HOW MUCH TO USE: A small house, 1 tube, ordinary dwelling, 3 to 5 tubes. One to two dozen tubes for large estate with basement and yard. Part rose and 1 washbasin and 1 dish towel for each 5000 sq. feet of floor space. PRICES: one tube, 75 cents; three tubes, \$1.75; six tubes, \$3.25; one dozen, \$6.00.

VIRUS LIMITED, INC., 72-H Front Street, NEW YORK

No Hesitation.—"Don't you think that Muscovite onslaught is awful?"

"I've never tried it; can you show me the steps?"—*Chaparral*.

Patriotism.—"Who's yoh fob, Sam? De French or de Germans?"

"Ah's fob de French, ob so'so. Ain't Jack Johnson a Frenchman?"—*Columbia Jester*.

Happy Lo.—"These things," said a real Mrs. Twickenbury at the Mohonk Conference, "have mitigated constantly against the advancement of the Indians."—*Christian Register*.

Not Fatal.—FOND MOTHER (proudly)—"An' do ye no think 'e looks like 'is father?"

SYMPATHETIC NEIGHBOR (cheerfully)—"An' niver ye mind thot, Mrs. McCarty, so long as 'e's 'ealthy."—*Harvard Lampoon*.

A Substitute.—DEPREST LUNCHEON—"Have you any prussic acid?"

WAITRESS—"No, sir."

DEPREST LUNCHEON—"Then bring me one of your steak-and-kidney puddings."—*Tit-Bits*.

Making Sure.—MAID (knocking in the morning) "Madame, I've forgotten whether you wanted to be waked at seven or eight."

"What time is it now?"

"Eight."—*Lustige Blätter*.

Difficult.—"Why doesn't the policeman pay his fare?" inquired the old gentleman on the twopenny tram, observing that no money passed between the constable and the conductor.

"Well, you know, sir," explained the conductor, "you can't get twopence out of a copper."—*Tit-Bits*.

Brought Home.—A party of tourists were going through a small town, having the time of their lives, laughing and joking. One of them thought she would have some fun, and called to a little girl standing near, "Are there any shows in town?" To which the little girl answered, "Only the one you people are making."—*Minnesota Minnehaha*.

The D. A. R. in Mexico.—"Who is that haughty-looking dark lady on the right?"

"That is Señora Juarez-Torreón-Varranza-Quilla, of Mexico."

"And what are all those badges, buttons, and medals with which she is almost covered?"

"Why, she's a Daughter of Three Hundred and Twenty-nine Revolutions!"—*Judge*.

Incurable Grief.—All the work was mapped out for the new charwoman, but about the appointed time she arrived in tears.

"My poor 'usband was shot in the battle," she said, "and 'e's passed away."

The employer was all sympathy, gave the widow the half-crown she ought to have earned, and did the necessary work herself.

The next day she met the neighbor who recommended the woman, and said:

"You've heard, I suppose, about Mrs. W.'s husband being killed?"

"Yes," said her friend. "But she ought to have got over it by now. It was in the Boer War."—*Tit-Bits*.

Plymouth Furs

Situated at the center of the fur bearing region of America, we are able to obtain the choice pelts of each catch.

These pelts are made up by skillful artisans in new and original styles. They are specially designed for women of refinement and for that reason Plymouth Furs are favorably known throughout the whole country.

Portfolio H Free

If you will let us know the kind of furs you are considering, we shall be glad to send Portfolio H free. This portfolio contains superb photographs of actual furs and will give you a good idea of our styles and prices.

BE KIND TO YOUR EYES

WHY TABLES AND DRESSERS SHOULD HAVE PLATE GLASS TOPS

Highly polished wood surfaces are easily marred beyond repair—one scratch frequently ruins the beauty of a costly piece of furniture. Plate Glass Tops on Tables, Dressers and Desks eliminate all danger of damage. They beautify as well as protect, for, unlike wood, glass grows more brilliant with cleaning. Plate Glass Tops are absolutely sanitary—are easily cleaned—afford no lodging place for dust or germs. Economical to buy and use. The first cost is the only cost for they last a life time. And they pay for themselves many times by saving tedious polishing and preserving the original finish of furniture they protect.

Write for prices giving size of Glass desired. Send for our handsome illustrated booklet: "Glass of the Hour." It's Free.

CURRENT EVENTS

EUROPEAN WAR

IN THE WEST

October 29.—The French War Office reports slight advances between the Aisne and the Argonne regions, resulting in the capture of German trenches. The German General Headquarters announces the repulse of French attacks southwest of Verdun and occupation of the main French position.

October 30.—The Belgian Army floods the lower valley of the Yser River, says the French War Office, compelling the Germans to withdraw. Slight successes are claimed by France in the Lille region and by the Germans in the Argonne forest.

November 3.—The Allies claim to have gained the west bank of the Yser River below Dixmude and to hold all the river-crossings. The Germans claim promising gains at Ypres, Roye, and east of Soissons.

IN THE EAST

October 31.—Vienna announces that the advance of the Russian forces along the San and Stryj rivers into West Galicia is being repulsed with severe losses to the enemy.

November 1.—An advance of the whole Russian Army beyond the Vistula is officially reported.

November 4.—The Russians report the capture of Barkalarjewo in East Prussia and the pressure of the German left wing back upon Biala and Lyck.

GENERAL WAR NEWS

October 29.—Prince Louis of Battenberg resigns as First Lord of the British Admiralty.

A Turkish cruiser begins hostilities against Russia by the bombardment of the town of Theodosia, in the Crimea. Odessa is also bombarded, and several Allied vessels in the harbor sunk.

In the harbor of Penang, in the Straits Settlements, the Emden sinks the Russian cruiser Jemchug and a French destroyer.

October 30.—Admiral Lord Fisher is

reappointed First Sea Lord of the British Admiralty, after three years of retirement, to succeed Prince Louis of Battenberg.

October 31.—The Allies request from Turkey an explanation of the bombardment of Russian seaports.

November 1.—Tokyo reports that Tsing-tao has been put in flames by the bombardment, but that the Germans are still maintaining its defense.

November 2.—Italy and Great Britain form a coalition, it is rumored, for the joint protection of their African provinces.

The Turkish Ministry resign, leaving the Young Turk party in control.

November 3.—The British submarine D-5 is sunk by a floating mine, during a skirmish between light cruisers of the British and German fleets in the North Sea.

A naval engagement in the Pacific, off Coronel, Chile, is reported, in which the British are said to lose the cruisers *Monmouth* and *Good Hope*, with severe damage to the cruisers *Glasgow* and *Otranto*. Of the five German cruisers attacking the British vessels, the *Scharnhorst*, *Gneisenau*, and *Nürnberg* report with slight injuries at Valparaiso.

Naval operations against Turkey are reported in the shelling of the Dardanelles by the British-French squadron, and the bombardment of the fortified town of Akabah, Arabia, by an English cruiser. Turkish troops are reported near the Egyptian borders. Tho the people are as yet undisturbed, the whole of Egypt is placed under martial law. The Turks are reported successful in an engagement with Russians near Trebizond.

November 4.—The Japanese claim the capture of 800 men, and the destruction of twenty-six guns employed in the defense of Tsing-tao.

Turkey breaks off diplomatic relations with Great Britain, France, Russia, and Serbia. Jeddah, a principal Arabian port, is bombarded by a British war-ship.

GENERAL FOREIGN

October 29.—Disturbances at Port au Prince, Haiti, result in the dispatch to that port of the transport *Hancock*, with a full regiment of marines aboard, and the battle-ship *Kansas*.

November 2.—The Aguas Calientes Conference deposes General Carranza and appoints Gen. Eulalio Gutierrez as Provisional President for a term of twenty days.

November 3.—Carranza refuses to abide by the action of the Aguas Calientes Conference.

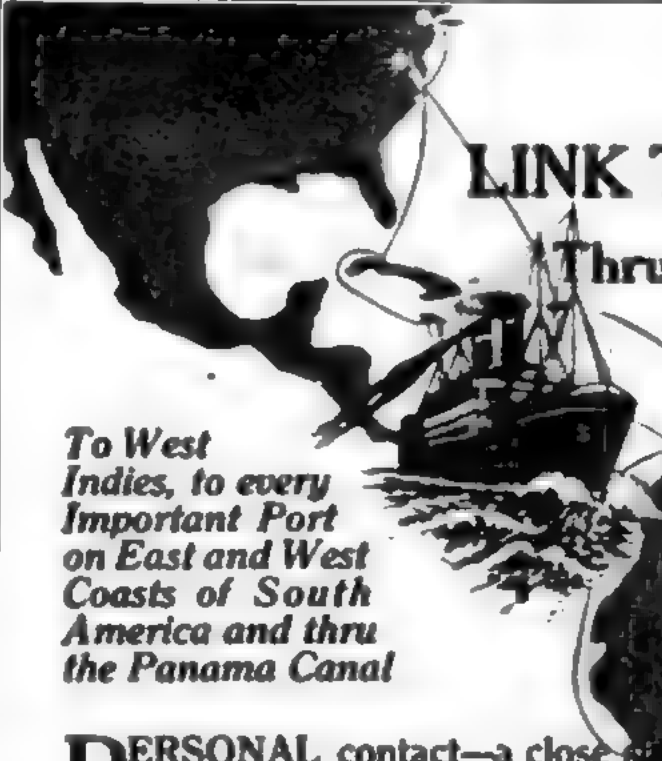

Acting Secretary of State Lansing serves notice on the small German cruiser *Geier*, now in dock for repairs in Honolulu Harbor, that within a limited time the vessel must sail or be interned for the war. Outside the harbor are the Japanese battle-ship *Hizen* and a Japanese cruiser.

November 4.—Carranza sets up his Government at Puebla, Mexico, while Gutierrez still rules at Aguas Calientes.

Prof. Domenico Argentieri, an Abruzzi priest, gives a successful demonstration of his pocket wireless telegraph-receiver, operating without poles or aerial, before French, Russian, and Japanese attachés, public men, and scientific experts, at the British Embassy in Rome.

DOMESTIC

October 29.—Upon investigation, the *Pittsburg Gazette-Times* declares that

LINK THE AMERICAS

Thru the Commercial Cruise Around South America

To West Indies, to every Important Port on East and West Coasts of South America and thru the Panama Canal

Organized By the Travel Department of the FIDELITY TRUST CO., of Baltimore, Md. Bankers, Manufacturers, Exporters and Importers

PERSONAL contact—a close study of trade conditions, is the only key to South American trade. A commercial cruise is the answer.

The twin screw S. S. FINLAND, an American built vessel of 22,000 tons displacement, sailing under the American flag, has been chartered from the International Mercantile Marine Co.

ITINERARY: Leave New York January 27th; Baltimore January 29th; via West Indies; making complete circuit of South America; fifty-two cruising days; fifty-four days in ports, the length of time in each port being regulated by importance of market.

COST: The cost of trip is small for the splendid accommodations afforded; \$800 and upwards for 105 days—\$7.54 minimum per day.

SPECIAL FEATURES: Financial and trade experts will accompany the cruise; also interpreters and stenographers. Business men who book for this cruise, will be put in direct touch with business interests in their respective lines at all cities visited, as well as adjacent territory. The generous co-operation of the diplomatic and consular offices of the United States has been assured by the Department of State, and previous publicity of the enterprise will also be given through the leading newspapers of the important commercial cities of Latin America. Special provision has been made for the exhibition and demonstration of goods.

To appreciate the full significance of the opportunities afforded by this Commercial Cruise, write at once for details and make your plans now.

Tourist parties invited. Ample accommodations for ladies.

Address,

Travel Department

THE FIDELITY TRUST CO.

THE LIGHTEST TOUCH TYPEWRITER IN THE WORLD IS BUILT IN THE GOOD OLD U. S. A.

The touch of the Fox Typewriter is—and always has been—exactly 2 1/4 ounces. If it takes a 6 1/2 ounce "blow" to print a letter on other typewriters and only a 2 1/4 ounce "touch" to print a letter on the Fox Typewriter, then there is a saving of 4 ounces to every character printed, by using the Fox Typewriter. A reporter copied 100,000 characters on his Fox Typewriter, in four years, off the fastest telegraph wire out of New York. By saving 4 ounces on each character printed he saved 24,000 tons of energy in the four years, or nearly enough for eight years more work. He says: "I did not spend a cent for repairs or make a single adjustment to my typewriter."

\$2.00

100,000 steel-workers are idle in the Pittsburgh region, and the average activity of the steel plants 40 per cent. of the normal.

The National City Bank of New York arranges to provide a loan of \$10,000,000 to the French Government, on treasury notes payable at 6 per cent. in nine months.

November 2.—An indictment charging criminal conspiracy against twenty-three directors of the New York, New Haven & Hartford Railroad is handed down in the United States District Court.

November 3.—As a result of the elections, the Democratic plurality in the House remains, tho much reduced; there is a slight Democratic gain in the Senate. Republican landslides occur in New York, Pennsylvania, and Connecticut. Seven States vote on Woman Suffrage, with the early returns leaving the result in some doubt. Six States vote on Prohibition; of these Colorado, Oregon, Washington, and Arizona go dry.

The Rockefeller Foundation relief steamship *Massapequa* sails for Rotterdam with a \$275,000 cargo of flour, rice, bacon, and beans for the destitute people of Belgium.

President Wilson orders United States troops to Fort Smith, Arkansas, to assist United States Judge Frank A. Youmans in enforcing the orders of his court in connection with mine strikes in the neighboring coal regions.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"H. E. B." Wapakoneta, O.—"I wish to ascertain if the word *wind*, meaning a current of air, can be pronounced *waind* in poetry. Indiscriminately, that is, regardless of whether it is necessary to rhyme it with another word or not, and if this is according to good usage, and if so, on what authority."

In its original pronunciation this word rhimed with "mind" and "find." When the short "i" sound ("i" as in "in") was introduced, it met with so little favor from the literary lights of the day that one of them prepared a squib that quickly became popular—"I have a great mind to find why he pronounces it *wind*." But the new fashion prevailed and is with us to-day. No other monosyllabic word ending in *-ind* is so pronounced—*bind*, *find*, *grind*, *hind*, *kind*, *mind*, *wind*—all are given the diphthongal sound of "ai" as in "aisle," and in poetry *wind* has this sound.

"G. McK. B." Norfolk, Va.—"I find 'predacious' given as the spelling in the STANDARD DICTIONARY; 'predacious' or 'predacious' in the COMPREHENSIVE STANDARD DICTIONARY, and 'predacious' in the CONCISE STANDARD DICTIONARY. Which is the proper spelling of this much-disputed word?"

The form preferred by the NEW STANDARD DICTIONARY, which records both, is *predacious*, and the reason for it is explained in a note thereon (see p. 1853): "The form *predacious* in current use is analogous to *mendacious*, *rapacious*, etc.; *predacious*, considered by some dictionaries as erroneous, is formed on the analogy of *erudacious*, *crustaceous*, and may have entered the language through the Italian *predace*." The form *predacious* is recorded by the Comprehensive Dictionary on page 462 (col. 1) with *-ceous* as a variant, and by the Concise Dictionary on page 384 (col. 2). From the foregoing it may be seen that *predacious* is the accepted spelling of the word to-day.

"W. H. M." Elkton, Md.—"Kindly explain a *trapezium* and *trapezoid*."

With Euclid, who flourished about 300 B. C., a *trapezium* included all quadrilateral figures except the square, rectangle, rhombus, and rhomboid. See definition 33 of the "Elements of Euclid,"

translated by Scarborough (1705). Proclus, who wrote Commentaries on the first book of Euclid's Elements, A. D. 450, retained the name *trapezium* only for quadrilaterals having two sides parallel, subdividing these into *trapezium isosceles* (*isosceles trapezium*) having two non-parallel sides (and the angles on their bases) equal, and *skalenon trapezium* (*scalene trapezium*), in which these sides and angles are unequal. For quadrilaterals having no sides parallel, Proclus introduced the name *trapezoides* (*trapezoid*). This nomenclature is retained in all the Continental languages and used universally in England till late in the eighteenth century, when the application of the terms was transposed so that the figure which Proclus and modern geometers of other nations call specifically a *trapezium* became with most English writers a *trapezoid*, and the *trapezoid* of Proclus and other nations a *trapezium*. The changed sense of *trapezoid* is given in Hutton's Mathematical Dictionary, 1705, and he himself used it and doubtless was the principal means of its diffusion. But since 1875, the original senses have been in prevalent use. To make the subject more clear to you, we cite the following definitions: "*Trapezium*, 1. (Euclidean sense.) Any four-sided plane rectilinear figure that is not a parallelogram; any irregular quadrilateral. 2. (Proclian sense.) A quadrilateral having only one pair of its opposite sides parallel (the specific sense in England in the seventeenth and eighteenth centuries). 3. (Rare, but common up to 1875.) An irregular quadrilateral having neither pair of opposite sides parallel." "*Trapezoid*, 1. (Called *trapezium* by English writers of the nineteenth century.) A quadrilateral figure of which no two sides are parallel. 2. A quadrilateral figure having only two sides parallel." This is an erroneous application peculiar to English-speaking people, now commonly given up.

"O. H." Indianapolis, Ind.—"Kindly inform me how the following words obtained their names and the incidents connected with them—*plaid*, *mohair*, *cashmere*, *challie*, and *astrakhan*."

The word *plaid* is Scottish and designates a rectangular woolen garment, cross-banded with different colors, worn by Highlanders of both sexes. It is derived from the Gaelic, *plaid*, a contraction of *pellaid*, sheepskin, from *peall*, skin.

Mohair is the hair of the Angora goat of Asia Minor, or a dress fabric made from this hair. A cotton and wool imitation of such fabric also is called "mohair." The word is derived from the Old French *mohere*, French *moire*, probably from the Arabic *mukhayyar*, goat's-hair cloth.

Cashmere is a fine and soft woolen dress-fabric, usually in plain colors; also, a cotton-and-wool imitation of it. Specifically, it is a fine, soft, costly fabric made in Kashmir and neighboring regions from yarn hand-spun from the flowy wool of the Cashmere goat. The term designates also anything (as a dress or shawl) made of cashmere. *Kashmir* is a native state of the Himalayan region of British India.

Challie is a light all-wool fabric resembling mouseline-de-laine; formerly, a fine, soft silk-and-wool fabric for women's dresses. The word is derived from the Anglo-Indian *shaler*, from the Hindustani *shila*, a soft cotton stuff.

Astrakhan designates the pelts of very young lambs from Astrakhan, Russia, of which muffs, collars, etc., are made; also a fabric in imitation of this. Astrakhan is a government of south-eastern Russia.

"Inquirer."—"Is there such a word as *shrapnel* in the English language? If so, what does it mean? I think it has to do with ammunition."

The term to which you refer is *shrapnel*. It is a shell filled with bullets, and having a bursting-charge to explode it at any given point in its flight, the bullets continuing in the same general course; also, shot of this kind collectively. *Shrapnel* bullets sweep an area of about 250 yards by 30 yards, half the bullets falling on the first 50 yards of the beaten zone. With a high-explosive shell the fragments strike the ground closer to the point of burst and beat a shallow, but broad, area of ground. The term shooting-shrapnel is given to certain howitzer shrapnel, which is designed to contain a large bursting-charge. This shell was named from its inventor, General Henry Shrapnel, who was born June 5, 1761, at Midway Manor House, Bradford-on-Avon, Wiltshire, England, and died March 13, 1842.

TOPICS - OF - THE - DAY

RUSSIA'S PART IN THE WAR

THE RUSSIAN WAR-TIDE, after a period of ebb that carried it back to within cannon-shot of Warsaw, is now pictured in the dispatches as sweeping forward with a momentum that, for a time at least, overwhelms the German and Austrian offensive and clears Russian territory of the Teuton foe. The interrupted invasions of East Prussia and Galicia have been resumed with increased strength, and for the first time Russian troops have crossed the boundary into the province of Posen, within 200 miles of Berlin. By these achievements, many observers agree, Russia preempts the center of the stage in Europe's theater of war; the broad and rapid developments in the eastern field between the checking of the German advance about the middle of October and the recapture of Jaroslav on November 5 affording a vivid contrast to the titanic deadlock in France and Belgium. Operating on a battle-line aggregating hundreds of miles, the Russian armies have driven back an invading force estimated at 1,000,000 men, the retreat being forced at a rate of fourteen miles a day. "It is in Poland and Galicia," remarks a writer in the *New York Evening Post*, "that war has retained its dramatic aspects—rapid marches, heavy engagements, decisive results, swift retreats, surprise attacks, flanking movements, sharp rear-guard actions." Glancing back over the Russian operations since the beginning of the war, this observer goes on to say:

"In East Prussia, in Poland, and in Galicia, the battle-lines have swayed back and forth, not hundreds of yards at a time as in the west, but twenty-five, fifty, one hundred miles at a time. The first phase in East Prussia began with the Russians close to Königsberg and ended with the tremendous Russian slaughter at Tannenberg. Two weeks after Tannenberg the Prussians were pressing deep into Russian territory and hammering at the line of the Niemen. Two weeks later the Russians were surging back against the Prussian frontier. In Galicia, by the middle of September, the Russians had crossed the San and were pressing forward on Krakow. Three weeks later they were back of the San in full retirement before the Austrians. To-day they are once more across the river, and once more moving on Krakow. The most dramatic change of all has occurred in central Poland. On October 20 the Russians were battling to save Warsaw; to-day the Germans have retreated close to 150 miles, and the Russian vanguard is across the Silesian frontier."

The same writer, who analyzes each day's war news for the *Evening Post's* readers, finds in this last result "more than fair justification for the exultant Russian claim voiced in a telegram from the Grand Duke Nicholas to General Joffre that the Russians have gained 'the greatest victory since the beginning of

the war.' " This claim, we are told, refers to the conflict which began near Warsaw on October 14 and ended, for the moment, with the occupation of Jaroslav. We read further:

"During these three weeks of fighting the Russians have beaten at least three great armies—the German host which advanced through central Poland against Warsaw, the Austrian army which advanced through southern Poland against Ivan-gorod, and the Austrian Army, or more than one army, which had advanced in Galicia against the River San, driven the Russians from Jaroslav, virtually compelled the abandonment of the siege of Przemyśl, and at one time seemed to threaten the evacuation of Lemberg, won by the Russian armies in the course of the first month of the war. The Austro-German forces thus defeated must have numbered a million men. Taking the events of the last three weeks as parts of a single operation, no such battle has been fought since the beginning of the war on either front. Add to this the fact that on the East Prussian frontier the Russians have been pressing forward till they are now once more on German soil, and the completeness of the victory is rivaled only by the full round of German successes in France and Belgium during the third week of August."

Now, we are told, Russia presents an unbroken battle-line from the Baltic to the Dniester, and, "for the first time since the beginning of the war, the way lies open for a formidable Russian thrust all along the line." To quote the *Evening Post's* expert once more:

"Taking the situation in Poland in conjunction with the situation in the west, the fourteenth week of the war closes ominously for the Kaiser. At the beginning of the war it was assumed that the Allies in the west must play the anvil to the Russian hammer. Both functions have been realized—the French and English by holding stubbornly, the Russians by hitting hard."

The Russian tactics during the German retreat, according to an associate editor of *The Army and Navy Journal*, who discusses the war in the *New York Times*, consisted of constant flanking movements by a large and mobile Cossack army. Thus whenever the Germans made a stand "their supply-lines were threatened and they had to retreat to avoid disaster." Germany, having failed to inflict a serious blow upon Russia, "is now confronted in both battle-zones by superior forces." He points out however, that the German retreat "seems to be greater than was called for by the Russian operations," and he surmises that this rapid falling back is probably for the purpose of taking up defensive positions of their own choosing. If this is the case, he says,

"The Russian advance must soon slow up in order to give

them time to bring up their heavy artillery and to make the many other preparations that will be needed to enable them to exert their full force against the new German defensive position."

The Springfield *Republican* notes that "Russian reports of great victories all along the line coincide with the reports from the western field of large German reinforcements to press the

WHERE RUSSIA AND TURKEY MEET.

attack in Flanders." It goes on to suggest that probably "the sweeping Russian victory is simply a successful advance against a line somewhat weakened and retiring in reasonably good order to a prepared defensive position, as after the battle of the Marne." The Springfield paper adds, however, that while the German force opposing Russia appears to have been somewhat weakened, the Russian armies "will hardly reach their maximum before January." But the Brooklyn *Eagle* is convinced that "Berlin and Vienna are in no immediate danger." According to one theory, said to be of official German origin, the German retreat in Poland was part of a deep-laid scheme on the part of General von Hindenburg to draw the Russians away from their base. Berlin dispatches quote Major Morah, military correspondent of the *Tageblatt*, as denying the possibility of an effective Russian invasion. "The German forces in the East," he declares, "are more than strong enough to prevent the Russians from gaining a foothold on German territory." In a Copenhagen dispatch to the London *Times* we read:

"It is asserted in Berlin that Germany and Austria-Hungary now have concentrated about 3,000,000 soldiers on the line from Thorn to Krakow, and this is considered sufficient to crush the Russian forces."

A Petrograd correspondent adds the information that "the Germans have been digging trenches and erecting barb-wired entanglements along the whole of the Russian-German frontier," altho "their main plan is to retire on the fortresses of Königsberg, Loethen, Grandenz, Bromberg, Glogau, Breslau, and Niesse."

"Bloody and terrible cheeks," agrees the editor of the New York *Evening Sun*, "are the natural thing to expect now that Russia is on the margin of Germany herself." But glancing at the results of a hundred days of war, he goes on to say:

"In the East it is not longer to be doubted that there is a real, efficient, powerful Russian Army, well equipped, effectively led. The Russia that the Kaiser has to deal with is comparable not with the Slav State which lost Port Arthur, or even that which faltered before Plevna and failed at Sebastopol. Rather it is the Russia that fought Napoleon at Borodino and Frederick at Zorndorf, a Russia bound to give, capable of enduring terrible blows."

Peculiarly ominous for Austria, according to the same authority, are the recent Russian successes. "It is perfectly plain," he says, "that Austrian conditions, after brief amelioration, have again become well-nigh desperate." And in proof of this he cites an official statement from Vienna concerning the return of Russian troops to Bukovina and Western Galicia. We read:

"This admission means that two Austrian provinces have been for a second time almost completely evacuated. Save for the invested fortress of Przemyśl, the passes of the Carpathians, and the immediate environs of Krakow, Galicia, and Bukovina are now in the hands of the Czar."

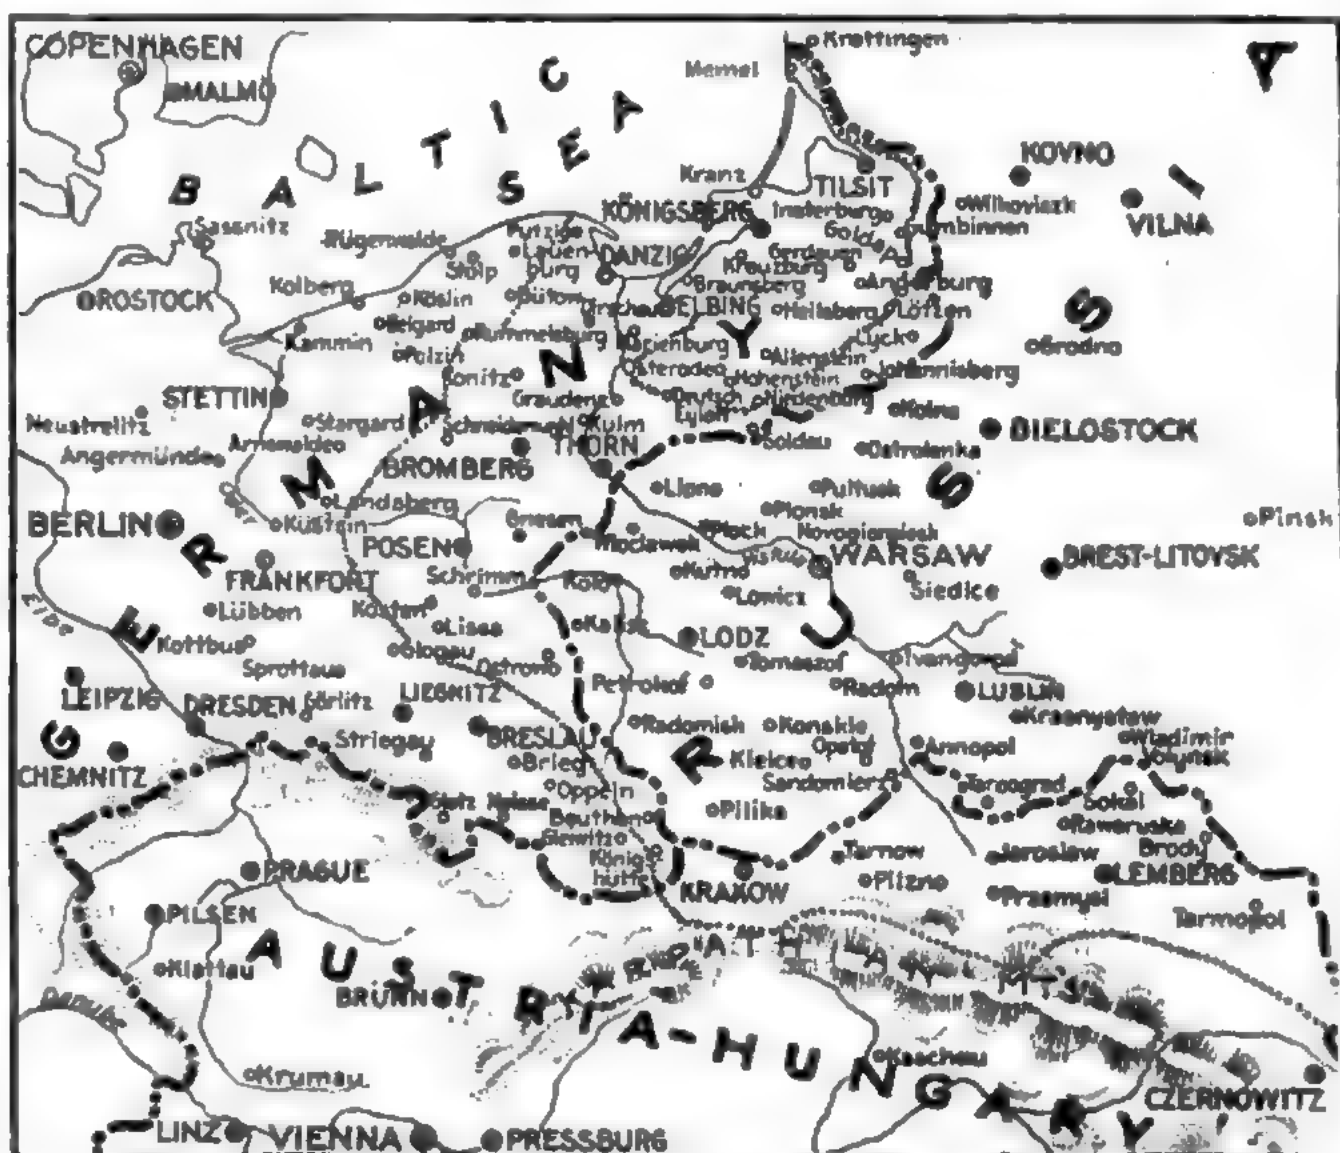

"This conquest is in itself considerable. The combined area of Galicia and Bukovina is 35,000 square miles, or three times that of Belgium; the aggregate population 9,000,000 against 7,500,000 for Belgium, and perhaps 1,500,000 for the districts in France now occupied by the Germans."

"But neither population nor territory measures the extent of the disaster to Francis Joseph incident to the conquest of his Eastern provinces. In the various operations his armies have three times suffered terrible defeat: at Lemberg in the opening days, at Rawaruska, Jaroslav, Tomazov in the later days, and now finally before Ivangorod and along the San. . . ."

"Moreover, at the end of four months Serbia, far from being crushed, seems to keep the field in full strength. In a Balkan winter now begun there is little prospect of a successful invasion of the Servian mountains. On the Danube and the Vistula Austria has failed."

Further light is thrown on Austrian conditions by a dispatch from Rome to the New York *Times*, in which we read:

"As was reported before the last great battle, which proved

WHERE SLAV AND TEUTON CLASH.

A BAD BREAK.

—Do Mar in the *Philadelphia Record*.

THE LATEST RECRUIT.

such a crushing defeat, the Austrian War Office sent to the front all the men of the Landsturm, three-fourths of whom were scarcely fit for the police work and railway watching which they had done up to then, and were much less capable of rendering service in the field.

"The military authorities had no choice but to call them up, for all the best troops had been put out of action in Galicia, while the Hungarian cavalry, which are the finest soldiers the Dual Monarchy possesses, were all drafted north long ago to help the Germans push through to Calais. They behaved splendidly in Belgium, but were almost annihilated by the naval guns. In a single list of the losses suffered by this crack corps in one week alone appear the names of 867 Magyars belonging to the most exclusive circles of the Hungarian aristocracy.

"Apart from its enormous losses in the field, the Austro-Hungarian Army has been seriously affected as a fighting force by the indiscipline and even sedition seething in the ranks. Some of the twenty-four regiments from the Carpathian region were shot down more or less wholesale at the very outset of hostilities for refusing to march against the Russians. Despite the terrible example made of the mutineers, the spirit of insubordination was not checked, with the consequence that in the very first engagements whole regiments went over to the Russians.

"In Bosnia and Herzegovina things are rapidly approaching

a crisis. Natives are deserting from their regiments by hundreds together. There is a constant stream of men returning to their homes from all sides. German troops have been detached to fetch them back, and as all the villages side with the deserters, civil war is raging over entire districts.

"The Germans are relentless in their methods of dealing with the mutineers. In order to strike terror into the population, executions are carried out wholesale. At Bugojno, for instance, out of 380 able-bodied men that place contained, only 111 escaped being shot. At Mostar 80 men were executed at the same time, while the shooting of parties of 15, 20, and 30 at a time is of daily occurrence. Frequently whole villages are burned down as well, as a further example.

"It is easy to understand after this how the Russians are driving the Austrians like sheep before them, without taking into account the terrible ravages cholera is making in the ranks of the unfortunate Austro-Hungarian soldiers."

Since Turkey's entrance into the war Russia has also had on her hands a naval campaign in the Black Sea and a land campaign in Transcaucasia, but these have not yet reached the dimensions of major operations. Constantinople is said to be Russia's chief objective, but, as the *Baltimore News* remarks, "Russia's path to Constantinople runs through Berlin."

MISSOURI RECALLS ITS FULL-CREW LAW

THAT even the popular heart has at last been softened by the financial plight of the railroads, and that railroad-baiting is consequently no longer a profitable sport for politicians—these are the principal lessons seen by many editorial observers in Missouri's repudiation, by a referendum vote of the people, of the Full-crew Law passed two years ago by her legislature. Another lesson deduced by the *New York Times*, which has hitherto manifested no enthusiasm for such direct legislative devices as the initiative and referendum, is that "the people are better judges of their business than those who assume to be specialists in what the people think and want." Full-crew laws, which are now on the statute-books in about twenty States, prescribe the number of men that shall make up a train crew. Eight similar laws have been before Congress, but none has yet been enacted. One of the arguments advanced by the advocates of these laws is that they increase the safety of railway travel. The railroads, on the other hand, have always contended that the laws prescribe more men than are necessary. There is no connection, they argue, between superfluous labor and safety. A St. Louis dispatch to the *New York Commercial* quotes a Missouri railroad official as naming the following reasons for the popular overthrow of the Full-crew Law in that State:

"The fact that men who hitherto have been able to get work from the roads have been unable to do so and voted against anything which meant further hardship for the railroads.

"The decrease in sales of commodities to railroads, which influenced traveling men, business men, and manufacturers to work against the bill.

"The belief of the farmer that the passage of the bill would result only in a further indirect tax on him and his desire for the sort of service he has had in the past.

"The conviction among railroad employees that the roads could stand no further operating expenses without wage-cuts and lay-offs."

So the Full-crew Law, put on the books in response to a supposed popular demand, remarks the *New York Sun*, "was vetoed by the public itself" in a manner that made it plain that "the people of Missouri do not want the railroads bled." Other papers affirm that the nation is of the same mind as Missouri. "The people are tired of oppressive legislation against the railroads," says the *New York Herald*, and the *Brooklyn Eagle* rejoices that "a sense of justice seems to be asserting itself." Missouri's decisive adverse majority of more than 60,000 marks, in the opinion of the *Rochester Post Express*, "the beginning of the end of meddlesome legislation having no other purpose than to burden the carrying corporations by compelling them to make worse than useless expenditures." Missouri's verdict, remarks the *Providence Journal*, "should encourage the Eastern roads to continue their fight against the 'full-crew' laws which are cutting into their earnings and compelling them to take off trains and curtail plans for improvements." The *Boston Herald* also hails the Missouri referendum result as "one of the most significant of recent events," and the *Boston News Bureau* characterizes it as "a straw indicating a refreshing change in the political wind." But if the popular attitude toward the railroads has undergone a change, the *New York World* reminds us, it is only because the attitude of the railroads toward the people has also changed for the better. Says *The World*:

"Granger wrath against common carriers would never have risen to dangerous height if railroad managers had played fair; if they had charged traffic what it cost, not what it would bear; if they had demanded interest returns only on capital invested, not water; if they had refused to build up one enterprise or one community at the expense of others by discriminating rates or by secret rebates. In proportion as railroads deal fairly with the public in future, they may more and more confidently expect fair dealing in return."

STAMPING OUT THE CATTLE PLAGUE

THE OUTBREAK of apthous fever, or "foot-and-mouth" disease, among our live stock within the last two weeks, which one paper characterized as "nothing less than appalling," is reported now to be fairly well in hand, and less of a national peril than at first seemed possible. With the discovery of the first case in the Chicago stock-yards came, within forty-eight hours, news of like infection discovered in ten different States, and, slightly later, in three more. The amazing suddenness of its appearance in so many places simultaneously awoke the authorities to take radical steps to prevent wider infection, and thus much of the threatened loss has been averted. In the thirteen States of New York, Pennsylvania, Ohio, Maryland, Indiana, Illinois, Iowa, Michigan, Wisconsin, Rhode Island, Massachusetts, New Jersey, and Delaware, the most stringent quarantine has been imposed, and every means taken to root out the disease. A quarantine has been placed on all imports of cattle from Canada. In the Chicago stock-yards, as elsewhere, we are told, not only were infected and suspected cattle shot, but even the pigeons that live in the eaves of the buildings. This was in obedience to the warning of the Department of Agriculture, which the *New York Commercial* summarizes thus:

"The Department of Agriculture warns the whole country that every suspected case should be reported by telegraph to Washington. No one should hesitate, because the Federal Government and the States will pay the owner the full meat value for his arrivals as if in good health, in case they have to be slaughtered. It is believed that pigeons, English sparrows, and rats spread the contagion, and they too should be killed off in infected districts."

Much credit is given by the *New York Evening Sun* to the Chicago Bureau of Animal Industry for reporting so promptly the first case that appeared in the stock-yards, and dealing with the whole affair in a manner so thorough and straightforward; but some criticism of our meat-inspection system is offered by several papers, on the suspicion that the dual system of State and Federal supervision may permit bungling and so account for the present situation. "Still," agrees one critic, the *Springfield Republican*,

"it is entirely possible that the outbreak of this disease in such widely separated localities is no discredit to the inspection system; that, indeed, the inspection system is to be credited with having swiftly discovered the epidemic in time to prevent its spread to alarming and costly proportions. The final judgment must be suspended until the history of the present outbreak is complete."

Coming to the effect of the cattle plague on the ultimate consumer, *The Commercial* vouchsafes us reassuringly that

"There is little danger of infection to the consumer of meat, and there should be no serious advance in the price of beef. . . . The Government inspection of meat in all of the large markets of the country is said to be careful and efficient. All wholesale beef plants have sanitary appliances and methods, and meat is prepared for consumption under supervision of officers of the Government, so that it is believed no diseased meat will reach the retail shops. In the case of milk there probably is greater danger of human infection, and some authorities recommend that all milk be boiled before use even if such treatment reduce the nutritive properties.

"There has been some appreciation already in the cost of meat and there may be a further rise in prices, but prominent packers are understood to hold the opinion that this advance will be only temporary. It is due chiefly to the closing of the Chicago stock-yards, through which Western meat is forwarded to Eastern centers. This embargo compels shippers to divert their meat to other Western cities, but does not reduce the supply. As the large producing States of the West are free from the disease, so far as known, there should be only an inappreciable shortage in beef. The chief item of higher cost will arise from delayed transportation and higher freight charges because of slightly longer transportation routes."

FUTURE OF THE PROGRESSIVE PARTY

PROBABLY no political party, so the Indianapolis *News* observes, "ever grew so rapidly as the Progressive, or ungrew so rapidly." And the favorite topic of the writers of editorial election comment is the astonishing shrinkage of a party which gave Theodore Roosevelt 88 electoral votes two years ago and which cast 600,000 more popular votes than did the Republicans. In only half a dozen States did the Progressives poll a respectable fraction of their 1912 vote, and their Congressional representation was cut from 18 to 7. So the prevailing opinion of Republican, Democratic, and Independent editors is that the Progressive party is dead and its leader's political career ended, while even the Progressive Baltimore *News* admits "the fading of the Progressive movement." On the other hand, there are a smaller body of editors who agree with Mr. Henry M. Pindell's Peoria *Journal* that even after this fall's disasters the Progressives "are still a vital factor in the important political centers of the country." The Springfield *Republican* sees ground for Progressive comfort in Governor Johnson's 250,000 votes and victory in California, Mr. Pinchot's 260,000 votes in Pennsylvania, and Mr. Robbins's 200,000 votes in Illinois. One Progressive Senator and seven Progressive Congressmen survive the Republican landslide, points out the New York *Progressive* in the State where the Progressive failure was most complete. And, while the election was "a stinging rebuke to a Democratic Administration," it was not "an election in which national Progressivism was at stake." And this journal predicts a successful future for the party.

Yet the very number and importance of the newspapers in all sections which dismiss the "dead" party with brief words of more or less respectful adieu is impressive. In New York *The Sun* (Ind.), *World* (Dem.), *Herald* (Ind.), *Evening Post* (Ind.), and *Commercial* join in the farewell. The Boston *Herald* (Ind.) and Providence *Journal* (Ind.) exchange greetings over the grave of New England Progressivism. Southern Democracy is represented by the Louisville *Courier-Journal*, Atlanta *Constitution*, Savannah *News*, Richmond *News-Leader*, and Norfolk *Virginian-Pilot*. Republican relief breathes from the editorial columns of the Pittsburgh *Gazette-Times*, Philadelphia *Inquirer*, and Brooklyn *Standard Union*. In the Far West, the proximity of Progressive California does not make the national party's demise less assured in the eyes of the Butte *Post* (Ind.) and Salt Lake *Tribune* (Rep.). The Indianapolis *News* (Ind.), a consistent foe of the founder of the Progressive party, asks his remaining followers to give the party corpse a decent interment, arguing that the keeping up of a shell of an organization to serve the ambitions of a few hungry leaders is a menace to the country. Similar advice comes from the much more friendly Chicago *News* (Ind.), which thinks that in view of the election returns "adherents of the new third party ought to return to the ranks of the two old parties and there continue their earnest work for progress in national affairs." *The News* may be classed with another group of dailies whose obituaries are less final, for various reasons. No real doubt about the moribund condition of the Progressive party, but rather simple kindness of heart, unwillingness to offend newly returned Republicans, or regard for a political force that made Democratic triumph

possible, seem to prevail in the editorial comment of dailies like the Charleston *News and Courier* (Dem.), Chattanooga *News* (Dem.), Columbia *State* (Dem.), Brooklyn *Citizen* (Dem.), Governor-elect Capper's Topeka *Capital* (Rep.), New York *Tribune* (Rep.), Duluth *Herald* (Ind.), and Chicago *Herald* (Ind.). The New Orleans *Times-Picayune* and *States* are positive enough about national Progressive weakness, but have to admit that Louisiana is sending a Progressive instead of a Democrat to represent one of her Congressional districts in Washington. The success of the Progressive State ticket in California is a sufficient reminder to the Republican San Francisco *Chronicle*, San Diego *Union*, Tacoma *Ledger*, and Portland *Oregonian* that not quite all the Progressives are ready to come back to the old party.

Taking the election results as a whole, the Springfield *Republican* (Ind.) is by no means sure that the Progressive party is "irretrievably smashed." Because the Progressives "have fallen so far short of their tremendous performance of two years ago, they are judged to be in their death-agonies." But, we are told, when the Progressive executive committee holds its coming meeting in Chicago, they will note the big vote in the important States of Pennsylvania, Illinois, and California. So *The Republican* concludes "that the Progressive party will live long enough to be something of a factor in the next Presidential election."

And the conservative Republican St. Louis *Globe Democrat*, assured tho it is that the new party has no national future, notes that it was an important factor in several States—

"In fact, there is not a single State which has heretofore been regarded as normally Republican in which Republican failure to elect was not directly due to the Progressive defection."

It is true that Republican division has largely disappeared, but the reunion, thinks the New York *Globe* (Ind.), is not necessarily permanent, nor does it necessarily portend Republican victory in 1916. Wherewith the New York *Tribune* (Rep.) whole-heartedly agrees, saying:

"Voters who left the party once may easily leave it again if bad leadership once more turns their stomachs. And let no one suppose that the Progressives have come back for the purpose of making a Roman holiday for Barnes and Penrose."

"The men who left the party to strike at the reactionary bosses came back to it to strike at Wilson. They can be kept in it. They can be alienated from it in such numbers as to make 1916 another overturn. It is up to the progressive element in the Republican party."

So the Progressive Chicago *Tribune*, with a touch of apparent desire for amalgamation, declares that "whether they call themselves Progressives, progressive Republicans, or Republicans," the voters will never stoop to boss dictation. But by "putting principle above partizanship and national welfare above personal ambitions, the same elements which made the Republican party progressive in 1912 can control it in 1916," and "if they do control it in 1916, the party will be successful," but "if a spirit of revenge is cherished, or if discouragement prevail, if the hard-faced, soft-bodied men of the Colosseum return to the saddle, the Republican party will not succeed."

Several important Progressive papers, notably the Philadelphia *North American*, account for their defeat by the voters' eagerness to hit the Democratic Administration and tariff-makers, and their natural flocking to the Republican "party of

THE WANDERER'S RETURN.
—Darling in the Des Moines Register and Leader.

protection," despite its many errors. Other Progressives, among them the defeated candidate for Governor of New York, are now persuaded that "the country still favors a two-party system." An Illinois Progressive leader, Medill McCormick, attributes the election results to a general reaction against progressive policies. The Springfield *Republican*, too, in one of its careful editorial reviews, sums up the election as "a

Copyrighted by the American Press Association

PUTTING THE SUFFRAGE STATES ON THE MAP

Note how the eleven white full suffrage States are grouped in the West. In Illinois women vote for Presidential electors and municipal officers. In the other shaded States they take part in certain school and minor elections. The black States have not yet "seen the light."

triumph for conservatism over radicalism." It is due partly to business depression and partly to the war, for "the world to-day has no desire for innovation and experimentation, because a large part of it is in flames and the remaining part is thinking of its fire-extinguishers." The *Republican* explains President Wilson's "driving" of Congress as due to a desperate attempt to clinch "so much of the radical program as was possible before the onrushing ride of reaction should become irresistible." And this conservative reaction "was sure to fall upon the Progressive party with terrific effect because nothing stronger than the bond of personal admiration for a great popular leader had drawn a large number of its members into the Progressive ranks."

The hostile New York *Evening Sun* finds that, instead of the rank and file deserting their leader, it was the leader who betrayed his followers. This editor admits that "there was in the new party the promise of new ideals in public life." And "it is because he has sacrificed this cause, because he has used these aspirations and these ideals as mere coin of political barter for his own personal fortune, that Theodore Roosevelt emerges from the present campaign not merely crushed as a political general, but bankrupt as a moral force."

So, it may be noted, the papers are writing obituaries of the leader as well as the cause, for the *Evening Sun's* estimate of the Colonel's future is likewise that of the New York *Times* (Ind. Dem.) and *World*, Louisville *Courier-Journal*, and St. Louis *Republic* (Dem.). Yet the Democratic Brooklyn *Citizen* and Columbia *State* think there are possibilities that the Colonel may "come back," and the New York *Globe* (Ind.) soberly asserts that "if his hat was in the ring again he could probably get to-day, in an open and fair Republican primary, more votes than any other candidate."

TWO MORE SUFFRAGE STATES

WHILE ONLY TWO of the seven States voting were carried for woman suffrage, the workers themselves look upon the result as a decided victory. And most friendly editorial observers offer congratulation rather than condolence, seeing that the two States won, making a present total of twelve equal-suffrage States with ninety-one electoral votes, are a clear and permanent gain, while in the States lost the suffragists have "only begun to fight." To the women who are now working valiantly to stem the rising suffrage tide, however, the returns tell a different story. To quote Mrs. Arthur M. Dodge, their national president, "woman suffrage is doomed," and "it is apparent that the backbone of the movement is broken when six—at this writing—of the States in which the question was submitted turned it down by big majorities." And, it is noted, Ohio, Missouri, North Dakota, South Dakota, and Nebraska, which have decided to remain content with man-made government, are larger and more important commonwealths than Montana and Nevada. Yet the winning of Nevada with its 80,000 population gives especial satisfaction to *The Woman's Journal* (Boston) "because Nevada is wholly surrounded by suffrage States. It was the one black spot remaining in the solid block of white on the suffrage map." And as for the States not carried, the suffrage editor notes that "in Ohio, Nebraska, and South Dakota, the affirmative vote showed a marked gain over the last time the question was submitted," while the women ought to be encouraged by the large vote in the States where the question was submitted for the first time. The vote in Nebraska, the *Lincoln Star* admits, was sufficiently close to justify the friends of suffrage "in the hope that another trial may bring different results." The campaign in South Dakota, thinks the *Aberdeen American*, "has established a broader foundation upon which future efforts toward the possession of the ballot will be founded." In North Dakota, the *Bismarck Tribune* opines that the issue "has been disposed of decisively and should not be resurrected again for several years," while the editor of the *Fargo Courier-News* writes that the suffrage managers did not expect the amendment to carry this time, but that they expect to overcome the majority against them "next time, for, of course, there will be a 'next time' very soon." Turning to Ohio, we note the *Springfield Sun's* prediction that before many years "a rapidly growing sentiment in favor of woman suffrage will give the women the ballot." Congratulatory editorials appear in papers like the New York *Globe*, Springfield (Mass.) *Republican*, and New Orleans *Item*; and the Philadelphia *North American*, voicing the sentiment of many suffragists, says editorially:

"Montana and Nevada have been added to the white States of the map; and they will always be white. No State that ever gave the vote to its women ever took it away again. Nearly every other forward movement has had its instances of reaction. Even prohibition has occasionally lost ground.

"But a position once won for woman suffrage is forever won. Instead of becoming a source of weakness to the movement—a citadel which has to be defended—each new suffrage State is an impregnable base from which the attack can be carried on against the common enemy.

"This is true not merely because of the demonstrated benefits and justice of suffrage, but because suffrage changes the entire political organism of a community; and the women themselves, once having the right to vote, will never give it up. And it can never be taken from them without their consent."

Others, represented by the New York *Times*, *World*, *Tribune*, and *Press*, Philadelphia *Public Ledger*, Boston *Transcript* and *Herald*, Washington *Star*, and Chicago *Herald*, see in the election results a setback for the suffrage cause, tho they do not believe it will do more than delay ultimate success. Some of these editors impute the suffragists' failure to win more States

to the same cause as does Mrs. Medill McCormick, the Chicago suffrage leader. She says: "We are suffering with the general reaction against radicalism, since woman suffrage is a radical movement." Antisuffrage workers interpret it as a sign that the voters "could not stand for the campaign methods of the women," or say that "the chivalrous Western men voted against woman suffrage because they were convinced that was the way their wives and daughters wanted them to vote." The latter idea was prevalent in Nebraska, according to the editor of the *Grand Island Independent*, while an additional reason for the defeat lay "in the fact that Nebraska, without votes for women, has better laws in the interest of womanhood and childhood than has a neighboring State in which the women have voted for fifteen years." One happy antisuffragist adds that the result of the election will check the suffrage movement in States where the proposition is soon to be voted on and will have a psychological effect upon the minds of politicians, to wit: "Our prominent men will not be in such a rush to get on the band-wagon. . . . The Members of Congress won't be so easily persuaded by the suffragists that their victory is inevitable." One handicap for the suffrage workers, in the opinion of several Eastern editors, was the belief in many States (especially Ohio, where both suffrage and prohibition were defeated) that the two causes go hand-in-hand. Such, for instance, is the opinion of the editor of the *Cleveland (Ohio) Press*. But the *New York Sun* wonders whether such a belief is really justified, saying that in Ohio and Missouri it undoubtedly counted in the final result; yet in this election Arizona and Washington, where women voted, went dry, while California, with women voting, remained wet.

In one of the new suffrage States, the *Butte Daily Miner* and the *Helena Independent* argue that the coming of equal suffrage will make very little difference to the average citizen of Montana, since, as *The Daily Miner* puts it, "no revolutions in political or social affairs have resulted in States that have adopted this course." For instance, "up to the time that this last election was held not a single State which had granted the ballot to women had been converted to the prohibition column, and yet both sides used the argument that if women voted the saloon would be put out of business." And in a State where woman suffrage was decisively voted down, *The Gazette*, of St. Joseph, Missouri, says "the liquor-dealers are needlessly frightened if they are opposing woman suffrage as a proved menace to their business." There is nothing in the actual practice of equal suffrage up to the present to justify such a view, he adds, and yet "the liquor interests will continue to look with unfriendly eye upon woman's attempt to obtain the ballot," for the simple reason that "any interest whose future is menaced as compared to its present status will oppose the injection of a new and therefore uncertain element into those matters relating closely to its own welfare."

To those looking through the election returns to find what effect the extension of the franchise is having, the result is not particularly enlightening. The facts noted above would seem to show, as the writer of a Chicago press dispatch remarks, "that women do not unanimously oppose saloons." In Illinois, this writer agrees with the editor of the *Chicago News* that "women seem to be voting mainly as their men folk vote." Yet *The News* cites several instances of the value of their work at the Chicago polls in defeating certain undesirable candidates, while "in California, where women's political activity is especially marked, their influence is strongly felt on the side of good candidates and good measures." Furthermore, "as bearing upon the effect of votes for women," the *Springfield Republican* asks us to compare Illinois with Pennsylvania:

"Roger Sullivan was defeated, while Mr. Penrose was mightily a winner. It is not necessary to claim that the women caused Sullivan's defeat, but the fact remains that a Sullivan victory can not be charged to an equal-suffrage State."

PROHIBITION WINNING THE WEST

THE FACT that the four States which went "dry" at the recent election were Washington, Oregon, Colorado, and Arizona means, in the *Detroit Journal's* phrase, that "the wild West and the barbarous South have joined fortunes in abolishing the saloon." Now, adds the *Springfield Republican*, prohibition is to be tried out in all sections of the country. "With the movement passing in intensity from the South to the Far West, the absence of a race motive in total prohibition" makes it seem probable to the *New York Evening Post* "that in each of the newly added States the laws will

THE FOURTEEN WHITE STATES HAVE STATE-WIDE PROHIBITION LAWS.

involve a struggle between rural and urban population." Yet it thinks "there is every reason to believe that public sentiment in even the largest Western cities will uphold the law once it is the law." Against the four States voting for prohibition, the important States of Ohio and California decided to remain wet. This gives such a liquor-trade paper as the *Philadelphia National Herald* cause for rejoicing, especially since in several other States, notably Missouri and Pennsylvania, local-option propositions or local-option candidates were defeated. But, as the Antisaloon League organ, *The New Republic* (Westerville, Ohio), notes, the four new dry commonwealths followed the lead of Virginia, which, on September 22, voted for State-wide prohibition, "so that the results of voting this fall show a 5 to 2 ratio in the seven States in which elections were held." In the States which were lost "a fight for the next election will be begun at once," and the net result of the election is declared a victory which "will have tremendous effect on the battle for national prohibition." There are now, as the *Detroit Journal* would remind us, fourteen dry States, in addition to the innumerable dry counties in other States. And, says *The Journal*,

"Viewing the question in a broad, national way, one observes not merely the increase in dry territory, but the increase in efficient enforcement of prohibition in that territory."

"The States that have in them sufficient antiliquor sentiment to carry prohibition, for the greater part, are also exhibiting a sufficiently strong antiliquor sentiment to enforce the law."

In Colorado, one of the new prohibition States, the *Colorado Springs Gazette* seems to be convinced by the election returns that public sentiment has now reached the point where a Federal prohibitory amendment "will be adopted almost by acclamation whenever the people get a chance at it"—

"The liquor interests may succeed in delaying its passage by Congress for another year or two, but the issue is assuming such proportions that Congress will not dare hold it up much longer. The liquor men might as well save their money and cease further efforts to 'educate' the public in an appreciation of the greatness of John Barleycorn. He is a permanently discredited hero."

In another State taking its stand for prohibition, press opinion is divided over the prospect. *The Labor World*, of Spokane, informs us that organized labor opposed the amendment almost

as a unit, understanding "that under the provisions of the bill liquor in vast quantities could be shipped into the State," and that "it would deprive thousands of stanch, true, union men of their positions, and let liquor remain." Men who view the liquor question from an economic standpoint are disappointed, according to the *Bellingham Herald*, and the *Tacoma News* believes that citizens of Washington face additional tax burdens. Yet the latter paper counsels strict obedience to the law and cheerfulness in meeting the new conditions. On the other hand, the *Spokane Chronicle* sees ahead a new era of prosperity by the aid of the prohibition law—

"Washington has chosen the lasting kind of prosperity by deciding to eliminate its most conspicuous form of waste. To say that prosperity will be lessened by abolishing a business that employs thousands in labor which is not only useless but destructive of property and earning power is to make an argument that is not only fallacious, but absurd."

Now that Oregon and Washington have voted out the liquor traffic and California has voted to keep it, "the saloons and breweries and whisky-houses of Oregon and Washington are preparing to move into California," says the *Kansas City Star*, and "how long can California stand that handicap?" But this is not everywhere looked on as a handicap. The *Tacoma News*, for instance, remarks that California "will not suffer financially by reason of the fact that both Oregon and Washington have gone dry." And the same daily gives the explanation of the California result which is generally accepted by editors of the most diverse views on the liquor question: "California vineyards and hop-yards, and the two expositions next year, added to the fact that the State depends so largely for a livelihood upon the tourist trade, resulted in an overwhelming defeat of the prohibition measure." The *San Francisco Labor*

Clarion is glad that "the prohibition amendment, which threatened to throw thousands of workers into a state of idleness, was defeated." The *San Francisco Argonaut* is no less pleased, while the *Sacramento Bee* declares that "California has been saved from a great calamity by the overwhelming vote against prohibition." Yet periodicals like the weekly *Issue* (Lordsburg) and monthly *Out West* (Los Angeles) protest against the idea that a "dry" vote would have done any eventual harm to California's laboring men and business interests. Such statements they think insincere, especially since, as *Out West* estimates, "the wine traffic amounts to only a little over 1 1/2 per cent. of total industries."

If California was "saved," so, too, was Ohio, largely through the enormous "wet" vote cast in Cincinnati. Tho the majority was decisive, the Antisaloon League papers are urging a renewal of the campaign, and the *Springfield (Ohio) Sun* believes that "the saloon is destined to bear the brunt of even fiercer fights against it," and that a prohibition amendment will some time be written into the Constitution of Ohio.

Pennsylvania did not vote on prohibition, but in that State, as the *New York World* notes, "where a prohibition movement was directed against Senator Penrose, the reforming zeal of some of his political opponents only added to his political strength." There were also a number of candidates for Congress or the legislature who were running on local-option platforms or on their antisaloon records. These candidates, *The National Herald* reports, were "defeated all along the line." The reelection of Senator Penrose is also pleasing. Altogether, declares this weekly liquor-trade organ—

"There is not a dealer in the wine, spirit, and beer business in the State of Pennsylvania who is not happy to-day over the results of the election in this State last Tuesday. There is also a great deal of rejoicing over the results in Ohio and California."

FOREIGN - COMMENT

EUROPE'S CONCERN OVER OUR ATTITUDE

THE IMPORTANCE of American sympathy appears to be recognized by all the warring nations, to judge from the strenuous efforts being made by some of the Powers to exert a direct influence upon public opinion in this country. For example, the London *Daily Chronicle* has sent a well-known English writer to this side to survey the field of American thought and to find out how best to secure and preserve American friendship. So, too, the German Government, influenced by the reports of the anti-German stand taken by the American press, at least in the East, has sent a statesman of the first rank upon a mission to present to the American people the truth as it appears to German eyes. The recent appeal of Congressman Gardner, of Massachusetts, for a "state of preparedness for eventualities in the United States" has excited much comment across the water, and Gabriel Hanotaux, once the French Minister of Foreign Affairs, says in an editorial in the *Paris Figaro*:

"This speech indicates a certain evolution in America in the past two months. Furthermore, private letters from the United States show clearly that 80 per cent. of American citizens favor the Allies. Germany does not conceal her desire to ruin England and dismember France. The first result of her victory would be the destruction of the English fleet and the possession of one or more French and English ports on the Atlantic. Then America would find herself a maritime neighbor of a colossal Empire whose object before everything is economic triumph. How could the United States maintain first her economic and then her political independence if she found herself facing alone the greatest military and naval Power known to the history of the world? . . . President Wilson is not unmoved by these considerations. Despite his firm determination to preserve the neutrality of his country he understands the gravity of the situation. . . . Perhaps still other preoccupations are already agitating his soul, which has been moved by the sentiment of the menace to his country's interests and of which Mr. Gardner's resolution is a symptom. Mr. Gardner told Congress that he believed that God would defeat Germany. That is all very well, but might he not add, by way of comment, the old proverb, 'God helps those that help themselves'?"

The French statesman considers that we are awake to the dangers of German ambition and have abandoned our traditional isolation and indifference to "*welt politik*." A similar view obtains across the channel in England, where the London *Outlook* remarks rather acidly:

"In spite of the German press campaign—perhaps to some extent because of it—the people of the United States are beginning to consider their position in the world, and to recognize at last that the western hemisphere really lies upon the earth and not upon some other planet. It is slowly but surely being recognized in the States that the Monroe Doctrine has nothing

at the back of it but the British Navy, and that if the British Empire were defeated in the present contest, Germany would be able and willing to put the Doctrine to the test. Hence there is talk of the need of an American defense scheme, tho even the shrewdest opinion of the States has not yet acknowledged, openly at any rate, that Britain and her Allies are as really fighting for American independence as for their own. Nevertheless it

is as well that the States should take stock of their position, for, as an eminent American publicist has said, 'Bullets can not be stopt with bombast nor powder vanquished by platitudes.' Nor, we may add, can pacifist countries depend forever for their national existence upon the benevolence of distant kinsmen."

More cordial in tone are the views of the London *Morning Post*, which in a long article expresses regret for "the injury that was done to the relations between Great Britain and the United States during the American Civil War by the tone of the English press," and then goes on to say:

"We feel certain that Mr. Wilson will do nothing that is not prompted by the highest sense of justice, or that will not be for the benefit of the world, should the occasion arise when his friendly offices can be employed. That is all we ask. We have been glad to have the sympathy of the people of the United States because we be-

lieved they were in a position to form an unbiased judgment and reach an impartial conclusion. Had that sympathy been withheld we should have been disappointed, not because a sentimental appeal to blood or race had fallen on closed ears, but for reasons far higher, and which mean more to the progress of civilization. People of the same race and of the same speech may not have the same ideals or aspirations; people without kinship may still be kin in thought and spirit. We have been forced into a war not of our seeking; we have been compelled to fight in protection of everything that is to the American sacred; that is the foundation on which the American social fabric rests secure."

The entire German press are frankly disappointed at the attitude of America and consider that we have been misled by one-sided accounts of events received from English sources. This view finds expression in a fervent appeal for American sympathy published in the *Hamburger Fremdenblatt*, which says:

"England's first act of war was to cut the German cable. Now we learn from America to what shameful comedy this was the preliminary. England accuses Germany of being the cause of the outbreak of the war. If the matter were not so dreadfully serious, one would be tempted to laugh.

"Americans! Can your clear brains really believe that a man would build a house for forty years with never-flagging diligence, only to set fire to it ruthlessly in the forty-first? Such a man would be mad! Can your clear brains really believe that a nation that has done the work of civilization and culture for forty years with untiring industry would voluntarily tear down its own work, destroy its commerce, prostrate its arts and

PERMANENT PATRIOTISM.

Thousands of British soldiers are being tattooed with patriotic and amatory sentiments before their departure for the front. Here is a typical example of a soldier's desire to record his loyalty.

sciences, and send the entire flower of its youth to death? Do you really believe that the entire German nation of sixty-six million human beings have suddenly gone mad?

"Do you Americans seriously believe this fairy-tale of the neutrality of Belgium that England wished to protect? Even in England no one is so simple-minded. In England it is openly admitted that the real issue is a commercial war against Germany. Belgium did not need to suffer. In Luxemburg not even a sparrow's feather was ruffled.

"Americans! Ask your common sense which side acted 'fair.' That side which must cut cables in order to be able, undisturbed, to deny before the world the authorship of the most loathsome war that ever started for commercial reasons, or that side where a nation rises as one man to defend the fruits of forty years of cultural work?

"We Germans call for the pity of no man; we will defend ourselves or die; but, as a people, we demand 'fair play.'"

Some sections of the German press, however, consider that America is hopelessly prejudiced and deprecate any further appeals to our reason or our sympathy, thus Count von Reventlow, the well-known publicist, writing in the Berlin *Deutsche Tages Zeitung*, thinks:

"It seems to be beneath our dignity to go on appealing before the United States in the attitude of one who thinks that he must justify himself. We are far from misunderstanding or underestimating the good-will of Count von Bernstorff and Herr Dernburg. We ask ourselves, however, what is the sense of it all, and whether there is not a point to which we, in our position, attacked on all sides, should regard it as a duty of self-esteem to adopt an attitude that if a people do not believe our words and deeds we will refrain from perpetual repetition of our words.

"When a man like Mr. Roosevelt, whose importance as a statesman we never rated too high, but who has been in Germany and knows many prominent Germans, can talk of Bernhardism in Germany, success of the German efforts 'to shed light' seems to be of a very problematical nature."

ISLAM AND THE "HOLY WAR"

THE SWORD OF THE PROPHET drawn in defense of German culture has been discussed in the German press for some time past, and now the Sheik-ul-Islam, the chief ecclesiastical dignitary in the Ottoman Empire, has proclaimed a Holy War against Russia, France, and Great Britain. German journals point out that England and France are the greatest Moslem Powers in the world, and the revolt of their Mussulman subjects in obedience to the bidding of the Sheik-ul-Islam will be, they say, a most serious embarrassment to the Triple Entente. On the Allies' part serious journals pooh-pooh the action of the Moslem authorities and predict that this move of the Sheik-ul-Islam will be entirely disregarded outside Turkey itself. The most authoritative organs in the Fatherland discuss the question with deep seriousness. The *Frankfurter Zeitung* gives special prominence to the remarks of the *Habshmatin*, a Persian paper established in Calcutta for the last twenty-two years, which, speaking before Turkey's entry into the war, says:

we reflect upon the fact that Germany has sold to Turkey

at this critical moment two of her finest war-ships, we shall recognize that Germany will have at her back in this war not only Turkey, but the entire Moslem world. Without doubt Turkey, which occupies so commanding an influence over the Mohammedans of the globe, will not forget this generosity of the Germans."

Britain's blundering diplomacy has alienated Turkey and the millions of Mohammedans, and will thus ruin the Allies' cause, if we are to believe the *Frankfurter Zeitung*. It says:

"Grey has destroyed the traditional understanding between England and Turkey and has sacrificed England's true interests in the cause of Greece and Montenegro. The false moves of Grey have brought all the Moslems into line. Indians, Egyptians, and Persians recognize the English as foes. The blows that Grey has rained upon the Moslem world have roused it, *videlicet*, from its deep sleep. The two great Moslem sects, the Shiites and the Sunnites, have sunk their differences and become brothers. No Power in the world can ever again make Turkey and Persia break away from each other. The Egyptians, Indians, Chinese, and Africans will enter into a holy league. The Moslems living in the English and French colonies can no longer be true to their allegiance nor can those of the Caucasus, Turkestan, and Transcaucasia remain loyal to Russia. If Afghanistan, India, Egypt, Morocco, Tunis, and Algeria join themselves to the two Moslem Powers, Turkey and Persia, can the Triple Entente continue their war against Germany and Austria?"

The *Berliner Morgenpost* believes that revolts are raging at this moment in India and Afghanistan, and states:

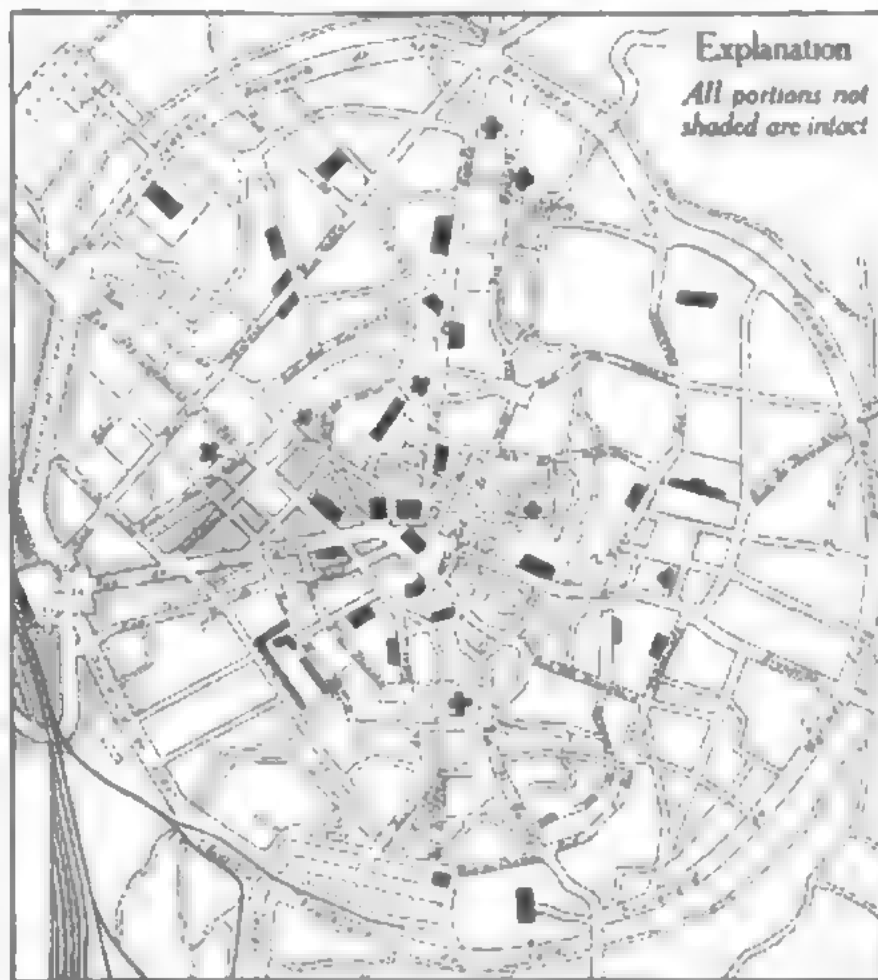

"According to announcements in Turkish papers in Teheran, reports from India state that the son of the Emir of Afghanistan is leading an army across the Indian frontier. It is reported from Simla that the appearance of the cruiser *Emden* before Madras caused a great stir among the Nationalist party in India, and attacks have been made on English officials."

Another issue of the *Frankfurter Zeitung* publishes a message from Constantinople giving an account of the efforts being made in Northern Africa to rouse the local Moslems to a Holy War against the French in anticipation of the Sheik-ul-Islam's action, and states:

"The Turkish clerical journal, the Constantinople *Seb ul Urrechad* ('The Straight Path') gives the translation of an Arabic proclamation being distributed through Morocco, Algiers, and Tunis. Moslems are warned not to fight on the side of France, for France is the enemy of God, of the Prophet, and of all Moslems. The proclamation points out the oppression of the faithful, and appeals to all Moslems to wage war upon their oppressors and rescue their religion and their honor."

The English papers doubt if the mere word of the Sultan or his deputy, the Sheik-ul-Islam, has any longer the power to rouse the Moslem world, and quote the following pronouncement of the Aga Khan, himself a descendant of the Prophet and the spiritual head of the Ismaili sect, which is powerful in India, Central Asia, and East Africa. The Aga Khan declares that Turkey's entry into the war is involuntary and denies her spiritual authority. He says:

"This is not the free will of the Sultan, but the will of the German officers and other non-Moslems who have forced him to do their bidding.

GERMAN EXTENUATION OF THE LOUVAIN BURNING.

"The above map confirms the fact that a complete destruction of Louvain can not be credited. Only that part of the city represented by the shaded part of the map has suffered in the combat that was forced upon us."—Issued by the Royal Prussian Army's General Staff.

"If Germany succeeds, Turkey will be a vassal of Germany. The Kaiser's resident will be the real ruler and will control the holy cities. No Islamic interest was threatened. Our religion was not in peril, nor was Turkey in peril. Now that Turkey so disastrously has shown herself the tool of German hands, she not only has ruined herself, but has lost her position as the trustee of Islam. Evil will overtake her."

The French press point to the profound tranquillity in all of France's Moslem colonies, and consider that the diversified allegiances and conflicting interests of the Moslem world make a Holy War an impossibility.

CHINO-JAPANESE FRICTION

IRRITATED by what they call the overbearing actions of the Japanese, the Chinese papers are filled with the bitterest comments upon their neighbors, whom they accuse of every crime from breach of faith to actual outrage. The trouble originated in the successful attack by the Japanese upon the German concession of Kiaochow and its port, Tsing-tao. During the course of military operations Japan considered it necessary, in forcing the surrender of Tsing-tao, to occupy, temporarily—they claim, the Shantung railroad. This China holds to be a violation of her neutrality, and she is not appeased by the promise of Japan eventually to restore Kiaochow to her now that the Germans have surrendered it. Most of the Chinese papers follow the lead of the *Peking Asia Jen Pao*, which says frankly that it "does not expect any such miracle to happen." Equally candid is the *Shanghai National Review*, which considers that:

"If Japan sincerely desired simply to hand back Tsing-tao to China, with or without compensation, she could have made her demands in a form that would have secured acquiescence, had she demanded the retrocession of the territory direct to China. As it is, the world at large (and there is no denying the fact) is frankly suspicious; and British suspicion is as genuine as that of anybody else, unfortunately. Were we to declare that we do not share these suspicions, we should be in a minority of one."

The seizure of the Shantung railroad, however, has seriously

exercised Chinese public opinion, as can be seen from the following comment of the *Peking Gazette*, which represents the attitude of the majority of Chinese papers, both vernacular and English:

"It is a serious question whether Japan can possess herself of all German privileges and undertakings in Shantung at this juncture without straining China's patience to breaking-point. Ever since the Japanese ultimatum expired, the Chinese Government has shown itself most reasonable and conciliatory in its attitude toward Japan. It has, indeed, exposed itself to a succession of protests, and even threats, from the German Legation, in consequence of its conduct in connection with the attack upon Kiaochow. The Central Government has given Japan indisputable proof of its friendly attitude, and has gone as far as it could reasonably be expected to go to meet her without actually overstepping the bounds of neutrality. But there are limits beyond which the Government can not go without arousing the indignation of its own people, and if permanent peace is to be maintained in the Far East, Japan must see to it that she insists upon no demands, the fulfilment of which may provoke serious opposition in China, and place the Chinese Government in a false position *vis à vis* its own citizens."

China claims that Japan's act is a violation of her neutrality and has entered the most energetic protests, but is warned by *The North China Herald* that "the right of China to complain was lost from the moment that she allowed the Germans to fortify Tsing-tao." Meanwhile tales of outrages upon the people of Shantung are finding their way to Peking, and that they are receiving credence is evident from the fact that the Secretary of the International Reform Bureau, Peking, writing in the *Hwang Chung Pao*, says:

"The truth of these reports of Japanese outrages on the people of Shantung has been proved from the most reliable sources. Natives, foreign missionaries, and Chinese official statements show that the stories have not been beyond the truth."

The *Shanghai National Review* paints a picture of the Japanese in Shantung in very strong colors:

"As far as we can see there is absolutely no difference between the way in which Japan is occupying Shantung and the way in

—Beck's Weekly (Montreal).

THE MOSLEM VIEWED FROM EACH SIDE.

which Germany is occupying Belgium, except that the occupation of Shantung is being carried out without opposition. The country is being devastated just the same; the supplies are commandeered just the same; the people's homes are invaded just the same; and all ordinary business is dislocated just the same. The only difference is perhaps to the advantage of the unfortunate inhabitants of Belgium; their private rights are respected even tho their Governments are at war, and their family furniture is not broken up for fire-wood. It would appear as if the Japanese officer has a good deal yet to learn, and that he might have learned a lot of it from the revolutionaries of China in 1911.

"Outrages of this kind, however, are not the only form of violation of Chinese national rights. Hardly was the landing of Japanese troops at Lungkow effected than the custom-house was seized, and, from the time of that seizure to the present, Japanese goods have been entering Shantung without paying the customary dues to the Chinese Government."

Nor did the Germans in Kiaochow escape a similar charge. For the *Peking Gazette*, in an article entitled "Helpless Chinese Farmers," says:

"It is learned that, in the vicinity of Tsing-tao, there are posted everywhere German proclamations, both in Chinese and German, to the effect that no farmers are allowed to work in their fields, because mines have been laid everywhere in the vicinity of Tsing-tao. Now the autumn harvest is at hand, the poor people will be deprived of the fruits of their labors and the means of livelihood for the whole year, as they will not be allowed to reap the crop. Petitions have been lodged in the office of Chinese high officials, but nothing can be done for them."

The Japanese papers justify the seizure of the railroad on the ground that it was really a German line. Japan, therefore, says the *Kobe Herald*, "was entitled to its temporary occupation, only she respected Chinese susceptibilities by limiting her operations within a necessary zone." The *Tokyo Kokumin*, too, agrees that "in fact, the railway company is a German concern, and Japan is thus justified in temporarily seizing the line, especially as such a step will tend to bring about a speedy restoration of peace in the East."

But another leading Japanese journal, the *Tokyo Chuo*, which is in opposition to the present Government, admits that Japan has gone beyond her rights in seizing certain stations of the railroad, pending the settlement of diplomatic negotiations, and sees trouble ahead, observing:

"It is not to be wondered at that in the National Council in Peking the chairman should have been applauded for his denunciation of Japan as a violator of China's neutrality, some of the members speaking in support, going the length of declaring that Japan's action is unwarrantable, and that China must draw the sword to maintain her dignity. This agitation raised in the Chinese capital against Japan has spread far and wide, and in Shantung Province the situation is such that an armed collision may at any moment occur between the Japanese troops and the Chinese."

The *Osaka Jiji*, one of the most influential papers in the Mikado's dominions, views the whole of the friction between China and Japan as the result of German intrigues, and says:

"The Chinese, both in official and private circles, will ere long fully understand the true motives of Japan in using the railway. The starting of the present agitation against Japan is mainly due to the Germans, who have been distributing 'gold pills' among Chinese journalists."

This charge is repeated by the *Tokyo Nichi-nichi*, which claims that Germany has spent in Peking alone more than a quarter of a million dollars in influencing the Chinese and foreign papers.

In discussing the way that Japan's action has been received by the Powers the *Osaka Asahi Shimbun* says:

"The Japanese action has the approval of England, France, and Russia, and its justice is acknowledged by the United States. Only Germany among the Powers objects; therefore the Japanese Government is pursuing its appointed course and occupying the railway, for the Chinese Government is not likely to be so foolish as to placate Germany at the expense of antagonizing Japan."

A BRANCH AT THE QUIRINAL.

"Grandad, what shall I do?"
 "Remember my words, 'I cannot be indifferent to the cry of anguish sent up by our undeserved brothers.'"
 "Yes, but —"

SCIENCE - AND - INVENTION

ANXIOUS MOMENTS: WATCHING A TAUBE'S FLIGHT OVER PARIS.

WAR, EXPANSION, AND AVIATION

COMBINATION is the order of the day, and if we think it is going to stop with the nation-wide trust we are woefully mistaken. It is bound to spread until we have Tennyson's "parliament of man, the federation of the world," but this biggest of all combinations is to come not through peace, but through war. Finally, if we want to keep out of the game, we must prepare to fight in the sky, for the air is to be the future arena of world-warfare. All this we are told in an article on "The Broader View of Wars," contributed to *Aircraft* (New York, November) by Alfred W. Lawson. It is not quite evident whether Mr. Lawson advocates our joining the world-combine as a component or not. His opening paragraphs would seem to indicate that he considers such a fate unavoidable for us, but in his last ones he appears to hold out some hope for an independent America, if she will read the signs of the times and take up military aviation on a sufficiently large scale. Perhaps, in that event, we may ourselves secure the leadership of the great governmental trust. Writes Mr. Lawson:

"Is there any good reason to believe that progressive expansion will stop with the nation any more than that it should have stopped with the tribe, community, or state? Not at all. Expansion and combination must go on until all nations, or combinations of nations, have become absorbed into one complete whole—a solidified people as large as the earth itself, a great and glorious unification of all the races to whom boundaries between different countries will mean no more than the boundaries between the different States mean to the American citizen to-day, and when race prejudice and patriotism will cease to exist entirely. Progress and expansion must go on, notwithstanding that the average human being has some sort of a dull feeling that this must all end in the year of 1914.

"A friend of mine owned a well-paying cigar-store a few years ago, and one day I explained to him the rule of expansion and suggested that he either absorb or enter into combination with several other cigar-stores for the sake of economy and self-preservation. He laughed merrily at the suggestion and said that he believed in leaving well enough alone. Well, I ran

across my contented friend the other day and, presto! changed he was no longer the proprietor of a cigar-store, but a clerk in one. While he did not believe in the rule of expansion there were others who did, and when he undertook to compete with combination single-handed he was put out of business through the agency of natural economy so quickly that he did not have time to figure how it happened. His heartrending yelps against the evils of combination were pitiful but availed nothing.

"Now, just what happened to that cigar-man commercially happens nationally to the country that is contented with its possessions and does not want further expansion—it becomes, sooner or later, a part of the country which believes in the expansion principle and is best fitted to fight for it.

"China, containing the largest mass of inert humanity upon earth to-day, is the worm trodden upon by every big and little country in the world with

sufficient pugnacity to show its teeth. This whole rotten mass will be gulped down, digested, and set in motion by one of the great war-dogs just as soon as he has demonstrated his ability to swallow up or incapacitate the other war-dogs who obstruct his way. It is not necessary to mention the name of any particular war-dog who will do the job; any of them will do it if once in a position to accomplish the work successfully, and the war-dog who accepts the task of absorbing and regenerating China will deserve the enthusiastic applause of the rest of humanity, for if ever tyranny, slavery, torture, and degradation have played a more important part among the peoples of the world than in this peace-loving race in China, then it has never been brought to light as yet. The horror of all modern wars is not even a shadow to the hellish

barbarities practised upon the inhabitants of this peace-ridden country."

Mankind, Mr. Lawson goes on to tell us, owes everything to war and very little to peace. Whatever peace and liberty we enjoy to-day we actually owe to war. It has always been the warrior who has taken up the fight against the slave-driver and savagery. War is a disinfectant which, as soon as the odor disappears, leaves conditions in a healthier and more purified state. All of our American wars prove that. He pursues the thought thus:

"Furthermore, the people who have been the most successful in war have been the most successful in the development of science and commerce. Just as the warrior acquired exceptional qualities through the necessity of great effort and deeds in battle, so these qualities exhibited themselves in his peaceful pursuits. Organization, heroism, temperateness, unselfishness, engineering skill, aircraft—all attain their greatest efficiency in war to the ultimate advantage of peace.

"Incidentally, the bravest fighters are usually the most considerate and humane characters. They go forth boldly to fight their adversaries fairly and squarely, face to face, and unafraid of personal bodily harm or discomfiture. They fight openly, man against man, according to certain rules, and after defeating the enemy they give him food, drink, and medical attention and otherwise treat him kindly. . . .

"So there will be other wars yet to come irrespective of the desires of the peace advocates and the sentimental, and the peoples who present the least resistance will be the first to lose their national identity.

"America will have to fight sooner or later or else peacefully submit to humiliation and subjection. If, when the time comes, she is not prepared to fight by proper and modern methods of training, then she will have to pay the natural penalty of defeat for her lack of it."

And what methods are "proper" and "modern"? Those of aviation, of course! Mr. Lawson leaves us no doubt of this. Aircraft, he asserts, is the great future vehicle of transportation—scientific, economic, and progressive. It will eventually become of tremendous commercial value, but wars will give it its earliest opportunities for demonstration and development. He goes on:

"The next war will be on as much larger scale as the present war is in comparison to the Napoleonic wars of the past.

"A vast final war between the eastern hemisphere on one side and the western hemisphere on the other side will be decided almost entirely by aircraft.

"Great air battle-ships of undreamed-of size and carrying-capacity and speed of over 200 miles per hour, capable of moving over either land or water, will make the Atlantic and Pacific oceans as boundary-lines, and all of the great land coast defenses as well as marine battle-ships absolutely negligible quantities. . . .

"America will have to prepare to fight. If she will not prepare to fight, then she will not be able to fight, and when she is not able to fight, she will then be in just as helpless a position as China is to-day, in case of any international argument. If America must fight, then she should have the most modern weapons to fight with.

"Aircraft is not only the most modern of weapons, but, owing to the great stretches of America's coast-lines and the vast area of its inland possessions to protect, aircraft is the most necessary weapon for America to have and improve, and the sooner America understands this little fact, and acts upon it, the better it will be for the protection of the American people of the future."

MORE HONOR FOR THE WRIGHTS

RECENT EVENTS have been strengthening the claim of the Wright brothers to recognition as the men who made aerial navigation possible. Most significant, in the opinion of the *New York Times*, is the "award of \$75,000 from the British Government in payment for the use in building aeroplanes of principles patented by them." This, according to the *New York paper*, "is a victory greater even than those won in American and French courts before the war began, for this is a time when only the clearest of 'cases' would be settled in such a way, for all ordinary compulsions are now either abrogated or weakened, and nations at war have little leisure for legal controversies." Little has been heard from the old Langley flying-machine since the experiments made over Keuka Lake a few months ago. The earliest stories of successful flights were, it will be remembered, followed by others casting doubt upon these successes. It is now a well-established fact, says Miss Katharine Wright, sister of the fliers, who has been keeping thoroughly posted in this matter, "that the Langley machine, as Langley knew it, was not tried, and that the machine, as doctored up by Curtiss and Zahn, could do nothing but make a hop off the water. It made no sustained flight." This, she thinks, settles the claim made for Langley's model. And the *New York Times* sees in the English decision the "ultimate vindication" of the Wrights.

claim for priority in the making of a successful heavier-than-air flyer. Says *The Times*:

"More than a patent suit and profits of manufacture was at stake. There has been, indeed, in this country, as well as elsewhere, something of regret among people who had given the subject only superficial thought, that the discovery of how to fly was not offered freely to the world for use and improvement, and the Wrights have sometimes been criticized for exploiting their invention without regard to sentiment. This feeling has, in turn, been industriously used by rival—and later—makers of aeroplanes to create sympathy for themselves as the objects of vexatious litigation by would-be monopolists.

"But whoever disregarded the claims of the Wrights to their legal profits also attacked their claim to priority of invention, and when this was done, as it often has been, by foreigners, they threatened to deprive the United States of the glory of having produced the solvers of a problem that had baffled the world for unnumbered centuries. Therein, for us, lies public interest in the maintenance of the Wright patents, and they now seem to be beyond further dispute."

MORE TROUBLE FOR TELEPHONE LISTENERS

THE RURAL AMUSEMENT of "listening in" on a party-line is apparently to be hard hit. In our issue for October 17 was described one attachment intended to interfere with it, and *Telephony* (New York, October 3) tells of another, which is claimed to possess the additional advantage of offering direct financial profit to the company installing it. This attachment simply locks the instrument against all eaves-dropping, while it does not disclose the identity of the would-be listener. Says the journal just named:

"The use of the Adsit attachment does not require any accessory apparatus, nor are there any complicated circuits involved. It is purely a supplementary form of apparatus not necessitating the displacement of any equipment now in service, and can be used on any existing type of telephone.

"The apparatus is a positive lockout device. Any two subscribers on any suburban party or rural line equipped with the attachment may carry on a strictly private conversation without the possibility of any one else on the line overhearing the

LOCKOUT ATTACHMENT USED WITH A DESK-PHONE.

conversation; nor can their conversation be interrupted by any one except central, who maintains control of the line at all times.

"No subscriber can monopolize the line. Altho the call may not go through central, there is an automatic device, located in the central office. This automatically restores the line to normal

at the end of any time-period the telephone company may desire, usually about three minutes. At the end of the time-period allowed for conversations, the parties using the line are not cut off, altho the line is restored to normal. They may continue their conversation, as they are not locked out; that is to say, all telephones are on the wire. Other parties may get in on the

SHUTTING OUT INQUISITIVE NEIGHBORS

The lockout mechanism on a wall-telephone.

line, as is now the case. In the event that the parties originally talking desire to have their conversation still remain secret, it is only necessary for them to again operate the lockout dial, which can be done in a small fraction of a minute. The line, therefore, can not be monopolized, as, after the first three or five minutes' secret talk is concluded, any one on the line can reach central in the short intervening time required to repeat the operation of the lockout device. The original parties may thus continue their conversation as long as they desire, or until some other party 'selects in,' in which event the original parties would be automatically locked out. It will thus be seen that every one has the private-line privilege for a nominal length of time and can continue the private-line feature by immediately operating the lockout device a second time; at the same time, no one can monopolize the line indefinitely. Before the termination of the secret-talk period, the parties using the line are 'signaled' by a short buzz, notifying them that within a half minute the line will be restored automatically to normal and their conversation will be no longer private unless they again operate the lockout feature of the device.

"If, for any reason, the central operator desires to clear the line for long-distance purposes, she can, at any time, secure access to the line through the timing instrument located at the office.

"One feature of this proposition which will appeal strongly to a large number of telephone companies, especially those in the rural field, is the fact that on one of the lines on which this system was tried out, the subscription rate was so low that the company could make no headway financially, and the cooperative feature of its organization would not permit of an arbitrary advance in rates. The officials could find no plausible excuse for a much-needed advance. When the line was equipped with the lockout device as an experiment, the service was so greatly improved that the subscribers, in this particular instance, were glad to consent to an equitable increase in rate. In fact, after the instruments had been in use only a few days, the subscribers refused even to entertain the suggestion of their removal, gladly agreeing to an advance in rates sufficient to justify the company in purchasing the equipment for all lines."

LOOKING ACROSS THE ROMAN CAMPAGNA.

Where scientific agriculture is eliminating the malaria that has made this plain as deadly as it is lovely.

THE PASSING OF ROMAN FEVER

THE ROMAN CAMPAGNA, long reputed one of the deadliest regions in the world, is being reclaimed by the Italian Government and restored to health and usefulness. This tract of country was in ancient times famed for its productive farms and great country-houses. There was no fever in it then. Where did the disease come from? There was no answer until the discovery that malaria is propagated by a species of mosquito. Then the matter became clear. Exterminate the mosquito, dry up his breeding-places, and the dreaded Roman fever would disappear. This is precisely the result that the operations under Government auspices are accomplishing. We quote from a review in *The Lancet* (London, October 17) of an article on the subject contributed to *The Edinburgh Review* by an Italian authority, Mr. L. Villari, who intimates that the reclamation process is something more than the abolition of mosquito-breeding by drainage. Says the reviewer, in substance:

"The Campagna is a congeries of hummocks rising into hillocks, intersected by *fossae* [ditches] either stagnant or dribbling their way into the Tiber. How is it that this should be the true description of an expanse of soil which was once famed for vegetative energy, and which, in response to cultivation, was covered with patrician residences and surrounded with gardens? How is it that a tract of country once a favored health-resort should have degenerated into a fever preserve? Views of the origin of one of the most characteristic phases of the Campagna, its unhealthiness from 'malaria,' are gaining ground which imply that insect life, in some of its most pernicious developments, is not the *causa causans* of the 'malaria' in question, but is itself a symptom of a deeper pathological coefficient without which the said insect life would cease to exist. Left derelict, or deprived of its proper treatment, the soil avenges itself by an unerring retribution. Wherever cultivation has done justice to the soil, the insect disappears, and with it the 'malarious' infection. To this Mr. Villari bears emphatic testimony, showing how the reclamation now in progress under Government is, precisely in those localities where it has been thoroughly practised, the prelude to the extinction of the insect (deprived of its pabulum), and, coincidentally with this, the disappearance of the 'malaria' and of the fever it induces. In other localities the State provision of quinin and wire gauze in the dwellings have had most salutary uses—the notable reduction of sickness. The appropriate utilization of the vegetative energy by scientific agriculture—in a word, the restoration of the Campagna to the salubrity and the amenity enjoyed under the Antonines—such is the prospect to which Mr. Villari invites us."

THE SPEED OF GLOBE-CIRCLING

THE EARLIEST RECORD in journeying around the world was held by Magellan at something less than three years—the latest stands at 35 days and 21 hours. It has taken us nearly four centuries to lower it to this extent. To reduce it in the next four hundred years in the same proportion, we should have to make the circuit, in A.D. 2314, in about a day, or in the time it now actually takes us to make the circuit by the rotation of the globe. Dr. R. Hennig, who writes on the subject in *Prometheus* (Leipzig, September 19), calls attention to the fact that Jules Verne's celebrated tale, "Around the World in Eighty Days," was written just after the opening of the Suez Canal and the construction of the first American transcontinental railroad, which had made it possible to lower the record to this unprecedented figure. Since 1870 we have cut it in half, "and then some." It remained the ideal of swift travel, Dr. Hennig tells us, until the very beginning of the present century. He writes:

"The completion of the trans-Siberian Railroad in 1901 brought with it the possibility of going Jules Verne one better. The trip from Moscow to the Pacific had taken the Dane, Vitus Bering, the discoverer of Bering Strait, three full years in 1720, and sixty years later Count Barthélemy de Lesseps, Ferdinand de Lesseps's uncle, . . . required 376 days for a quick journey from Kamchatka to Paris. After steam navigation came in and the Suez Canal was opened, the journey from Western Europe to Eastern Asia was cut to one and one-half to two months. The trip to Kiaochow, which to-day lasts only about twelve days, with the help of the Siberian Railway, required, from Germany to the sea, in recent years about 47 days—very lately 38. . . .

"Without using the Siberian Railroad, the quickest journey around the world in the year 1901 was 60½ days; in 1903, 54½ days. Using the Siberian road, the feat was accomplished in 1907 in only 40½ days. . . . Practical experiment, however, has already shown that this period is doubtless capable of considerable shortening.

"A reporter of . . . *The Evening Sun* (New York), several months ago, succeeded, in the interest of his paper, in making a record-breaking trip around the world. This trip was really shorter, in miles, than formerly, for the equator was not crossed or touched. The route extended from New York to London, Paris, Berlin, Petrograd, Moscow, the Siberian Railway, Mukden, Fusan, Shimonoseki, Tokyo, Yokohama, Victoria, Seattle, and Chicago, thence back to New York. It began on July 2 and ended on August 6, 1913, and occupied 35 days, 21 hours, and 35 minutes. . . . The traveler was delayed in London 21 hours, in Paris 8, and in Berlin 11½. In Siberia

the washout of a dam caused a delay of 18 hours, on the Pacific bad weather prevented the making of good time, and at Seattle thick fog made landing impossible for a time, the enterprising reporter finally making use of an aeroplane to get ashore. The shortest day's journey, London to Paris, was 286 miles; the longest, Ann Arbor to New York, 948.

"This shows clearly that another record-breaking trip is quite within the possibilities. With normal speed on steamship and railroad, the journey ought to be made in between 33 and 34 days. If we may shortly make use of Zeppelins and aeroplanes . . . a further shortening may be looked for.—Translation made for THE LITERARY DIGEST.

THE GOOD SIDE OF WAR

THE WAR-GOD may slay ruthlessly with one hand, but he ministers with the other to the sick and feeble. Half of him is clad in armor and the other half in the garb of a hospital-nurse. So we learn, in effect, from an editorial in *The Army and Navy Journal* (New York, October 10). The editor of this paper is annoyed by a casual remark of the *Springfield Republican* to the effect that "war and pestilence have always gone hand in hand." This may be the record of the past, answers *The Journal*, but there is less likelihood of it in the future, and the improvement has been the result of war and military control. We read:

"The war with Spain in 1898 resulted in the ending of yellow fever as a world-wide scourge, not only of the tropics, but of countries reached by emigrants from the tropics. . . . It was army medical officers, not civilians, that directed that great work, and to them should go the credit. . . . It is idle to say that the same thing would have been done without the war. The fact is that civil administration wrestled with the problem unavailingly for generations, and the disease bade fair to continue as a menace to the health of the world until the United States Army set to work the sanitary machinery that put an end to this most terrible of diseases. Within the short space of half a dozen years the reign of yellow fever came to an end and the world was at last freed from this terror of the centuries.

"The same war saw the beginning of the great health reforms which have saved thousands of lives in the Philippines. . . . When the civilian bureau of health took up the work with its larger funds and opportunities, this good work was extended until now the scourge of smallpox has been eliminated from the islands and cholera also is going the same way. Smallpox used to count its victims by the tens of thousands annually in the Philippines; now it has virtually disappeared.

"But there is another achievement which can rightly be placed to the credit of the results of war. The world has rung with praise for the work done by Gen. William C. Gorgas, Surgeon-General of the United States Army, as chief sanitary officer of the Isthmus of Panama, and his able assistants in ridding the Canal Zone of yellow fever, and in turning this plague-spot of the world into a region that will compare in salubrity with some of the most naturally favored sections in northern latitudes. . . .

"The mastery over the yellow fever in Panama has been due to the knowledge acquired and the results accomplished in Cuba as a consequence of the occupancy of that island by the American troops and the grappling with the fever-scurge

by the officers of the Medical Corps, U. S. A. The victory won in Cuba by our soldiers was not so much over the troops of Spain as over the forces of ignorance and poverty that turned that garden-spot of the earth into a pest-hole threatening the United States with its deadly fevers. Some years ago we said that the benefits conferred upon the world through the elimination of yellow fever in Cuba by our army medical men

more than offset the loss of life and property incidental to the war that drove the Spaniards from this hemisphere. As the years have gone on extending the immunity from fever from Cuba to the Panama Canal Zone, and thus making possible the construction of the canal, we find that our statement as to the counterbalancing blessings, sanitarily speaking, bestowed by the Spanish-American War upon the world was fully justified.

"Another feature of medical prophylaxis we should mention in justice to the splendid record made by the medical men of the United States Army. It is true that the Spanish-American War resulted in the loss of a great many lives through typhoid fever contracted in the concentration camps such as that at Chickamauga, but the experience then passed through turned the attention of army surgeons to the necessity of finding some inoculatory preventive, and out of these researches has come the antityphoid-fever vaccination, which in the last three years has practically reduced typhoid morbidity to a negligible quantity in the United States Army. The first army in the world in which vaccination against typhoid was made compulsory was that of the United States, and the results obtained in our Service have served as guides to the medical directors of armies of other countries. It is the Army of the United States that has blazed the way to the elimination of typhoid from civilian life as well as from the military through inoculatory prophylaxis. Indeed, there are army medical officers who believe that if the same efforts were put forth in civil life to prevent typhoid that are employed in

the Army thousands of lives lost each year in civil communities would be saved."

WHEN FIGHTING GROWS TIRESOME — Physical and mental exhaustion of soldiers, says "The Annotator," in *American Medicine* (New York, October), is a matter which military commanders are prone to ignore. He goes on:

"The skilful commander knows exactly how much effort his soldiers can make without becoming too fatigued to fight. It is often necessary to rest an army even in the progress of a prolonged battle. In addition, nutrition must be kept up, but if the soldiers march too quickly for their wagon-trains they go hungry. There is some evidence that plans of campaign have failed more than once because of the exhaustion of the soldiers from overexertion and lack of food. Some captured men were almost in a condition of shock; indeed it was shock, but it was cured by a nourishing meal and a long sleep. It is quite possible that the annual maneuvers, extending over a period of two or three weeks, have exacted more labor from soldiers than could be kept up in a long campaign, and that the attempt to do in war as in maneuvers is directly responsible for certain disasters. They have neglected the basic principles of warfare, and as these are matters of physiology, it is evident that the system of preparation was faulty through the habit of ignoring medical advice."

A GUN-INVENTOR TURNED COOK.

Mr Hiram Maxim has perfected a pork-and-beans combination, which he believes highly nutritious. He will give 25,000 tins of it to the Canadian troops. He is here shown chopping some pork to be used in his new dish.

BELGIUM'S ECLIPSED MENTAL LIFE

HOWEVER DEEPLY we regret the destruction of works of art, says Mr. Edmund Gosse, the paralysis of living intelligence is an even more serious matter. This is an observation that calls our attention to the effect of war upon the lives of men of letters. The outward and immediate effect in such countries as Belgium and France, and doubtless also Germany, is annihilation. They cease to be men of letters at all and are simply men in the ranks not distinguishable from others wearing the same uniform. The psychological effect is in danger of being almost as disastrous, and Mr. Gosse speculates in *The Edinburgh Review* on the future in the light of France's former experience with Prussian arms. "The lover or student of pure literature need accuse himself of no levity if his mind strains forward with anxiety and compares with our own cataclysm the catastrophes of former times." The martyrdom of Belgium, then, presents in this respect a case whose poignancy, in the face of her material disasters, has been so far well nigh overlooked. Writes Mr. Gosse, in a rather critical vein, as regards Germany:

"For a long while past the astonishing development of the Belgian mind, as displayed in a triple literature, has been watched in Germany, and noted by German professors, with patronizing envy. It has been observed, first with surprise and then with annoyance, that a little country no larger than a Teutonic province, tucked into a corner between the sea and two Great Powers, a country without a dominant language, without a decisive capital, a mere political expression, has since 1880 ventured to display, in defiance of the menacing shadow of Germany, an intellectual activity, French, Flemish, and Walloon, in which German *kultur* has found no place. It has not been agreeable to the professors of Berlin to be obliged to admit that the greatest poet of Europe at the opening of the twentieth century is unquestionably the noble Emile Verhaeren, a Fleming of the Antwerp district, writing consistently in French. It has not been to their taste to watch the advance of Maeterlinck, of Camille Lemonnier, of Eugène Demolder, writing in French, or of the less known and perhaps less brilliant, but numerous and enthusiastic, new school of authors composing ardently in Flemish and even to some extent in Walloon."

Since about 1880, points out Mr. Gosse, a most remarkable effort has been made by Belgium "to redeem her people from intellectual sterility, and since that time no country of Europe has come forward in literature so rapidly as she." We read of this movement:

"A generation joyously greeted at home as 'La Jeune Belgique,' stimulated by the ideas which were stirred in close spectators of the last great war, yet protected, in a highly prosperous

country, from the actual miseries and denudations of that struggle, dared to inaugurate a literary revolution against the cut-and-dried theories of their elders, and found for the first time a fitting expression in verse and prose for the rich, full-blooded, highly colored genius of Flemish life. In this movement, encouraged by the praise of Paris, undeterred by the sneers of Berlin, the pioneers were Max Waller, who died prematurely in 1889, and the admirable poet of Louvain, Albert Giraud, of whom I know not whether he is alive or dead.

"This exuberant school of writers, now as broad as Rubens in their joyous painting of life, now as exquisite as the traceries of their medieval architecture, has been, up to this summer, producing abundant work of a kind not exactly parallel in any

other country. In the matter of speech, of course, the possession of a single language has been denied to the Belgians. Their poets and novelists have to take their choice between a tongue which is shared with French or one which is almost identical with Dutch. But their genius, taking different manifestations from individual minds, is yet national and peculiar to Belgium.

"It has been observed that the greatest Belgian writers of to-day are Flemings by birth, education, and character; and even Maeterlinck, who has long inhabited France, alternately residing in Normandy and in Provence, is still a pure Fleming of Ghent in his dramas. There is no modern writer more national than Verhaeren, and to study his poems is to gain such an impression

of 'Toute la Flandre' as is to be found nowhere else. It should be interesting to note that when, in 1881, the 'Jeunes Belges,' in a now-famous manifesto, announced their intention of creating a national literature, they were met with coarse ridicule in Germany, and recommended to stick to the prosy business of their trades. They did not heed the warning, and in thirty years they have enriched their country with a fine harvest of masterpieces."

Mr. Gosse bitterly declares that "this literature of Belgium has now been trodden into the mud by the jack-boot of the Prussian," and begs us not to forget, "in our legitimate indignation at the destruction of medieval relics, that Germany has committed in Belgium—to speak for the moment only of Belgium—a still greater crime against light and learning." For—

"We have to consider the conditions of mental life in this gallant and unfortunate country. It is a commonplace to say that Belgium is the battle-field of Europe; it is more; it is the graveyard of successive generations of Flemish aspiration. Since the sixteenth century, when its earliest civilization was withered by the agitations of the Spanish invader, until the close of the war of 1870, when the assurance of its neutrality gave it at last a basis of hope and energy, Belgium never had breathing-space. Sacked by the armies of Louis XIV., hung by the Treaty of Utrecht on to the pikes of Austria, overrun and

EMILE VERHAEREN.

The Belgian whom Edmund Gosse declares to be Europe's greatest poet to-day. "To study his poems is to gain such an impression of 'Toute la Flandre' as is to be found nowhere else," for "no modern writer is more national."

annexed by the French in 1795, torn and tortured by European diplomacy in the days of Waterloo, not given, until 1830, even the shadow of individual sovereignty, the insecurity of existence in Flanders and Brabant through all these centuries could but detach the minds of men from the creation of works of the imagination. Who writes great poems when the specters of famine and fire are prowling round his homestead? After the last war all this was ended, as the Belgians thought, as all the rest of Europe, with one sinister exception, believed. The neutrality of Belgium, solemnly reasserted and confirmed, was a sacred basis for the intellectual life of the little admirable country to build upon. She was no longer so fragile, no longer so timorous, and she built the beautiful structure which Germany has now cynically and brutally destroyed."

JOHN BURROUGHS FREES HIS MIND

MEN OF LETTERS in many lands, particularly in the warring ones, have enlisted their pens in the conflict. While they fight with vigor, they do not always persuade the neutral that they fight without prejudice. Two new recruits from the pen ranks have lately appeared—the American John Burroughs and the Swedish Pontus Fahlbeck, of the University of Lund. Mr. Burroughs's article appears in the *New York Tribune*, and leads a later correspondent to suggest that "every news and religious paper and magazine in our nation print that splendid letter and that every minister read it from his pulpit." The "good gray" naturalist begins by "considering the genuine liking and admiration we Americans feel for the German people, based as it is both upon race kinship and long association with the German element in our midst," and points it out as "a curious psychological problem why our sympathy from the first day of the war should have been so overwhelmingly on the side of their enemies." As one man, so he perhaps too comprehensively reviews it, "North, South, East, and West, in conversation, in private letters, in the pulpit, in the press, we have voiced our condemnation of the war-drunk Kaiser and the military clique that surrounds him, and in our secret hearts have prayed for the success of the Allies." Mr. Burroughs's article traverses many of the well-known positions of our publicists, but the literary quality of its statement leads us to make no apology for possible reiteration:

"I believe that I make no extreme statement when I say that of all the Continental peoples, except possibly the people of the Scandinavian peninsula, we like the Germans the best, and certainly we owe more to them both in our material civilization and in our esthetic and intellectual culture. They are a great people; they touch us on all sides; they have added immensely to the richness and stability of our national and civic life. We like them as mechanics, as farm-hands, as kitchen help, as teachers, as neighbors, as coworkers in all fields. They are a sober, reliable, unassuming, home-loving, human people. Yet we stand at this stage of their terrible struggle wishing only for an overwhelming defeat of their armies.

"I have yet to meet a pro-German anywhere in the country or to see a pro-German newspaper. In the little country village in the Catskills near where I spent the summer every farmer and villager and city boarder that I met was eagerly waiting for news of the defeat of the German hosts. When the morning mail arrived the people gathered at the post-office and waited almost breathlessly for tidings in favor of the Allies. The men of German descent, of which there were many, had no sympathy for the Kaiser and his onrushing hosts. Upward of sixty years ago three young German brothers settled in this little Catskill village as blacksmiths; and what steady, honest, efficient men they proved to be! They married American women and had families. Their sons are among the substantial and always reliable business men of the community. I saw more or less of them almost daily, and if their sympathies were at all with the warring hosts of the land of their fathers I failed to get an inkling of it.

"This frame of mind in which our nation finds itself is not of our own seeking; we have not cultivated it; quite the contrary. It has been forced upon us by events over which we had no control, and it has been intensified as these events have multiplied. We saw German militarism springing with a tiger's

bound for the blood and life of a neighboring people whose only offense was that they had for a generation been making ready to try to ward off such an attack; we saw a small, peace-loving, industrious, inoffensive people, whose territory lay in the way of this fierce onrush of the Germans, trampled and murdered and despoiled, their villages and cities burned, their farms laid waste, their treasures of art and architecture consumed, their gold and silver demanded—we saw, and still see, millions of as worthy and likable people as there are in the world homeless, foodless, swept before and trampled upon by invading armies like autumn leaves, and we heard the cry for mercy and succor that went up from them and it still rings in our ears. We saw the vast military power of Germany loosened, as if it had long been straining at the leash, as it had; we saw it eager and ready—the readiness that is the fruit of long premeditation and preparation. It was as clear as daylight that it felt the thrill and the joy of its predetermined mission. . . .

"The iron brute Bismarck must have stirred in his grave. The gay, chivalrous, and, as we often think, frivolous people over the western border were hurriedly pulling themselves together to resist the unprovoked onslaught, and their ally across the Channel was as hastily marshaling her forces to rush to the rescue. What a spectacle it all was! Who can ever forget those early August days? One of the most efficient and admirable people the world has ever seen in the grip of a merciless military autocracy, welded and hardened into such a weapon of destruction as the world had never before seen, and aimed at a neighboring nation who would have been glad enough to have lived forever at peace with all the world. Poor La Belle France! How has she been sinned against both by her own rulers and the rulers of other nations! And little Belgium (the home of Maeterlinck), who dared to bar her doors against the titanic nation-despoiler and robber, and who now lies prostrate, bleeding, and famishing! Her wrongs cry to heaven."

Is it any wonder, he pauses to ask, that we in this country give our sympathy without measure to the Allies and their cause? He proceeds:

"We instinctively look upon the German Army as simply a vast machine rushing with blind fury upon the civilization of the world. We do not think of its individual units as made up of the altogether modest, industrious, human, and admirable people of whom we know so many. We see nothing human in it, and we see nothing admirable but its terrible efficiency. It is as regardless of life, of property, of things beautiful and precious, of the rights of the innocent and the unoffending as is any other machine. It is not expressive of the spirit of the Germany that we know—the Germany to which we owe so much in literature, in music, in philosophy, in science, and in the art of rational living, the Germany of Goethe, Schiller, Kant, Hegel, and a hundred others. It is rather the outcome of the Germany of the blood-and-iron Bismarck, and of the gospel of war that has been so assiduously preached by her recent savants and philosophers—the tense, abnormal Nietzsche and of the hard, calculating von Bernhardt, and of her ruling classes—the hellish gospel that might makes right, that small nations have no rights which great nations are bound to respect, the bygone feudal doctrine of the divine right of kings, and that the legitimate upbuilding of one nation can only be by the pulling down of another nation; the gospel of armed conquest, of the robber baron, of the pirate on land or sea; a gospel which sneers at treaties as scraps of paper and throws international morality to the winds; a doctrine which our own nation has done much to discredit by refusing to seize Cuba and Mexico when there was none to say nay; a doctrine to which, let us all hope, this war will put an end forever.

"War as now waged by the Kaiser against Belgium and France is but a high-sounding name for the collective murder and pillage and arson of a vast, organized band of outlaws, and for my part I believe it is the last spectacle of the kind and on such a scale that the world will ever see."

Mr. William H. Mathews, who is mentioned at the beginning of this article as urging that it be read in every pulpit, says further about Mr. Burroughs's letter:

"It should be translated into every language and sent broadcast through the world. A more moderate or truthful view of the diabolical German plans and a more merciless exposure of the military leaders could not be written, and the name will carry weight and be a great aid to right thinking and right decisions."

SWEDISH SYMPATHY FOR GERMANY

THE SWEDISH PROFESSOR referred to at the opening of the preceding article presents a brief for Germany against such charges as are brought by Mr. Burroughs. Writing in the Swedish paper *Statens Tidning* he holds that Germany and Austria were not the aggressors in this war. His thesis is that "nations may not be guided by the same considerations as individuals in meeting such a crisis as that which confronted Germany and endangered her very existence." Professor Fahlbeck argues:

"Some might hold that the war is not only terrible—as, indeed, it is—but also incompatible with a high degree of culture, and therefore unnatural and immoral. But this view bespeaks little insight into the vital requirements on the part of a State, inasmuch as those requirements and the moral duties resulting therefrom are different from those prescribed for individuals.

"Duty may demand of an individual that he refrain from claims to which he is entitled, or even that he sacrifice his own life. But this demand may never be made of the State. The highest task of the State, and therewith its highest duty, is self-preservation.

"Austria-Hungary as well as Germany were threatened for their very existence and had to take up the sword. For Austria it was a matter not only of punishing the people that had become guilty of the murder of a prince, but above all to stifle the Slavie propaganda which Serbia had set into motion in order to undermine the Austrian State and break off bit after bit of it. And for Germany the hour of fate would have been rung three years later at the most, in which it would have been forced to defend its newly won unity and position as a Power, the fruit of hopes and labors of a thousand years. That was known.

"There was no choice permitted, so completely had the three allied Powers isolated Germany. For Germany, too, this war was a matter of self-defense and therefore justified according to the laws of that duty which rests upon a State."

The Swedish professor further argues that "if this is true of Germany and Austria, the same is not true of their opponents":

"To be sure, the diplomats of these countries and the press influenced by them have continually asserted that Germany threatened the peace of its neighbors. But the history of the last forty years contradicts such assertions. And at heart the people of France, Russia, and England do not believe them either. This is plainly shown by a comparison of the sentiments reigning in the various countries with the sentiment in Germany. For the variety of sentiment concerning the war in the nations now warring with one another is the best verdict upon the war.

"The many races in Austria-Hungary welcome the conflict with Serbia as a war of liberation. And the German people have arisen against the mass of their foes with a unanimity and enthusiasm unmatched in history. The highest demand of duty on which depends all life of a State and, therefore, all culture, the duty of self-preservation, has stepped forth in all its majesty and has found a united people.

"The same is not true of Germany's enemies. It is true that here, too, the voices of parties ceased when the Fatherland called; here, too, they fought valiantly, but nowhere with the same enthusiasm and the same readiness. Moreover, the opinion of the people, outside of the parliaments, is here far from one of unanimity. According to all one hears from France, the average man wanted peace far more than war, even if the devotees of the 'revanche' were allowed to lead in the debate and adopt the resolutions. In England conditions were in part the same, even into the highest circles, as the resignation of Morley, Burns, and Trevelyan from the Government proves. In Russia, finally, there can be no talk of an opinion of the people itself.

"The variety of popular sentiment in Germany and the countries hostile to her gives the decisive answer to the question of the right and wrong in this world-war. And I am sure it will give the decisive answer concerning the final issue of the war.

"One can only hope that the war will be of short duration and that the victor will be content with a peace that is not dear, that will not crush France too deeply. For its vitality is not great; and the world can not afford to lose this people. Belgium, too, which, to be sure, not without some fault of its own, got between the hammer and the anvil, is entitled to sympathy. But the same is not true of Serbia. Of Serbia I need not speak; it deserves all the punishment it gets, and it can stand it. And the same is true

of Russia and England. They have a surplus of vitality, no matter how heavy the reverses they may have to stand, especially Russia. Nor can one cherish the least pity for this land, which is a State bent on conquest in the ancient sense of the word, and a constant source of danger to its neighbors. And still less can one have sympathy for England, whose ruthless-business policy under the intriguing leadership of Sir Edward Grey has now ranged that country among the enemies of Germany, altho it could have remained neutral as well as did Italy."

GERMAN PLANS TO WIN OUR GOOD-WILL

OUR ASSUMPTION of Germany's diplomatic duties in countries with which she is at war is gratefully acknowledged by a German professor, Dr. Ernst Daenell. It is to him a symbol of the ties that he feels binds the two nations. Germany's reciprocal attention to Americans who found themselves as tourists in the Fatherland when she suddenly became a military camp is on the other hand evidence to him "of real humaneness that a nation surrounded by mighty enemies with whom it must battle for its very existence can still find time to think of others and to provide for their safety and welfare." He feels sure that "the heroic war Germany has been forced to wage will appeal strongly to the kindly instincts inherent in the American character," for in many ways he sees Germany and the United States as "very much alike." His article, published in the *Illustrirte Zeitung* (Berlin), has been translated for the *New York Sun*, from which we quote:

"Taking the history of American development, we will see a strong likeness between the German war of independence in 1813-1815 and the American Revolution of 1775, as also in the unifying wars of both nations, the American war of 1861-1865, and the German war of 1866.

"In organization, too, we are alike: a confederation of States. Industrially, also, there is a similarity in the development during the last half century, especially in the tremendous industrial impetus noticeable in the last two decades, whose aim was to secure a world-wide market. Then in the unexampled, rapid growth of their cities, both nations present a strong similarity; in their superiority over other nations in the engineering world; in the systematic upbuilding of a navy; in the universal military instinct; in the manufacture of weapons, and in many other things.

"These traits, however, are only surface traits, of chief value in blazing the trail for mutual understanding and respect. The true soil in which mutual respect and sympathetic understanding must grow is a different one: spiritual culture. Harnack referred to this in the following words: 'To maintain the culture of the world was a mission entrusted to three nations—Germany, England, America.' And accusingly he concluded in bitter sorrow, 'Only two remain to-day.'

"Germany and America are to-day the bearers of a common cultural ideal which, altho the two nations are taking a different line of development politically as well as in individual and racial traits, still has the same basic motive power; their historical development is a result of the ethical genius of the nation. We Germans are sometimes prone to overlook the fact that the character of the true American is a highly idealistic one, and that this American idealism is a continually waxing force which acts as a leaven for the entire nation. As possessors of this ethical idealism, Germany and America are spiritually the two most wholesome nations on earth, and are bound in consequence to achieve a higher destiny than other nations."

There is no reason, the professor thinks, why this future should not be attained in mutual good-will and friendship. "Nothing has occurred in the past which America can charge against us," yet there is "one tremendous obstacle" between America and Germany that the professor sees fraught with peril:

"We must overcome the peculiar historical feeling existing between America and England; for those Americans who are responsible for American politics and for the shaping of public opinion are of Anglo-Saxon extraction. In cross-examining himself such an American would find that in his heart of hearts, in those instincts and sympathies which are due to race and to

SOME OF THE IRONIES OF WAR.

The theater of Le Mans, France, witnessed a strange entertainment when British forces were quartered there. One of the number attempts to amuse the sleepless ones. Those who can sleep are blissfully unconscious of his efforts.

tradition, he is still an Englishman. The German pilgrim of old was filled with joy on glimpsing the towers and battlements of the Holy City. Similarly, all true Americans become exultantly, exuberantly happy, on visiting the historical sites of Old England—Westminster Abbey, Oxford, Windsor, and Eton.

"It is altogether natural that the American trend of thought and sentiment, so far as they are grounded in historical and political education, should be anchored in England. England's history is America's preliminary history, and the history of America's independent development has been linked closely to England in many ways. A common tongue and a similar political organization strengthen these feelings. Of small moment, compared to this intensely strong feeling, is the fact that America's politico-territorial development has occurred in defiance of England.

"Not to speak of the two wars in which America fought England in order to establish her national independence, England, during several decades in the nineteenth century, did all in her power openly, and more frequently in secret, as is her habit, to hinder the expansion of the Union. All that has been forgiven by the United States, because the United States was victorious in every instance. It would therefore be unwise to overestimate these historical collisions and the indignant language indulged in occasionally by the American press against England. We are less apt to curb our tongue in reprehending a kinsman than in finding fault with a stranger. All these things are of little consequence.

"We Germans can not afford to overlook the fact that America, being the onlooker in a quarrel which England has with another nation, will side with England. How far removed we are from a closer, inner communion with America is best evidenced by the attitude of the American press throughout the country at the outbreak of the war. American sympathies went emphatically to England and to France; news from London, Paris, and Brussels was accepted as dogmatically true, and deliberately Americans held us responsible for the war, and the prospect of our ultimate defeat was a welcome expectation. An astonishing outbreak of anti-German sentiment!

"Under such conditions it is, of course, difficult for us to create a favorable sentiment for ourselves in America. Such a result can be brought about only by long and unrelenting work.

"In the first place the great majority of Americans must be made to understand, as a matter which is politically self-evident, that Germany has no aggressive intentions toward America.

The mistrust of Germany existing in America, which has been systematically fostered by the English and French press, must be entirely allayed. But by far greater acumen and greater efforts than have hitherto been displayed by us are required in order to overcome the effects upon the press and upon public opinion of the malicious news transmitted to America from abroad. We have been politically unwise to allow our enemies to traduce us, believing as we did that, because we had a clear conscience, the truth was bound to prevail. In this instance the truth will only conquer if we make very serious efforts to disseminate it.

"Above all, we must seek to get in closer touch with the American press and to enlarge and secure our direct cable communications. We must guard against the possibility of having our cable messages intercepted by our enemies at a time when we need them most; we must so arrange that in future English cables and English news shall not for months be in sole possession of the field, as has been the case, making it possible for England to arouse the excitable, inflammable, spasmodic temperament of some of the American people against us to a pitch which approximates the heat of war. The floating mine laid by English malice and cleverly exploded at the psychological moment had power to ignite public opinion, which, in turn, might have swept the Government off its feet.

"Our own press must learn self-control and, above all, comprehension of American intentions and character. The tone of our press must not be continuously attuned to contempt for, and suspicions of, American motives. To this end we need the preparation of a series of pamphlets, printed in English, which shall elucidate our political ideals, our internal affairs, and ethical convictions, and the distribution of these pamphlets should be carefully planned.

"Much can be done through personal influence, the effects of which, as shown in the case of our exchange professors, have a wide zone of usefulness. With the same end in view we must seek to better our relations with the influential German-American contingent, as well as with the Irish-American element. The passionate outbreak of the German-Americans against the recent outrages of the press surely can not fail to have some effect. We must realize, however, that the ability of the German-Americans to impress their convictions and make their influence felt is necessarily limited. We must seek to avoid making demands upon them which, for psychological or other reasons, they are unable to comply with."

RELIGION-AND-SOCIAL-SERVICE

APPEALS THAT PASS NONE BY

AT LEAST 2,500 Salvationists, it is estimated, are on the firing-line with the different armies, including 100 German officers. Some 50 Swiss officers are mobilized with the Swiss Army. The appeal of Commander Evangeline Booth for contributions to the rescue work carried on by the Salvation Army brings before us the effectiveness of this

Photo by Alice Boughton

FILLING IN THE ODD MINUTES.

The famous dancer, Adeline Genée, who devotes her present earnings, \$2,500 a week, to Red Cross work. While she waits for her cue her hands supplement the work of her feet in knitting for the soldiers.

organization, already long established for the work now most needed. One of their unique appeals asks for old linen such as the household consigns to the rag-bag, but now of the utmost service for bandages for wounds. Householders are urged to look up these discarded fragments and forward them to some Salvationist headquarters. The appeal of Commander Booth in *The War Cry* (New York) is full of passionate entreaty:

"I am not forgetful that I am continually appealing to my own people in the United States for financial aid, and recognize that upon this tried and proved source of generosity so many claims have already been levied, but never during the years I have been privileged to be in your midst have I been so anxious for your help, and I can not but feel confident that, as ever this same period, will you be so ready to give it.

"First, because of your recognition of the loss and sorrow which have come down upon our organization as a result of this Armageddon; secondly, because of your confidence in the equipment, second to none, which long experience has given the Army in dealing with eager masses of people in crises of agony and want; thirdly, because I know that, however much you have already done or may feel called upon to do, you will not fail to do something more at this unprecedented time of stress and anguish across the seas.

"The Salvation Army's share in all this travail and terror is wide-spread. As is now universally known, we are a globe-wide organization; the salvation of all peoples, body and soul, is our aim; national differences are lost sight of in our propaganda, and with our founder we have cried, 'The World for God!' Naturally such a standpoint has its shadows as well as its glory. One or more members of our great Army family can not suffer without all the others being affected, and international complications and controversies bring both direct and indirect ills upon us. My father said during the progress of another and smaller war, 'Whichever side wins, I lose.' So it will be with us.

"At the present time we have among the warring nations a great many thousands of Salvationists standing by the colors—Salvationists who are actually bearing arms. It is not only the gap left in our ranks by these husbands, fathers, and sons which we must face, but those who are left—their aged parents, wives, and children; many, alas! already become widows and orphans—for whom we must provide. And even wider and deeper than this is our loss, for the heavier bereavement, the greater penury, the more acute suffering are found among the poor of each conflicting nation—those vast and needy communities whose burdens the Army always carries upon its heart.

"Their breaking, bleeding spirits we must heal; their hunger we must feed; their defenseless we must ingather, and their desolate and despairing feet we must lead to the world's only Savior, the Prince of Peace.

"Now, with passionate entreaty, I plead for your help, your immediate help, your generous help. The wings of agony and death are swift; our action must be equally rapid. If you can give much, give much. If you can only give a little, give a little, and God and the Salvation Army will stretch it to its limit. But give, you must! Give, you will! The bereaved, hungry, weeping on earth will bless you. And who knows but that those whose lives have already been sacrificed will do so, too?

"If any donors wish their gift to be used to ameliorate the painful conditions in any particular land, and will specify the same, I can promise that the help shall go to its desired destination without delay."

A letter from a Belgian officer gives a picture of conditions where the need is acknowledged greatest:

"Our poor corps in Belgium have been utterly scattered. Many places where we have had corps there have been battles. I am hoping that all our dear officers and soldiers have been saved—brands literally from the burning. Here in Quaregnon it has been terrible—beyond all expression; more than 300 houses destroyed and so many civilians killed; not only men and women, but their little children. As yet, none of our Salvation Army comrades has been touched. We have been protected in a marvelous manner. We can say with David, 'The Angel of the Lord encampeth around those that fear him and plucks them out of danger' (French translation). God has done that for us. The battle continued from Sunday morning at eleven o'clock to Monday evening. The bombardment did not cease a moment; while it was on we had thirty of our comrades, with their little children, in our large cellar.

"The day after the battle—what horrible sights! Dead bodies in the streets, the wounded, and from all sides poor maddened people flying to save themselves with their little children—all the people weeping. I could never describe what I have seen. How is it possible that such things could take place in this age of education? And now the misery is here for the poor workers. It is already seven weeks since the men (colliers)

could work. The food has been seized, and more often than not wasted by the invading troops. The future is very dark for these poor people.

"When the English soldiers came here the Lieutenant and I prepared tea for them while they dug trenches. After the battle, when the Germans came, we lodged many of them in our hall and did what we could for them. Then I thought of all our dear Salvationists who are in the different armies—English, German, French, Austrian, Russian, Belgian. Oh, how glad I am that I remained at my post to help my comrades! On the Sunday during the bombardment the cry went forth: 'Let all those save themselves who can do so!' I went outside to see if there was any serious danger. Then I said to the people: 'Come with us in the hall; I will take care of you as much as I can.' They came, and were content to be with their officers."

Collier's Weekly prints a cartoon appropriate to the thanksgiving season and urges its readers to take it literally:

"If you do, there are agents aplenty to serve you in the giving—the Belgian Relief Fund (10 Bridge Street, New York), the Committee of Mercy (August Belmont, treasurer, Fifth Avenue Building, New York), the American Red Cross (130 East Twenty-second Street, New York). Trite is the saying, 'He gives twice who gives quickly,' but never was it truer than now; for winter is at hand, and human flesh and human souls are crying for the help that none but we can give them."

The contrast between Belgium's imperative need and Germany's widely advertised affluence is treated on the same page of the *Weekly*:

"While we give, Germany takes. 'No Food in Belgium—Six Million Homeless'; 'Belgium is Stript of All Supplies.' These are typical head-lines. If you read the news underneath, you learn that the fields are deserts, that no cattle are left in the pastures and no horses on the roads, that live stock and produce of every kind have been sent into Germany. As a result, 'the people are literally starving.' Yet German news sources affirm that Germany is entirely prosperous, hence not in need of the supplies of which she is robbing her victim. The *Fatherland* news service ('Fair Play for Germany and Austria') issues a broadside stating that 'There is wealth enough in Germany to defray the tremendous demands for war expenditures for at least a year. . . . The supply is ample for eighteen months. . . . It is not too much, therefore, to state that an ample supply of food for man and beast is in sight for two years.' At least a year—eighteen months—therefore two years. While Belgium starves, Germany continues to grind war-taxes from her smoking cities, violating all rules of civilized warfare. Germany's Consul-General in New York, Herr Horst Falcke, says in his kind way: 'Germany is doing its best to help the Belgians.' May God save the rest of the world from German 'help'!"

The *New York Evening Post* voices the general appeal and surveys some of the results to date:

"The growth of the Belgian Relief Fund in the past few weeks has been encouraging. Last week alone added about \$120,000 to the amount, and brought the total to nearly \$400,000. In this total, and in the contributions for the week, are included handsome sums sent to the Belgian Relief Committee in New York by local committees in other cities; thus \$30,000 was received from the Boston committee on Saturday. And there continue to be that wide range of size in the contributions of individuals all the way from \$1 to \$10,000—and that large number of separate participants, which ought to obtain in a matter appealing as this does to the deepest instincts of our common humanity."

"But let it not be thought that \$400,000 is anything more than a beginning—a mere earnest of what this great nation of a hundred million inhabitants, blest with resources almost beyond measure and happy in its exemption not only from the horrors but also from the terrific, economic burdens of war, is going to do for the relief of a people crushed beneath the weight of an affliction that defies description and transcends imagination—of hundreds, of thousands, perhaps millions, of women, children, and old men homeless and without resource, their whole land ravaged by war, starvation staring them in the face. We are not forgetting the magnificent work of rescue which is being carried on by the Rockefeller Foundation, over and above that furnished by the general contribution. But all that the Foundation will do, together with all that will be done by individuals, is sure to fall far short of what will be needed to supply the Belgian sufferers with the bare necessities of decent existence."

GUNPOWDER AND THE GOSPEL

GREEK ORTHODOX, Roman Catholic, Lutheran, Anglican, Presbyterian, all of whom make identical confessions regarding the God-man, are killing each other with the same avidity as if there had never been a Jesus. This comprehensive statement of *The Biblical World* (Chicago, October) brings the further reflection that "evidently men can

U. S.: "I'm thankful I've got it to give."

—F. G. C. in *Collier's*.

be theologically orthodox and put their Christ to an open shame." The editor who writes these words hastens to check us Americans against being complacent in our neutrality. "We have our Navy League and those who tell us that international morality is no stronger than military preparation," while "incipient militarists urge us to distrust and hate the very nations to whom the Church of Christ is sending missionaries to teach the primacy of the God of love." Further:

"Are we not even now being urged to grasp the world's trade as unhappy Europe sees it slip from the fingers that grasp the sword?"

"Suppose the Good Samaritan, finding the traveler struggling with the robbers, had run off with the traveler's luggage and clothes! Do you suppose Jesus would have told the rest of mankind to go and do likewise?"

"Is it Christlike to exploit another's misery?"

"War bids us measure the beam in our own eye."

"Is the Sermon on the Mount good instruction for militarism? Do soldiers put the golden rule into their knapsacks?"

"Is 'Love your enemies' printed on battle-flags?"

"Did the soldiers or Jesus go to the cross to save the world?"

"Men tell us we must have war in order to be strong."

"Jesus taught that we must become great by sacrificial service like his own."

"Men tell us that we must build up the nation's morale by economic policies."

"Jesus taught us that we can not serve God and Mammon."

"Men tell us that we must fight for our rights."

"Jesus told us by word and by example that we must die for other people's rights."

"Men tell us we must learn to fight, kill, and hate if we are to dwell in safety as a nation."

"Jesus told us that God is love and that the way to peace is

through a life that refuses to countenance hate and prefers loyalty to the crucified Christ to comforts with political supermen.

"We thrust the question home. Do men who thus refuse to order their lives by Jesus's words and conduct really take him seriously? Is their profession of faith in his deity a profession of sympathy with his spirit, obedience to his word, and loyalty to his example?"

"Christendom's interest in the present war is vastly deeper than its horror at brutalities, its amazement at the world's indifference to poverty and sorrow. The ultimate issue is between Jesus and Nietzsche. If we take Jesus seriously, we shall not war. If we take him simply as a doctrine, distrusting the truth and practicability of his teachings, we shall go on fighting indefinitely.

"The world's call to the Church is obvious enough. Will the Church answer it by training generation after generation to revere the teaching as well as the person of Jesus?"

IS WAR A MEANS OF GRACE?

THIS QUESTION is answered affirmatively by the Rev. R. J. Campbell, of London, who assembles facts to confirm his belief. He even asserts that England is "living on a loftier plane" now than when the war broke out. A correspondent of the *New York Evening Post*, "H. W. H.," gives us the grounds of Dr. Campbell's belief, but also assembles another sort of evidence which, he says, makes one feel somehow "a certain reluctance to believe that the nation was living on a lower plane in July than it was in October." There is, no doubt, ground for saying that the nation is "responsive to the call for spiritual things." We read:

"The clergy of all denominations are rejoicing in the larger opportunity that is coming to them, not only in their increased congregations, but in the more attentive hearing they are receiving.

"This is not the only evidence to support the theory that grapes do sometimes grow on thorns and figs on thistles. Lord Kitchener's call for recruits has awakened a spirit of self-sacrifice in all classes of the community. If we may believe the *'Times's History of the War,'* it has even been an effective agency in the reclamation of habitual criminals. According to that publication: 'It is not a coincidence that throughout Britain the war period was marked'—the writer uses the past tense, inasmuch as his history is to be regarded not as a contemporary diary, but as a standard work of reference in which everything will appear in true perspective—'by an amazing absence of crime. There may seem to be no direct antagonism between a scheme of world-war hatched at Potsdam and a burglary planned in Whitechapel. But many a burglar, moved to honest indignation by the German outrage, enlisted as a soldier or found some other way to declare himself on the side of the Right; and thus many police were set free to protect the nation's interests, instead of watching the criminals.'

"When even *Bill Sikes* has thus gained the right to wear an unaccustomed halo, it is scarcely necessary to say that the normally law-abiding people are not lacking in their devotion to the common weal. This unselfish zeal is frankly and thankfully recognized, even by those who are still of the opinion that war has closer affinities with hell than with heaven.

"Amid the darkness," says *The Friend*, 'one of the few gleams of hope, which we should prize and cherish, is that, while but a few weeks ago English people were divided into a variety of groups of persons trying to get something from the State in support of their particular interests, now the country, and in its smaller sphere the society, is full of persons banded together to give something to the State.'

"And not to the State only, as many a Belgian and French refugee would bear grateful witness. If anything, the relief of distress of all kinds in England at this moment is suffering not so much from indifference as from an oversupply of uninstructed enthusiasm. Everybody is not only willing to help, but anxious to help, and the problem is to turn this immense fund of personal service to practical account."

These are "the obvious gains of the war" and seem to justify Dr. Campbell. What the *Evening Post* correspondent finds to set on the other side is "the plague of malevolent lying that is spreading over the whole country." It will, perhaps, serve as a useful antidote in our daily newspaper-reading to bear in mind

how unsuccessful he was in tracing down the stories of "atrocities" that came within the pale of reasonable truth:

"The myth about the passing of the Russian troops through England did no particular harm, but when the same industry is shown in imagining and circulating stories of German atrocities it is a more serious matter.

"A short time ago a thoroughly trustworthy correspondent of mine repeated to me a tale that was current in his neighborhood. An English doctor had come home from the war with both hands cut off by the Germans. The alleged authority for the story was a letter from the wife of a Methodist minister, who had apparently a personal knowledge of the case. This seemed a precise enough clue, and as I happened to know the minister mentioned, I wrote to ask him for particulars. He replied as follows:

"It is true that we have heard of a doctor in one of our hospitals who had his hands cut off by the enemy while he was attending to our wounded on the battle-field; but we do not know his name, nor in what hospital he is."

"My correspondent had further told me that a local doctor of his acquaintance knew of a similar incident, a nurse from his own old hospital being the victim. I ascertained the name of the hospital—one of the largest in London—and sent the secretary of it a letter of inquiry. Here is his reply:

"We have no information whatever as to any nurse of ours having been injured in any way whatever by the Germans. We have had several reports before us as to patients who have been maltreated by the Germans being in this hospital, but no such cases have been admitted here at all."

"Another variant of the same legend came to my ears a few days later. It was the tale of a lady who, when calling on a friend who had taken two Belgian refugee children, was shocked to find that both of them had had their hands cut off. On the same day, from a quite different source, I heard of a lady who had offered to take a Belgian child, and found, on going up to complete arrangements, that the child allotted to her had been similarly mutilated. Utterly upset by the discovery, she declared that she could not possibly take into her home a child in that condition. 'Oh, I do wish you would,' said the relief worker, 'we have so many of them.' Whereupon a letter to the secretary of the War Refugees Committee brought this answer:

"We are in receipt of your letter in which you inquire with reference to certain alleged mutilations to Belgian refugees. In reply we beg to inform you that the director of public prosecutions is making all inquiries regarding these rumors, and as yet we have not heard of any confirmation of the same."

The same recklessness about truth, declares this correspondent, is to be seen in the loose way in which rumors are circulated respecting the antecedents of British subjects and the management of British business firms:

"It has been a common thing since the war broke out to see in the newspapers advertisements repudiating mischievous charges of this type. Even a paper with the reputation of the *Manchester Guardian* has found it desirable to offer a reward of \$5,000 for evidence that will lead to the conviction of persons who started a libelous report that it has been financed by Germans.

"One of the most edifying examples of the elevation of spiritual tone due to the war comes from Edinburgh. If one had been asked to mention the most saintly minded among contemporary British preachers, the man most exempt from partizan bias, and most at home in the rare atmosphere of the mystics, one would have pointed to Dr. Alexander Whyte, of that city, the expositor of William Law and Samuel Rutherford, and the author of much other devotional literature of high quality. Yet here are some extracts from a recent sermon of Dr. Whyte's:

"The real and the true, if not absolutely the sole, cause of this present awful catastrophe is the pride and the ambition of that Satan-possessed man who now sits on the throne of Germany and asserts his will as the sole sovereign over that unhappy country.

"He is wilfully and sinfully blind who does not see that it is simply the German Kaiser's satanic contempt for Belgium, and his satanic scorn of France, and his satanic envy and hatred of England that have turned Germany first into one great armed camp, and then has hurled her armies against this country and against all her peaceful allies."

"When a religious teacher of Dr. Whyte's quality can allow himself to speak in this fashion, is it any wonder that the man in the street is giving way more and more to suspicions and hatred of everything and everybody that has any sort of German label?"

REVIEWS - OF - NEW - BOOKS

WHEN PARIS WAS UNDER SIEGE BY THE GERMANS

Vizetelly, Ernest Alfred. *My Days of Adventure: The Fall of France, 1870-71.* With frontispiece. 8vo, pp. xi-337. New York: Duffield and Company.

THE almost apocalyptic character of the conflict now racking the world has tinged literature itself with the hue of war. No recorded event throughout the ages has had such power over the human imagination; never before in history has the awful panoply of war been seen in such conjunction with the terrible military inventions of recent science. All comparisons brought to bear on the mighty struggle are at fault. The only adequate parallel must be sought in the grandiose fictions of Jules Verne or Flammarion, whose dreams of submarine and aerial powers in war have now become the commonplaces of newspaper reports.

Nevertheless the natural and relevant comparison is to be found in the Franco-German War of 1870, a war which, as regards the two principal combatants, presents features of striking similarity and forms a historical background essential to a right understanding of the present conflict. Next in interest to the current accounts by correspondents in the field of the bloody *epopée* now unfolding in Europe comes Mr. Vizetelly's narrative of his experiences in the War of 1870. Mr. Vizetelly comes of a family of distinguished journalists and authors. As correspondent of *The Pall Mall Gazette* he was a personal witness of the great events of forty-four years ago in France. He saw the fairest parts of France ravaged by the Prussians, and his descriptions of the ruthless devastation wrought by the invaders of 1870 read like the accounts of what is taking place to-day. He was in Paris when the news arrived of the cataclysmic defeat and capture of the French armies, and he saw the scene at the Palais Bourbon when the republic was proclaimed with Gambetta at its head.

The siege of Paris by the Germans is pictured in a graphic chapter in which the author throws a new and interesting light on one of the most thrilling episodes of French history. He avers that at first there was no hostility shown toward the Church by beleaguered Paris. Solemn High Mass was celebrated before the Statue of Strasbourg in the Place de la Concorde, when the siege was at its height. The hatred for the priesthood and for religion which appeared later was the work of the Commune and had its origin in the dregs of the populace. The surrender of Versailles, the author informs us, was marked by the same impositions and ruthless behavior that characterize the operations of the "*Salles Bouches*" on French and Belgian soil to-day. Versailles was forced to provide the invader with great numbers of oxen to be slaughtered for food, great consignments of wine, and forage valued at £12,000. "After all," remarks the author, with timely significance, "that was a mere trifle in comparison with what the present Kaiser's forces would probably demand on landing at Hull or Grimsby or Harwich."

Regarded as history, Mr. Vizetelly's book possesses merits of a superior order. Keen intelligence and clearness of insight

into the causes and meaning of the momentous events he describes from the vantage-point of an actual observer impart to his work a value and significance which are lacking in formal histories. Thus the reader of these vivid pages finds to his astonishment that, altho he may have gone through many volumes dealing with the subject, he has till now remained in comparative ignorance of many of its salient phases. We are too prone to regard the first Franco-German War as a sort of military avalanche enveloping France and meeting with little effective opposition. This idea is corrected in Mr. Vizetelly's highly interesting volume. Then, as now, the French put forth mighty efforts, and at times the legions of Von Moltke were taught that they were not invincible. The campaign in Brittany, a phase of the war somewhat neglected by students of history, is here set forth with fulness of detail and graphic description. The author is the translator of Zola's famous novel on the War of 1870, "*The Downfall*," and there is this difference in the character of the two books, that Mr. Vizetelly actually beheld and took part in the great events which the novelist saw reflected in his own imagination.

ROOSEVELT'S "AFRICAN GAME ANIMALS"

Roosevelt, Theodore, and Heller, Edmund. *Life Histories of African Game Animals.* With illustrations from photographs and from drawings by Philip R. Goodwin; and with forty faunal maps. Large 8vo. Two volumes. Pp. xxviii-798. New York: Charles Scribner's Sons. \$10.

The explorations and events described in this book took place in 1909-1910. The country traversed comprised an immense tract of East Africa to the west of Abyssinia in the region of Victoria Nyanza Lake and extending northward along the Nile to Khartoum. The journey covered a period of eleven months' active field work and was under the auspices of the Smithsonian African expedition. Its object was the securing of specimens of the large game animals of British East Africa, Uganda, and the upper Nile districts. The explorers were highly successful, bringing home valuable original information about the country, specimens of a new species of sable antelope, three new races of hartebeest and new species of smaller antelopes, besides numbers of mammals and birds.

The expedition was a progress of wonders and dangers. Mr. Roosevelt and his party must have felt as if they had been transplanted into another world. Their experience was as full of marvels as that of the renowned *Othello*; and one is struck with the thought that this may have been the unnamed land described by the famous Moor in the story that won the heart of *Desdemona*. *Africa Portentosa* was the name of the ancients for the Dark Continent—Africa the Portentous, the world of mystery which the gods had walled in from curious mankind, the abode of danger from whose unknown depths no traveler had ever returned. For centuries practically nothing was known of the interior of this immense continent. Only its rim had been touched by Europeans since its discovery in 1483 by Vasco da Gama. Mr. Roosevelt is struck by the fact that it

is only within the last half-century that we have come into possession of important knowledge about the topography of the interior, the character of the great equatorial lakes, and their connection with the Nile watershed. "Ptolemy's map," he writes, "in the middle of the second century actually gives a better idea of the hinterland than that given by the European maps of the middle of the nineteenth century."

A work of joint authorship is always a little repellent by reason of the difficulty of fixing responsibility for the various statements, opinions, etc. In the present work Mr. Roosevelt has written the life-history accounts of each species and the chapters on Game Reserves and Concealing Coloration; while Mr. Heller has prepared the able, technical descriptions and faunal maps showing the range of each species, and the "coloration." Each, however, has reviewed, added to, and assented to the other's work, and the responsibility for the book is joint. The scientific character and quality of the present work is marked.

Interesting and poignantly heretical as are Mr. Roosevelt's views on the philosophy of evolution, most readers will prefer those pages that depict him in single combat with a rhinoceros or braving the man-eating lions of the jungle. In these vivid pages, illustrated with pen, pencil, and camera, the multitudinous life of the African jungle is shown in bewildering profusion and variety. Strange living creatures of unheard-of shape and incredible ugliness were encountered; and in contrast with these startling living things which suggested the beings of another and sinister world the travelers saw herds of antelopes and gazels, beautiful lithe creatures with curved, lyre-shaped horns resembling moresque fretwork.

BIOGRAPHY AND LETTERS

Dowden, Edward. *Letters of Edward Dowden and His Correspondents.* With two portraits. Royal 8vo, pp. xvi-415. New York: E. P. Dutton and Company. \$2.50 net.

Edward Dowden belongs to the small group of men whose lives have been passed in the literary cloister, as it were, and who have attained to world-fame. He died about a year ago and was almost the last of the line of scholars who held to the ideals of the past and continued the traditions of Lamb, Hazlitt, and De Quincey. He was by nature a literary recluse and "enters history by his books alone." His intimate friend, W. K. Magee, who contributes a brief but interesting biographical preface to this volume of letters, refers to him as "a saint of literature." He declares his conviction that he was capable of doing for English literature what Sainte-Beuve did for the French.

While Professor Dowden's claim to distinction must rest upon his work in the field of Shakespearian criticism—a department in which he probably stood unrivaled—it is apparent from his letters and from those of his friends, many of which are included in the present collection, that he might have attained to eminence in purely creative work had he so desired. He wrote poetry of rare beauty and distinction, and his verses won high praise from Aubrey de Vere and others.

"I hired the boy with the good teeth" said a Chicago business man, in describing his efforts to secure a suitable young business assistant.

"There were a dozen applicants; all of them intelligent, typical American lads, but the boy that won me had white, well cared for teeth, and I argued that a boy who was careful of his personal appearance was the kind of a boy I wanted."

Nothing contributes so much to attractive personal appearance as good teeth—and good teeth mean good health—and the ability to win, not only in business, but in all lines of human endeavor.

A pleasant, satisfactory way to insure "good teeth—good health," is the twice-a-day use of Colgate's Ribbon Dental Cream and twice-a-year visit to your dentist.

**You too
should use
COLGATE'S
RIBBON DENTAL CREAM**

The letters cover a period of over fifty years and are addressed to some of the best-known literary personages of the Victorian era. Most of the well-known writers of Europe figure in the correspondence, and such names as Whitman, Gosse, and Burroughs show that the author had many friends on this side of the Atlantic.

In these intimate outpourings to congenial friends the author has laid bare his inmost soul. We are brought in contact with an individuality of singular charm and distinction, in whom the fine flower of modern culture is found with all the human qualities intact. In these letters it is possible to trace the main currents in the great intellectual movement which during the last half-century swept over the world. We see in the author a thorough child of the century, who, while keeping intact his intellectual patrimony, has supplemented it by what the unheard-of scientific achievements of his time have added to the sum of human knowledge.

Holt, Winifred. A Beacon for the Blind. The life-story of Henry Fawcett, Postmaster-General of England. Illustrated. Pp. 334. Boston and New York: Houghton Mifflin Company.

Let any one easily discouraged or prone to yield to adverse fortune read this life of Henry Fawcett, at whose death Queen Victoria and the Prince of Wales, Gladstone and many others did not hesitate to avow their personal grief and loss. Bryce says of him: "The force of his character and the vigor of his intellect must have insured him a distinguished career, even had he been stricken by no calamity. That he should have been stricken by one which would have overwhelmed almost any other man, and should have triumphed over it by his cheerful and persistent courage, marks him out as an extraordinary man worthy to be long remembered." In a comparatively short life of fifty-one years, Henry Fawcett who attained his goal and became a member of Parliament, was one of the founders of that Commons Preservation Society, studied and worked for the welfare of India, and administered the Post-office Department with wonderful success. His constant motto is expressed in his own words, "I do whatever can be done by one humble individual to render justice to the defenseless and powerless." As a youth he loved nature and all sports, and his mental power, tho not subtle, was strong and determined. He was accidentally blinded by a shot from his father's gun when he was only twenty-five, but he never complained, and after the first shock was over readjusted his life to meet the exigencies of the occasion, and from that time never allowed his blindness to prevent his steady advancement. He forced himself to walk, ride, skate, fish, and always talked as tho he could still see the beauties of nature that he loved so well, and his invariable cheerfulness, sunny spirit, and indomitable courage prevented any one from pitying him. It is a wonderful story of a beautiful life. His home life was perfect. A singularly sympathetic bond existed between him and his wife and only daughter, likewise a great devotion to his parents. Henry Fawcett kindled a beacon for the blind of all times, proving that, saving for the blindness of the spirit, there is no blindness.

Begemann-Lindencrone, Little De. The Sunny Side of Diplomatic Life. Illustrated. Pp. 337. New York and London: Harper & Brothers. 1914. \$2.

Like "The Courts of Memory," this new book by the same author abounds in

The Man Who Gambles

with money is playing far safer than the man who gambles with health.

Money when lost can sometimes be regained, but health lost—is another matter.

Every person gambles with health who drinks coffee; it contains caffeine, a subtle cumulative drug. It may not seriously affect one at once, because its work is slow—but sure.

Coffee poisoning shows in headache, sleeplessness, indigestion, heart trouble, nervousness, and a dozen and one other aches and pains.

The safe way is to quit coffee and use

POSTUM

It is made of wheat and a small proportion of wholesome molasses, skillfully roasted and blended to produce a delicious Java-like flavour.

You get the rich food value of the grain, in Postum, and it is absolutely free from caffeine, or any other drug.

Postum comes in two forms:

Regular Postum—must be well-boiled. 15c and 25c packages.

Instant Postum—soluble—no boiling—made in the cup with hot water, instantly. 30c and 50c tins.

Both kinds are delicious—cost per cup about the same—sold by Grocers everywhere!

**"There's a Reason"
for
POSTUM**

breezy, sprightly narrative descriptions of the events in her life spent at the different courts to which her husband was sent: Washington, 1875-1880; Rome, 1880-1890; Stockholm, 1890-1897; Paris, 1897-1902; Berlin, 1902-1912. An American by birth, she has a keen sense of humor, and in her letters to her mother and others describes glowingly the social pleasures which she shared, the famous personages in Europe and America, emperors, kings, princes, artists, and musicians, with whom her life was identified. The author's unusual musical ability added much to the pleasure of all who knew her. In her interesting accounts of royalty behind the scenes, we realize that many, hedged in and restricted by court etiquette, would be glad to be natural if they could. The greatest charm of the book is its naturalness, its evident sincerity, and its freedom from artificiality of all kinds. She speaks of kings and queens and their favors to her as the simplest thing imaginable and relates that which is most pleasing and entertaining about each one.

Reminiscences of Tolstoy, by His Son Ilya Tolstoy. Translated by George Calderon. Illustrated. Pp. 405. New York: The Century Company. \$2.50.

This is a book which every admirer of Tolstoy will wish to read. No one could be found to present the intimate life of this great author with more truth and authority than his own son, and yet there is a certain sense of disappointment for the reader that the narrative, descriptive of so many episodes in the home life of one of the greatest figures in modern literature, leaves us as ignorant as before of the causes of the mysterious and baffling phases of Tolstoy's life. We read intimate facts about his home life, his manner with his children and his other relatives, his habits of writing and his connection with different scientists, poets, and authors, but his own character, his inner life, and the philosophy which actuated him are left in darkness. His faults are alluded to, but whether they were inherent in his character or induced by the circumstances of his environment are not told. The great change in his life when he took up bootmaking, hard manual labor, and, finally, left his home and family finds no satisfactory explanation in these pages. The account of the every-day events in Tolstoy's life is intensely interesting.

Pankhurst, Emmeline. My Own Story. Illustrated. Pp. 364. New York: Hearst's International Library Company. \$2 net.

Mrs. Pankhurst's "Own Story" is not the history of her personal life, except as it coincides with the development of the suffrage movement, but an exhaustive account of events in the progress of that movement from 1866 to 1914. Her sympathizers and opponents alike will be convinced of her evident sincerity and firm belief in the justice of her "cause." A daughter of active suffrage workers, she became the wife of Dr. Richard M. Pankhurst, a shining light in the feminist movement, and two of her five children, Christabel and Sylvia, are as ardent in the cause as their mother. So convinced is the author of the justice of her position and that the opposition of the Government to "Votes for Women" is dastardly and criminal that she contents herself by making statements of events as tho they were convincing arguments in themselves and satisfactory to all. Having tried "peace-

10% More for Your Money

Quaker Oats is put up also in a 25-cent size, nearly three times as large as the 10-cent size. By saving in packing it offers you 10 per cent more for your money. See how long it lasts.

The Driving Force

For Human Machinery is Delicious Quaker Oats

Every atom of energy—every spark of vitality—comes from something fed. It's the same with children as with locomotives. Their power to do things depends on supplies of stored-up energy.

That's why children need a vim-food—need it in abundance. So do workers of all ages. And that means Quaker Oats.

One fair-sized dish of Quaker Oats supplies a thousand calories of energy. Nothing else grown can compare with it.

We have made this vim-food a dainty. We have made it so luscious that millions of mothers insist on this matchless brand.

Quaker Oats

The Delectable Energy Food

This is why Quaker Oats so excels in flavor and aroma.

We pick out for it just the big, plump oats. All the puny, starved grains are discarded. So careful are we that we get but ten pounds of Quaker Oats from a bushel.

We apply to these grains both dry heat and steam heat, to fix and enhance the flavor. Then we roll them into large, white, luscious flakes.

The result is a delicacy which has won the world. For many years, the mothers of a hundred nations have sent to us to get it. You, in America, find it right next door—at any grocery store. And the price is only one-half cent per dish.

You get this extra quality—this matchless flavor—when you order Quaker Oats. And we promise that you always will.

Please remember this.

Quaker Cooker

We have made to our order—from pure Aluminum—a perfect Double Boiler. It is extra large and heavy. We supply it to users of Quaker Oats for cooking these flakes in the ideal way. It insures the fullness of food value and flavor. See our offer in each package.

10c and 25c per Package, Except in Far West and South

Tree Ripened Florida Oranges and Grapefruit

Oranges and grapefruit in boxes shipped by the Florida Citrus Exchange come to you with the flavor and fragrance of the groves of fair Florida. When you open the boxes in your cellar, you will find the fruit as fresh and juicy as if you had picked it yourself. When served, your folks will exclaim, "How delicious!"

Producing orange and grapefruit groves are a beautiful sight the year round in Florida

In Florida the months of delightful sunshine during the time the orange and grapefruit crops are ripening sweeten the juices of these fruits into health-giving liquids confined in globes of gold. The sparkle of Florida sunshine, the softness of semi-tropical breezes and the fragrance of orange and grapefruit blossoms are combined in the citrus fruits grown in this favored state.

Oranges and Grapefruit as Juicy, Sweet and Spicy

The climate and soil of Florida combine to produce oranges and grapefruit of surpassing quality—juicy, sweet and altogether delicious.

Broad-minded Florida growers have organized for the culture of citrus fruits by methods that insure this quality, and for picking, packing and shipping fruit to reach users in prime condition.

This co-operative, non-profit making association works on the theory that whatever is for the good of the consumer of oranges and grapefruit is equally desirable for the grower of these fruits. Its name and trademark—to be found in red on boxes and wrappers—is this:

In the great groves and packing houses of the growers who compose the Exchange every person must wear white gloves.

FLORIDA CITRUS EXCHANGE

This rule is one of many enforced by the Exchange to assure to the consumer, juicy, sweet, spicy, tree-ripened oranges and grapefruit. No child labor is employed in the packing houses. Every precaution is taken to prevent damage to the fruit.

The growers who form the Florida Citrus Exchange believe their interests and those of the consumers of their fruits to be identical and endeavor to put into the markets oranges and grapefruit so good that buyers will want more of them. It is their aim and intention that the "red mark" shall be your guarantee of your money's worth.

(Scenes in a packing house of the Florida Citrus Exchange—First picture, washing the fruit; second, elevator to the brushes. All workers wear white gloves.)

More Luscious This Season Than Ever Before

A sometimes rough, uninviting looking globe, the Florida orange or grapefruit is filled almost to bursting with the concentrated essence of spicy dew, jeweled rain drops, balmy air and golden sunshine. Disregard the mere appearance and drink the juice—delicious, refreshing, healthful, invigorating; a tonic for faded nerves; indeed a food "truly fit for the gods."

In Florida there are hundreds of thousands of acres of splendid groves like these

Your grocer has or can get Florida Citrus Exchange oranges or grapefruit, and if you insist will deliver it to you in the original boxes. Just tell him that you want this fruit; that while other Florida oranges and grapefruit may be good, the Exchange brands are **SURE** to be.

As in the Golden Groves of Balmy, Sunny Florida

"Eat oranges—eat them all the time, as many as you can get. They will save you many a doctor's bill," said Dr. Wiley.

"I believe in the youth-protracting and beauty-making power of oranges," wrote Lina Cavalieri, the beautiful singer. "If I could have only one fruit, it would be the orange."

The juice of tree-ripened grapefruit is almost as strengthening as it is delicious. Thousands of persons with tired stomachs and jaded nerves have been started on the return road to health by this fruit. Many a brain worker finds an ample breakfast in a good-sized grapefruit.

FLORIDA

CITRUS EXCHANGE

stands for a square deal to all concerned — for the grower, the dealer and

the consumer of oranges and grapefruit. Its motto is "fair-play."

It means good fruit at fair prices for the consumer, a living profit for the dealer and a proper return on his labor for the grower. The mark of the Exchange assures full value for the money, no matter what grade of fruit is bought, and a minimum of loss in distribution.

Up-to-date grocery and fruit stores generally carry Florida Citrus Exchange oranges and grapefruit. Tell your dealer *now* that you want this fruit during the season. Booklet telling how to use citrus fruits in cookery and confections for four cents in stamps. Address Florida Citrus Exchange, 627 Citizen's Bank Bldg., Tampa, Fla.

Scenes in a packing house of the Florida Citrus Exchange—First picture, fruit going into the dryer; second, packing fruit in the boxes. No child labor employed.

NABISCO Sugar Wafers

—entrancing sweets which are always and everywhere popular. Wafer confections centered with delicately flavored cream. The perfect accompaniment for every dessert. In ten-cent tins; also in twenty-five-cent tins.

ANOLA

—a new conception in chocolate-flavored sweets. Exquisite wafers of crisped baking with chocolate-flavored cream nestling between. Anola has achieved a new delight which only taste can tell —a flavor which gives immediate pleasure. In ten-cent tins.

NATIONAL
BISCUIT
COMPANY

ful methods" unsuccessfully, the Woman's Social and Political Union was organized with the determination to force the Government to grant the franchise to women at any cost. A detailed account is given of revolting and often disgusting scenes, with which daily papers have made us familiar, of militant methods in trying to compel what they could not obtain with dignity. There is little in the book which adds to an understanding of the situation or sympathy with the cause. Enthusiastic to the point of fanaticism, Mrs. Pankhurst sees nothing reprehensible in the destruction of private property, works of art, or public treasures—in fact, calls the voluntary sacrifice made by Miss Davison in throwing herself under the horse's feet at the Derby "a wonderful sacrifice for a noble cause." The European War has caused a cessation of hostilities on the part of the militants, but Mrs. Pankhurst asserts confidently: "Our battles are practically over; no future Government will repeat the mistakes and the brutality of the Asquith ministry, none will be willing to undertake the impossible task of crushing, or even delaying, the march of women toward their rightful heritage of political liberty and social and industrial freedom."

Montagu, Violetta. *The Celebrated Madame Campan*. Pp. 374. Philadelphia: J. B. Lippincott Company. 1914. \$3.75 net.

It would seem as tho France's most sensational era and its complex life had been exhaustively described in previous books of history and fiction, but from the *Memoirs of Mme. Campan*, lady-in-waiting to Marie Antoinette and later the confidante of Napoleon, the present author gleams new facts and new impressions of old ones which shed light on the France of the "Cœur-de-Bœuf" and Paris, that "Parnassus whither Napoleon, the master mind, invited the world's most gifted artists, musicians, littérateurs, scientists, and thinkers." At the age of fifteen, Mme. Campan, then Henriette Genest, became *lectrice* to the Mesdames de France, fulfilled that same service for the little Austrian Princess when she entered court life, and from that time was identified with events in the life of Marie Antoinette with all its tragic vicissitudes. After the death of her royal patrons, Mme. Campan opened a girls' school, to which came Hortense and Eugénie Beauharnais. The school came to be under the protection of Josephine, and later Napoleon himself, who gave his sisters Pauline and Caroline into Mme. Campan's care and made her directress of the first Imperial Educational establishment of the Legion of Honor at Écouen. "Mama Campan" rarely speaks of her husband, but was devoted to her son, Henri, and especially to Hortense, and some of the many witty and beautiful women who adorned Napoleon's court. It is not often that one life is identified so intimately with so many celebrities, and the fact that scandal never touched Madame makes her memoirs all the more charming.

Simplified Spelling.—The dentist had just moved into a place previously occupied by a baker, when a friend called.

"Pardon me a moment," said the dentist, "while I dig off those enamel letters of 'Bakeshop' from the front window."

"Why not merely dig off the 'B' and let it go at that?" suggested the friend. *Boston Transcript.*

CURRENT POETRY

TO put all the democracy of America into poetry is a tremendous but tempting task. Some poets try to do it by imitating Walt Whitman's informal rimeless lines and his mixture of slang and poetic phrases. Others attempt merely to reflect and interpret the phases of life which most strongly appeal to them—and their method is more likely to succeed.

Such is the method of Vachel Lindsay, whose "The Congo, and Other Poems" (The Macmillan Co.) is one of the important books of a season rich in good verse. The title-poem is a long study of the negro race: sympathetic, picturesque, and full of strange and beautiful music. Most of the other poems in the book deal with contemporary American life, and in them Mr. Lindsay speaks sincerely, with knowledge and with the simplicity that is art of the highest order. His freedom from that self-consciousness which usually possesses poets writing on subjects not patently poetic is admirably shown. Even in the more subjective poems, like that which we reprint below, Mr. Lindsay speaks naturally, avoiding literary affectations. Many readers of verse have had the feeling to which this poet gives appropriate expression.

IN PRAISE OF SONGS THAT DIE

BY VACHEL LINDSAY

(After having read a great deal of good current poetry in the magazines and newspapers.)

Ah, they are passing, passing by,
Wonderful songs, but born to die!
Cries from the infinite human seas,
Waves thrice-winged with harmonies
Here I stand on a pier in the foam
Seeing the songs to the beach go home,
Dying in sand while the tide flows back,
As it flowed of old in its fated track.
Oh, hurrying tide that will not hear
Your own foam-children dying near:
Is there no refuge-house of song,
No home, no haven where songs belong?
Oh, precious hymns that come and go!
You perish, and I love you so!

To the London *Chronicle* Mr. Maurice Hewlett contributes a poem that has something of the quality of a folk-song. It is a pity that the poem does not end with the fifth stanza, for what follows is weak and unconvincing.

SOLDIER, SOLDIER

BY MAURICE HEWLETT

"Soldier, soldier, off to the war,
Take me a letter to my sweetheart, O.
He's gone away to France
With his carbine and his lance,
And a lock of brown hair of his sweetheart, O."

"Fair maid of London, happy may you be
To know so much of your sweetheart, O.
There's not a handsome lad,
To get the chance he's had,
But would skip, with a kiss for his sweetheart, O."

"Soldier, soldier, whatever shall I do
If the cruel Germans take my sweetheart, O?
They'll pen him in the jail
And starve him thin and pale,
With never a kind word from his sweetheart, O."

"Fair maid of London, is that all you see
Of the lad you've taken for your sweetheart, O?
He'll make his prison ring
With his 'God Save the King'
And his God bless the blue eyes of my sweetheart, O!"

"Soldier, soldier, if by shot or shell
They wound him, my dear lad, my sweetheart, O."

Teaching
"Young America" to Shoot!

—yes, teaching him the love of home, fair sport and clean companions;
—tempering his boyish arms with manly confidence to *hit the mark in life*;
—breaking up the corner "gang."

Thus in the homes of thousands now, *real* Carom and Pocket Billiards played on scientific Brunswick Tables are helping "Young America" grow big and "Grown America" keep strong.

Royal games that make the mind and muscle tingle with a *healthy rest*.
Give your boy this rapturous training through the long winter evenings *at home*.
Brighten your own leisure hours with merry rivalry among the whole family.

"BABY GRAND"

Carom or Pocket Billiard Tables

The famous Brunswick "Baby Grand" home Table is made of mahogany with genuine Vermont slate bed. It should not be confused with cheaply made wood-bed tables or toys.

Gives the perfect playing qualities of Brunswick Regulation Tables—fast imported billiard cloth and Monarch Cushions famed for quick action. Its speed and accuracy are the marvel of Billiard experts.

For Homes of All Sizes

"Baby Grand" Tables for carom billiards, pocket billiards or combination carom and pocket billiards made 3 ft. by 6 ft., 3 1/2 by 7 and 4 by 8. New Brunswick "Grand" 4 1/4 by 9. All have disappearing cue rack and accessory drawer that conceals playing outfit when not in use.

Other Brunswick Home Tables include "Con-

vertible" models that are changed in a moment from perfect Billiard Tables to Dining or Library Tables. They have the same unexcelled playing equipment as the "Baby Grand."

30-Day Trial—Outfit Free

With every Brunswick Table, regardless of style, we give all necessary balls, cues, cue clamps, tips, markers, cover, brush, book, "How to Play," etc.—a complete high-class playing outfit *free*!

Our popular purchase plan offers factory prices and lets you try any style Table 30 days in your own home. Payments spread over a year, as low as 20 cents a day.

New edition of our deluxe Billiard book, illustrated in colors, shows all Brunswick home tables, gives prices and full details. Send the coupon printed below and book arrives by return mail, *free*.

—What men like you and me say of "Whip"

Scores of men write us every day commending "Whip" Smoking Tobacco. These men are not in the public eye but they are pipe smokers who enjoy and appreciate a good smoking tobacco. We reprint here a few of these letters. Won't you please read them?

"I have always wished for just the kind of a smoke which you have given in 'Whip'. And I thought I never was going to find a tobacco that gave me all I hoped for."
E. W. O.—, WAVERLY, IOWA."

"I wish to congratulate you on manufacturing a blend of tobacco of merit, which you sell at two ounces for ten cents. Your slogan should be—'The Quantity Is Exceeded Only By The Quality.'"
J. M. M.—, ELIZABETH, N. J."

"I was enjoying a brimming pipeful of 'Whip' in my home one evening, meanwhile humming 'This Is The Life'. My wife entered and smiled the air, smiled in a satisfactory manner, and mentioned the song I was humming was quite appropriate."
W. L. N.—, EAST WYBOUTH, MASS."

"I have tried 'Whip' tobacco and think it is the best I have ever smoked. It is so soothing, mild and fragrant that it acts as a gentle anodyne."
P. A. P.—, LINDSAY, ONTARIO."

"I have found that all you say about 'Whip' tobacco is not all the good that can be spoken of it. Truly, it is one of the finest tobaccos made."
J. C. B.—, STANLEY, N. C."

"I have tried 'Whip' and think it is the best tobacco out. I have tried them all and none equals it."
C. P.—, GAINESVILLE, TEXAS."

"'Whip' is quite the most delightful blend I have ever smoked—cool and sweet, and without the hint of a sting in it."
J. H. R.—, SPRINGFIELD, ILL."

Ounce Tin Free

Now that you have read what real smokers say about "Whip," won't you put our proudest achievement to a pipe test? Let us send you an ounce can Free. Write for it today and please mention your dealer's name. "Whip" is sold in 1-oz. tins at 5c, 2-oz. tins at 10c and patented pottery pound humidors.

The Globe-Wernicke Co. Cincinnati

He'll lie bleeding in the rain
And call me, all in vain,
Crying for the fingers of his sweetheart, O."

"Pretty one, pretty one, now take a word from me:
Don't you grudge the life-blood of your sweetheart, O.

For you must understand
He gives it to our land,
And proud should fly the colors of his sweetheart, O."

"Soldier, soldier, my heart is growing cold—
If a German shot kill my sweetheart, O!
I could not lift my head
If my dear love lay dead
With his wide eyes waiting for his sweetheart, O."

"Poor child, poor child, go to church and pray,
Pray God to spare you your sweetheart, O.
But if he live or die
The English flag must fly.
And England take care of his sweetheart, O!"

Not a few readers of this poem (taken from *Munsey's Magazine*) will heartily endorse the sentiment which Mr. Le Gallienne expresses. Literature will not suffer if this war calls forth no more verses.

TO CERTAIN WAR-POETS

BY RICHARD LE GALLIENNE

The bugles have blown—O, have done with your singing!

As a gnat's is your song in the roar of the guns,
No man's work is this, colored words to be stringing.

Deeds are the songs the world asks of its sons;
Too late for the pen paper wars to be fighting,
When the bayonets in blood are doing the writing.

How green are your gardens—how trampled and ruddy
Those gardens of swords, with dead faces for flowers.

Where the stream 'mid its rushes runs frightened and bloody,
And the soft sides of summer rain bullets for showers;

Ah! poet, it seems a poor trade to be plying,
When all that is left of brave living is dying.

When the dead are brought home with a light on their faces,
Of your tears, if you will, you shall make us a song.

Singing them home to their safe laureled places,
With the sweetness of words for the strength of the strong;

But now is no time for your musical talking,
When death and the war-gods are out at their hawking.

It is surprising to find in the *London Times* a poem so non-partizan in spirit as that which we quote below. Such lines as, "This is the Dark Immortal's hour; His victory, whoever fall," seem to indicate that the famous Irish poet who signs himself "A. E." has not, like so many of his brother poets, given up the conviction that war is wrong.

GODS OF WAR

BY "A. E."

Fate wafts us from the pigmies' shore;
We swim beneath the epic skies:
A Rome and Carthage war once more,
And wider empires are the prize;
Where the beaked galleys clashed, lo, there
Our iron dragons of the seas!

High o'er the mountains' dizzy steep
The winged chariots take their flight.
The steely creatures of the deep
Cleave the dark waters' ancient night.
Below, above, in wave, in air
New worlds for conquest everywhere.

More terrible than spear or sword
Those stars that burst with fiery breath:
More loud the battle-cries are poured
Along a hundred leagues of death.
So do they fight. How have ye warred,
Defeated armies of the Lord?

This is the Dark Immortal's hour;
His victory, whoever fall:
His prophets have not lost their power:
Caesar and Attila prevail.
These are your legions still, proud ghosts,
These myriad embattled hosts.

How wanes thine empire, Prince of Peace!
With the fleet circling of the suns
The ancient gods their power increase.
Lo, how thine own anointed ones
Do pour upon the warring hands
The devil's blessings from their hands.

Who dreamed a dream mid outcasts born
Could overbrow the pride of kings?
They pour on Christ the ancient scorn.
His Dove its gold and silver wings
Has spread. Perhaps it nests in flame
In outcasts who abjure his name.

Choose ye your rightful gods, nor pay
Lip reverence that the heart denies.
O Nations. Is not Zeus to-day,
The thunderer from the epic skies,
More than the Prince of Peace? Is Thor
Not nobler for a world at war?

They fit the dreams of power we hold.
Those gods whose names are with us still.
Men in their image made of old
The high companions of their will.
Who seek an airy empire's pride,
Would they pray to the Crucified?

O outcast Christ, it was too soon
For flags of battle to be furled
While life was yet at the high noon.
Come in the twilight of the world:
Its kings may greet thee without scorn
And crown thee then without a thorn.

The railroad has been the subject of several poems recently, but of none more musical than this, which we take from *The American Lumberman*.

THE STEEL ROAD

BY DOUGLAS MALLOCH

There's a steel road, a real road, that runs among
the trees,
That dashes over cataracts and clambors over
hills;
There's a white road, a bright road, that's swifter
than the breeze—
And, easterly or westerly, it wanders where it
wills!

And it's hot then, it's go then, along the shining
rails,
A speeder for your chariot upon a summer
day;
It will lead you, will speed you, through green
and dewy dales,
The forest for your canopy upon your royal way.

There is no'er than a care then—the town is left
behind,
You're free as any meadow-lark that circles in
the blue;
Like a swallow you follow the rails as they
unwind—
In all the world around you there is just the
road and you!

And when play ends and day ends and ruddy is
the west,
When birds come singing from the fields and
sailors from the foam,
Then the steel road, the real road, the road that
leads to rest
Is the white road, the bright road, the road that
leads to home!

DODGE BROTHERS MOTOR CAR

It Speaks for Itself

UNIT POWER PLANT—Cone Clutch.

MOTOR—Four-cylinder, cast in bloc. $3\frac{1}{8}$ -inch bore by $4\frac{1}{2}$ -inch stroke, 30-35 H. P. Water Cooled. Centrifugal Pump.

RADIATOR—Tubular Type.

STARTER GENERATOR—Single unit. 12-volt, 40-amp. Battery.

HIGH-TENSION MAGNETO—Waterproof.

LUBRICATION—Splash and force feed.

GASOLINE SYSTEM—Pressure feed. 15-gallon tank hung on rear.

REAR AXLE—Full-floating. Removable cover plate to give access to differential.

TRANSMISSION—Selective sliding gear type—three speeds forward and reverse. Vanadium steel gears, heat-treated.

TIMKEN BEARINGS thruout, including wheels and differential.

S. R. O. BALL BEARINGS in clutch and transmission.

STEERING GEAR—17-inch wheel. Irreversible nut and sector type.

DRIVE—Left side; center control.

WHEELBASE—120 inches.

BODY—Real five-passenger, comfortably upholstered in genuine grain leather with deep springs and natural hair.

SPRINGS—All Chrome Vanadium steel, self lubricating.

FENDERS—Exceptionally handsome oval design.

RUNNING BOARDS AND FOOT BOARDS—Wood, linoleum covered and aluminum bound.

WHEELS—Hickory; demountable rims. 30 by $3\frac{1}{2}$ inches.

TIRES—Straight side type—Non-skid rear.

WINDSHIELD—Rain vision, clear vision and ventilating.

TOP—One-man type, Mohair cover with jiffy curtains and boot.

LIGHTS—Electric; head (with dimmers and automatic focusing device), tail and dash.

INSTRUMENT BOARD—Carries full equipment of oil pressure gauge, gasoline pressure gauge and pump, battery gauge, switches and speedometer. Speedometer driven from transmission.

EQUIPMENT—Electric Horn, Rope Rail, License Brackets, Foot Rail, Tools, Demountable rim mounted on rear.

SHIPPING WEIGHT—Approximately 2200 pounds.

PRICE—\$745, F. O. B. Detroit.

DODGE BROTHERS, DETROIT

Hupmobile Touring Car, with Sedan Top, complete, \$1365
 Detroit, \$1400 f.o.b. Windsor, Ont.

29% More Hups Driven Through the Winter Months

The beautiful new Hupmobile sedan top adds the finishing touch to the superiority of the Hup for cold weather use.

We have always known that a majority of Hup owners kept their cars in commission all the year round.

But until we gathered the facts and figures from 150 leading points, we did not know that the use of Hups during the winter exceeded the use of other cars by 29%.

And now the new sedan top has arrived to render the Hupmobile more than ever the winter car of the American family.

The new Hupmobile with the sedan top costs you, complete, \$1365—the roadster, \$1325.

It is handsome, graceful, finely finished outside; and luxuriously equipped within.

The Hupmobile top absolutely lacks the noise and rattle usually found in enclosed bodies. The doors are wide and roomy, of standard limousine dimensions. Windows are made of the highest grade coach glass.

The tops are built for the Hupmobile in our own shops and conform so perfectly with the beautiful 1915 lines that the effect is that of the costliest limousine. And when the winter season is over, the top is easily removed and the regular summer equipment quickly attached to the car.

There is no reason now why every family should not enjoy the luxury of winter driving in complete warmth, comfort and ease.

Suburbanites, physicians and other professional and business men, and women who have felt the need of an easy-driving, economical closed car, will find their every expectation realized in this new Hupmobile feature.

PERSONAL GLIMPSES

THE EMDEN CAUGHT AT LAST

WHEN the Australian cruiser *Sydney* found the *Emden* at the Keeling Cocos, nearly two weeks ago, forced her into conflict, and destroyed her, "Finis" was written to one of the most exciting stories of adventure that war history can supply. It is true that violence and disaster had followed in the *Emden's* wake nearly every day of the three months of her adventurous life, but there had been no cruelty, no treachery, nor any slightest stain upon the honor of the ship, her crew, or her commander in any of the engagements in which she took her part. Even the British press say that Commander Karl von Müller has made for himself and his vessel a name which any of his fellow wearers of the Iron Cross may well envy. He has proved himself a clever, daring sailor and a gallant gentleman, and it is safe to assume that his crew have echoed much of the personality of their leader. The English have rejoiced in the destruction of the *Emden*, but not one has failed to acknowledge his admiration for Commander von Müller nor to commend the spirit of fair fighting which he exhibited even in his most ruinous attacks on British shipping. The story of the *Emden's* capture is told in a London dispatch, which we quote from the *New York Times*:

A large combined operation by fast cruisers against the German cruiser *Emden* has been for some time in progress. In this search, which has covered an immense area, the British cruisers have been aided by French, Russian, and Japanese vessels, working in harmony. The Australian warships *Melbourne* and *Sydney* also were included in these movements.

On November 10th, news was received that the *Emden*, which had been completely lost to sight after her action with the Russian cruiser *Jemtchug*, had arrived at Keeling, or Cocos, Islands and landed an armed party to destroy the wireless station. Here she was caught and forced to fight by the Australian cruiser *Sydney*, Capt. John Glossop.

A sharp action took place, in which the *Sydney* suffered the loss of three men killed and fifteen wounded. The *Emden* was driven ashore and burned. Her losses in personnel are reported as very heavy. All possible assistance is now being given to the survivors by the various ships which have been dispatched to the scene.

With the exception of the German squadron, now off the coast of Chile, the whole of the Pacific and Indian oceans is now clear of the enemy's war-ships.

The First Lord of the Admiralty, Winston Spencer Churchill, has sent the following message to the *Sydney* and to the Navy Board of the Australian Commonwealth:

"Warmest congratulations on the brilliant entry of the Australian Navy into the war and the signal service rendered to the Allied cause and to peaceful commerce by the destruction of the *Emden* by Google Capt. von Müller, the commander of the

Charles W. Kane, 306 Arrott Building, Pittsburgh, Pa.

Emden, is a native of Blankenberghe, Belgium, and was at one time an officer in the employ of the Hansa line of steamers.

Just how much damage the *Emden* managed to inflict ashore and at sea is not yet known. It has been estimated that she sank or captured forty-two English vessels, altho only twenty-three of these are known certainly. Their value alone in hull and cargo reaches \$20,000,000, so it may easily be understood that many a trader and marine underwriter in England breathed more freely at the news that the *Emden's* career had come to a halt. An interesting picture is given of the effect of this announcement at Lloyd's where, perhaps more than anywhere else in the world, the German sea-rover had caused deep and painful anxiety. The dramatic scene is described as follows:

The business of the day was in full swing, when suddenly above the hum the Lutine bell rang out. Only on momentous occasions is this bell rung.

Instantly business was suspended and all turned toward the rostrum, from which it was known that some great news was to be made public. The official crier mounted the steps and, in the rolling tones for which he is famous, began: "Gentlemen, it is officially announced that the *Emden*—"

That is as far as he was allowed to go. Cheer after cheer went up. Hats and papers were thrown into the air.

Again the Lutine bell was rung—to enjoin silence—and at last the message was completed that the *Emden* had been destroyed.

The shipping industry in the Indian Ocean is now relieved of the greater portion of its peril, and underwriters will sleep more comfortably. It is, perhaps, no exaggeration to say that this ship alone has inflicted more damage to British merchant shipping than all the rest of the German Navy combined.

The *Emden* was coaling off Rangoon on August 1. Three days later, when England had declared war on Germany, she had vanished; but not for long. The very next day, near Table Island in the Indian Ocean, she captured, robbed of coal, and sank the *City of Winchester*. Some weeks later seven ships in the Bay of Bengal fell prey to her guns. To while away the succeeding period of dullness, she flitted into harbor at Madras and proceeded to bombard the ships in the harbor and a few prominent oil-tanks on shore. By the end of her second month, she was busy once more, sinking four small-sized steamers of the aggregate value of nearly a million. About October 15 one of the two swift cruisers sent in pursuit of her, the *Yarmouth*, caught a glimpse of the *Emden* and succeeded in capturing two of her colliers; but this had little apparent effect, for her most daring exploit, at Penang, was to follow. Disguised by a false smoke-stack and a Japanese flag, she was able to steam slowly and sedately into the harbor, under the guns of the British forts; whereupon

Baker
Electrics

The New Light Baker Coupe

Baker
Electrics

Light Weight Baker Electrics

Two Baker Models Cover the Whole Range of Enclosed Car Service

THE day has come for adjusting the size of a car to meet individual requirements. Unnecessary size, unnecessary weight and unnecessary seating capacity are not only inconvenient—they are a handicap to economical operation. Baker Electrics meet this situation, on the one hand, with The New Light four-passenger Coupe, *instantly convertible into a two or a three-passenger car*, and on the other hand, with a light five-passenger Double Drive Brougham for people who really require a very large car. These two models cover the whole range of enclosed car demand with a passenger capacity which economically meets every owner's actual requirements.

The New Light Baker Coupe

THE New Light Baker Coupe weighs half a ton less than most five-passenger electrics. Of all high grade coupes it is the lightest. Light weight has always been a characteristic of Baker construction. In the new Coupe this characteristic reaches its highest development. Consider the results: the relief in maneuvering through congested traffic, in steering over rough pavements—the saving in expense, of less battery equipment, less power consumption, less wear on tires.

High Speed and Long Mileage

THIS new car will make 23 miles per hour—remarkable speed in an electric designed above all else for economical operation. It will go as far at any speed with 32 cells of battery as heavier cars with 40 to 42 cells—a clear saving of one fourth in battery expense, and what is still more important, a saving of one-fourth in battery weight.

Disappearing Front Seats

A MOST attractive feature, introducing a luxury entirely new—just the seating capacity immediately wanted for two, three or four people. When not in use, front seats fold out of the way, affording an unobstructed view ahead and a roominess never before enjoyed in a Coupe. Think of the desirability of having it will a two, three or four-passenger car.

The Baker Double Drive Brougham

IT would be difficult to conceive of a more luxuriously vehicle than this five-passenger Brougham. And for a car of its size it is lighter in weight and easier to control than any other. In general design it resembles the Baker Coupe, the difference being in its larger proportions, its double drive feature, which enables operating from either front or rear seat, and its revolving type of front seats.

Style Vehicles

THE Electric is more than a convenience; it is a style vehicle. In this respect the Baker Coupe and Brougham set a new standard. Their interiors are unusual—simple and rich without needless adornment. Fabrics, specially woven to our own design, give to each car an individual distinction. Finest colorings predominate in effects that are novel.

Artists have designed these luxurious cars, and they have reduced beauty to its simplest terms. Not a fussy outline nor a wrong proportion anywhere disturbs the perfect balance. The whole impression is one of excellence, refinement, good taste—a charming setting for a lovely woman.

THE BAKER MOTOR VEHICLE COMPANY, CLEVELAND

Are You Satisfied to Remain a "One-Language Man"—or Woman?

Or do you realize the immense advantage possessed by the man or woman who can talk with foreigners in the foreigner's own tongue—when traveling abroad, when transacting business with foreigners, or when meeting them in a social way?

Thousands of American men and women spend two or more years studying one of the four important foreign languages—German, French, Spanish, Italian—in a public or private school, and at the end of their study find themselves wholly unable to maintain a casual conversation on ordinary matters in the foreign language!

If you really want to speak and understand one of these common foreign languages, use the ROSENTHAL METHOD for private study, or organize a ROSENTHAL CLUB among your friends. By the

Rosenthal Method of Practical Linguistics

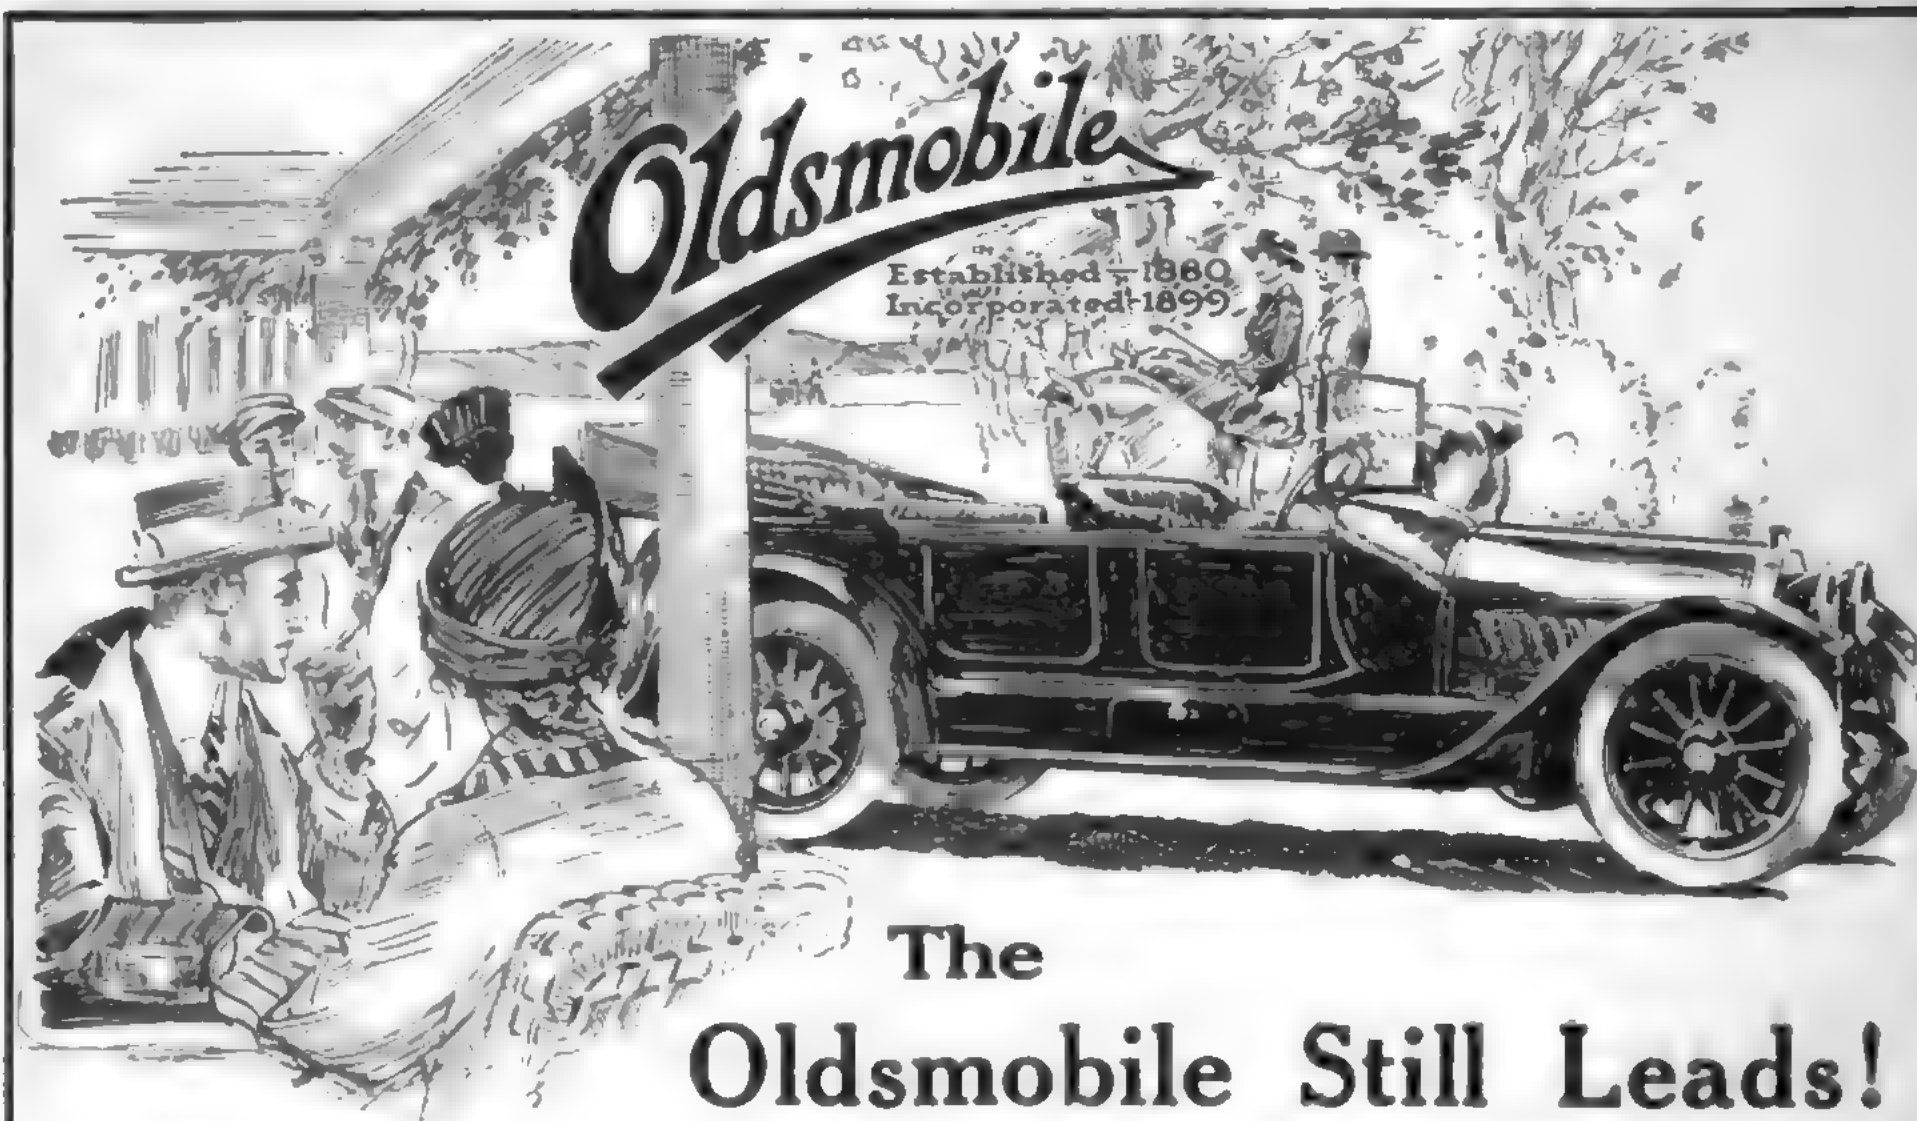

you can learn to converse in a new language as naturally and easily as a child learns to speak. Like the child—or like a foreigner learning English here—you learn first the more necessary and most use-

ful words and sentences. You quickly get a mastery of ordinary, necessary conversation and correspondence in the new language you wish to USE.

The ROSENTHAL METHOD is for BUSY men and women—ten minutes three times a day will lead within a marvelously short time to complete mastery of every-day business and social conversation. The study is a pleasure—never a task.

If you want to learn to think and talk in idiomatic French, German, Spanish or Italian, quickly, pleasantly, and FOR PRACTICAL USE, send a postal for DR. RICHARD S. ROSENTHAL'S Free booklet, "Revolution in the Study and Teaching of Foreign Languages." Address Dept. 263,

Funk & Wagnalls Company, New York

Oldsmobile
Established—1880
Incorporated—1899

The Oldsmobile Still Leads!

Whether you examine the big Oldsmobile "Six", famed for its exquisite completeness and mechanical refinement—or the newer, lighter, Oldsmobile "Four", you will still find maintained those standards of design, finish and completeness that have always been accepted as standing for the highest in motor car value.

The OLDSMOBILE SIX \$2975

Known as "America's Greatest Six"

Where else in America can you find a car that has the glorious traditions of leadership that surround the Oldsmobile "Six"?

Known everywhere as the "greatest six-cylinder car in America," it has been accepted for the nine years we have been building "sixes" as standing for the highest in motor car values—authoritative in design, exquisite in finish, complete in equipment, luxurious in comfort.

And what organization better fitted to maintain by constant improvement and refinement the position of leadership it has always enjoyed?

Today the Oldsmobile "Six" enjoys even a higher reputation among men whose demands are for the utmost.

Every modern feature of proven worth is found in this elegant car. The dash assembly is of nicked trimmings and Circassian walnut. A specially built Delco unit provides current for the starting, lighting and ignition system. Other Oldsmobile features are: Automatic spark advance—horse hair carpet—tonneau light—aluminum toe boards and running boards—non-vibrating steering column—corrosion-proof gasoline tank—honey-comb type radiator—Stewart-Warner tire pump—one man top—jiffy curtains—and folding seats.

THE OLDSMOBILE "FOUR"

The OLDSMOBILE FOUR \$1285

The Little Brother of the Big Six

When we announced for 1913 the new Oldsmobile Light "Four" at \$1285, the price made many wonder.

In the past Oldsmobiles have always been among higher priced cars. The question naturally arose: Has this newest Oldsmobile those true characteristics of refinement and patrician qualities that have marked former cars bearing this famous name?

Let us compare the Oldsmobile Light "Four" with its big brother which has been well called "the greatest six cylinder car in America."

Place the two cars side by side and the likeness is astonishing. The smaller car is truly a replica of the Oldsmobile "Six" reduced in wheel base length to 118 inches. The same distinctive body lines, the same graceful sweep, and the same low center of gravity that makes it seem to "hug the ground."

Doors of extreme width; deep luxurious upholstery; big easy-riding underslung springs; beautifully grained Circassian walnut woodwork throughout.

A handsome dash unit with all instruments, including Delco electric starting and lighting system, speedometer and eight-day clock, set flush and immediately under the driver's hand, flooded at night by electric light, make driving equally easy in darkness or daylight. Dimming searchlights; cast aluminum foot and running boards; concealed tool box, with complete tool equipment; strong substantial wheels of carefully selected hickory in natural finish; jiffy curtains with one man cape top, with boot.

Only the large demand for a car of this size and style, of true Oldsmobile quality, makes this low price of \$1285 possible. We anticipated this demand two years ago and began planning to meet it, working out each detail step by step, until the triumphant result, exemplified in this light Oldsmobile, has been achieved.

Light weight has been achieved without sacrificing an ounce of strength. Ready for the road it weighs less than 2500 pounds.

Under the hood is a remarkable motor. Following the latest tendencies of European designers, it has four small bore cylinders, cast en bloc, unusually compact and powerful; the overhead valves are enclosed and all working parts covered. A special Oldsmobile silencer reduces all motor noise to a quiet hum.

See the Oldsmobile that interests you most at any Oldsmobile branch in the larger cities or call on any of our hundreds of dealers scattered from coast to coast. Our catalog "A," describing the Oldsmobile "Six," and catalog "B," describing the "Four," will be sent on request.

OLDS MOTOR WORKS, Lansing, Michigan

she fired torpedoes with fatal effect upon the Russian cruiser *Jemichug* and the French torpedo-boat *Mousquet*, and managed to turn about and scuttle safely out of the straits again, into the open ocean. The official list of her victims is as follows:

City of Winchester, 6,800 tons, August 5, sunk.

Indus, 3,393 tons, September 10, sunk.

Local, 6,102 tons, September 10, sunk.

Killin, 3,544 tons, September 10, sunk.

Diplomat, 7,615 tons, September 10, sunk.

Trablock, 4,014 tons, September 10, sunk.

Kabinga, 4,657 tons, September 14, released.

Clan Matheson, 4,775 tons, September 14, sunk.

King Lud, 3,650 tons, September 30, sunk.

Foyle, 4,147 tons, September 30, sunk.

Hiberia, 4,147 tons, September 30, sunk.

Tumerick, 3,314 tons, September 30, sunk.

Buresk, 4,350 tons, September 30, captured.

Troilus, 7,562 tons, October 20, sunk.

Clan Grant, 3,946 tons, October 20, sunk.

Benmohr, 4,806 tons, October 20, sunk.

Chilkana, 5,146 tons, October 20, sunk.

Ponrabbel, 473 tons, October 20, sunk.

Exford, 4,542 tons, October 20, captured.

St. Egbert, 5,593 tons, October 20, captured.

Kamagasaki Maru (Japanese freighter), sunk.

Jemichug (Russian cruiser), October 29, sunk.

Mousquet (French torpedo-boat), October 29, sunk.

It is pleasant to find an enemy, especially so exasperating an enemy, so well appreciated as the *Emden* and her crew have been. The English papers have not hesitated to express their admiration in the most generous terms, glad tho they are that her end has come. The *London Daily Telegraph* finds itself almost ready "to regret that the *Emden* has been captured and destroyed." Of her commander, who was granted the privilege of retaining his sword upon his surrender, in recognition of his valor, it says:

He has been enterprising, cool, and daring in making war on our shipping, and has revealed a nice sense of humor. He has, moreover, shown every possible consideration to the crews of his prizes. So far as is known, he destroyed over 74,000 tons of shipping without the loss of a single life. There is not a survivor who does not speak well of this young German, the officers under him, and the crew obedient to his orders. The war on the sea will lose something of its piquancy, its humor, and its interest now that the *Emden* has gone.

To which *The Daily Chronicle* adds much praise of a similar nature, speaking of Commander von Müller as one who

Handled his ship with the skill of an accomplished sea officer and the courtesy of a chivalrous gentleman. He has been an ornament to the sea profession and an honor to the brotherhood of the sea.

THE NEW HEAD OF THE BRITISH NAVY

FOR a man who has done so much, so the *New York Sun* tells us, the recently reappointed commander of Britain's Navy is curiously little known to his countrymen. Now in the neighborhood of seventy, John Arbuthnot Fisher, Lord Fisher of Kilverstone, G.C.B., O.M., has a record of nearly sixty years' service. And throughout that period he has held a constant belief in the necessity of absolute efficiency in the Navy that has amounted almost to a passion. Even when, at the age of sixty, he was offered the greatest honor that a naval officer can receive, appointment as First Sea Lord, his desire to acquit himself in that office only in accordance with this firm belief led him to insist upon his own terms before he would accept the appointment. As we are told:

He carried in his brain a full scheme of reorganization. He believed the training and the distribution of the Navy to be perilously out of date. He had watched the change from wooden walls to iron citadels packed with tremendous and exquisite machinery. Yet there had been no fundamental change since Nelson's time in the method of training officers for their profession.

There had been a revolution in England's political relations, and it was clear to him that the struggle of life and death in the future would be fought in the North Sea, and no other where. Yet England's fleets were still organized as tho the Mediterranean would be, as in the eighteenth century, the chief scene of crisis. British ships were stationed anywhere but where they would probably have to fight.

Sir John Fisher—as he was then; his creation as first Baron Fisher of Kilverstone dates from 1900—clearly stated his intentions. They were approved. He went into the Admiralty to carry them out. His activities were revolutionary tho constructive. He was denounced for the sheer daring and resolution of the changes he introduced. But he was commissioned from the outset to effect them. That was what he was there for. To the foreign mind he appeared like nothing so much as an incarnated torpedo waiting for its war head to be flung on it.

And what did he accomplish? At Osborne he trained the officers of to-day to handle the grim machines which have superseded forever the old vision of masts and sails. He vastly increased efficiency while reducing expense. He struck out of the estimates every penny which did not yield real fighting value. He mercilessly scrapped scores of weak vessels that could neither attack nor run. He transferred the men to real fighting ships. He created, with the inspiration of nothing less than genius, the system of nucleus crews, by which every ship in the reserve can be mobilized for war in a few hours. Above all, he swung the whole fleet, as it were, clean round to face the tasks of the future.

He recognized that in the twentieth century, as in the seventeenth, the British Empire will be saved or lost not in the Mediterranean, but in the North Sea. Quietly he massed British strength in the

"The Best System of All"

Written by a Sales Manager

EVERY selling organization has to have one worker—and I am it. With five branch offices, forty salesmen, four crews of missionaries and 100 demonstrators to urge along from day to day, I am probably the worst offender of the fifteen-hour law in America. Against my natural instincts, I have to be systematic. And the best little system of them all was wished onto me by a printer's salesman. As he put it, "a different color for each office form." The daily sales sheet has a dominant color I can pick from a hundred papers. Each branch office has its own color for stationery, reports, orders, etc.

The system saves an astonishing amount of time and worry.

The printer's salesman showed me a fine, tough paper which comes in 12 attractive colors and white. Believe me, it was some order that he got—and he is sure of re-orders. The whole office has adopted the same system—the advertising manager especially finds it a great help for form letters. The paper is Hammermill Bond. Can also be obtained in tablet form, 6 sizes.

—A Sales Manager.

HAMMERMILL BOND

"The Utility Business Paper"

The system is fully explained in a valuable book, "The Signal System." Send for a copy and for a big portfolio of samples to the

Erie, Pa.

Barrett Specification Roofs

Standard Practice

THE fact that the building shown below is one of the largest industrial buildings in the country is enough to certify that the best architectural and engineering talent controlled its design and construction.

This invariably means that the building carries a Barrett Specification Roof, as the specifying of such roofs for large commercial structures is standard practice today. The reason is simple.

A Barrett Specification Roof costs less

than any other permanent roofing to build. It costs nothing to maintain. The unit cost (i. e., the cost per foot per year of service) is about $\frac{1}{2}$ cent—a lower figure than that of any other roofing.

This means that for the next twenty years this roof will probably give perfect service without a cent's worth of care or attention. Under favorable conditions such roofs have lasted thirty years.

For buildings of this type, therefore, Barrett Specification Roofs have no substantial competitor.

Copies of The Barrett Specification with roofing diagrams sent on request.

Special Note—We advise incorporating in plans the full wording of The Barrett Specification, in order to avoid any misunderstanding. If any abbreviated form is desired, however, the following is suggested: **ROOFING**—Shall be a Barrett Specification Roof laid as directed in printed Specification, revised August 15, 1911, using the materials specified and subject to the inspection requirement.

Special
No. 3

Diminutive Greenhouse

Covers 40 sq. ft. of garden space. Probably high enough to receive some of your tallest pet plants. Six large lights of extra-heavy glass to each sash. Hinged at top. Easily ventilated. Strongly made. Nicely finished. Quickly put together. Portable. Carefully packed. Price complete, freight prepaid anywhere in the U. S. \$20.00. For double glazing \$2.50 extra. Our catalog sent immediately for the asking. Write for it today.

WILLIAM H. LUTTON CO.
Designers and Builders of Greenhouses, Conservatories and Modern Glass Structures
221-3 Kearney Ave. JERSEY CITY, N. J.

Lutton Greenhouses and Miniature Glass Gardens

Ordered today will reach you in time to prepare a garden that will supply your table with delicious vegetables and beautiful flowers throughout the long winter months. Frames shipped complete, ready to put together. Quickly assembled. Easily ventilated. Built of the same materials as the large ranges of glass which we erect in all parts of the country. Make winter gardening a continual source of pleasure and profit. We manufacture 2-, 3- and 4-sash frames, single and double glazed, besides the specials listed below. Complete planting instructions with each frame. Prompt shipment and satisfaction guaranteed. Send your order today.

Special No. 2 Beginner's Garden

To meet a popular demand, we manufacture this special sash and frame. It's 8 ft. 3 in. long and just wide enough to put in a 3 ft. space. Sash has six large lights of extra-heavy glass so that plants receive the maximum of life-giving sunlight. Carefully packed, easily set up. Price complete, freight paid anywhere in the U. S. \$10.50. For double glazing \$1.00 extra.

narrow seas until, in Admiral Mahan's words, "86 per cent. of the British battle ship strength was concentrated in or near home waters."

When Fisher was appointed First Sea Lord in 1904, a Unionist Government was in power, with Lord Selborne as First Lord of the Admiralty. Within two months Fisher's influence was evidenced by Lord Selborne's issue of a memorandum and circular letter dealing in drastic fashion with the distribution and mobilization of the fleet. Existing arrangements were canceled and the effective war fleet divided into two, one in commission at sea and the other in commission in reserve.

Only a month later Fisher made his next departure, which was of a kind more calculated to attract general attention. He then showed that his practical, as apart from his strategic, policy was to scrap every naval vessel that was not absolutely up to date. In the first three months of 1905 no fewer than 120 of such vessels were removed from the ports to mooring-stations round the coast as obsolete.

All his life he had been a hard worker and he was untiring at the Admiralty. He was constantly planning and preparing for the war which has now come. In a measure he is the von Moltke of the British Navy, and when the storm broke the men and ships of England were, thanks to his work of organization, as ready for war as the German soldiers were in 1870. His knowledge of naval affairs was all-embracing. He knew where each ship was and all about it, whether the commander was a good officer, whether he drank, whether he was a fop, whether he was liked by his crew—in fact, everything about him.

"Confound him," said an officer who served under him in the West Indies. "I believe he could tell you the exact number of cocktails I drink every time I go ashore."

Added to this encyclopedic quality of mind are the faculties of prompt action, absolute fearlessness, and the ability, developed to a remarkable degree, of holding his tongue. Interviewers find him invariably deaf and dumb. These are not un-English traits, and yet—

The strangest thing about this man who bears upon his shoulders much of the weight of the British Empire is that he is not an Englishman at all in the strict sense of the word. His father was a Captain in the Seventy-eighth Highlanders, who settled in Ceylon, and his mother was a Singhalese woman of high rank. Thus he has a strain of Oriental blood in his veins.

It shows very slightly in his face; only persons who have lived in the East are able to detect it. In countenance Admiral Fisher shows the characteristics of a bulldog, and he has that simple, bluff, hearty manner which is associated with the typical John Bull.

Sometimes his subordinates and foreign diplomatists with whom he has had to do have been deceived by this manner into thinking him an innocent, guileless sailor-man with plenty of pluck, but no brains. In every case they discovered too late that a touch of Oriental subtlety was grafted onto the Anglo-Saxon directness and iron

Continued by George

will, and that Fisher had been playing them with Asiatic craft.

Essentially, he is a hard man, a hard taskmaster, and an implacable warrior. He does not dally with any romantic perceptions of his trade, but believes that, since war exists, it should in reality be war and not a monster inadequately swaddled in ribbons and bits of lace to hide its ugliness. When he was delegate at The Hague Peace Conference, he made it plain that in his opinion a humane war is an anomaly, and both foolish and cruel, and illustrated his meaning most skilfully:

"When you have to wring a chicken's neck," he said, "all you think about is wringing it quickly. You don't give the chicken intervals for refreshment and recuperation. It should be the same with warfare."

Lord Fisher has never hesitated to say that any war he may have to make will be hell. He has a bitter hatred of submarine vessels, and years ago was quoted as saying that if he caught the crew of a hostile submarine in time of war he would string them up to the yard-arm, even if he had to face a court martial afterward.

He showed the sternness of his nature after the bombardment of Alexandria in 1882. As captain of the *Inflexible* he had the task of organizing a police force and repressing disorder and looting after the capture of the city. He shot the guilty on sight and restored order in a few hours.

Some of his intimate friends, even officers of his own ship, were caught with looted goods. They begged in vain for mercy. He had all of them court-martialed and severely punished.

Admiral Fisher's subordinates respected him, but did not love him. He worked them too hard for that, and was too quick to detect their faults. He himself toiled from 5 o'clock in the morning until 9 at night, and expected everybody to do the same. Men who have served under him are apt to curse whenever his name is mentioned.

Fisher knows this and takes a sardonic pleasure in it. He is fond of telling the story of an old boatswain who served under him in several ships.

The boatswain eventually retired on pension and Fisher paid him a visit at his country cottage in Devonshire. He noticed a man servant about the place who seemed to have nothing to do, and asked his host:

"What on earth do you want him for?"

"Well, sir," said the boatswain, "he has to call me every morning at 5 o'clock and say: 'Admiral wants to see you, sir.' I roll over on the other side of the bed and reply: 'Tell the Admiral to go to the devil.' Then I go to sleep again, feeling good."

"This happens half a dozen times a day, and I feel better every time. I've been waiting for it for twenty years."

"His will is iron," said one of Fisher's Mediterranean officers, "and his nerves are Harveyized Krupp steel."

No better idea can be given of this little-known man of energy and determination than in the following anecdotes and incidents of his career:

Several years ago he was at Lisbon with

ARMCO IRON Resists Rust

That is why it is used for the ventilating system of this new Railway Terminal. ARMCO, American Ingot Iron, was subjected to severe tests to prove that it would withstand such conditions as a ventilating system imposes. As a result, 300,000 pounds of galvanized Armco Iron were ordered for this building—the largest contract of its kind in the West.

ARMCO, American Ingot Iron, is unequalled not only in purity, but also in the care given to every process of its manufacture. This also accounts for uniformity of

quality and resistance to rust.

Tests of years have proved it most serviceable where exposure to alkali, salt air, the fumes of sulphur, etc., quickly ruin other sheet metal.

Armco Iron Lath resists rust. It is in some of the largest buildings in the country, such as the Woolworth Building, in New York. Armco Iron Lath may be

had either in the Herringbone pattern as made by The General Fireproofing Company or the Imperial Spiral Lath and several other styles made in our own factory.

New Use for Armco Iron

The Enameled Tank Company of Kalamazoo, Mich., has adopted Armco Iron for enameled tanks in spite of its higher cost, because of its superior durability, welding qualities and unequalled enameling properties. Enamel on a base of Armco Iron does not show pin holes and imperfections, because of the even texture of and freedom from gas bubbles in the iron. Armco Iron has already been adopted very largely by makers of refrigerators, stoves and other enameled products for the same reason.

The American Rolling Mill Company

Licensed Manufacturers under Patents granted International Products Company

a squadron. Relations were strained between Germany and England.

Just before the English ships left a German fleet of twice the strength entered the harbor, with the idea of impressing the Portuguese, and drew up in double line off the town. Fisher exchanged salutes, and then led his vessels out of the harbor at full speed between the two German lines, with only twenty or thirty yards clear on either side.

It was a maneuver that might have wrecked a dozen ships, and only a man of iron nerve could have carried it out successfully. But he had trained his squadron well. Not a single vessel swerved a yard from the wake of his flag-ship. Amazed at his daring, the Germans cheered as he passed by their ships.

Stern toward men, he is pleasant to women. He never went into port if he could help it without giving a ball on his flag-ship. He was a great favorite with Queen Victoria, and was deeply attached to her.

When the French Admiral Gervais visited Portsmouth some years ago with his fleet Fisher was told off by the Admiralty to do the honors to him. The Queen called him to Osborne and said:

"Sir John, we have sent for you especially to ask you to be very nice to Admiral Gervais, as he was so kind to us when we were recently at Cimiez."

"Madam," gallantly replied the Admiral, "I will even kiss him if your Majesty wishes it."

Notwithstanding this expression of amiability, Lord Fisher used to be averse to alliances, especially maritime alliances. He took the ground that cooperation with a friendly fleet at sea in war-time was inadvisable, since "you can not shoot a friendly Admiral for ignorance or negligence."

He married a clergyman's daughter, and possesses an extraordinary stock of Scriptural quotations, which he uses to emphasize his arguments.

Lord Fisher has paid only one visit to America, and then stayed exactly a week. That was four years ago. But he is remotely connected with this country, because on that visit he came to attend the wedding of his son to Miss Jane Morgan, daughter of Randal Morgan, of Philadelphia.

At the time of his visit here Admiral Fisher expressed the opinion that the coming thing in navigation was the oil-engine and that aeroplanes would be valuable in matters of naval reconnaissance and dispatch. And that was about all the reporters could get him to say about naval matters.

As for personal characteristics, it has been said that it would tax Mr. Sargent to paint him. His profile, like that of most born fighters, juts clean out from forehead to chin, like the bow of a battle-ship. There is a certain force of expression about it which recalls the "hammer-and-tongs" captain in Marryat's ballad.

His figure is of middle size and active, and if you passed him in the street without knowing him you would be compelled to look at him twice. His talk is full of the unexpected, yet revealing phrases which light up a subject with flashes of conversational lightning. He is as irresistible in anecdote as in energy. Once when asked what was his favorite text he replied instantly, "And there shall be no more sea."

His motto throughout his career has been that "the frontiers of England are the coasts of the enemy."

A GENTLE HINT

ALL Paris in these days wants to visit the French firing-line, but the required passes are extremely difficult to obtain, and there are therefore only a few of the many who finally find their way within hearing of gun-fire. Even these seem an abomination to the French General Staff. Spectators are not wanted, and consequently every means is used to turn them back. The New York Times tells of an amusing incident in which an overzealous group had their patriotism tried cruelly and found wanting:

They had collected on a hill overlooking Soissons to watch the artillery duel that was going on across the river when a staff officer rode up and asked what they were doing there. All with one accord said they had come out to see whether they could be of any use in Red Cross work.

The staff officer at once sent them to the surgeon in command of the nearest field-hospital with a message placing the whole party at his disposal. The surgeon rose to the occasion.

"It was most kind of you to come," he said; "you can be of the greatest service. Here are picks and spades. Will you kindly bury those dead horses?"

Not many of the horses were ever buried, but that corner of the field of battle was successfully cleared of spectators.

AN INCONVENIENT WAR AVOIDED

AMERICANS are becoming more and more imprinted, as the war goes on, with the difficulties that a neutral country experiences in eluding diplomatic entanglements and maintaining its equilibrium upon all vexed questions. It is comforting, therefore, to come across so definite and unhesitating a declaration for peace as appears in the first issue, November 7, of *The New Republic* in regard to a reported embarrassing misunderstanding between this country and Switzerland. If we must invade Swiss territory, it would be so much better all around if we were privileged to wait until the present invasions elsewhere have ceased and the railroads are running on schedule once more, when the invasion might be conducted, as it has been so many times before, by the tourist experts. *The New Republic* remarks:

It is fervently to be hoped that Switzerland will give credence to Minister Ritter's denial of attacks upon that country by the American press because it did not officially protest against the violation of Belgian territory. Whatever indiscretions may have been committed by irresponsible journals, we can assure Switzerland that there has been no organized attempt to inflame the minds of our people against that tall but thin republic. While as a nation we do not admit that Switzerland is in advance of the United States in any respect except alphabetically, we have only friendly feelings toward her, if any. We do not desire a war with Switzerland, especially at this time, when communications are so shattered that war could not be carried on with any degree of comfort. Lest this be

Saved!—Oil—Money Time—Life In Stores, Garages and Factories

The Bowser idea of oil storage has given oil a new value and a longer lease of life. Makes one drop do the work of ten. Has established a permanent safety line between oil and fire. Saves men's time in drawing oil. Makes every man responsible for the oil he uses. In stores it makes the oil and butter absolute strangers. Does away with guess-work in computing prices on odd quantities. In garage neighborhoods it has ushered in an era of gasoline efficiency and SAFETY hitherto unknown.

In other words, the Bowser idea of oil storage and conservation has already saved the world millions in oil, time, money, and life itself.

CUT No. 41

BOWSER Safe Oil Storage System

"Modern Method" Stores everywhere handle oil the Bowser way. The oil is kept underground, away from other merchandise. Exact pre-determined quantities can be pumped right into the store at a moment's notice—clean, full-bodied, full-measure—best every way—the exact price computed in the one operation. No leaving the store for oil. No oil to be kept in leaky, unsafe containers. No groping for it in the dark or with a dangerous light. No oil or time lost. No miscalculations. No oil-tainted merchandise.

Also in Garages and Factories

Here, too, untold savings are being effected the Bowser way. In the garage gasoline is kept safe underground until needed. Then it pumps right into the garage at a stroke—full-bodied, clean and powerful. Not a drop lost by evaporation or careless handling.

In Factories Oils of every kind are stored just as efficiently. A Bowser system "checks up" on every man that draws oil—makes him responsible and accurate. No oil "lost" as under the "barrel" method. No waiting in line for oil. No yarn swapping at the bung-hole. Oil, time, money, and equipment saved. All 'round utility and efficiency.

In Garages Gasoline is kept safe underground. No evaporation—no lost power—no dirt to find its way into the car. And, above all, peace of mind be-

cause of a garage that is danger proof—no vapor "trains" to lead fire to the oil magazine.

500 Systems There are over 500 Bowser systems—ranging from portable departmental units to huge centralized, distributing systems. Over a million Bowser users—from private garages to mammoth plants. Learn of the system for you, whatever your oil storage needs. Write today. State for what purpose. Finding out costs you nothing, places you under no obligations.

The Gunn Furniture Co., Dept. B-19, Grand Rapids, Mich.

"Reassure yourself," he says; "that will perhaps amount to nothing. In any case, you will get well."

I learn that they are from Lorraine, which is lucky. They are clad in gray, which makes them almost invisible in war. I speak of this to them. They answer:

"Indeed, with your red trousers we can see you a long distance. You make superb targets."

The Germans go on their way, promising to return to look for me, as well as others, who, like myself, lie on the battlefield. I take hope. It seems good to be alive, altho I am in a sorry plight.

The hours pass; night arrives. It still rains. Day breaks. No one; neither stretcher-bearer nor my Lorrainers of the day before. It is not until four o'clock in the afternoon of the second day that the Germans come back. I have passed thirty-four hours in reflection in the rain, with a wound which caused me much suffering.

The Germans were kind enough, and carried him on a rough stretcher to a neighboring village. But they had wounded of their own Army to care for, and so he was left in the open air, in the village street, but, he says thankfully, "on firmer ground." When they have finished their work, there are nearly 800 wounded in that village, half of them French. It is still raining, but he has too many other concerns to mind that:

I am famished, I munch with joy a bit of army biscuit, which I find delicious. Upon my urgent entreaty a German consents to give me a glass of wine from his flask, which he has just filled. I thank him. That warms me. The German is going away, when he changes his mind and demands payment for his glass of wine. I jabber a little German. I understand and give him a ten-sou piece, the only money I have left. He takes himself off content.

Some German officers come to talk to us. One of them says to me:

"It is your Government's fault that you are here."

They all speak French. I note the remark of this officer, because it appears to me to indicate a curious mentality.

The third day of this Calvary they put us in a barn on the hay. We have as yet received no care. I beg the Germans to take off my clothes. I have been able to snare a blanket which happens to be there. I don't know to whom it belongs, but necessity stifles scruples. They are quite willing to do what I have asked.

It is something to have a dry blanket, to be rid of the frightful mud for a time. Also, he is able to dress his wound from his emergency kit. A French doctor, a prisoner, appears, but before he can be of use he is called away again to care for German soldiers. There are frequent transfers of the wounded, nightmares of jolting agony. Outside the improvised hospital one hears constantly the tramping march of troops, the roll of gun-carriages, and shouted commands. There is a period of rest, and then the wounded soldier rouses to clear consciousness again:

Outside of this dream of infernal horror, which I have had for eight days, I am highly hopeful for the final results of the

PROOF, Not Talk

You need an automatic pistol for home protection. You know you do. But you're not sure, after reading the different maker's claims, which pistol is the best. Good. Now listen to this:

The Colt was adopted by the U. S. Government because of its "marked superiority to any other known pistol."

The U. S. Ordnance Board made the most exhaustive and rigid tests before it decided on the Colt. It brushed claims aside—its experts decided on results. *Marked superiorly!* A strong statement—from the highest source in the country, too. Be guided by the Government's decision—get a Colt—the automatic pistol that

Fires the First Shot First

the pistol that is automatically safe—those two qualities so essential to a firearm for home protection.

war, because I am able to prove one thing, which has greatly surprised me, I confess. That is, that the replenishing of supplies and ammunition is marvelous. We have never lacked bread, nor meat, nor cartridges a single day. The service is marvelously organized. It is one of the great successes of this war. It is not as in 1870.

I have at last slept, and in a bed. I have no fever. Only in my sleep do I dream that they are transferring me and that it rains. But this little hallucination is disappearing.

THE SPICE OF LIFE

Inconsiderate.—PUP—"Great cats! That's a nerve! Somebody has put up a building right where I buried a bone!"—*Puck*.

A Marital Atrocity.—"What's the trouble at Wombat's house?"
"Wombat accuses his wife of using dum-dum biscuit."—*Louisville Courier-Journal*.

Fixing the Blame.—"See here, milkman, I don't think the milk you are giving me is pure."
"Madam, to the pure all things are pure."—*Life*.

A Bit Tired.—A somewhat weather-beaten tramp, being asked what was the matter with his coat, replied, "Insomnia; it hasn't had a nap in ten years."—*Christian Register*.

Another Trial.—FINANCIER—"That is not the same tale that you told me a few days ago."

BEGGAR—"No, sir. But you didn't believe that one."—*London Mail*.

Not What He Meant.—THE HOST—"It's beginning to rain; you'd better stay to dinner."

THE GUEST—"Oh, thanks very much; but it's not bad enough for that."—*Yale Record*.

The Pity of It.—MR. GABB—"Freshmen at the University of Pennsylvania are forbidden to smoke cigars."

FOND MOTHER—"Oh, dear me! Now Oswald won't get a bit of exercise."—*Buffalo Express*.

Quits.—"Your boys were in my apple-tree again yesterday," observed the first suburbanite.

"If you say anything more about it," declared the second ditto, "I'll send you the doctor's bill."—*Philadelphia Ledger*.

Genesis of War.—In very early times some kings, having made war, went forth in person to fight the battles, ignorantly supposing there was no other way.

But they had not proceeded far till they were swept aside by a great multitude rushing to the front.

"Who are you?" asked the kings, in no small curiosity.

"We? Why, we're the precious fools who are always ready to make somebody else's quarrel our own—patriots, in short!" replied the multitude.

"Precious, indeed!" chuckled the kings, and risked their skins no more.—*New York Evening Post*.

NERVOUS BREAKDOWNS

And How to Avoid Them.

By Charles D. Musgrove, M.D.

"It is Worry and Not Work at it."

Any man who sets out to accomplish important, and therefore necessarily trying work, is obliged to equip himself with some knowledge of the nervous system—its possibilities, capabilities, and its liability to exhaustion.

Truly, as Dr. Musgrove says, "It is the natures of finest fiber which accomplish the most, and it is they who are most liable to give way beneath the strain. A common mug may fall to the ground unharmed, where a piece of costly china would be smashed to atoms."

He is neither "preachy" nor "scary," but informing, inspiring, and helpful throughout.

12mo cloth, \$1.00 net by mail, \$1.07.

FUNK & WAGNALLS COMPANY, 354-56 Fourth Avenue, New York

"At once an expert and serviceable book."—*Salt Lake Tribune*.

"A volume full of truly valuable information, clearly and simply put."—*Chicago Inter Ocean*.

Awkward.—Hostess—"I want you to sing, Mr. Basso, but it's such a pleasant party I hate to break it up."—*Boston Transcript*.

Habit.—Doctor—"I have to report, sir, that you are the father of triplets."

POLITICIAN—"Impossible! I'll demand a recount."—*Puck*.

When Talk Begins.—Hostess—"People are very dull to-night, Adolph. I really can't get them to talk."

Host—"Play something, dearest."—*Judy*.

A Dry Atmosphere.—"I like this quaint little mountain village of yours, waiter. I suppose I can get plenty of oxygen here."

"No, sir; we've got local option."—*Sacred Heart Review*.

Another Try.—RECRUITING OFFICER—"What's the good of coming here and saying you're only seventeen years old! Go and walk around that yard and come back and see if you're not nineteen."—*Punch*.

Worth Trying.—"Let's drop into this restaurant."

"I don't believe I care to eat anything."

"Well, come in and get a new hat for your old one, anyway."—*Boston Transcript*.

Quite Natural.—"Why are women so crazy over these battered-up football-players?"

"I suppose it is because of the innate feminine love of remnants."—*Baltimore American*.

Explained.—In a barber-shop window in the Italian quarter:

PHYSIOGNOMICAL
TONSorialist

In the opposite window of the same store is this explanatory notice:

SHAVE, 3 CENTS.

—*New York Evening Post*.

Authoritatively Informed.—"So you come from New York," said an English lady to a traveling American. "I supposed, of course, you came from Boston."

"Why did you think that?" inquired the New York lady.

"Because I supposed all cultivated, intelligent Americans came from Boston."

"But what in the world made you think that?" was the natural question.

"Oh, I don't know, exactly. I think I was a Boston lady who told me."—*Christian Register (Boston)*.

Justly Earned.—Admiral Sir Hedworth Meux, still familiarly known in the British service as "Lucky Lambton," for two years commanded the Royal yacht, and once had occasion to reveal to King Edward how little thought of in the services was the lavishly awarded Victorian Order. A yachtman had forced himself on the late King's attention at Cowes.

"Do you know that man?" his Majesty asked.

"I'm afraid I do," said Admiral Lambton.

"What do you think of him?"

"Not much, sir; in fact, he's a bounder."

"I'm sorry to hear that," the King replied, "because I have just made him a member of the Victorian Order."

"Glad to hear it, sir," the Admiral chuckled. "It serves him right."—*Tit-Bits*.

Gillette the Practical Gift for His Christmas

SPECIAL welcome this Christmas for the *useful gift*. Every dealer will tell you that he is selling more Gillettes this year than ever.

Here indeed is a gift that means everything practical to a man—a better shave, and the saving of fees and tips!

See the Gillette sets in the stores:—

The "Bulldog" is the new *stocky-handled* model, with extra weight, different grip, balance and swing to the stroke.

The "Aristocrat," another new

model, is cased in *French Ivory*, in line with the latest idea of the day in men's toilet articles.

A dozen different styles—\$5 to \$50.

To the man who already owns one Gillette—give a *different style*, a Combination or Travelers' Set, a "Bulldog" Gillette or an "Aristocrat."

For a small gift at 50c. or \$1, the Gillette owner will be more grateful for a packet of Gillette Blades than for anything else you could get him for the same money.

Dealers everywhere. Buy early. Assortments are better and choice easier than when the Gillette counters are crowded with last-minute buyers.

INVESTMENTS - AND - FINANCE

NEW YORK AS THE PRESENT FINANCIAL CENTER

NEW YORK concededly is now the world's financial center," according to *The Journal of Commerce*, which adds that this position will be maintained by New York "at least during the remainder of the war." London for the time being has been "definitely displaced." While the foreign exchange situation "is bad enough here," the fact remains that "it is much better than it is in London." London, in fact, is coming to us for remittance to France, Holland, and Italy, and those countries are doing the same thing with us in remittances to London. Other points in this interesting situation are set forth as follows:

"Altho sterling exchange rates are concededly above normal, New York's financial relations with foreign centers are gradually getting back to a working basis. Continued progress is expected in banking circles in this city without Government aid of an arbitrary kind. The current indebtedness of the United States at the beginning of hostilities was quite large, but not exceptionally so; nor was it in any measure out of keeping with the international trade relations. With the outbreak of the war came a sudden demand from all European countries on New York for remittance to London. The natural result was a large enhancement in the value of the pound sterling. Under natural conditions the rate would not have gone so high as it did, because gold could have been shipped at a profit to London, thus pegging the rate of exchange at the gold shipping point dependent upon the price to be paid for the gold by the Bank of England. One of the foremost sterling exchange authorities in New York, discussing the new conditions that have been created, said:

"The Bank of England in this respect was never known to be very liberal on an export movement from this side. It generally puts the rate down to the minimum, namely, 77s. 9d. for standard bars and 76s. 3d. for American eagles. That would make the rate of exchange 4.87437 and 4.87998, less the cost of shipment, which in the one case is approximately \$1.46 per £100 sterling and in the other case \$1.26 for £100 sterling. The increased cost of shipment of bars is due to the fact that the United States Assay Office called for a premium of 40 cents per \$1,000 on the bars."

"It is thus evident, the banking authority in question argues, that the high price of exchange is not due to any particular urgency of American merchants to effect remittances. It is due to the fact that New York has become the clearing-house of the world for the settlement of the international balances due from one European continental center to the other. London also comes to us for remittance to France or to Holland or Italy, and Holland *et al.* are doing the same thing, so that the pivotal point has now swung around to New York and will remain so as long as the present disturbance is occupying the nations of Europe.

"The talk of remedying the situation by the shipment of gold, the banker argued, is to be deprecated. Europe has tied up our balances through moratoria, etc., and is it anything out of the way that we, in our turn, should protect ourselves against a demand for the yellow metal that can not be justified on any equitable basis? "The whole transaction is one-sided," the banker continued. "I know of my own knowledge

that the English banks and bankers are only too willing to extend us further accommodation, and, in fact, they are begging us to take such extension. I have received letters from the more prominent bankers in London asking us to reduce our credit balances with them, inasmuch as owing to the general collapse of the industrial conditions there they have no use at present for the money. The lowest price ever known to have been paid for eagles in London is 76s. 3d. and for bars 77s. 9d. But the price that is being allowed by the Bank of England is only 76s. 1/2d. and for bars 77s. 6d. If the bank were very anxious to have gold it should have put the price at a premium over its minimum figure, thus bringing the cost of exchange below the usual gold-import point, which is around 4.85, thus encouraging remittances against the so-called indebtedness of America to England."

EXTRAVAGANCE IN CITY GOVERNMENT

A budget for New York City, reaching \$200,000,000 in 1915, recently announced, has given new life to discussion of the gross extravagance practised in governing American cities in recent years. In New York the running expenses were this year pruned, so that the actual cost of governing the city is less than formerly, but a large increase in the budget has occurred just the same, due to increase in the "debt service" of over \$7,000,000, besides another large amount for deficiency in taxes, the two items making over \$10,000,000. In other words, strict economy in operating expenses has been insufficient to offset the growing burden of taking care of the city debt.

It was recently shown by a writer in the *New York Times Annalist* that expenditures in nine of the largest cities of this country are now \$2.62 per capita more than were the revenue receipts, New York being "the least thrifty of all" and Chicago "the most economical." The average revenue receipts per capita in these cities, all of which have a population of more than 500,000, were, in the fiscal year ending June 30, 1913, \$32.10. In the same cities the per capita cost of government including interest charges and all other outlays, averaged \$34.72. In only three of these nine cities were expenses kept below the revenue receipts. One of these was Chicago, with an excess of revenue over expenditures of \$2.98 per capita; another Boston, with an excess of \$2.04; a third, St. Louis, with an excess of 11 cents. In all others the cost was greater than the receipt, New York making "the worst showing of all." The writer says further:

"The greatest source of revenue is, of course, property taxes, and it might be supposed that these would form substantial the same percentage of the revenues in the various cities. Some astonishing differences in the amounts so raised per capita and the percentage to total revenue are shown, however. For instance, Boston raises \$33.70 per capita, or 71.5 per cent. of her total revenue receipts, from that source while Philadelphia gets only \$13.74, or 55 per cent., in that way. In New York, \$29.00 per capita, or 73.6 per cent. of the revenue are raised through property taxes. Other taxes, special assessments, and highway privileges, rents, and interest account for a large part of the remainder of the

CADILLAC ENCLOSED CARS

Here is provided the harmonious blending of the highest engineering achievement with the utmost in designing art and coach building skill.

The engineers have provided an eight-cylinder motor of superlative smoothness. The coach builders have provided a dignified and luxurious environment.

The liquid smoothness of these cars is supplemented by a sense of complete seclusion; the seclusion by a sense of rest and relaxation; the restfulness by a sense of unexampled ease and elegance.

Buoyant springs, deep soft upholstery, appointments in quiet good taste but still almost palatial—all of these soothing influences bring supreme comfort to mind and body, and leave you almost oblivious to the fact that you are borne along by mechanical means.

Special Enclosed Car Booklet on request

Cadillac Motor Car Co. Detroit, Mich.

Pictures sharp to the corners, not dull and hazy.

Building? Get This Free Book

It tells all about the proper method of finishing floors and interior woodwork, and improving furniture. A big help in beautifying the home—new or old.

Johnson's Wood Dye

Comes in 17 harmonious shades. Makes cheap, soft woods as artistic as hard woods.

If you are building, tell us what woods you contemplate using for floors and interior trim, and the shades in which you are most interested, and we will finish panels of those woods for you, showing what beautiful and durable effects may be inexpensively obtained by the use of Johnson's Artistic Wood Finishes. We will send you these panels and the 25c book, edition LD 11. Free and Post paid without obligating you in the slightest—this is part of our service to builders.

S. C. Johnson & Son, Racine, Wis.
"The Wood Finishing Authority"

receipts, and the earnings of public-service enterprises are also an important source of income, tho varying greatly in the different cities. In New York, for example, the receipts from that source are only 8.5 per cent. of the total revenues, while Baltimore gets 13 per cent. of her income from such enterprises.

"Governmental expenditures are divided into four classes: expenses of general departments, interest on indebtedness, expenses of public-service enterprises, and 'outlays.' The latter item includes payments for land and other properties and public improvements more or less permanent in character, which are constructed or acquired by municipalities for use in the exercise of their function or in connection with business undertaken by them. The first class, with its many subdivisions, generally accounts for approximately 50 per cent. of the total revenues; in some cities it is slightly less, but usually a little over half. Boston spends the most per capita for the expenses of general departments, the outlay for that purpose being \$27.62, with New York, spending \$23.95, a close second. Baltimore spent only \$15.01, considerably less than any of the others. In outlays, however, she was more extravagant, with an expenditure of \$11.02, as against but \$4.55 for Philadelphia. New York's outlays were the greatest, being \$13.38. Boston's interest payments per capita were by far the largest, being \$8.26, as against \$7.04 for New York, which came second in this respect, and only \$1.06 for Detroit, whose interest-bearing debt is relatively very small.

"In allocating expenditures of the various governmental departments, it is seen that the ones devoted to education are the most expensive, the expenditures being approximately twice as great as those of the police departments, which usually come second in the amount expended for maintenance. Philadelphia spends 21.6 per cent. of her outlay on schools, the smallest percentage of any, while Cleveland leads in this department with 30.3 per cent. The police expenditures range from 9.2 per cent., spent by Pittsburgh, to 15.8 per cent. in Chicago. Following is a table of percentages of expenditure for various departments:

PERCENTAGE OF PAYMENTS FOR EXPENSES OF GENERAL DEPARTMENTS MADE FOR—

	Schools	General Government	Police Department	Navy, Hospitals, and Corrections	Sanitation	Highways	Fire Department
New York	27.9	13.6	12.1	8.7	8.0	7.8	7.0
Chicago	24.6	15.3	15.8	6.4	8.2	6.6	7.9
Phila.	21.6	13.8	15.0	10.4	7.1	14.6	5.1
St. Louis	25.3	12.4	15.6	6.6	10.2	13.0	8.2
Boston	24.6	10.8	11.4	8.3	9.3	10.3	8.1
Cleveland	30.3	13.9	9.3	5.2	8.5	11.2	8.4
Baltimore	22.5	11.6	14.6	7.2	10.2	12.5	10.7
Pittsburg	26.2	12.9	9.2	6.4	6.2	13.1	8.3
Detroit	22.1	10.3	11.0	5.6	8.0	23.6	8.7

"Its prominence as an automobile-manufacturing center, and the fact that it is said to have the greatest number of automobiles per capita of any city in the country, doubtless account for the tremendous expenditures of Detroit for highways, amounting last year to 23.6 per cent. of general departmental expenses."

LIGHT BANK CLEARINGS

Bank clearings in this country for October and for ten months of this year are presented in a table by *Bradstreet's*, which compares them with corresponding periods in 1913. This comparison shows that clearings in October were "of light proportions." In the broader situation of affairs there are, however, favorable aspects such as "heavy exports, high prices for wheat, activity in industries turning out

The American Mechanical Toy Co.
252 East First St., Dayton, Ohio

war supplies, and better general financial conditions," but against these as offsets it has to be remembered that purely domestic trade is proceeding "at a relatively slow pace," that many dividends have been reduced, and the country's basic industry—iron and steel—is "working at a very slow rate." Because of a considerable amount of idleness the purchasing power of a large number of people has been curtailed, and meanwhile speculation has been almost entirely suspended and collections are hard to make. Other points as to light clearings are set forth in this article as follows:

"Under the circumstances, light payments are to be expected. However, it is to be noted that bank clearings for the month of October evidence improvement over the low-water marks set up in the preceding two months, altho this fact by and of itself provided little comfort, seeing that payments in October always expand from the small limits usually set in the summer.

"Clearings at all cities for the month under review total \$11,594,006,571, which sum reflects an increase of 17 per cent. over the very light aggregate reported for September. Barring the exhibits of August and September, the showing for October is the lightest noted for any month since February of 1909. It also discloses a loss of 25.4 per cent. from October of 1913, and it indicates a drop of 31.2 per cent. from that month in 1912, when payments reached record proportions, and when economic movements were working under full sails. Comparison with every October back to 1904 brings out losses, and the total for last month is but 1.3 per cent. larger than that registered for October ten years ago. For October of this year New York's total forms 48 per cent. of the aggregate, whereas in October of 1912 it was approximately 60 per cent. The total for the country outside of New York reflects a less noteworthy decline than that reported for the country as a whole. Briefly, New York's total fell off 35.4 per cent. from October of last year, the grand total receded 25.4 per cent., and for the zone outside of the metropolis the drop is 12.7 per cent. That ratio expresses the decline from the heaviest total ever reported, that of October, 1912.

"New York City's total for October last—\$5,609,436,978—indicates a rise of 21 per cent. over September, but, as we have already seen, it manifests a recession of 35.4 per cent. from October, 1913, while it displays a loss of 44 per cent. from October, 1912, when payments aggregated the extraordinarily large sum of \$10,138,000,000, the third heaviest total ever reported. It may be recalled that in October of 1912 14,149,000 shares of stock changed hands on the Stock Exchange, whereas this year trading was well-nigh negligible. However, the sum just given is the lightest noted for any October since 1903, at which time clearings aggregated \$5,233,000,000.

"Outside of New York the total for October is \$5,984,659,593, an advance of 13.5 per cent. over September, but a loss of 12.7 per cent. from October of last year, that ratio also representing the decline from October of 1912. It may be noted that the total named is larger than those reported in September, August, June, May, and February of this year, and it is 2 per cent. better than the showing made in October, 1911. Incidentally, Kansas City and Minneapolis, with totals of \$306,305,338 and \$170,202,373, respectively, established new high records. In other words, the total given for Minneapolis displaces the high sum scored in October, 1907, while the showing made by Kansas City is the best reported since October, 1913.

From Nothing to \$10,000 a Year

That's the remarkable experience of a well-known Cleveland man (name on request) who read "The Magic Story" and applied its "Secret" to his own life and business. You may do as well or better. Thousands of successful men have reached the goal of their ambition through the pages of this remarkable book. If you want place, power and prosperity this book will positively help you. To satisfy curiosity as to its tremendous influence I will send the first part FREE. You are under no obligation to buy the complete story or even return the first part if it does not please you.

FRANK E. MORRISON

296 St. James Building,

New York

DO YOU KNOW A BOY

who would appreciate an opportunity to earn money and secure a thorough business training in exchange for a little spare time work? You will be doing the boy a favor by asking him to reply to this advertisement or by sending his name and address to Boy Department 5, THE LITERARY DIGEST, 354-360 Fourth Ave., N. Y.

been said about the war-tax of \$10,000,000 on Brussels and of similar taxes upon other cities. A little figuring shows clearly that according to Germany's official estimate all these sums added together would be sufficient to prolong the war only about a week.

On the other hand, the capture of large numbers of able-bodied male prisoners by any one country is a factor tending to prolong the war so long as these captures are more or less evenly balanced. Such prisoners are of value not so much in handicapping the enemy as in providing the country making the capture with workers for their factories and fields while their own men are at war. If Germany has 250,000 able-bodied prisoners, these, without doubt, have been put to work, to take the place of Germans at the front, in mines, mills, and public improvements. Considering the fact that these prisoners need not be paid and can be fed for a few cents a day, they are of much economic value in enabling nations to prolong the war. For this reason the status of the prisoners will be carefully considered in this column from week to week.

Figures show that at the present time nations containing about 1,000,000,000 people, or considerably over one-half of the entire human race, are participating in this war. Noting the fact that about 25 per cent. of this number are males of fighting age, we can not hope that the war may be ended for the lack of men on the part of any of the belligerents. M. Leroy Beaulieu, a well-known French statistician, was asked the other day whether it would be possible for any nation to carry on the war with the whole of its adult male population of military age in the field. He replied that this was done fifty years ago by Paraguay in a war lasting several years against the Argentine Republic; it was accomplished again by Boers in 1899-1902 in their war against Great Britain, and again in the recent Balkan wars. Not only are the women and prisoners, the boys and girls forced into service, but the neutral nations also supply laborers. For instance, reports coming from France indicate that Spanish laborers are already working in the vineyards, while with the Baltic Sea still controlled by Germany's fleet, she is carrying on commerce undisturbed with the countries on the north. Hence, M. Beaulieu argues that so long as the population is united by military ardor and national sentiment and regards the war as just and holy, Germany can not be reduced by starvation. Therefore we can not look to these figures for optimistic prophecies."

WARNING!

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even tho they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonus. The LITERARY DIGEST mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

FUNK & WAGNALLS COMPANY,

New York City.

ATWOOD GRAPEFRUIT

NO OTHER GRAPEFRUIT EQUALS IT IN FLAVOR

THE superiority of Atwood Grapefruit is not an accident. From the first planting the Atwood Grapefruit Co. has sacrificed everything for QUALITY. An initial expense of hundreds of thousands of dollars was incurred, while everything that scientific culture and experience could suggest was done to produce QUALITY. Even then some trees at maturity bore simply good grapefruit, but not good enough for the Atwood Brand. These trees were cut down and replaced by superior varieties.

So through the various processes of selection, cultivation and elimination has evolved the ATWOOD FLAVOR, as hard to describe as it is difficult to produce.

People who have eaten Atwood Grapefruit say:

"It is absolutely the best grapefruit I ever tasted."

"Fruit is fine and full flavored, 'The Best Ever'."

"They are the nicest fruit we have ever tried."

"The best that we have been able to secure."

"As usual, your grapefruit is way ahead."

"Fully ripe and delicious."

A well-known physician writes: "I prescribe grapefruit for all my patients, and tell them to be sure and get Atwood Grapefruit."

Atwood Grapefruit is always sold in the trade-mark wrapper of the Atwood Grapefruit Co.

Do you know what your handwriting means?

You put your own personality
(systematic, straightforward and sincere)
into your handwriting, but
(Independent, blunt, artistic, a bit selfish)
Spencerian Steel Pens
(has large ideas, well balanced)
put an easy smoothness into
(Impulsive, imaginative, man of large notions)
what writing you do
(romantic, emotional, meek)

FOR the thousands of readers of the Digest who are interested in the subject, we have just published a series of small, factful books printed about handwriting. The first is written in French, the celebrated Granger's, where there are a series in English. These magazines have aroused a great deal of interest. The book, entitled "What Your Handwriting Means," interprets nearly every style of handwriting and helps you to recognize your own style among them.

This book has been prepared by us at great expense for those who are seriously interested in the subject.

The edition is limited.

If you desire a copy, it will be sent to you with 12 different styles of Spencerian Pens on receipt of ten cents.

CURRENT EVENTS

EUROPEAN WAR

IN THE EAST

November 5.—Russia announces the recapture of Mlava, on the Russian-Polish frontier north of Warsaw, with heavy losses for the fleeing Germans.

November 6.—The Russians capture Jaroslav, seventeen miles from Przemysl, taking 5,000 Austrian prisoners. This is, it is claimed, the most important victory for Russia so far.

November 7.—Petrograd reports the East Prussian forces forming an offensive against the Germans near Lyck. In southern Russian Poland the Germans are withdrawing westward through Czenstochowa. Many cholera victims have been left behind in Jaroslav, Przeworsk, and villages on the San by the Austrians.

November 8.—The Russian General Staff reports the Germans forced back to the border, and the entrance of Russian cavalry into Germany near Posen.

November 9.—Russia reports a steady advance in East Prussia and a further withdrawal of the Germans in southern Poland. In Galicia, the Austrians are reported as falling back on Krakow, 1,000 prisoners being taken south of Przemysl. Berlin, on the contrary, declares the Russians defeated near Wyschytyniz Lake, in East Prussia, and the capture of 4,000 Russian prisoners and many machine guns.

November 10.—Berlin reports victories on the border of East Prussia, near Wirballen. Russian victories near Soldau, in the southwest corner of East Prussia, and near Lyck, are announced in Petrograd.

November 11.—The Russian General Staff denies a German victory in East Prussia. A Cossack approach on Krakow is announced, as well as the reinvestment of Przemysl. From Liège, Belgium, a movement of Austrian troops is reported, entraining to go to the support of Krakow.

IN THE WEST

November 5.—Paris reports German attacks repulsed in the Argonne region and north of Arras. The Germans announce the repulse of an Allied attack near Nieuport, with progress near Ypres, Lille, Berry-au-Bac, and in the regions of the Argonne and Vosges.

November 6.—The French claim ground regained about Soupir, in the Aisne region, German trenches captured on the heights of the Meuse and east of Verdun, and attacks repulsed between Arras and the Oise. Germany announces important gains near Ypres and St. Mihiel.

November 7.—Paris *communiqués* mention fierce attacks centering on Cambrai, Aix-Neulette, and Le Quesnoy-en-Santerre, all on the line of Dixmude-Arras-Roye, with slight French gains at Vailly, west of Soissons, and two villages regained northeast of Verdun.

November 8.—France announces advances at several points, notably northeast of Soissons, with no recent losses. The Germans claim the capture of a height west of the Forest of Argonne, the object of their attacks for several weeks.

The Germans announce the capture of Vienne-le-Château, twenty-two miles

Digitized by Google

west of Verdun, as of extreme importance, altho not a breach of the Allied line.

November 9.—The Allies hold Dixmude against the Germans, with little change in the whole battle-line. Berlin reports the Allies on the offensive near the coast but with negligible gain. German attacks of an unprecedented violence on Ypres and Dixmude persist.

November 10.—The German headquarters are moved to Alost, fifteen miles west of Brussels. The flooded territory of the Yser now impedes the operations of the Allies. The latter announce progress between Ypres and Armentières.

November 11.—The Germans announce officially the capture of Dixmude, and the crossing of the Yser canal, along with the capture of the Allied first line west of Langemarck, and over 2,000 prisoners taken. The French admit the relinquishment of Dixmude, but deny any further German success.

GENERAL WAR NEWS

November 5.—Great Britain and France make formal declaration of war upon Turkey. Russian troops invade Turkish Armenia, sweeping all before them, according to Petrograd.

November 6.—Tsing-tao surrenders to the Japanese after a siege of sixty-five days.

England, informed that copper now being shipped to Italian ports is destined for German and Austrian use, has since October 25 detained all such shipping at Gibraltar, and now offers to pay for all copper shipped previous to October 20, when copper was made actual instead of conditional contraband.

November 8.—Transvaal rebels under General Beyers are dispersed on the Vet River, southeast of Bloemhof, by General Lambert's forces.

Failing to leave the neutral harbor within the time specified, the small German cruiser Geier is interned at Honolulu.

The second week's report of the American Commission for Relief in Belgium shows a 20,000-ton shortage in the prospective food supplies for November, only about 30,000 tons being at present available.

November 9.—General De Wet overcomes a small Government command under General Cronje, near Doornberg, South Africa.

November 10.—The German cruiser *Emden* is finally caught, at the Keeling-Cocos Islands, in the Indian Ocean, and driven ashore in flames by the Australian cruiser *Sydney*. The *Emden* loses 200 lives. Commander von Müller and other officers are rescued, and are allowed to retain their swords.

November 11.—The British torpedo-boat *Niger* is sunk in Deal Harbor by a German submarine. The Japanese torpedo-boat 33, mine-hunting in Kinohow Bay, strikes a mine and is sunk.

GENERAL FOREIGN

November 5.—A battle is reported twenty miles south of Aguas Calientes, Mexico, between Villa and Carranza forces.

November 6.—In a notification to the Aguas Calientes Convention, Villa insists on Carranza's resignation, offering himself to retire, if necessary.

November 7.—Paris universities open, attended only by middle-aged men and foreigners.

Strong earthquake shocks are reported from Messina, and Mt. Etna is said to show signs of activity.

November 8.—Carranza receives an ultimatum from the Aguas Calientes

How the Public Profits By Telephone Improvements

Here is a big fact in the telephone progress of this country:

Original
Bell Telephone
1876

Standard
Bell Telephone
To-day

Early
Telephone
Exchange

Typical
Present-day
Exchange

If City Wires
Were Carried
Overhead

800
in Underground
Cable

Hand in hand with inventions and developments which have improved the service many fold have come operating economies that have greatly cut its cost.

To appreciate these betterments and their resulting economies, consider a few examples:

Your present telephone instrument had seventy-two ancestors; it is better and cheaper than any of them.

Time was when a switchboard required a room full of boys to handle the calls of a few hundred subscribers. Today, two or three girls will serve a greater number without confusion and very much more promptly.

A three-inch underground cable now carries as many as eight hundred wires. If strung in the old way, these would require four sets of poles, each with twenty cross arms—a congestion utterly prohibitive in city streets.

These are some of the familiar improvements. They have saved tens of millions of dollars.

But those which have had the most radical effect, resulting in the largest economies and putting the telephone within everyone's reach, are too technical to describe here. And their value can no more be estimated than can the value of the invention of the automobile.

This progress in economy, as well as in service, has given the United States the Bell System with about ten times as many telephones, proportionate to the population, as in all Europe

CONVERSATION

What To Say and How To Say It

A new and widely commended book
By MARY GREER CONKLIN

"Books like this perfectly delightful one, simply thrill one with the imaginary joys of conversation, real conversation, not breathless chatter or the martyrdom of enduring having somebody talk when you want to, but a fair and even deal, heart and mind alert, and a companion for whose opinions you really care. This eminently intelligent book has so much that is good sense, and so much valuable advice to give that it warms the heart and stirs the imagination."—*Elizabeth Dvingerfeld, in the Herald, Lexington, Ky.*

12mo, cloth, 75c net; by mail 82c

"'Conversation' shows that its author has thought deeply concerning her theme, and followed many lines in her endeavor to ascertain why talk is so seldom worth while." — *Detroit Free Press.*

Convention, calling for his peaceful abdication of the Provisional Presidency by 6 p.m., November 10, and threatening force in case of refusal.

November 10.—Several generals are deprived of their commands in Mexico City by General Carranza, because of their refusal to retract their affirmation to abide by the decisions of the Aguas Calientes Convention. General Villa is reported as marching on the capital with an advance guard of 15,000 men.

November 11.—Washington declares that Holland, through arrangement with the Holland-American Line, sole neutral carrier plying regularly between America and Holland, has effected a virtual Government food monopoly, allowing no private shipments to be brought into the country.

Word comes via Aguas Calientes that war is declared between Villa and Carranza and that a preliminary engagement occurs at Leon, between Aguas Calientes and Queretaro.

DOMESTIC

November 5.—Designs and specifications are complete for a new type of United States navy submarine, twice the size of the German U-9 type, costing nearly \$1,250,000, and to be known as submarine destroyers or diving destroyers.

Eight hundred men begin the work of disinfecting the 13,000 pens, 725 chutes, and 25 miles of water-troughs of the Chicago stock-yards, pursuant to the Federal quarantine on the hoof and mouth disease.

November 9.—The Fore River Shipbuilding Company receives an order for 20 submarines, to be delivered in sections for assembling. The purchasing nation is not disclosed.

Popular.—SALESMAN—"That bracelet, madam, is unique. It was given to the Empress Josephine by Napoleon Bonaparte. We are selling a lot of them this season."—*Judge.*

SOME WAR-NAMES OFTEN MISPRONOUNCED

The following are some of the names and terms which have come into prominence during the European War of 1914, and which are commonly mispronounced. The pronunciations given below are indicated by the alphabet devised for pronunciation by the Department of Superintendence of the National Education Association, and used in the *Funk & Wagnalls New Standard Dictionary*. The basic principle of this alphabet is the use of the fundamental vowels in their original Roman values.

Give These

Delightfully Different Chocolates

Lend distinction to your chocolate gifts this year by giving Ambrosia Chocolate Tixies—the delicious rich confection that's so entirely different from Christmas chocolates of the usual sort.

Ambrosia Chocolate Tixies

Pure, rich chocolates with select almond and light cream. No cream at all used in the filling. Every bite a delight. Put up in handsome three pound boxes. Chocolate Tixies are the gift "de luxe." Your friends will appreciate them. Send \$3 today (paid in three pound boxes only) for box containing 3 full pounds—prepaid to you.

Ambrosia Chocolate Co., 331-5 Fifth St., Milwaukee, Wis.

FOR CHRISTMAS "Chevalo" Prunes

Grown and packed in OREGON. Then direct to you. A prettily packed box with tested recipes, sent anywhere in the United States by express prepaid on receipt of \$1.75. The "CHEVALO" brand OREGON prune is the peer of all prunes in every respect. A large assortment, perhaps, but just try a box and see how the taste lingers. And quantity—for the \$1.75 you get OREGON fruit delivered equal in bulk to 1/2 bushel of the fresh fruit. A box makes a splendid Christmas gift.

"Why not the best when the cost is least?"

Chehalem Valley Orchards, Salem, Ore.

LENS DIET

Greatest food known to mankind for all invalids, babies and dyspeptics. We will prove it—70 years in use. 1-lb. can + 18 adult meals, \$1.00 prepaid. Just Pure Food. THE LENS CO., 526 Third Ave., Pittsburgh, Pa. (Estb. 1842)

The BEST LIGHT

Positively the cheapest and strongest light on earth. Used in every country on the globe. Makes and burns its own gas. Casts no shadows. Clean and odorless. Absolutely safe. Over 200 styles, 100 to 2000 Candle Power. Fully Guaranteed. Write for catalog. AGENTS WANTED EVERYWHERE.

THE BEST LIGHT CO.
92 E. 5th St., Canton, O.

San Diego *Panama* California Exposition

The Panama California Exposition and Southern California

THINK of all the things imaginable to make you want to travel; consider the seasons, the weather, your own education, your comfort, your pleasure; add them all together and you will have part of the reasons for coming to San Diego in 1915.

This wonderful Exposition, celebrating the opening of the Panama Canal, will welcome the world on January 1st, and will not close its doors until midnight of the last day of 1915.

A year of sunshine and soft, caressing breezes; an Exposition of man's achievements; a demonstration of what man is doing; while products will be exhibited, processes will be shown; in this, all former Expositions will be outdone; others have shown the silent evidences of man's skill and ingenuity; this Exposition will show manufactures, farming, tea growing and such things throbbing with the life of performance.

Don't miss it! Don't take the chance of regret, following regret, as your friends return and tell you of the most wonderful Exposition ever held; of days and nights of comfort and entertainment in a land full of romance of old Spanish Mission days; the out of doors part of this wonderful Exposition is worth the trip if there was no indoors part.

It is Southern California,—plus! In less than two months after the opening of the San Diego Exposition, San Francisco, five hundred miles north, will open the doors of her wonderful Exposition. Your railroad ticket takes you to both without extra charge. Could anyone think of greater inducements! Come to California in 1915.

On up the coast and across the Rockies, in the deserts and forests, on the plains, and in the valleys that fill the West, there are other sights which make all other lands commonplace.

This is the West of Your Country

It is a West in which you find a civilization that pre-dates that of pre-historic Egypt, a country far excelling those of the Mediterranean; it is the Great West of the Grand Canyon, the Yosemite, the Yellowstone, the Painted Desert, the Great Trees; the Great West that is old, yet young, filled with the wonders of the world and with the romance of centuries. It is the West that you should see, and 1915 is the time for you to see it, when California with her two Expositions offers you the opportunity and special rates.

Railroad fares and hotel rates add to the inducement, they are very low and will not be raised. Select your time, come when you can, but come!

Whole Number 1284

SHALL WE LET BELGIUM STARVE?

THE WORD now comes from the relief-workers in Belgium that the supplies so far received are "entirely insufficient" to meet this great national tragedy. When a nation hungers, heroic measures are called for. "Every day's delay means an increasingly heavy toll in sickness, suffering, and death," declares the Belgian Relief Committee, and the American Consul at Antwerp says in a letter to Henry Van Dyke, American Minister at The Hague, that "it seems that Belgium will have to face the danger of famine much earlier than any of us thought it would." "If in Belgium a population of six millions is to be kept alive," says the Women's Committee, "food must be sent and at once."

Prompt and generous action is plainly needed. The need sends its cry to every heart. How shall we meet this appeal? We believe we know our readers when we say that every one of them is thrilled with pity and is anxious to send food to the hungry ones. So we have decided to ask our great family of readers, all over the world, to join hands in this great life-saving crusade.

What is needed? Bread. What shall we send? Let every one of us send a barrel of flour, ten barrels, fifty barrels, a hundred barrels, five hundred barrels! We will start the barrels rolling with a contribution of five hundred barrels. Who will match it? We hope to print a goodly list of the well-to-do readers of our magazine who will meet or, better, outdo it.

And the one-barrel gifts! Each barrel may, in fact *will*, save a life. Every pound will make a loaf and a quarter of bread. Every barrel will feed a family of five for two months. What a message of love and life will go to Belgium in every barrel! Some child, some poor widow, some aged man or woman is waiting now for your barrel. Send a hundred barrels and save a hundred families this winter. The relief committees are guaranteeing that 100 per cent. of the food supplies shall reach the starving Belgian women

and children. Every barrel will reach Belgium without any further transportation charges from New York. We shall see to that. Reports have it that England, Holland, and France are already caring for 1,500,000 of the refugees. Disputes about the war have no place now. When babies are starving, it is no time for acrimonious discussions. Save the babies, and discuss afterward.

Flour varies in price per barrel, but \$5 will send one, and we will rate our campaign on that basis.

Let us send a cargo of 20,000 barrels of flour to Belgium at the earliest possible moment. He gives twice who gives quickly!

The wife of the Minister of State of Belgium says in an address to the women of America:

"Seven out of the nine provinces that go to make the Kingdom of Belgium have been devastated by the most dreadful war known to history. Thousands and thousands of people have nothing in the world left, not a roof over their heads, no money, no clothes, and no chance of earning a living of any sort.

"The sight of the poor refugees streaming into Antwerp, women with babies in their arms, their older children clinging to their skirts, men wheeling their decrepit fathers in wheelbarrows or helping along a crippled brother or son, is more pitiable than any words can express."

That was before Antwerp fell. Conditions

have grown worse since then, and will continue to grow worse until help comes.

Ask your friends to join you in this life-saving crusade. Clergymen can ask their congregations to unite in a gift of 100 or 500 barrels. Sunday-school classes can give one, five, or ten barrels.

This is Thanksgiving week. What could crown it more gloriously than to sit down *to-day* and send your gift to those whose Thanksgiving day was a day of hunger and cold?

All contributions will be acknowledged in our columns.

TOPICS - OF - THE - DAY

A NEW START IN NATIONAL FINANCE

A NEW ERA in the history of American finance, the press agree, begins with the opening of the Federal Reserve Banks; and the 16th of November, observes Mr. Paul M. Warburg, of the Reserve Board, "may be considered as the Fourth of July in the economic life of the United States." Besides being a new departure equaling in historic importance the destruction of the Second United States Bank by Andrew Jackson, and the inauguration of the national banking system during the Civil War, the auspicious opening of the new banks is taken by the newspapers as both evidence of, and a powerful influence toward, a revival of business, especially when they consider it in connection with the re-opening of the New York and New Orleans Cotton Exchanges and the increase of security dealings in various centers. Bankers all over the country predict a restoration of good times with the release of millions in cash and credit reserves. Secretary McAdoo announces that the day of panics is past. President Wilson congratulates the Secretary on the adoption of a "constitution of business peace"; in the series of legislative acts establishing the "new freedom," declares the President, "the means by which credit has been set free is at the heart of all these things, is the key-piece of the whole structure." The 16th of November, we may note with the *New York World*, marked "the settlement of a controversy more bitter than any other, except slavery," the struggle between the experts advocating financial centralization and the popular distrust of monopolies of money and credit. We have compromised a struggle as old as the Constitution, says *The World*:

"In the Regional Banks we are to preserve all that was good in the early banks of the United States. In the member banks we safeguard all that has been desirable in the national banks. In the Federal Reserve Board at Washington we have a necessary regulating authority that has the fullest public confidence."

It has taken time, as the *Cleveland Plain Dealer* points out, to get the new system started:

"The act establishing the system was signed by the President on Christmas eve last year. Then came the selection of reserve cities. The President's choices for members of the Central Reserve Board were announced in May and the Board itself organized in August."

Now, because of the financial situation resulting from the European War, we read in the *New York Commercial's* Washington correspondence, the Federal Reserve Board has hastened to open the banks for a limited exercise of their functions. Little business, the *New York Globe* hears, will be attempted before the middle of January. There will be no haste, says the *New York Journal of Commerce*, toward the full exercise of the banks' functions. Reserve deposits will be made in instalments,

and the discount and currency operations of the system "are expected to get into effect at once and increase in volume as it gets settled down to regular working. Three years will be required for a complete adjustment to the new reserve basis. At present, the *Commercial's* correspondent notes, the operations of the banks will be limited to the following:

- "1. Acceptance of deposits of reserves payable in lawful money.
- "2. Discounting of bills of exchange and commercial paper.
- "3. Acceptance of deposits of checks drawn by member banks on any Federal Reserve Banks or member banks in reserve and central reserve cities within their respective districts.

"The Federal Reserve Board, in preparation for the opening of the banks under the foregoing limitations, has fixed rates of rediscount for the twelve banks, defined commercial paper, fixed general rediscount policy, drafted by-laws for the banks, and attended to other pressing matters of detail incident to the opening."

So, *The Commercial* comments editorially:

"This country now possesses a scientific credit and currency system the lack of which has been the cause of the panics of the past in so far as they drove money out of circulation and closed the doors of solvent banking institutions. We now have the tools with which

to work. One of the leading Wall Street banks has just set up a branch bank in Buenos Aires, and the whole world is open for similar enterprises if other banks wish to extend their business into the foreign field, as this one is doing."

The new banking system, the *New York Globe* succinctly informs its readers, will accomplish these definite results:

"It will release some \$400,000,000, now tied up by reserve requirements, as a foundation for fresh loans; it will further greatly expand credit facilities by its provision for the rediscount of commercial paper; it will allow a complete, instead of only a partial, mobilization of free United States Treasury resources; finally, by means of the control over note issues as well as through the use by the regional banks of their own reserves, the transfer of money and credit from one part of the country to the other will be rendered far easier, and there will be no such wide disparity as has existed hitherto between interest rates in different localities."

After denying, as do several papers, the sanguine predictions that the new banking system necessarily means the end of panics in the United States, since many potential causes of panics lie outside the currency domain and can not be safeguarded against by any system, the *St. Louis Republic* goes on to show in what respect the national banks are better off than they were before:

"Under the National Banking Act a bank might have its portfolio full of the best notes known to the commercial world, every one worth 100 per cent., and yet be obliged to close its doors, to the great harm of the business community. Under the National Banking Act a bank might have a large sum of cash in its vaults when panic impended and yet be forbidden, under the law, to make such rational use of that cash as alone could

THE FEDERAL RESERVE MAP.

Showing the twelve Reserve Bank cities and the boundaries of the districts they serve.

avert panic. Under the National Banking Act a bank in pressing need of cash might go down to ruin with plenty of idle money lying in the vaults of other banks in the region, and yet those other banks be helpless to come to its rescue. Under the National Banking Act the country, in a time of overconfidence on the part of investors, might go gaily on its way, preparing for the inevitable period of sudden alarm and violent contraction, and yet there be no effective way in which the sober judgment of far-seeing men in the financial centers could intervene to prevent.

"Under the new law the solvent bank will not go to ruin. When the banker's cash gets low he can use some of his good notes for 'rediscount'—which practically means sale—at the Federal Reserve Bank. Under the old law the banker long on good notes and short on cash had nowhere to turn. To-day he will turn to the Federal Reserve Bank.

"There will be no more failures of solvent banks when neighbor banks have plenty of money but can not use it to save the threatened institution because of the reserve requirements. Under the old law each bank kept its own little reserve. Under the new law the Federal Reserve Bank combines many small reserves into one big reserve."

The crowning merit of the new system, in the opinion of the *Providence Journal* and *Syracuse Herald*, lies in the adoption of the principle of an "asset currency." In the *Rhode Island paper's* phrase, "Government bonds will give place to 'commercial paper' as a basis for a great volume of the currency—a live and elastic security for an inactive one fixed in quantity." The reserve banks, *The Journal* also points out, "will take on a relatively new function, that of rediscounting," the object being "to permit the fullest employment of every dollar." Both of these functions are explained by the editor of the *New York Journal of Commerce*, a high authority on banking. He says:

"One of the most useful results of the transition from the old system to the new, and one which will be immediately availed of, is that of giving greater mobility to one of the chief assets of sound banking, the commercial paper held as security for current business loans. This, as defined and prescribed, will have a character of practically assured safety. At first this paper, offered by member banks for rediscount by the reserve banks, may be deposited with the reserve agents and count as one-half the reserve to be there deposited. This is one of the features of operation that should be conducted with care, as it will in itself be a substitution of credit for cash in reserves, and it is doubtful how far it should be carried. Weakening reserves by mingling cash and credit and making the former do double duty is a questionable policy at best. Of this discounting and rediscounting process, much is expected in the way of facilitating exchange operations in domestic trade. A very useful development is likely to come of it under the competent management which we have a right to expect.

"Another feature of the new system of which much is to be expected is that of supplying an elastic element in the circulating currency of the country. This will be put to a test under a supervision in which we have reason to feel confidence. Our bond-secured bank-notes will remain for a long time as the main body of the credit currency, but they will be gradually diminished in volume while the requirement for such currency is likely to increase. The result will be an elastic margin of the new Federal reserve notes, which will expand and contract according to the requirements of business, as they may be issued

in the rediscount of commercial paper, which must be deposited as security and will be constantly maturing and being replaced, and must be redeemed in gold coin on demand, a reserve of 40 per cent. being held for the purpose, and the Government credit also standing behind the notes with an obligation of final redemption in gold. There is no reason to apprehend that this will not be an entirely safe as well as useful credit currency. It will be especially useful in meeting the fluctuating requirements of the 'crop-moving season.'

"Among other useful functions which the new banking system is expected to exercise is that of facilitating foreign exchange by dealing in acceptances and bills of exchange based upon export and import transactions. In connection with this, member banks with a capitalization of a million dollars or more are authorized to establish branches abroad."

Never again, says the *New York Times*, "will there be an insufficient supply of currency because Government bonds were not available as a base. Never again will there be an excess of currency because it has been issued for necessity and there was no way to retire it." *The Times* further notes that under the new system "there are to be no unlimited issues of credit":

"Currency will not be printed for the erection of buildings, the enlargement of plants, and for correcting heart-failure in business. The new credit will be accessible for the most part only to those who are making money by production and distribution of goods. Those who fancy that they can make millions by borrowing millions must look elsewhere."

In the *Boston News Bureau*, Mr. C. W. Barron gives figures to show that the Secretary McAdoo announces that \$400,-

000,000 of bank reserves is released on the establishment of the reserve system, the actual net amount should be something below \$300,000,000. The regional banks, says the *Springfield Republican*, may exhibit two weaknesses in the course of time: one from its very structure, the other "from the character of the Government and people behind it." Yet *The Republican* has ample faith in the character of the present Reserve Board, and also believes that, as the nation develops in commerce, unsound currency agitation will be less and less effective. As for the other weakness, "it must be conceded that, for the purposes of unified control in mobilizing a nation's banking power, the regional banks will not be quite so efficient as a single central institution." But the American prejudice against such a bank is too strong to be combated successfully, and through the Reserve Board's powers the country will enjoy most of the advantages of centralized banking. At any rate, "for the present, bankers generally seem disposed to put aside personal preferences, and, recognizing that the regional system best expresses the Federal character of the nation to-day and the sectional bias of various parts of the country, are glad to cooperate in making the departure a success." And *The Wall Street Journal* is but one of a number of papers to hail "the hearty support and co-operation extended by the national bankers" as one of the most gratifying sights in connection with the opening of the twelve reserve banks. The "sound and broad-gaged" instructions issued by the Reserve Board are, in the *New York Sun's* opinion,

SUNBEAMS.

—Harding in the *Brooklyn Eagle*.

another token of the happy auspices under which the new system opens for business, and they "constitute solid reasons for confidence in the prospect of business recovery, which are reinforced by other current facts of great moment." This

RESUMING BUSINESS.

—De Mar in the Philadelphia Record.

belief that the new system will help mightily in bringing better times is shared by editors in all sections of the country.

The inauguration of the Federal Reserve Act—according to the *Boston News Bureau*, "the broadest and most beneficent piece of legislation which this generation has seen put upon the statute-books of this country"—is deemed by some a more important step than the establishment of the national banks under Secretary Chase, and will, in the opinion of the *Springfield Republican* and *Brooklyn Citizen*, probably go down in history as the greatest achievement of the Wilson Administration. For the fruitful result of so many years of investigation, agitation, recommendation, and temporary legislation, President Wilson, according to the *New York Evening Post*, deserves the chief credit. Yet the *New York Times* would have us remember the work done by ex-Senator Nelson W. Aldrich, as head of the Monetary Commission which paved the way for the final legislation under Democratic auspices. Congress, it says, eventually "prepared a better and sounder bill than the Aldrich, or as it was later known, the Commission Bill; many needed changes were made. But the name of Senator Aldrich will be associated with the new banking system as the name of Huskisson is associated with the evolution of the currency system of Great Britain, as the name of Hamilton is associated with the foundation of our public credit."

The following statistics regarding the new banking system are taken from the *New York Herald*:

District	Location of Reserve Bank	Capital (Authorized)	Area, in Square Miles	Population	Number Member Banks
1	Boston	\$9,711,000	66,465	6,557,841	441
2	New York	19,811,700	49,170	9,113,279	480

KING COTTON CONVALESCING

WHEN the New York Cotton Exchange opened successfully on November 16 for the first time since July 31, the cotton market benefited at once, say the press experts, prices were stabilized, and the South was relieved of the shadow of complete disaster which has been hanging over it for many weeks. What is no less important in the eyes of all observers of business conditions, "Wall Street took on an air of revived prosperity." As the *New York Commercial* noted the next day, "there seemed to be more stirring; commission-houses which had been idle, or almost idle, for many weeks were the centers of attraction for customers again; brokers, clerks, and runners had an occupation once more, and there was generally more hustle and rush than the financial district has seen in many weeks." In short, says the *New York Evening Post*, "people down-town believe that business is going to return." And consequently there is much talk of reopening the Stock Exchange at an early date. It should be noted that the New Orleans Cotton Exchange also opened on the 16th, and that the stock markets of Chicago and several smaller cities are doing an unrestricted business. Hence, viewing so much of our every-day financial and commercial machinery again at work, and noting likewise the steadying influence of the new banking system and the growth of our export trade, such representative papers as the *New York World*, *Sun*, *Tribune*, and *Commercial*, *Boston News Bureau*, and *Philadelphia Record* agree that the worst of the havoc wrought by war upon American business is over.

The opening of the New York Cotton Exchange had, as the *New York Commercial* observes, an international interest. The South, the cotton trade, and the textile-mill interests wanted answers to several important questions:

"They wanted to know what cotton would sell for in an open, unrestricted market in war-times such as we are having now. They also wanted to know what value to place on the new style cotton contract which the enactment by Congress of a law regulating cotton markets has brought into the already complicated situation, and, above all, they wanted to know whether

"SWEET 'NIN'."

—Donnell in the Los Angeles Tribune.

the public would come into the market and buy cotton for an investment."

When the market opened, there were "no fireworks or failures" and prices advanced to a point slightly above that of recent private sales, but still considerably below the quotations

THE UNITED STATES CRUISER TENNESSEE AND HER COMMANDER, CAPTAIN BENTON O. DECKER.

of the last exchange transactions in July. On the whole, the financial experts consider the resumption of trading very satisfactory—especially so, says *The Commercial*, "to Wall Street banking interests, as well as to the foreign-exchange market, and also to the general cotton trade." With this agree Cotton Exchange officials and bankers quoted by the New York papers.

The trouble with cotton, as several editors explain, has been that the ordinary channels of consumption have been clogged or closed to a crop almost unprecedentedly large, while the machinery of credit was at the same time thrown out of gear. The grower could dispose of his crop by "spot" sales only, and needed the "future" markets where buyers would have to consider an increasing demand and the possibility of a smaller crop next year. The resumption of regular trading in New York and New Orleans, says the *Savannah News*, a cotton-belt paper, "helps to stabilize the market and facilitates the operations of speculators who find it much cheaper and more convenient to buy futures than to buy and carry spot cotton." Furthermore, note the New York writers, banks will be less chary of lending money on cotton since a loaning base is established and buyers will be able to finance their purchases. A bankers' pool, to which \$135,000,000 has been subscribed, was organized under the auspices of Secretary McAdoo and the Reserve Board to take a portion of the crop off the market at a six-cents-a-pound rate. This plan, according to Mr. McAdoo, "is going to be beneficial not only in helping the cotton situation and the foreign-exchange situation, but also by promoting the general prosperity of the country, which now has such a happy impulse that it would be difficult to retard it." But New York bankers questioned by the *New York Journal of Commerce*, "said that they saw no need for the pool, now that the machinery for marketing the cotton crop has been set in motion by the reopening of the New York and New Orleans cotton exchanges."

While the opening of the cotton exchanges is benefiting the cotton trade, several papers note that other causes are operating to the same end. One of the strongest editorials appears in the *St. Louis Star*. The writer sees indications "that long before another cotton crop shall be harvested, every pound of the present crop will be in demand." He points to Europe's unusual demands for such things as cotton duck for tents and cotton uniforms. Moreover, the civilians' clothing destroyed and wasted must be replaced with cotton goods. Still more:

"All over Europe, and in a measure all over the world, cheaper clothing will be in demand this year and for several years to come.

"This means cotton clothing as distinguished from wool, silk, and linen.

"Right here in the United States there is going to be much less purchase of expensive silk, wool, and linen wearing-apparel and much more purchase of cheaper fabrics made of cotton.

"It seems impossible to see anything but an increased consumption of cotton as compared with other fabrics. . . .

The problem as a whole seems to be less one of a demand for cotton goods than an ability to manufacture them. If the German mills can get cotton importations freely—and cotton has now been declared not to be contraband of war—and the British mills can be kept running at full capacity, which seems probable, and our own mills run full time or extra time, even without adding a spindle, there appear to be in sight enough manufacturing facilities to handle even a larger crop than the one now awaiting a purchaser."

OMINOUS POSSIBILITIES OF THE SMYRNA INCIDENT

THAT even this remote and neutral country is not beyond the danger zone of the spreading European conflagration was startlingly emphasized by the three shots fired by a Turkish fort at the launch of the United States cruiser *Tennessee* in the harbor of Smyrna. While our State Department is confident that fuller light on the incident will rob it of much of its sinister aspect, correspondents point out that, even if the action of the Turkish fort is satisfactorily explained, there will remain disquieting possibilities in connection with the hundreds of foreign Christians, including a number of American missionaries, now under the protection of our consulate in Smyrna. Nor is

WHERE AMERICAN CRUISERS AND CITIZENS ARE LOCATED IN THE "HOLY WAR" ZONE.

the gravity of the situation lessened by the fact that Sheik-ul-Islam has proclaimed a "Holy War" for the whole Islam world. There is a large Mohammedan population under the United States Government in the Philippines, and there are American missionaries in virtually all Mohammedan countries. According to a Washington correspondent of the New York World the State Department has received "information to the effect that the least overt action might bring this Government into the war."

The American public had its first official information about the Smyrna incident in the following statement issued by the Navy Department on November 18:

"Capt. B. C. Decker, in command of the *Tennessee*, wired Secretary Daniels this morning that while proceeding from Vourlah to Smyrna to make official calls the boat was fired at. Consul anxious for safety of consulate. *Tennessee* proceeded to and left Vourlah at request of Ambassador, and is now anchored in the harbor of Seio (Chios), from which Captain Decker's telegram was sent."

Secretary Daniels cabled for fuller information, at the same time sending instructions to the *Tennessee* and the *North Carolina*, which are in the Mediterranean looking out for American interests, to take no action which could involve this Government without specific instructions from the Navy Department. While hopeful that the incident would prove to be of minor importance, say the Washington correspondents, officials of the Department confessed themselves worried over the statement that the American consul at Smyrna was anxious for the fate of the consulate. According to a correspondent of the New York *Evening Sun*, "there have been reports that the Governor of Smyrna had declared that, if war broke out, he would massacre all the Christians in the city." But the same correspondent goes on to say:

"It is certain that German influence dominates in Turkey, and there is no doubt in diplomatic quarters here that this influence is exceedingly friendly to the United States. The Administration officials are counting on the Turkish Government manifesting a much less belligerent attitude than that of the military governor of Smyrna, who is believed to be responsible for the firing on the *Tennessee's* boat."

There are said to be "about fifty Americans, mostly missionaries," at Smyrna. The English residents, according to the New York *World*, are estimated at about eight hundred. A London dispatch cites the rumor that the *Tennessee* approached Smyrna in response to appeals from the Christian residents

generally, who were threatened with death in reprisal for attacks by the Allies on Turkey.

The Washington Government, says a correspondent of the New York *Herald*, is "determined that a second Tampico incident shall not be made out of the action of the Turkish forts at Smyrna." President Wilson, declares the same correspondent, "has let it be known that in no circumstances will he permit this country to be dragged into war." And Vice-President Marshall is quoted as saying:

"There is no fear of the United States entering the war because her ship was fired on. Europe can't get us into the war. We don't want to get in, and we are going to keep out. That is all there is to it. We will not go into the war with Europe."

THE PRESIDENT'S INDORSEMENT OF NEGRO SEGREGATION

PRESIDENT WILSON, in the opinion of many Northern editors, has been placed in an embarrassing and inconsistent position by those Southerners in his Cabinet who have instituted segregation among the Federal employees in their departments. When, early in the present Administration, a delegation waited upon him to report that segregation was being introduced in Washington he merely promised to investigate the matter and take it under advisement. But when the subject was again called to his attention a few days ago by a delegation of negroes representing the National Independent Equal Rights League, he replied, according to Washington dispatches, that "the policy of segregation had been enforced for the comfort and the best interests of both races in order to overcome friction." The problem, he declared, was a human and not a political one. He pointed out that segregation had not been accompanied by any discrimination, and that the negro employees had in every case been accorded working conditions equal to those enjoyed by the white employees.

Altho William Monroe Trotter, spokesman of the delegation, replied with a heat and aggressiveness that was rebuked by the President and condemned by the press in general, the interview served to bring sharply to the public attention an issue which is regarded with concern by the ten million negroes in this country, and on which white opinion is still rather sharply divided along geographical lines. Thus even so staunch a Democratic paper as the New York *World* declares that "the bad manners of the chairman of the delegation, however deplorable, are no justifica-

PREDICAMENTS.

tion of the policy of Jim-Crow government which certain members of the Cabinet have established in their departments," and regrets that the President permitted Mr. McAdoo and Mr. Burleson to "carry their color-line theories into democratic government." To the assertion that segregation had been instituted to avoid friction between the races, *The World* replies:

"For nearly half a century white clerks and negro clerks have worked side by side in the departments of Washington under Republican and under Democratic Presidents. *The World* keeps itself fairly well informed about Washington affairs, but the first it ever heard of this alleged friction to which Mr. Wilson refers was when Mr. McAdoo began his Jim-Crow proceedings in the Treasury Department."

And the President is wrong, *The World* goes on to say, in thinking that this is not a political question. For—

"Anything that is unjust, discriminating, and un-American in government is certain to be a political question. Servants of the United States Government are servants of the United States Government, regardless of race or color. For several years a negro has been Collector of Internal Revenue in New York. He never found it necessary to segregate the white employees of his department to prevent 'friction'; yet he would have had quite as much right to do so as Mr. McAdoo had to segregate the negro employees of the Treasury in Washington."

"While the Democrats of the country have been trying to solve certain problems of government, a few Southern members of the Cabinet have been allowed to exploit their petty local prejudice at the expense of the party's reputation for exact justice."

"Whether the President thinks so or not, the segregation rule was promulgated as a deliberate discrimination against negro employees."

"Worse still, it is a small, mean, petty discrimination, and Mr. Wilson ought to have set his heel upon this presumptuous Jim-Crow government the moment it was established. He ought to set his heel upon it now. It is a reproach to his Administration and to the great political principles which he represents."

Even more emphatic is the comment of such New England papers as the *Boston Transcript* (Rep.) and *Springfield Republican* (Ind.), with whom championing the cause of the negro is a matter of tradition as well as of conviction. That the President should "unqualifiedly justify" the separation of Government employees on the basis of color, says *The Republican*, is "a distressing and sinister development." And the *Springfield* paper continues:

"The fact that an emotional negro may have lost control of his temper and his manners in addressing the President at a White House conference should not obscure the painful fact that Mr. Wilson has fully accepted the principle and the practise of the segregation of the white and black employees in certain administrative departments of the Government at Washington, notably in the Treasury and Postal buildings. Segregation in the Treasury and Post-office departments was never practised in Washington until the Southern Democrats who now preside there came into office. In President Cleveland's time there were Southern Democrats holding the posts of Secretary of the Treasury and Postmaster-General, but they did not venture to inflict their views concerning racial caste upon the American people. It has remained for the Wilson Administration to do this."

"The negro race in this country is the political equal of the white race, under the Federal Constitution, and while the 'Jim-Crow' statutes and 'grandfather' suffrage laws of various States have stood the test of judicial review, segregation in the Washington departments unquestionably violates the spirit of the Constitution, whatever shift for the Government the courts may find in its letter. That the nation-wide public sentiment outside of Washington itself sustains classification of this character in government departments is not susceptible of proof. The Southern influence now dominating those departments is simply asserting its power by introducing the cruellest Southern customs into the Government of the whole people."

The segregation of negro clerks in the Governmental departments is characterized by *The Transcript* as "un-American, unfair, and unconstitutional." Moreover, declares the *Boston* paper, it is "as unnecessary as it is unconstitutional." Much the same point of view we find reflected in the *Boston Traveler* (Rep.) and *Advertiser* (Rep.), *Philadelphia Press* (Rep.), *Hartford Courant* (Rep.), *Des Moines Register and Leader* (Rep.), *Indianapolis News* (Ind.), *Rochester Post Express* (Rep.), *Pittsburg Dispatch* (Ind.), *New Haven Journal Courier* (Ind.), *New York Evening Post* (Ind.), and *Chicago Tribune* (Prog.). Says the last-named paper:

"President Wilson came very nearly establishing a national program of treatment to be given the negro when he defended segregation. If that step is to be taken it certainly is a serious one, and Mr. Wilson would be in better position if he were representing national rather than sectional sentiments."

Crossing the Mason and Dixon line, however, we find a very different note in the newspaper comment. "The segregation effected during this Administration can be justified on any one

of a number of grounds," declares the *New Orleans Times-Picayune* (Dem.), which goes on to say:

"It makes for efficiency in the public service, and for better racial relations. It has come, as we believe and hope, to stay, for the good of both races and in spite of the rantings of negro agitators who seek political preferment via the race issue, or racial social equality, or both. The right adjustment of race relations in this country is earnestly desired by whites and intelligent negroes as well. We do not believe that the agitators of Trotter's stripe can prevent it, tho they may, by continued beating of the racial tomtoms, provoke further race friction and hostility in the Northern States."

"The President has convinced at least one part of our population that he has plenty of good red blood in his veins," remarks the *Baltimore Evening Sun* (Dem.), and the *Oklahoma City Oklahoman* (Dem.) declares that "race segregation in the departments at Washington or elsewhere can be defended on all just grounds and operates to impose no hardship upon the colored race." In the *Charleston News and Courier* (Dem.) we read:

"The segregation which has been instituted at Washington in recent months is not, as the *New York Evening Post* contends, a sudden reversal of the policy which has obtained for fifty years. The Wilson Administration did not 'go out of its way to create this issue.' On the contrary, the plan of segregating the clerks is correctly described by the *Springfield Republican* when it speaks of it as a 'development.' The necessity for such a rule has been felt for years. If the demand for it has not been pressed before now it has been because the time was not yet ripe. It was hopeless to expect reform until the passions of the war had died down and the negro had ceased to be the plaything of unscrupulous Republican politicians anxious to humiliate Southern white men.

"It is no arbitrary rule to which Mr. Wilson has given his approval. The color-line does exist, and is recognized everywhere that whites and blacks in any considerable numbers are brought into relations with each other. When the *New York World* excitedly denounces segregation as the exploitation of petty Southern prejudice it forgets that the same 'prejudice' is just as lively in its own city as in any Southern community. The removal of negro families into any residential section of Manhattan will send the price of real estate shooting downward as surely as the plague, and will keep it down as long as the negroes remain there. It was the attitude of the Government in undertaking, as it did undertake for a long while, to deny the existence of this race feeling and of a line of separation between the races which was capricious, not its abandonment."

Nor do all Northern papers take issue with the President on the question of segregation. Thus we find the *Brooklyn Citizen* (Dem.) suggesting that the whole matter is being stirred up by Republican politicians, and declaring that "there will not, of course, be any two opinions held by intelligent people as to the correctness of the President's position." And in a Washington dispatch to the *New York Evening Post* we read:

"The truth of the situation, as it affects the President, seems to be that while he has had nothing to do officially or otherwise with the issuance of any order relative to segregation, he has deemed it good administration to permit his Cabinet officers to readjust their working forces as they pleased. . . .

"Personally, President Wilson has treated the negro clerks well. At the instance of the Secretary of the Treasury, he recently promoted Richard Green, a negro messenger of long and faithful service, to a clerkship, and at the suggestion of Secretary Bryan, he similarly promoted Edward Savoy, the Secretary's personal messenger. Both of these promotions required Executive orders.

"He also nominated a negro to be Registrar of the Treasury, but the nomination stirred up so much hostility among the Southern Senators that the candidate withdrew, and an Indian, Gabe E. Parker, finally was appointed and confirmed."

STEALING \$200,000,000 FROM THE OKLAHOMA INDIANS

AN ORGANIZED CLIQUE of grafters, we are told, is operating in Oklahoma and the city of Washington to rob the Oklahoma Indians of more than \$200,000,000 worth of coal-lands. The spot-light is now turned on these operations by Miss Kate Barnard, Oklahoma's Commissioner of Charities, whose position makes her the immediate official protector of the Indians in her State. The accused clique, according to Miss Barnard, has entrenched itself so strongly in State politics that she found it necessary to refuse a renomination for her present office and is organizing instead a State-wide and nation-wide "people's lobby" to rescue her wards from the spoilers. Her startling charges, according to a Washington correspondent of the *Philadelphia Public Ledger*, are indorsed by Mr. Cato Sells, Commissioner of Indian Affairs, as "in the main true." Mr. Sells further bespoke "the cooperation of all good people" in Miss Barnard's "righteous struggle to protect the weak and helpless." Writing in the *New York Survey*, Miss Barnard tells us that

"Two hundred millions is a low estimate of the money-prize at stake, and the success of the plot means misery and poverty for 10,000 Indian mothers and the unborn babes of coming generations. This remaining stupendous wealth is now in the hands of 33,000 restricted Indians, most of whom are ignorant and can not read or write. The remainder of the 100,000 Indians have already been robbed. This conspiracy reaches from the political group which dominated the fourth legislature of Oklahoma, is dominating

the Oklahoma delegation in Congress, and through the delegation is evidently dominating the Indian Department, as it affects Oklahoma matters at this time."

The first step in the plot, we are told, was accomplished in 1908, when the Federal Government was induced to surrender its supervision of Indian minors and full-blooded heirs and to place this authority in the probate courts of Oklahoma. The next step, says Miss Barnard, was taken when the last Oklahoma legislature crippled the State Department of Charities, "the last disinterested official protector of these Indians." Another move of the plotters, she goes on to say, was to procure the removal of certain Indian agencies from the protection of the civil service and their transfer to purely political control. We read further:

"Approximately \$5,000,000 in cash of tribal funds are now ready for per-capita distribution among about 80,000 Chickasaws, Cherokees, and Seminoles. Approximately \$30,000,000 more will be ready to distribute in the near future among 40,000 Choctaws and Chickasaws; there are still nearly 25,000 separate ledger-accounts open relating to the unfinished sale and transfer of title to more than 2,000,000 acres of tribal lands. Is it an accident that the Department of Charities, the only branch of the State Government having any legal authority to protect these helpless minors in the courts of Oklahoma, should be destroyed on the eve of the distribution of these vast natural resources and tribal funds?"

"I AM IN THIS FIGHT TO THE FINISH."

Says Miss Kate Barnard, who declares there is a conspiracy of powerful interests trying to rob the Oklahoma Indians of lands valued at more than \$200,000,000.

Describing the methods by which the Indians are robbed, Miss Barnard goes on to say:

"The most common form of plunder lies in the power to sell a minor's land for the pretended purpose of 'benefiting' the minor. Reduced to money, 80 per cent. of the capital is consumed by fake 'court costs,' 'attorney fees' and 'allowances,' bad loans, and investments.

"One of the leading newspapers of the State obtained from the Indian orphan minors thousands of dollars on its worthless stocks and bonds.

"At one time, the Department of Charities was informed that three 'elf' children were sleeping in the hollow of an old tree and eating at neighboring farmhouses. An investigation proved that these little ones were actually living in this homeless, friendless fashion, their hair so matted that it had to be cut from their heads. We found further that they were under the 'protection' of a 'guardian,' who had fifty-one other children under his protecting care. These three children had valuable lands in the Glenn Pool oil-fields. The guardian was charging up large amounts for their 'schooling' and 'general care,' yet he did not know where the children were."

At every turn, says Miss Barnard, her efforts to protect the ignorant and helpless Indian heirs from those who were battenning on them were balked by a combination of interests so strong that they even undertook to dictate the manner in which the laws should be enforced. When she refused to conduct her department according to their program, and to make an appointment at their dictation, the appropriation for the Department of Charities was cut off. We read:

"I was told I would be given 'all the money I wanted in the

Appropriation Bill,' but when I refused to make the appointment I was left without money for office help, field help, stamps, or telephone. I furnished \$350 of my own money and solicited additional money from my friends, and at this time the Department of Charities of Oklahoma is financed upon the money of humanitarians and philanthropists."

Miss Barnard declares that she is "in this fight to the finish," and she calls upon the people of the United States to stand by her "until the hand of partizan politicians is wrested from the control of Indian affairs in Oklahoma and in the nation."

Turning again to the Washington correspondence of the *Philadelphia Public Ledger*, from which we have already quoted, we gather the following additional information:

"It was freely admitted at the Indian Office that a systematic robbing of Indians in Oklahoma had been going on for a long time and the office was at work trying to get at the bottom of the criminality. Convictions of scores of crooked administrators have been obtained and hundreds of thousands of dollars in money recovered and restored to the Indian children to whom it belonged.

"Soon after Congress meets in December the crookedness that has been going on in Oklahoma will be brought to its attention by Commissioner Sells in a special report. . . .

"The policy insisted on by Miss Barnard is that the United States Indian Office shall provide a number of special attorneys in Oklahoma to take charge of the probate business involving Indian children. They are to look after such cases of adjusting estates as may arise, and also to dig up all the wrong-doing in cases already disposed of and institute criminal prosecutions where necessary to bring defaulting and thieving administrators and executors to justice."

THE WAR IN BRIEF

It seems to be a long way to anywhere with the contending forces.—*Washington Post*.

THE Made-in-America movement may even extend to world-peace.—*Atlanta Constitution*.

FOREIGN - COMMENT

Copyrighted by the International News Service.

H. M. S. AUDACIOUS SINKING.

This photograph, one of the most remarkable made during the present war, was taken from the deck of the transatlantic liner *Olympic*. It shows the superdreadnought *Audacious*, built in 1912 at a cost of over \$10,000,000, sinking off the north coast of Ireland after having been struck by a mine on October 27. Two torpedo-boat destroyers are standing by, and the boats of the *Olympic* are engaged in rescuing the crew of the doomed ship. No strict was the censorship in regard to this incident that the news of the loss of the *Audacious* was known in this country only a few hours before the above picture was received here. Out of a crew of 900, only one man was lost.

TRYING TO EMBROIL AMERICA AND JAPAN

WHEN JAPAN declared war upon Germany somebody circulated a rumor that the United States was about to send the whole Atlantic fleet to the Far East. The United States, it was alleged, took this step for the specific purpose of interfering with the action which Japan was contemplating to take in China. Thanks to the repeated denials made by statesmen of both countries, the rumor was soon consigned to the limbo of oblivion. But now comes the *Yorodzu*, a popular Tokyo journal, publishing a startling statement made by "Paymaster Malcock, of the United States Navy, who stopt at Yokohama on his way home from Manila." The American paymaster was introduced to the Yokohama correspondent of the *Yorodzu* by a foreigner, also supposed to be an American. In the course of the interview Paymaster Malcock is reported as making these sensational statements:

"It appears as tho war between Japan and my country were inevitable. My country would not, of course, assume the offensive, but we may be compelled to call a halt on Japan's advance in China in order to protect our own interests.

"The American Government is fully alive to the gravity of the situation and is making preparations for all possible emergencies. Many of us serving in Asiatic waters are being called home. It is more than probable that within a few weeks the Atlantic fleet of our Navy will pass through the Panama Canal and put in appearance in the Pacific.

"Already immense quantities of coal and ammunition have been shipped to Hawaii and the Philippines. A large number of submarine boats, aeroplanes, and hydroaeroplanes have also been brought to those islands. Lieutenant Pauter, who is well known as a hydroaeroplane pilot, is to take charge of our aircraft. He is especially noted for his nocturnal flights, and is reported to have invented a most terrific sort of bomb.

"Of late the fortifications in Manila have been greatly strengthened. They can easily resist Japanese attack until the Atlantic fleet comes to the rescue. As for Hawaii, it will within a short time have 10,000 additional troops. The American cruisers *Iowa* and *Indiana* will arrive at Yokohama within two weeks. I have received this information from Admiral Elkins, on board the *Iowa*."

This interview took place early in October, and its publication set all Japan agog. As fate would have it, a section of our press was, just at that time, voicing apprehension as to Japan's "military occupation" of the Marshall Islands. This lent color to Paymaster Malcock's statement, and when George W. Guthrie, our Ambassador to Tokyo, called at the Foreign Department, all the papers in Tokyo reported that the Ambassador waited on Baron Kato to demand explanation for the seizure of the Marshalls.

The fact was that the American Ambassador did nothing of the sort. On the contrary, he went to the Foreign Department, it was explained at the American Embassy, to inform Baron Kato that the *Yorodzu* story was the sheerest fabrication, and that there were no such officers in the American Navy as "Paymaster Malcock," "Lieutenant Pauter," or "Admiral Elkins."

Thus the ephemeral war scare turned out to be a farce, and the *Yorodzu* has been made a butt of ridicule.

But who "Paymaster Malcock" is, no one knows to this day. He stopt at Yokohama only a day on his way to San Francisco. Naturally, every paper in Japan has been asking the one question "Wasn't he a German spy who was sent here to stir up trouble between Japan and America?"

The Tokyo *Asahi*, for one, unmistakably intimates the German intelligence men are exceedingly active in the Far East, and especially in China. Those Shanghai cablegrams whose specific purpose seems to be to estrange Japan both from China and from the United States, the *Asahi* declares, are mostly manufactured by Germans, and as an example of such canards cites the following Shanghai dispatch:

"Negotiations are going on between England and Japan with a view to persuading Japan to send troops to India so that England may send Indian troops to Europe. In consideration of this service, Japan is demanding the fulfillment of three conditions: (1) The granting by England of a loan of \$1,000,000,000; (2) the recognition of the right of Japan to send emigrants to Canada, Australia, and New Zealand; (3) a free hand for all troops which Japan may send to China."

A JAPANESE THRUST AT AMERICA.

Uncle Sam searching every nook and cranny for reasons to interfere with Japan's movements in China.

—*Yorodzu* (Tokyo).

The Tokyo *Jiji* pays tribute to President Wilson and Secretary Bryan for the untiring efforts which they are making for the maintenance of amicable relations between Japan and the United States, "in spite of the mischief constantly made by those elements within their country which are hostile to Japan."—*Translations made for THE LITERARY DIGEST.*

"WATCHFUL WAITING" IN ITALY AND ROUMANIA

AMID popular clamor for war and the conflicting editorial admonitions of the German and the French press, Italy and Roumania do not find the business of being neutral an idle occupation. Now is the time to strike at Austria, in cooperation with the Allies, urges the Italian populace, in order to "redeem" the provinces of Trentino and Trieste. As for Roumania, which has at stake the recovery of Transylvania, we read in the *Paris Gaulois* of "an imposing mass-meeting" at Bucharest at which 10,000 persons, presided over by the rector and faculty of the university, "warmly exhorted the Government to declare itself against Germany and Austria." Meanwhile the Italian and Roumanian Governments stick to their policy of neutrality, which, in the German view, especially as regards Italy, will prove the more profitable in the end. The Italian Ambassador at Washington, Marzani di Cellere, according to press dispatches, says that Italy will not take up arms unless "forced to do so by some overt act which threatens her own safety." And the Italian Government organ, the *Tribuna*, calls attention to the fact that "this is not a war of governments, but of nations—of races." It may last "for a year or years," and "therefore Italian neutrality is a transitory condition, due to circumstances which may change at any moment." The *Tribuna* adds that "there is thus necessity for military, economic, and diplomatic preparation on the part of the Government, and moral and political preparation on the part of the public."

And we are told that, as far as the rest of the world is concerned, "the future decisions of Italy will be taken with a view to the absolute exclusion from Italian interests of outside influences and unpractical idealisms." An "outside" view of the situation of both Italy and Roumania, which is also that of a Government organ, is expressed by the *Paris Temps* as follows:

"In the European crisis Roumania and Italy move along parallel lines, which seem to be leading them toward similar destinations. By this is meant a personal cooperation to free those of their people who are still subject to the oppression of Austria-Hungary. The Russian victories in Galicia have deeply impressed public opinion in Roumania. The Government is pondering the risks of neutrality. . . . The Roumanian people, as they study the downfall of the Hapsburg Monarchy, show more and more plainly that they do not want it to be left to Russia alone to liberate the Roumanians of Transylvania as she did those of Bukovina. Yet while each new stage of the Russian advance adds a greater force to the impulse that is drawing Roumania into action, the manifestations of Italian opinion are not lost sight of at Bucharest, and the Roumanian Government shows a marked tendency to model its attitude on that of the Italian Government."

If French journals are keen to see Italy and Roumania make war, no less earnest is the wish of German observers that they remain neutral. We learn that in both countries German diplomacy is "exercising the greatest pressure" toward this end. From Bucharest the correspondent of the *Muenchener Neueste Nachrichten* writes with evident satisfaction that "the tactics of our new minister, Baron Busche, have resulted in complete success. Roumania has decided to maintain her present neutrality." As for Italy, according to the *Berliner Tageblatt*, it is to her own best interest that she remain neutral, and this journal says:

"We can not understand how any active party in Italy can desire to change the attitude of benevolent neutrality assumed by Italy into one of hostility toward Germany. Every Italian capable of reason, like each and all of the Italian statesmen of the day, must see the value of a calm reserve on the part of his

THE ITALIAN ASS AND MULE ON OPPOSITE SIDES OF THE FENCE.

country and should restrain all agitation of whatever sort. When the time for concluding peace comes, Italy will find herself in a far better position by maintaining her present reserve. If passion does not obtain a victory over cold common sense, her gain at that moment will be most important. Italy will be the only great Power remaining neutral in Europe, and, if she can hold herself above the sordid clamor of her streets, she is destined above all others to bring about peace. That peace is still far off, but the wisdom of the Italian Government can secure its conclusion in Rome."

The sincerity of this statement becomes more emphatic when we remember that, according to authoritative German reports, Germany feels no resentment against Italy because she did not join with her and Austria in the war. For Italy to have done so, we are told, would practically have been "to commit suicide" because she is all sea-coast and almost the entire French fleet is in the Mediterranean. In Italy itself public opinion is reported as divided between fervent upholders of neutrality and those equally fervent for war. The Milan correspondent of the New York *Giornale Italiano* writes "with a sense of grief" that—

"There is becoming manifest in the country an unmistakable tendency to abandon neutrality. Such a tendency, indeed, is growing more vigorous from day to day in an alarming manner, because it may strongly influence our Government, in which, as every one knows, several members favor a war against Austria. . . . The *Giornale d'Italia* (Rome) and the *Messaggero* (Rome) openly demand that Italy enter the war at once. . . . The *Corriere della Sera* (Milan), after a series of articles gradually demonstrating the dangers of neutrality, now comes out with an article proclaiming that the moment has arrived for abandoning neutrality and participating in the conflict."

The Socialists, however, are for peace, tho the editor of the Milan Socialist paper *Avanti* was forced to resign for indorsing this policy. The *Osservatore Romano* thus states the Clerical position:

"The great majority of the country supports and encourages the work of the Government with its unanimous consent and its full adherence, regarding with manifest aversion any attempt or initiative that tends to disturb or fatally compromise this enlightened and eminently wise work."—*Translations made for THE LITERARY DIGEST.*

RECRUITING IN CANADA

CANADIANS of the east, so say the Dominion papers, are not responding to the call to arms with the willingness of their brothers in the west, and many of the papers find it incumbent upon them to beat the recruiting-drum with some insistence. Thus the Halifax (N. S.) *Herald* issues the following stirring appeal:

"The spirit which compels the young men of the west so freely to volunteer—by the hundreds and thousands—for service in this war is worthy of every praise. Of course we are closer to the war and have seen so much of military life that we take it all as a matter of course. We have watched soldiers land here and depart from here for so many years that we have got it into our heads that we have no part in the business—but to look on. This war is our war as much as it is the war of the enlisted soldier of the line. That is why we say: Young men, wake up! Join the first line of defense, if you can—they are waiting at the armories to enroll your name—but if you can not, then prepare to protect your native city and province! And 'do it now!'"

Further west, the *Ottawa Free Press*, while recognizing that the response to the call of the Motherland has been adequately met, considers that further preparation is imperative, and says:

"We have not the shadow of a doubt that Britain will triumph, and triumph without calling upon her last resources. But that is no reason why our very last resources should not be in readiness in the event of their being required. A man does not go into the woods to hunt a bear taking only one or two cartridges with him, on the assumption that he will not find the bear."

Still further west, in Alberta, where men flocked to the colors with the greatest enthusiasm, the same emphasis is laid upon this point. The *Calgary Herald* remarks that "it is by no means conceded that we have yet measured up to our full duty, either in what we have done or are promising to do," and then proceeds to state:

"It may not happen that we shall require to send 350,000 Canadians to the front, but we should realize now that ultimately this may become necessary, and our plans and arrangements

meanwhile should be made with this always in view as a possibility. Canada's contributions of men and means to the cause of the Allies in this war are only in a minor sense sentimental. In a very real sense this fight to us is a battle for national existence, and we must lay our plans accordingly."

TURKEY'S FATE

AGHAST at what they term the "audacity of Turkey," the English papers predict swift retribution. They foresee the disappearance of the Turk from Europe and his relegation to the rôle of a minor Asiatic Power whose dominions will be confined to Anatolia. Like all the other organs of English opinion, the *London Times* sees the hand of the Kaiser in Turkey's act, and says:

"By her foolish yielding to the instigations of Germany, Turkey has pronounced her own doom. The Ottoman Empire in Europe soon will be merely a memory. Since the Turks have resolved upon their own destruction, we do not regret their appearance in the ranks of the combatants.

"Their acts of war mean that, when this mighty struggle is over, Europe will be rid of two factors which for more than fifty years have been the chief menaces to the peace of the Old World. We shall get rid of Prussian militarism and we shall simultaneously get rid of the Turks in Europe. The peoples of Syria, of Arabia, and of Mesopotamia will also be freed from the blighting influence of the Turks, and the Ottoman race will be relegated to the obscure valleys of Asia Minor from which it long ago emerged."

These hard words from an erstwhile friend of the Sublime Porte are echoed by another former supporter, the *Paris Temps*, which considers that Turkey's entrance into the war will not in any way embarrass the Allies, and adds:

"The Turkish aggression has been foreseen at Petrograd, as it has been foreseen by the English in Egypt. It is not on the banks of the Bosphorus that the fate of the Ottoman Empire, which has been guilty of treachery and complicity with the enemy, will be settled."

On the Russian side more attention is paid to the practical aspect of it, for to Russia falls the task of meeting the Turkish attack. The *Petrograd Noroye Vremya* says that, under German influence, Turkey has gathered together fifteen efficient army corps.

"These corps give Turkey an available fighting force of 600,000 men. Those in Asia will be used in invading the Caucasus and Egypt. There are fully 1,000 German officers in the Turkish Army, and it is no longer the disorganized, poorly

equipped army that was crushed by the Balkan allies. Gen. Leman von Sanders, an able German leader, is in command of the Army. Weber Pasha, another German, commands the fortresses guarding the Turkish straits."

In Germany, naturally enough, the press deny that Germany was in any way responsible for Turkey's war fever which was, it claims, instigated by some other Power. Thus the *Frankfurter Zeitung* and the *Berliner Tageblatt* consider that England forced Turkey into the war, and the latter paper states that "if Turkey had not acted when she did, England's long and carefully prepared plans against the Porte would have miscarried." The *Frankfurter Zeitung* says:

"Turkey knows she fights for her existence when she fights on our side. She knows that the defeat of Germany would mean that Turkey would become the helpless victim of Russian covetousness. At any rate, our diplomacy, which since the beginning of the war has incurred unjustifiable blame in Germany, at last accomplishes a distinct success, but not in the sense that Turkey has become a blind tool of our purposes. She acts in accordance with her own highest interests."

This view is supported by the *Berlin Tageliche Rundschau* which is inclined to think that France also had a finger in the pie, for it says:

"Turkey's action had been expected for a long time by the entire world after the Anglo-French effronteries against the Porte. Turkey is to be congratulated on her honorable decision. We sought no allies, but we welcome all the more heartily one who takes our side from the recognition of the fact that it is advantageous to do so."

While the Allies claim that Turkey started the war and then tried to explain away what they consider were aggressive actions against Russia by apologizing for them as "temporary mental aberrations," and while most of the German papers blame England, quite the contrary view is taken by the well-informed and influential *Berlin Lokal Anzeiger*, which states:

"It must be emphasized that it was not Turkey, but Russia, which started the war. Turkey's action in the Black Sea and the attack on Theodosia were natural sequels to the outrageous Russian assault on Turkey's integrity. The breach of the peace was Russia's work."

In Italy, Germany is roundly accused of causing all the trouble, and the special correspondent of the *Milan Secolo*, writing from Constantinople, says that Turkey has to all intents and purposes become a German colony, and adds:

"The Grand Vizier blindly follows orders from Berlin and has not the slightest notion what the morrow may bring forth for Turkey."—Translations made for THE LITERARY DIGEST.

FOREST SHELTER FROM AIR-SCOUTS.

ENGLISH CAVALRY WHO ESCAPE AEROPLANE SCOUTS BY RESTING UNDER FOLIAGE AND ADVANCING THROUGH WOODED COUNTRY.

WAR IN THE WOODS

THE FORESTS in the region of war in Europe are playing a much larger part in the hostilities, both offensive and defensive, than most persons imagine—so we are told by Samuel T. Dana, who contributes an article on "French Forests in the War Zone" to *The American Forestry Magazine* (Washington, November). A German news dispatch of October 14 speaks of the French troops firing from trees where machine guns are posted; and the same forest of Argonne, which thus aided them in their defense, enabled the French, Mr. Dana tells us, to repulse the Prussians in 1792. In 1870 it concealed the maneuvers of the Germans before they inflicted their crushing blow at Sedan. Says the writer:

"That the French Government itself recognizes the forests as a means of defense is shown by a provision in the Code Forestier, adopted in 1829 and still the forest law of the land, that private owners can be prevented by the Government from clearing away forests at the frontier wherever these are deemed necessary for defensive purposes. There can be no question but that they are, in fact, a decided advantage to the army having possession of them. First of all, they offer a serious obstacle to the advance of the enemy. Troops can not march nor can artillery-trains be transported rapidly through dense woods, particularly when it is possible to block the few roads leading through them by fallen trees. In Alsace, so I was informed by an eye-witness, the first step taken by the Germans after the declaration of war was to barricade every road as effectively as possible in this way. Presumably the French did the same thing in their own country wherever they were forced to retreat. That the blockades established in this way were effective in checking the advance and wasting the strength of the enemy can hardly be questioned.

Furthermore, the forest forms an excellent shelter from

which an army can fire upon an advancing enemy, while itself remaining in comparative security. It is easy to imagine an infantry or a cavalry charge across an open plain against an opposing army entrenched on the edge of a forest being repulsed with tremendous loss. On the other hand, there would be situations, particularly in level country, where the forest would

present a serious obstacle to artillery fire, and considerable areas have probably already been cut over, in this as in other wars, to afford a clearer field and wider range for the batteries.

"The value of a wooded cover in masking fortifications must also not be overlooked. A correspondent with the German Army in describing the fortifications about Metz has stated that they were so skilfully concealed by woods and blended with the hillsides that nothing out of the ordinary was apparent. This is in striking contrast to the forts at Liège which, being unprotected in this way, stood out so boldly against the sky-line as fairly to invite bombardment. The correspondent further stated that in one particular battery which he visited overlooking the River Meuse, the guns were placed behind a screen of thickly branching trees with the muzzles pointing to round openings in this leafy roof. Even the gun-carriages and tents were screened with branches, while a hedge of boughs was constructed around the entire position as a protection against spies. This battery had been firing for four days from the same position without being discovered, altho French aviators had located all of its sister batteries so accurately that they had suffered considerable loss from shrapnel fire."

In the present war the forests have exercised an entirely new function—that of concealing the positions and numbers of the various armies from the vigilance of the enemy's airmen. In open country an aviator may determine with considerable accuracy the strength, position, and movements of the enemy's forces. In a forest this is impossible, and to this fact are

A STRICKEN ALLY

The result of shell-fire on a poplar-tree in the neighborhood of Reims. It presumably served as a cover for the line of retreat.

probably due what few surprises strategists have been able to bring about. The forest also offers opportunity for effective scouting. Natives of the country, thoroughly familiar with local conditions, find it comparatively easy to steal by outposts and to observe the enemy without being detected. We read further:

"In the war zone of northeastern France conditions as regards forest cover vary widely. In the roughly rectangular area to the northeast of the Seine and northwest of the Oise the country is for the most part very flat and is almost wholly given up to agriculture. To the south of the Oise and the Aisne it becomes more undulating, with low hills, and here the farming land is interspersed with patches of forest and woodland. Still farther to the south and east, along the Meuse River and in the Vosges Mountains, the country becomes still more rugged and the forests more abundant.

"The topography and the distribution of the forests throughout this region probably account largely for the decision of the Germans to hurl their main attack against France through Belgium rather than through the more difficult route to the south. To these factors can also be attributed in large measure the rapid advance of the right wing of the German Army in the early stages of the war, while the left made little or no progress. In the north the comparatively level, unwooded country interposed practically no obstacle to the free movement of the armies, and as a result the early advance of the Germans here was almost incredibly swift. During the same period, farther south in the region of Verdun and Nancy, the rugged, heavily wooded country, in conjunction with fortifications and strongly entrenched troops, held both armies practically stationary.

"To what extent the forests in the war zone will be injured during the progress of the war is problematical. That they will suffer more or less, however, can not be doubted.

Much wood will be cut for fuel and construction work; trees will be felled to block roads; whole stands may be leveled to clear the way for artillery fire; and the rain of shot and shell will do much damage to standing trees, much more than the damage done similar forests in the Franco-Prussian War. Equally serious will be the havoc wrought by forest-fires. These will be set not only by accident, but also purposely in order to harass the enemy.

"This was the case in the Forest of Compiègne, which is said to have been fired by the British in order to drive out the Germans. While the fire may have been effective from this point of view, it also doubtless destroyed very largely the natural beauty of the famous forest and seriously disarranged the carefully laid plans for its management. If the war lasts as long as experts predict, it is certain that large sections of the forests in which the armies will operate will be cut down for fire-wood. To date it is evident that there has been much cutting of young growth to use as screens in hiding entrenchments and masking batteries.

"Cathedrals and other edifices are not the only objects that have been devastated. Like the cities and towns, the forests will for many years bear unmistakable evidence of the ravages of war, and in many cases the damage done them will take much longer to repair."

A SHELTER IN TIME OF NEED

A detachment of German Infantry in the Vosges Mountains, operating unsuccessfully in the neighborhood of St. Die, seeks shelter in this fringe of wood to rally for another attack

PRESSURE ANESTHESIA AGAIN

THE ALLURING IDEA of preventing pain in the dentist's chair by pressing on the patient's finger has aroused wide interest among both dentists and patients. This method, as used by Dr. W. H. FitzGerald, of Hartford, Conn., who avers that he is able to produce anesthesia by simple pressure, is examined, and in great part rejected, by Dr. William

Harper De Ford, of Des Moines, Iowa, in an article contributed to *The New Jersey Dental Journal* (Newark, September). Dr. De Ford attended a demonstration of the new method at a meeting of the New Jersey State Dental Society, in July, and, if we are to believe his statement, it was by no means conclusive in that method's favor. Dr. FitzGerald's plan of producing numbness anywhere in any one of the "zones" into which he divides the body, by simple pressure on a bony prominence within that zone, he believes will not work at all. The pressure must be applied very near the part to be anesthetized, and even then, apparently, it is not successful unless it is so placed as to cut off the blood-supply, in which case, of course, the result embodies no new discovery whatever. Many of the patients, Dr. De Ford says, suffered much more pain than if the pressure method had not been used on them at all. We read:

"Fifteen men were admitted at a time to the clinics and allowed to remain fifteen minutes. Three 'zonotherapists' conducted the clinic, each having a separate booth. In the booth which the writer visited, the first time around, a dentist took the chair, having a sensitive bucco-distal cavity in a

lower first molar. The operator did not rely upon the finger-joint in this case, but made pressure with his thumb and finger on the tissues at the extremity of the roots, buccally and lingually, pressure causing intense pain. At the expiration of three minutes the cavity was touched with an explorer, and patient could not distinguish any diminution in sensation.

"Second Case.—Dentist presented with a mild acute tympanitis, resulting from water entering the ear while bathing. Attempt was made to apply pressure at the inferior dental foramen. Much gagging resulted, and intense pain during the entire three minutes, with no diminution of the symptoms.

"In the third case an attempt was made to anesthetize the tissues adjacent to the upper left central incisor. The thumb was applied to the hard palate distally, and the index-finger to the tissues above the tooth labially, pressure being exerted for three minutes. A sterilized needle applied to the gum showed not the slightest numbness. The clinician remarked that he had been more successful in inducing anesthesia for extracting than for such cases.

"On the second time around the writer took the chair of another clinician and wished the gum anesthetized in the region of the upper right cuspid. The pressure applied with thumb and finger on the tissues above the tooth was so painful it felt as tho the bone would be crushed, and it was necessary to diminish

the pressure. At the cessation of the blood flow, there is a sudden and marked increase in the amount of pressure in the foot.

For the purpose of the experiment, a number of small animals were used, and the results were as follows: In the case of a small animal, the pressure was found to be about 100 mm. Hg. In the case of a larger animal, the pressure was found to be about 150 mm. Hg. In the case of a very large animal, the pressure was found to be about 200 mm. Hg.

It is evident, therefore, that the pressure in the foot is directly proportional to the weight of the animal.

The same experiment was also made on the foot of a human being, and the results were as follows:

The pressure in the foot of a human being was found to be about 100 mm. Hg. This is about the same as the pressure in the foot of a small animal.

It is evident, therefore, that the pressure in the foot of a human being is about the same as the pressure in the foot of a small animal.

It is evident, therefore, that the pressure in the foot of a human being is about the same as the pressure in the foot of a small animal.

It is evident, therefore, that the pressure in the foot of a human being is about the same as the pressure in the foot of a small animal.

It is evident, therefore, that the pressure in the foot of a human being is about the same as the pressure in the foot of a small animal.

Dr. De Ford calls attention to the fact that a certain amount of anastomosis, due to pressure, is to be expected. Such anastomosis, by interposition in different parts of the body to relieve pain, is, he says, a daily occurrence, but before the interposition was, it had been practiced for centuries. Baseball players frequently grasp and squeeze a finger that has been hit on the end with a rubber ball. The pressure induces anastomosis, shuts off certain circulation with the brain, diminishes or prevents pain. He goes on:

"But the real mechanism of the Fitzgerald method of pressure, or reflex anastomosis, is found in those cases in which the pressure is made at remote and positions so remote from the seat of pain or pathological condition as to evidently have no connection whatsoever with the case under consideration. Dr. Fitzgerald told me once that he had no explanation to offer, and that should advance a theory today, he might have to announce another week but he did say we know little about the lymph, and it is that we get this action through the lymph channels."

Dr. Fitzgerald says that after starting the pressure method of treatment for the various forms of lymph, the patient will see a very marked improvement in the lymph system in the course of a few days. But when the pressure is stopped, the lymph system will be found to be in a state of normal condition.

BLASTING BY WEIGAND

THE FIRST OF THE NEW METHOD OF BLASTING OPERATIONS WAS THE FIRST OF THE NEW METHOD OF BLASTING OPERATIONS. It was the first of the new method of blasting operations, and it was the first of the new method of blasting operations.

A GIANT BLAST THAT MOVED MOUNTAINS
The photograph was taken at the time the blast was made. It was the first of the new method of blasting operations, and it was the first of the new method of blasting operations.

The first of the new method of blasting operations was the first of the new method of blasting operations. It was the first of the new method of blasting operations, and it was the first of the new method of blasting operations. The first of the new method of blasting operations was the first of the new method of blasting operations. It was the first of the new method of blasting operations, and it was the first of the new method of blasting operations.

Says Mr. von Bernstorff, a substantial:

"In order to have plenty of rock for the various large quantities of material are loaded at the two faces being worked. One is a brown and the other a more massive sandstone, the latter being the hardest. On July 11, 1914, a large blast was made at the brown face, which sent the stones across the over two months. An air was driven into the hill 50 feet from which charges were driven 70 feet each way. The rock-cuts were divided into four sections each, and were started with powder. Three electric explosives were inserted in each charge, making twenty-four in all. Laying the powder and tamping took about four days.

"To help the main blast by carrying away the foot of the hill, was to allow the broken rock to slip down eight 25-foot holes were bored at equal distances. These 'brush-blasts' were fired first, and so loosened the bottom. In setting off the large charge, a 250-volt, 11-ampere electric current was switched on to the leads. At the moment of disruption, as shown by the half-tone, the whole hill was lifted out several feet, fell back, and then the broken rock started to roll down. There was only a dull thud heard, more noise being caused by rolling of rocks than the actual explosion. The blast was an excellent one, and a total of 100,000 tons of rock well broken up, and, requiring no secondary blasting, has since been moved by the steam-shovels and dumped into San Francisco Bay."

AN ENGLISH RED-CROSS TRAIN

THE ACTIVE cooperation of the British railways with the military authorities appears, among other things, in the alteration of passenger equipment for hospital service, furnishing facilities for carrying the wounded from Channel ports to hospitals at interior points. It has been arranged, we are told by F. C. Coleman, writing in *The Railway Review* (Chicago, November 7), that each of the chief British railway companies shall provide a certain number of special trains for this purpose, and he describes and illustrates, in his article, the accommodations prepared, under this arrangement, by the Great Eastern Railway. The ambulance train on this road consists of nine coaches, of which five have been turned into ward cars, each containing beds for twenty men; one, a luggage van, has been converted into a pharmacy, with operating-room and other conveniences, while two accommodate the medical staff, nurses, and attendants, with necessary stores. The remaining car is a diner. Writes Mr. Coleman:

"The beds in the ward-room are disposed in two tiers, and when made up are supported by stanchions to the floor in the case of the lower range, and to the side pillars in that of the upper range. The vehicle is divided into two sections, one large and the other small, the larger section containing twelve beds and the smaller one eight. In one of the cars four of the beds

side corridor, this is much wider than that in ordinary use, so as to enable stretchers to be readily carried along it. The pharmacy has large nests of pigeonholes and shelves for medical and surgical necessities, a folding table and a gas-heater of special design for hot water, with a large water-tank in the roof, besides other accessories. The floor and lower parts of the sides of the

A RAILROAD WAR HOSPITAL DE LUXE IN ENGLAND.
Showing the efficiency with which ordinary coaches are transformed into ambulance trains.

operating-room are lined with lead, and the compartment is provided with a sliding door to the corridor with an eight-foot clear opening to allow free access for stretchers.

"In the dining-car the chief interest centers in the provision made to convert it into a sleeping-car when required, altho the arrangement of the car for dining has been amended. Originally this car was designed to seat sixteen persons, but as now arranged the total number accommodated at one time is twenty-two. When adapted as a sleeping-carriage the accommodation is for ten persons, each provided with a comfortable couch.

"The structural alterations in the case of the two remaining coaches of the train are not very material. In their original form these vehicles each comprised three third- and two first-class passenger compartments, with lavatory accommodation for each class, and also a compartment for guard and luggage. In one of them the first-class compartments are now allocated to doctors and nurses, respectively, while the other compartments form storerooms. The third-class accommodation in the last-mentioned case is preserved intact, but in the other carriage this has been done with the middle compartment only, the remaining two having been converted into a pantry and a storeroom. In one case again, the guards' compartment has been retained in its original shape, but in the other case it has undergone complete change, all the usual equipment having disappeared, and by the instal-

lation of tables, armchairs, and other furniture the compartment has been converted into a comfortable mess-room and office. In both vehicles the passenger compartment can, if required, be easily and quickly made up as sleeping-carriages.

"As regards general fittings everything possible has been done to promote comfort and convenience, the lighting, heating, and ventilating arrangements being exceptionally good."

IMPROVISED HOSPITAL TRAIN IN FRANCE.
Not so luxurious as the British train, yet it saves many lives.

are specially allocated for officers. In the lavatory compartment a large steam jet is provided for sterilizing purposes, and the floor is lead-covered. Throughout the rest of the car the floor is covered with thick linoleum.

"In many respects the pharmacy-car is the most interesting in the train. The whole of the interior of the luggage brake van was stripped, and altho in its new form the vehicle has still a

LETTERS - AND - ART

CLEARING UP "CULTURE"

IT HAS PUZZLED many minds, which have expressed their bewilderment in editorial and cartoon, to see the strange things that have been done lately in the name of culture. The Germans first put forth the word as an oriflamme, and opposing elements have denied that military ambitions or expedients can exist under her egis. Plainly the two sections have not been talking in common terms, and so have hopelessly misunderstood each other. This fact is clearly brought out by Prof. Frank Jewett Mather, of Princeton University, that "when a German speaks of *Kultur* he means an entirely different thing from what a Latin or Britain means by culture." Professor Mather has already contributed to the current discussions, and his sympathies are plainly indicated on the Allied side, yet his examination of the two words and the states of mind back of them is largely of an academic nature, and either will be accepted as a fair statement or will elicit a reply from some writer of equal standing on the other side. *Kultur*, he says in the *New York Times*, "means the organized efficiency of a nation in the broadest sense—its successful achievement in civil and military administration, industry, commerce, finance, and in a quite secondary way in scholarship, letters, and art." By a further distinction it may be said that—

"*Kultur* applies to a nation as a whole, implying an enlightened government to which the individual is strictly subordinated. Thus *Kultur* is an attribute not of individuals—whose particular interests, on the contrary, must often be sacrificed to it—but of nations.

"Culture, for which the nearest German equivalent is *Bildung*, is the opposite of all this. It is an attribute not of nations as a whole, but of accomplished individuals. It acquires national import only through the approval and admiration of these individuals by the rest, who share but slightly in the culture they applaud. The aim of culture is the enlightened and humane individual, conversant with the best values of the past and sensitive to the best values of the present. The open-mindedness and imagination implied in culture are potentially destructive to a highly organized national *Kultur*. A cultured leader is generally too much alive to the point of view of his rival to be a wholly convinced partizan. Hence he lacks the intensity, drive, and narrowness that make for competitive success. He keeps his place in the sun not by masterfully overriding others, but by a series of delicate compromises which reconcile the apparently conflicting claims. Moreover, he has too great a respect for the differences between men's gifts to formulate any rigid plan which requires for its execution a strictly regimented humanity. He will sacrifice a little efficiency that life may be more various, rich, and delightful.

"Hence nations with cultured leaders have generally been beaten by those whose leaders had merely *Kultur*. The Spartans and Macedonians had abundant *Kultur*; they generally beat the Athenians, who had merely very high culture. The Romans had *Kultur*, and the Hellenistic world wore their yoke. Germany unquestionably had admirable *Kultur*, and none of the mere cultured nations who are leagued against her could hope to beat her singly.

"On the other hand, Germany has singularly little culture, has less than she had a hundred years ago, does not apparently desire it. She has willingly sacrificed the culture of a few leading individuals to the *Kultur* of the Empire as a whole. Thus it is not surprising that Germany, as measured by the production of cultured individuals, takes a very low place to-day. Not only France and England, Italy and Spain, but also Russia and America may fairly claim a higher degree of culture. Here the fetish of German scholarship should not deceive us. Culture—a balanced and humanized state of mind—is only remotely connected with scholarship or even with education. A Spanish peasant or an Italian writer may have finer culture than a German university professor. And in the field of scholarship,

Germany is in the main chiefly laborious, accurate, and small-minded. Her scholarship is related not to culture, but is a minor expression of *Kultur*. Such scholarly men of letters as Darwin, Huxley, Renan, Taine, Boissier, Gaston Paris, Menéndez y Pelayo, Francis J. Child, Germany used to produce in the days of the Grimms and Schlegels. She rarely does so now. Her culture has been swallowed up in her *Kultur*."

The claim of Germany to realize her *Kultur* at the expense of her neighbors, Professor Mather admits, is at first sight plausible, because "her *Kultur* is unquestionably higher than theirs":

"She has a sharply realized idea of the State, and she has justified it largely in practice. In a certain patience, thoroughness, and perfection of political organization, her preeminence is unquestionable. The tone of her apologists shows amazement and indignation over the fact that the world, so far from welcoming the extension of German *Kultur*, is actively hostile to that ambition. Yet, even if it be conceded that Germany's *Kultur* is wholly good for herself—surely a debatable proposition—it does not follow that it is or would be a universal benefit. Nations may deliberately and legitimately prefer their culture, with its admitted disadvantages, to the *Kultur* which pleases Germany. England is often mocked for the way in which she 'muddles through' successive perils, yet she may feel that the stereotyping of her people in a rigid administrative frame might be too high a price to pay for constant preparedness. As for us Americans, we have made a virtue, perhaps overdone it, of avoiding a mechanical *Kultur*. We prefer the greatest freedom for the individual to the perfectly regimented state. We will move toward culture and cheerfully assume the necessary risks of the process.

"In a broader view, the war may be regarded as a contest between the metallic, half-mechanical *Kultur* of Prussianized Germany and the more flexible civilizations of States that have inherited culture or aspire to it. Germany herself has rejected the humane and somewhat hazardous ideal of culture, so she can not wonder or complain when she sees that the culture of the world is almost unanimously hostile to her. There is no quarrel with German *Kultur* itself, merely a feeling that it has its drawbacks, that it is, on the whole, as unlovely as it is impressive, that there is quite enough of it in the world already, and that its broad extension would be disastrous.

"Meanwhile the nations of culture have much to learn from Germany's *Kultur*. Flexibility may mean weakness. The United States, for example, could well have a standing army and an army reserve commensurate with its history and prospects, without incurring any danger of militarism. There is, finally some disadvantage in being merely a culture nation, for such a nation can add a large measure of *Kultur* without belying itself. On the contrary, so highly developed a *Kultur* nation as the German Empire puts itself in a position where it is almost impossible to acquire any considerable degree of culture. Culture is the enemy of such a state—it must remain in the Spartan or Macedonian stage. Rome began to decline as soon as Hellenistic culture got the ascendancy over the old Latin *Kultur*."

The *New York Evening Post* thinks Professor Mather's definition not quite comprehensive enough—the meanings of "civilization," "progress," and "social evolution" all enter into the German's conception of *Kultur*. It adds:

"Rightly understood, German *Kultur* is very much like the good old Anglo-Saxon virtues—industry, order, filial obedience—and a love of soap and water. . . . It would probably hurt Mr. Kipling to be told that he is a fervent believer in German *Kultur*. But the fact is that his attitude toward the subject races, his doctrine of East and West, his portrayal of the Englishman in India, is only an exaggeration of the German attitude toward the Slav. Mr. Kipling will not deny to the Hindu his ancient civilization, rich philosophy, literature, and art; but, in the last resort, the Englishman bathes and fights and subdues nature to the uses of man, whereas the native's customs tend to be 'beastly' and lazy. In a milder form this is the Teuton's view of his own *Kultur* as against that of the Slav."

ANOTHER BELGIAN CITY TO FALL IN RUINS

The square in front of the Cloth Hall at Ypres, the Flemish town now shattered by shell-fire. This building was begun in 1200 by Count Baldwin, of Flanders, and finished in 1304. It symbolized the great cloth-weaving industry of the place in the fourteenth century when the population was 200,000. Wars and plagues led to the decay of the cloth-weaving industry there, and the population was reduced to about 18,000.

HEINE AS A PROPHET

THE GIFT OF PROPHECY is imputed to Heine, the poet of irony and of sentiment, by a writer in the *Paris Journal des Débats*, who says that with singular prevision he announced the coming of German hegemony. Altho he was mistaken in his belief in an uprising of democracy, the writer adds, yet he was correct in his predictions of the exploits of Greater Germany. Whether Heine really cared for France is questioned by the writer, who discloses him as stoutly pro-German in one of his prefaces, tho ten years earlier, in certain magazine articles, he had warned France to be always on her guard against German aggression. But it must be remembered, we read, that Heine was "an impertinent wit" who, in his judgments of men and things, "sought above all an excuse for sarcasm." For all that, he and his democratic compatriots deeply admired the institutional results of the French Revolution and held them up as an example to Germany. So that if he praised France it was chiefly for the purpose of sowing the seeds of a German revolution. In evidence of Heine's prophetic powers, the writer in the *Journal des Débats* cites the above-mentioned preface, which introduces his poem "Deutschland." This preface, we are told, does not appear in the French edition of the complete works of Heine; and probably, says the writer, because those "who wished to pass off the German poet as a French wit" knew it contains statements that might be counter-signed by "Pan-Germanism hungry for new conquests." According to this writer, Heine says:

"I shall never yield the Rhine to France, for the simple reason that it belongs to me. It is mine by birthright, because I am the free son of the free Rhine. It is true that I can not incorporate Alsace and Lorraine with the German Empire as easily as you manage it, because the people of these countries cling to France, on account of the rights gained through the French Revolution in the matter of free and equal laws, which are so dear to the *bourgeois* mind. For all that, the Alsatians and the Lorrainers will reunite with the Germans if we bear to the end the burden the French have taken up; that is, if we surpass them by our actions, as we have already surpassed them in

thought, and if we pursue to the uttermost what this thought involves.

"And then, not only Alsace and Lorraine, but also France, all Europe, the whole world, will come under our yoke—the whole world will become German. Often I dream of this mission, of this universal domination of Germany, as I take my walks in the shade of the oak-trees. This is my patriotism."

This preface to the poem "Deutschland," we learn, bears the date of September 17, 1844. And yet ten years earlier, when Heine published his articles on "Intellectual Germany" in the *Revue de Deux Mondes*, he warned France against the intentions of Germany which he himself was to reveal. His book on Germany contains passages of such startling prevision, the writer tells us, as almost to be called prophecies of the present state of things. For instance, at the close of the chapter entitled "From Kant to Hegel," Heine says that "the natural philosopher will be terrible" because "he rouses in himself that love of fighting which characterizes the ancient Germans." Again, "then will appear Kantists who will have no ear for piety, whether in the world of facts or of ideas, and who, with ax and sword, will mercilessly ravage the soil of our European life in order to destroy the last remaining root of the past." The writer then calls attention to a more precise prophecy of Heine's, from whom he quotes as follows:

"To a certain degree Christianity softened the brutal battle-ardor of the Germans. Yet it did not destroy the instinct, and when the cross, the talisman that holds it in check, is broken, there will be a new eruption of the ferocity of the ancient warriors and of the frenzied Berserker exaltation still celebrated by the poets of the north. Then—and, alas, the day is bound to come—the old war-divinities will rise from their fabled tombs. . . . Thor will come forth with his gigantic hammer and smash the Gothic cathedrals into ruins."

Further on in this passage, says the writer in the *Journal des Débats*, Heine pictures the devastation of "the Teuton hordes" and issues a warning to France, as follows:

"You must not laugh at my counsels, even tho they come from a dreamer who asks you to defy Kantists, Fichteans, and natural philosophers. . . . Remain always armed and tranquil at your post. I have only the best of feelings toward you, and

so I was almost terrified lately when I heard that your Ministers proposed to disarm France."

The present French writer is impelled to confess that France has not given sufficient heed to the advice of Heine, and he adds: "Nor did our defeats of forty-four years ago prevent us from listening to protestations of friendship on the part of other Germans who came to the shores of the Seine after Heinrich Heine and strove to lull our doubts to sleep."—*Translation made for THE LITERARY DIGEST.*

THE MILITARIST AND THE HUMANE GERMAN

THAT there are two sides to every question is shown by the press of a single day when Germany is represented by two of her spokesmen to exactly opposite effect. As the militarist Germany is principally in the public

created, all the pictures ever painted, and all the buildings ever erected by the great architects of the world be destroyed, if by their destruction we promote Germany's victory over her enemies, who vowed her complete annihilation. In times of peace we might perhaps regard the loss of such things, but at the present moment not a word of regret, not a thought should be squandered upon them. War is war, and must be waged with severity. The commonest, ugliest stone placed to mark the burial-place of a German grenadier is a more glorious and venerable monument than all the cathedrals in Europe put together.

"They call us barbarians. What of it? We scorn them and their abuse. For my part, I hope that in this war we have merited the title of barbarians. Let neutral peoples and our enemies cease their empty chatter, which may well be compared to the twitter of birds. Let them cease their talk of the Cathedral at Reims and of all the churches and all the castles in France which have shared its fate. These things do not interest us. Our troops must achieve victory. What else matters?"

The humane side of Germany is seen in the statements of Dr. Bode relative to the question of art reprisals in Belgium. Mr.

Edward Robinson, of the Metropolitan Museum of Art, brings these statements forward in the *New York Times* to offset "unpleasant insinuations" that, he says, have been appearing recently as to Dr. Bode's "wishes or intentions with regard to the disposition of works of art in Belgium, and possibly France as well."

"I beg that in justice to him you will allow me to state his own sentiments on the subject, as nearly as possible in his own words. In the October number of *Kunst und Kuenstler* was published an article by Dr. Emil Schaeffer on 'War Indemnity in Works of Art,' giving a list of the works of art owned by the Belgian State and municipalities, which he thought should be handed over to Germany. I translate the following from Dr. Bode's reply to this article, which was published in the *Berlin Lokal Anzeiger* of October 8:

"The undersigned declares that he holds quite the opposite opinion regarding the retention of works of art in the enemy's country. With proscription lists, such as exist for France in the imagination of Ugo Ojetti, and as Herr Schaeffer has thought them out for Belgium, I have no sympathy whatever. On the contrary, my conviction is that all civilized nations ought to retain the creations of their own art and the works of art which legitimately belong to them, and that it is our duty to protect the monuments of a hostile country just as we should our own. . . .

"It was precisely in order to save the works of art in Belgium for the Belgians that the present writer recommended the sending of one of our museum officials to Belgium. Since that time Director von Falke has been working zealously to insure the safety of the treasures in that country, acting in behalf of the Belgian Government in common with our military authorities, who, before his arrival, and in spite of the fact that the conduct of the populace was a violation of the law of nations, were doing what they could for the preservation of the monuments, even with danger to themselves, in both Belgium and France, especially at Reims. The endeavors of the Berlin museum authorities will be directed toward seeing that, after a victorious ending of the war, Germany does not follow the example set by England in the removal of the Parthenon sculptures, and by France under Napoleon I. in plundering the artistic treasures of nearly every country in Europe."

The Palace of Justice in the Place de la Republique in the French city of Lille, now in German hands.

eye, Major-General von Dittfurth is probably entitled to speak first, and he, it must be admitted, rather glories in the title of "barbarian." "No object whatever is served by taking any notice of the accusations of barbarity leveled against Germany by our foreign critics," he writes in the *Hamburger Nachrichten*. "Frankly we are and must be barbarians, if by this we understand those who wage war relentlessly and to the uttermost degree." He further feels that—

"It is incompatible with the dignity of the German Empire and with the proud traditions of the Prussian Army to defend our courageous soldiers from the accusations hurled against them in foreign and neutral countries. We owe no explanations to any one. There is nothing for us to justify and nothing to explain away. Every act of whatever nature committed by our troops for the purpose of discouraging, defeating, and destroying our enemies is a brave act and a good deed, and is fully justified.

"There is no reason whatever why we should trouble ourselves about the notions concerning us in other countries. Certainly we should not worry about the opinions and feelings held in neutral countries. Germany stands as the supreme arbiter of her own methods, which in the time of war must be dictated to her world.

It is of no consequence whatever if all the monuments ever

"In these words Dr. Bode has placed himself on record in the most emphatic manner that he could, and, believing as I do that they are entirely sincere, I think we need feel no uneasiness as to the ultimate fate of the paintings in Belgium if he has a voice in the decision."

HOW OXFORD IS HIT BY THE WAR

MATTHEW ARNOLD once spoke of Oxford as a place where England's "young barbarians" might be seen "all at play." The war has put an end to their play-time. A writer in the *London Times*, who asks where the undergraduates are now, says: "We miss them by field and stream, and in the 'streamlike' windings of the High Street which they are wont to make so busy and so merry." Oxford is changed, he declares, "sadly and drastically enough." "The classes that the reformers always want to reform away, the well-to-do, the athletic, and the sporting, who are often scholars too—they are gone; and all can see what Oxford looks and is without them. They were the first to go, straining at the leash, streaming up in the vacation, begging and praying for commissions, longing to get to the French shore." We read on:

"War acts both by 'shock' and by 'attrition.' Oxford has felt the first, and is beginning to feel the second. The 'shock' fell upon her in the month of August, when, as is already known, over 1,000 of her undergraduates were recommended for commissions, with the result, obvious at once, that none of them would be in residence this term, or, as is fairly certain, this academic year, and that many of them would come back no more. A further number were similarly recommended and withdrawn before the vacation ended. Now, in the second week of term, it is more possible to take stock of Oxford's actual position. It will be, of course, some time before the results of the 'shock' take full effect. But the second process, of 'attrition,' has also begun, and is going on. Some 600 freshmen have matriculated instead of the 1,000 of last year, but the diminution is still more apparent in the ranks of the seniors. . . .

"The Officers' Training Corps reigns in great vigor and rigor. The undergraduates have responded splendidly to the Vice-Chancellor's appeal to 'every able-bodied young man to join,' and the numbers of the corps stand at something like 700. Yet the arrangements are severe and exacting. As an undergraduate remarked, it is for the first time really a corps for training officers. Those enrolled are divided into Class A, who are pledged to be ready to take commissions at the end of or during the present term, and Class B, who are unable or unwilling to take commissions till a later date. Every cadet has to attend all compulsory parades and all the lectures arranged for his class. It will be seen, then, that Class A will disappear at the end of term, if, indeed, some of its members do not go sooner, and the greater part of Class B will follow in the course of the year. The result is that the only undergraduates who can be counted on to remain are those who have not joined the O. T. C., and that these will be much less than a thousand. Besides the undergraduates, not a few of the younger dons may be seen drilling in the park, and they, too, will, ere long, take their departure. Military training is the overwhelmingly predominant athletic exercise, and khaki is the only wear. The aspect of the streets is strangely changed. One of the chief scenes of interest in the daytime is the Base Hospital, where nurses, doctors, and the convalescent wounded may be seen streaming to and fro. At night the stronger electric lights are turned off, and gloom prevails."

A new feature in Oxford is the considerable number of Belgian refugees, among them some dozen professors, nine from Louvain:

"Some of these are giving occasional lectures. Others are

pursuing their studies in the Bodleian or the University laboratories. Beside these a certain number of specialist students are beginning to arrive, who have been prevented from going to Germany, Switzerland, or other places abroad, and are now seeking advanced instruction with the Oxford professors. This is one of the most satisfactory and interesting features of the moment, as it is at once a tribute to Oxford and will make her better known and to a different class."

A SUBSTITUTE FOR COLLEGE ATHLETICS—Something akin to Oxford's Officers' Training Corps is suggested for American colleges in a proposal to bring the entire student body under physical training, and also provide for national defense. It is

BERNARD SHAW, MAETERLINCK, LEONCAVALLO, AND D'ANNUNZIO IN GERMAN EYES.

Represented by a German cartoon as the men "who were glad enough to profit by Germany's love for culture. They accepted German gold, yet now they rage against the country which recognized their genius and would bite the hand that fed them."

urged by *Puck* (New York) that our colleges and universities be turned into training-camps. Secondary schools would be unlikely to lag far behind. We read:

"Were we suddenly called upon to face a crisis such as Europe was called upon to face with but very little warning, it would find us woefully unprepared. In the security of our peace we have neglected to build up an organization capable of performing the multitudinous services of war, or of any great disaster, either political or physical, which may come into a nation's life. The thousands of young men in colleges and universities offer a field for the development of such a force of trained men in a way that would entirely revolutionize our educational as well as our defensive system.

"As our athletics are conducted to-day, a few picked men have trainers, coaches, rubbers, and waiters for the purpose of preparing them for a conflict with a correspondingly small group of similarly trained men from other institutions. The remainder of the student body, which makes this training possible, is meanwhile physically utterly neglected.

"Yet the average young man entering college is quite as much in need of physical development and training as of mental. The country, too, is in need of disciplined, trained men; and this double need can be met—can be met for less money than is expended on a single season's football team. A system of military drill, under the supervision of experts in military discipline and hygiene, with the cooperation of the athletic associations of the colleges, and under the auspices of the United States Government, would prove of inestimable value to every student in the college, and would furnish to the nation a groundwork upon which a magnificent, national service could be established. A spirit of true patriotism and of unselfish public service would be instilled in the students. The nucleus of a trained military corps would be established from which officers and men could be recruited, with but little additional training in time of war."

RELIGION-AND-SOCIAL-SERVICE

FAILURE OF PRAYERS FOR PEACE OR VICTORY

A LETTER written to the New York *Evening Sun* signed by "A Mother" asks if we have lost faith, and if that is why our prayers for the cessation of the world's conflict are fruitless. The *Evening Sun* editor gives prominence to the letter "because it expresses with evident sincerity a doubt that has clouded the minds of honest people in these days of

From "The Graphic," London.

BLESSING A BAVARIAN REGIMENT.

"God on the lips of every potentate, and under the hundred thousand spires prayer that 22,000,000 servants of Christ may receive from God the blessed strength to tear and blow one another to pieces," so Galsworthy states the irony of events.

battle." In the presence of great calamities, it observes, such questions come unbidden: "Does the Supreme Wisdom heed the supplications of men? And do men ask for divine intervention with genuine confidence that the help they seek will be granted?" The letter, which occupies a conspicuous place in large type, reads in this way:

"When I follow in your paper the daily toll of the war, the thousands of lives sacrificed to the greed or vainglory of nations, unoffending women and children thrown out into the world penniless, homeless, and robbed of husbands and sons, I wonder how it can be that an all-powerful Being allows such a state of things to keep up. For what are all our effort at progress and our striving toward usefulness and achievement if we are to be torn to pieces and thrown into the ditches? Of what use are all our millions a year and the sacrifices of good men and women to convert the heathen to our way of thinking when we in turn imitate the wild beasts in our ferocity toward our fellow man and turn the strength of our arms and the ingenuity of our brains toward annihilating one another?

"Our day of prayer for peace was unavailing and our peace parades came to nothing. Is it because we asked without faith? Have we really lost faith, or are we being punished for having attained wings like the bird, for chaining the lightning, and blotting out the sun with the smoke of battle?"

"Our President has asked us to be neutral. I think we are neutral in the way he meant. That is, the cumulative horror of the thing seems to have strangled such expressions as 'I hope Germany will win' or 'I have no doubt that the Allies will win.' The big question is: How much longer, O Lord, is the door of this vast slaughter-house of the great and brave of all nations to be kept open? We are not worrying any longer about how it started or what nation is in the lead; we are concerned only about when it shall stop. We know that the conflict has passed beyond the bounds of human intervention. Only the Father may stretch out his hand and stay the destruction, and he has apparently turned his face away.

"I am groping in doubt and dismay. What do you think? That day when we all prayed for peace—do you think we asked without faith?"

"Have we lost faith?"

The question of the efficacy of prayer in the present crisis is discussed by *The Continent* (Presbyterian, Chicago), prompted by an article in *Scribner's Magazine* by the English novelist Mr. John Galsworthy. In this article the novelist "predicts that when this war is over, religion, as now known, will be gone forever." "God ruling over the affairs of men and ordering the destiny of the world is a conception which, Galsworthy argues, can not survive a war wherein each bloodthirsty combatant calls upon the Deity to wreak a heavenly vengeance on all foes in arms." He is thus quoted:

"Three hundred thousand church-spires raised to the glory of Christ! Three hundred million human creatures baptized into his service! 'I trust the Almighty to give the victory to my arms!' 'Let your hearts beat to God and your fists in the face of the enemy!' 'In prayer we call God's blessing on our valiant troops!' God on the lips of every potentate, and under the hundred thousand spires prayer that 22,000,000 servants of Christ may receive from God the blessed strength to tear and blow one another to pieces, to ravage and burn, to wrench husbands from their wives and fathers from their children, to starve the poor and everywhere destroy the works of the spirit! 'God be with us to the death and dishonor of our foes'—that God who gave his only begotten Son to bring on earth peace and goodwill toward men! No creed can stand against such reeling subversion of its foundation. After this monstrous mockery, beneath this grinning skull of irony, how shall there remain faith in a religion preached and practised to such ends? When this war is over, and reason resumes its sway, our dogmas will be found scored through forever."

Such an outburst should be regarded more with sorrow than with blame, *The Continent* observes, for—

"Thousands of stout and staid Christians have found it well-nigh more than they themselves can stomach to hear braggarts on their way to human slaughter lay claim to God in heaven, as if he were theirs to order hither and yon.

"And if Mr. Galsworthy was not well grounded in personal religion to begin with, it is unhappily no wonder that this grotesque religiosity should sicken him totally.

"But with all his disdain, Mr. Galsworthy should not imagine himself logical in concluding that conflicting prayers of contending armies for triumph over one another make God an absurdity.

"The strange fact is, tho, that his most illogical way of looking at this matter is a rather common view of it. Back in Civil War times here in the United States, there was much scoffing talk about how confused God must be to have both North and South praying to him for victory, each expecting his help against the other."

The only answer which Christianity needs to make, says *The Continent*, is to explain the real Christian conception of prayer:

"Praying is not any compulsion on God. He is not a lackey called hither and thither to do the bidding of those who quickest claim him. The Lord of heaven and earth can not be distracted by antagonistic petitioners urging on him contradictory desires. He lends a listening ear to all sorts and conditions of men who choose to pray, but does not engage to satisfy any of them. He still will do, whatever their request, the thing that conforms to the pattern of his righteous and infallible will. God never resigns his scepter to the clamor of the many or the private influence of the few.

"When, therefore, two nations go to war and each calls on high heaven to aid its arms, the victory goes to one or the other not according to the petitions of either, but according to the most just determination of Omniscience, awarding success where it will best advance the right and defeat where it will most effectively punish the wrong."

THE FRENCH CHURCH IN THE WAR

RELIGION AS AN ISSUE of national politics in France appears anew in these days of war. From the clerical Paris journal, *La Croix*, there was lately cited in these pages an article showing the need for the restoration of religious faith in the Republic, yet without any suggestion of politics; now we hear the official organ of the French capital, *Le Temps*, urging prudence and deliberation upon too ardent clericals. It is inadvisable, according to the *Temps*, that they take too great advantage of a situation which requires, above all, a united nation, lest at a later date they experience a proportionately greater reaction. The republicans are more than willing to yield their bent of liberalism, we are told, but also they will be of one mind in warding off any attack on the "essential principles of the republican régime." Calling to the attention of the aggressive clericals the example of those "incontestable but far-seeing Catholics who dread to see politics once again making use of religion and compromising it, or subjecting it to reprisal," *Le Temps* says:

"None among us—even the unbeliever or the most defiant and hardened freethinker—resents these personal manifestations that do not trespass, or do not trespass too greatly, upon the freedom of the faith of his neighbor. We say: Go easy—because some individual enthusiasts are liable to be indiscreet. Yet this is not the time for us to be insistent on such niceties. On the contrary, it is our business to broaden our understanding and our tolerance. Our country needs the devotion and courage of all parties, and we must not stop to ask on what grounds this one or that is stirred, or at which hearth he kindles his ideal into flame.

"At the same time a voice of authority should be raised among the faithful to give sound advice to those who seem to have covert political ideas, and also to repudiate certain demands or censure a certain excess of utterance. The purpose of a 'national reconciliation' . . . at the moment justifies many things that are not strictly legal; yet why not be satisfied with the advantages provided by the occasion? Above all, why ask that the Republic solemnly abjure its essentially lay character?"

Just this is what *La Croix* tries to do, says *Le Temps*, when it pleads that President Poincaré should assist "officially" at certain religious services. Either *La Croix* is asking a known impossibility, observes *Le Temps*, in order that the clericals may use "inevitable reprisal" as an issue when convenient to them, or else they admit that they value their political interests above others. We read:

"From the very beginning of the war we reposed our confidence in all the French people, whether they were recognized as ardent syndicalists or as dangerous anarchists. Similarly, now we are not busying ourselves to discover whether the regular

clergy is observing certain laws. Those of really religious mind will be content with this half-opened door and adopt a wise reserve in order to secure or prolong the concessions due to circumstances. But this is not enough for the clericals—those politicians of the faith. What they want is a political victory. They want to see the Republic make an apology, to see it strike its breast in penitence and deny its principles."

Further *Le Temps* states that the Government, which has charge of the national defense, is doing all in its power to be fair

THE VICTIMS.

This cartoon by the Russian artist Holarek represents the victims of war known as "cannon fodder" and the multitudes who sacrifice the produce of their labor. Both alike are consumed by the monster.

in those matters that concern "the State and the faithful" and it sets down the official practise with some detail of offered evidence. Then this journal adds:

"Despite this fact certain clerical politicians seize upon present circumstances to 'get the upper hand,' as the phrase is, to pursue their advantage, and to rouse the defiance of the republican party. What blindness! What imprudence!

"Rather should we try to encourage the reciprocal sentiments of esteem and of tolerance that are the result of extraordinary conditions. But there are those to whom we shall keep on saying: 'Have a care lest you require too much of these conditions. Do not abuse them or turn them to political ends. Do not seek to achieve permanent success by causing an excessive oscillation, for, by virtue of the imperious law of physics, such a movement will soon be followed by a contrary movement just as strong again.'"

The Church's view of the matter is indicated in an interview with Archbishop Fuzet, of Rouen, who says to a representative of the *Paris Gaulois* that—

"The people of Rouen, even those who do not practise religion, cling to its forms and ceremonies. This spirit has grown wonderfully since the beginning of hostilities. . . . Admitting that war is frightful, that beautiful youth and dear lives are destroyed, yet the blood thus shed will weld together forever the French

conscience, which until now has been divided by too many misunderstandings. Even now I receive letters from my priests who are at the front assuring me of the firm confidence that has sprung up between them and their comrades—that is, between the people and the clergy. Such an understanding can not melt away the day after victory, because it is based on the solidarity of sacrifice for the Fatherland and on the most deeply rooted traditions of the heart of the race."

Referring to the movement toward concord between Church and State, the Archbishop is reported in the *Gaulois* as saying that the legislators of the Republic, "enlightened by the immense growth of religious feeling in this supreme crisis, will not deprive victorious France of the great moral benefit she has spontaneously acquired. And I am convinced that at Rome there is the disposition and the readiness to make an end of all sorry and regrettable errors."—*Translations made for THE LITERARY DIGEST.*

WAR'S ILLS TO THE MIND

LESS IS SAID on the subject of atrocities than was the case a few weeks ago. Perhaps there is less occasion through their growing infrequency, or people are becoming saner and inventing fewer stories. Other ills of the war among those who are not direct participants are grouped by Canon Horsley under the head of "Bellitis," but the atrocity charges have been so widely current and so many of them have been discovered to be unfounded that Mr. O. Locker Lampson, son of the famous poet and litterateur, writes to the *London Daily Chronicle* to voice the anxiety of some "to see the problem of German atrocities settled upon a solid basis." He declares that the feeling is strong, that "while memories are fresh, details should be collected," and he "feels even more strongly that the testimony of witnesses should be upon oath, so that the person who makes a statement shall be legally responsible for its accuracy." He writes further:

"We have, therefore, formed a committee in cooperation with *Le Cri de Londres*, 60 Marsham Street (a patriotic French newspaper which since the war began has been fighting the Allies' cause in this country), and in the hands of this committee we have placed a sum of money to defray the expenses of a thorough inquiry and of a careful collection of facts."

Canon Horsley also, in *The Chronicle*, turns to consider "the imbecilities and immoralities commonly, if not inevitably, born or developed in war-time which should be exposed and combated." He writes:

"War may be a school for certain virtues, but it is certainly not the school of all virtue. Even as regards bravery, only the opportunity for its display and use is in and by war increased (as our Albert medal shows), and fortitude, which is morally superior to bravery, is not unknown outside war nor unpractised by non-combatants. Moreover, even the basic moral virtues of prudence, justice, temperance, and fortitude are inferior to those of mercy, pity, peace, and love. But war certainly generates or increases certain mental and moral failings. Such atrocities as have actually occurred, and are not the unsubstantial progeny of fear and excitement, of suspicion and credulity, would probably have never been possible to their authors in times of peace."

"But our chief danger is in the case of non-combatants, the sufferers from Bellitis. The natural desire for war news becomes with thousands an obsession, a monomania, and already our asylums are receiving those whose mental balance has been overthrown by brooding on the war. Healthy freshness of mind is impossible to those whose one thought and inquiry is, 'Anything fresh?' This obsession must be combated by the lenitive force of another interest, and there should be a demand for more recreation and not for its cessation in war-time, and still more should there be a sustained and even increased interest in the duties of citizenship and religion."

Bellitis, he continues, has caused in some "that septic condition of mind which desires daily horrors in the papers, and

gloats over them with gruesome fascination." It is even perverted into—

"A readiness, nay, eagerness, to believe evil of all German and to forget temperance in speech and justice in action with regard to them. One daily paper applauds itself for a 'campaign' of this sort, and is directly responsible for the outrages of a South London mob in the last few days, and perhaps also for the refusal of a suburban magistrate to grant a summons against one who had assaulted her German neighbor, remarking that Germans had now no legal rights in English courts."

"Elsewhere I have had to pour some ridicule and scorn on an anonymous cleric who wrote that 'we should not offend national susceptibilities by singing common hymns which had Austrian Anthem or 'Ein feste Burg' as the usual tunes.' And other protest against naturalized Germans (as much English citizen as you or I) protecting themselves against unjust obloquy by legally changing their names."

"Then, again, there was the spy mania with its endless inventions of alien outrages in trains, in the cutting of telegraphs and the poisoning of water, concerning which our Government has had to declare in the interests of truth and justice that 'no trace whatever of any conspiracy has been discovered, and no outrage of any sort has yet been committed by any alien. Akin was and is the readiness to swallow any and every tale of atrocity, and the charges of using dumdum bullets which have always been made by both sides in every war since this form of missile was banned. . . ."

"I am told by a friend, a public lecturer, that whereas he believed in and spoke of many atrocities in Belgium on what seemed to him to be clear evidence, he can find no direct and first-hand evidence for any."

War-time, he finds, gives a fresh opportunity to commercial immorality—

"Every country has to watch the ways of army contractors, to denounce the pet maxim of trade, 'The price of a thing is what it will fetch,' and to draw its teeth by fixing maximum prices. It is hopeful for the future of social integrity that the principle of unfair prices has been laid down by England, by France, and by Germany, all of whom have enough to do with alien foes without having synchronously to guard against these domestic enemies in trade."

"In this country such greed and dishonesty have been exposed and checked by the General in command. In Berlin the Kaiser had to prohibit first the unnecessary rise in the price of bread, and then when the size of loaves was diminished to threaten the seizure of stock. But when martial law runs riot, commercial greed chuckles unabashed and unchecked. Trade clamors for only British goods to be bought; but trading associations have admitted that goods have been imported from Germany and been relabeled 'Made in England' (of course, by 'the other boys, not me') to make an extra profit at the expense of the ignorant customer, and that our gardeners have been made to purchase as home-grown roses and lily-of-the-valley crowns imported cheaply from Germany."

"The first and chief thought in many letters and articles in the press is not that Belgium may be liberated, but that we may 'capture German trade.' Well wrote *The Church Times* as to this: 'It suggests a sordid aspect of war, and encourages some of the sharpest criticisms of English policy.' And I know from friends actively engaged in helping the refugees that Mr. C. E. Maurice was right in saying that 'a certain number are trying to exploit the miserable condition of Belgian refugees so as to secure cheap labor for themselves.' Is this the *modus vivendi*?"

"Already also are vindictive designs and extravagant claims advocated in view of our triumph. As to this, as well as to Prussian ways, it must be remembered that might does not make right. A beaten foe may become a friend, and in the future Confederation of European States we may be most brotherly with the various monarchies or republics of the Deutschland; but an enemy crushed and humiliated to the point of degradation would fail in manliness if it did not hope and scheme for revenge at the earliest opportunity. Had we acted toward the conquered Boers as some would desire we should act toward Germany, if and when we get the chance, can any imagine that South Africa would be in sentiment and operation what now it is? There is our precedent for post-bellum arrangements. Only a peace with honor is desirable; and honor includes charity. And charity connotes a striving after international brotherhood, and an application of compulsion, not to military service for all, but to arbitration in every case of international dispute."

Living it over Again

In a mental picture, he reviews the accident — the result of his recklessness.

He realizes too late that it is *always foolhardy* to motor on slippery roads and streets without equipping all four tires with

Weed Anti-Skid Chains

The Only Real Safeguard Against Skidding

Strange, is it not, that *some men laugh at peril*—they do not seek to avoid danger—and they have no fear because they have no prudence.

They continue to motor over sleety, icy, or wet roads and pavements with "Foolish Dependence Upon Bare Rubber Alone" until a false turn—a sudden meeting at a corner—a slip or a skid—brings disaster as the punishment for their imprudence.

You motorists with reasoning brains put on your Tire Chains at the first indication

of slippery streets, and the editors of the daily newspapers are urging *all* motorists to follow your example.

For instance, the Public Ledger of Philadelphia, Pa., published by the owners of The Saturday Evening Post, in an editorial on August 1st, 1914, said that the simple adjuration to "Use Tire Chains on wet and slippery pavements" deserved to find its way into a law, and that law should by all means be enforced.

Promote "Safety First" in YOUR motoring circle—
insist that everyone use Weed Chains on ALL tires.

MOTOR - TRUCKS

MOTOR-BUSES THAT CARRIED MORE THAN ELEVEN MILLIONS

IN the annual report of a motor-bus company now operating on Fifth and other avenues in New York City, it appears that heavy increase in earnings occurred last year over the previous year. During the year, the number of passengers carried was 11,276,430, the fare being ten cents, and the company operating 125 busses. The increase in passengers over the previous year was 2,391,896. The total revenue of the company from all sources—fares, advertising, and livery service—for the year was \$1,176,050, an increase of \$240,982 over the previous year. With operating expenses and taxes deducted, the net from operation and leased property was \$231,145. Out of this were deducted charges for rent, interest on mortgage, and on advances amounting to \$40,707, leaving a net income for the year of \$190,427. From this sum was deducted \$10,175 for profit and loss of adjustment, which gave a surplus of \$180,262, an increase over last year of \$49,341. Other items in the annual report, as summarized in *Automobile Topics*, are these:

"Having cut down its tire cost to 1.7 cents per bus-mile, and its net operating expenses to 31.6 cents per mile, while its income in fares alone reached 38.95 cents per bus-mile, the company can look back on its latest fiscal year with more than a smile. Its stockholders and directors may well be pardoned for being pleased over the success achieved.

"Financial reports of the kind submitted by this company at times conceal more than they tell, particularly when it comes to the understanding of the 'man in the street.' Even shrewd bankers in Wall Street are reported to have been badly mistaken in their reading of the 1913 report of the company, in which the profitable business was to be discerned by a careful study. Which may or may not have been responsible for the cool reception accorded to certain persons in the 'Street' who were looking for financial backing to open

similar bus-lines in Chicago, Philadelphia, Washington, and other cities.

"To tell the story of the fiscal year of the company which ended June 30, 1914, in a few terse sentences: Its net profits (on a capitalization of only \$50,000!) were \$190,437.81; it has accumulated a reserve fund for damages and injuries amounting to \$214,436.02; it has a cash fund on hand exceeding \$167,000; has supplies on hand valued at \$71,085; a bus-equipment valued

From "Automobile Topics."

A LIGHT-BUILT MOTOR TAXICAB TO BE OPERATED AT 25 CENTS PER MILE.

at \$644,727, and real-estate property, free of all mortgages, valued at \$54,025. Despite these strong assets the company carries on its books a 'corporate deficit' of \$105,794.67; its corporate deficit last year was listed on the books as \$286,000.

"How this company managed to make such excellent profits in a business which has been branded as 'dangerous, ruinous, and unprofitable,' requires an analysis of its operating statistics. First of all must be noticed the tire cost. It must be galling to owners of small trucks in delivery service to find that these heavy busses, driven in the exacting and hard work of stopping and starting at practically every corner in Fifth Avenue, and speeding at 25 miles an hour along macadam Riverside Drive, need only 1.7 cents per bus-mile to pay for their tire equipment. How the

AMERICAN MOTOR-TRUCKS READY FOR SHIPMENT TO EUROPE FOR USE IN THE WAR

WAITING FOR NEW SHOPS TO BE BUILT

Canvas tent in temporary use in Detroit for finishing automobile parts.

company has succeeded in cutting down this expense from 4.98 cents in 1911 to 3.13 cents in 1912, to 2.1 cents in 1913, and to 1.73 cents in 1914, is a story for which many operators of delivery wagons would undoubtedly be glad to pay good money.

"From present indications it would seem as if motor-bus traffic in New York City is but in its infancy, if a single company can boast of more than eleven and a quarter million passengers in the course of a year. During the year ended June 30, 1914, the company added 20 new busses to its fleet, bringing the total number of its passenger-carrying vehicles to 119; in addition, the company owns 6 non-revenue cars. The item of depreciation has been handled in the inspiring way which has been a feature of the company's business from the beginning. Writing off 1.34% of the total cost of the equipment each month, its whole fleet is amortized in three years, and as nearly 70 of the company's busses are older than three years it follows that they are already completely paid for out of the profits of the operation, and are listed in the assets as 'fully paid operating equipment.' The depreciation charge this year has been fixed at \$53,795.76. By inference, \$107,591.52 is still to be paid on the busses now in use, and the remainder of the \$644,727 given as the value of the fleet is completely amortized.

"Among the assets listed is an item which, perhaps, shows better than mere words that the company is so flush with money that it must look for other outlets than its own equipment. The item reads, '\$101,125 miscellaneous investments,' and a foot-note explains this as an investment of the company's surplus funds in \$100,000 par value of Canadian Pacific Railway 6 per cent. notes, which were purchased during the fiscal year."

HORSES AND TRUCKS AND THE WAR

The demand for horses for use in the European War has raised expectations of a new demand for motor-trucks in this country. While the number of horses in America has been estimated at about 20,000,000, the countries engaged in war, except Russia, have comparatively small supplies, for which many have already been killed or disabled. The result has been a large demand for American horses and mules. Representatives of Great Britain, France, and Russia have placed many orders in this country. In a single week in October these orders are said to have reached 20,000. Prices accordingly have sharply advanced. When the war broke out the price was \$125 to \$150, but in some parts of the Mississippi Valley \$270 has since been a prevailing price, while even larger sums have been paid elsewhere for horses of superior kinds. An active trade in horses is also going on in Canada.

In consequence of these sales of horses for Europe it is believed that motor-vehicles of all kinds—those for pleasure as well as those for business—will be in greater demand here. It is known that some owners who have sold their horses did so with the intention of purchasing trucks with the proceeds. Another contributory influence will be the European demand for our surplus oats and hay, the prices of which in consequence will rise still further, and hence add to the cost of keeping horses. It is known that exports of oats from July 1 to October 24 were 22,000,000 bushels, or just about double the amount for the same period last year. It is, therefore, expected that motor-trucks, and especially delivery wagons, will be in greater demand than ever before.

Our Eighth-Year Truck Tire

A Truck-Efficiency Problem Solved

Tires constitute the greatest problem of truck efficiency. That problem has now been solved by Goodyear. And in the doing of it a new standard has been set in truck service.

For the last eight years, Goodyear experts have been concentrating on heavy service truck tires. In that time they have built 29 distinct types. For one type alone—the 1915 Goodyear S-V—no fewer than 74 separate tire structures have been built in the aim for perfection. Each new structure has been exhaustively tested under most rigid working conditions. Some 2100 tires have been so tested and watched. Development has kept step with actual known requirements.

The result of this eight-year continuous progress is our 1915 Goodyear S-V Truck Tire. This tire marks today's finality in truck tire efficiency. It has solved a big problem for concerns that want to get the most out of their trucks. For owners know that truck efficiency is largely a matter of tire efficiency.

GOOD YEAR
AKRON, OHIO
S-V Truck Tires

See These Advantages

Applied in five to ten minutes. No rights or lefts. No wedges, flanges, bolts or bands. 1915 Goodyear S-V Truck Tires are pressed on the wheel. Go on to stay. No trouble through tires working loose, because the pressure at which they are applied exceeds by many tons all stress or strain the tire can ever receive in actual use.

Flat treads. Better load distribution, traction and wearing quality. Absence of special fastenings means a lighter and a trouble-proof tire.

A Rubber-and-Steel Welding

The steel base is a corrugated channel, to which is vulcanized a layer of hard rubber. By a Goodyear process, the steel, the hard rubber, and the soft rubber tread are welded into one inseparable unit.

Remember all that has been done in the attainment of such tire perfection, efficiency and economy. The work done by the men in the Goodyear Experimental Department in the development of Goodyear Tires costs us \$100,000 a year. It is the price we pay for your insurance of tire value.

Reduce Tire-Mile Cost

It will pay to ask us to tell you of concerns using 1915 Goodyear S-V Truck Tires, and how they have reduced cost per tire-mile. It will interest you to learn how these concerns are saving equipment—the load—the driver's time—how they are keeping trucks in commission day-in-and-day-out by using Goodyear S-V Truck Tires—today's last word in truck tire supremacy.

Writing and asking questions involve no expense or obligation on your part whatsoever. Write today.

RAUCH & LANG

John R. Eustis, at a convention of motor-truck makers in Detroit a few weeks ago, in discussing the work done by motor-vehicles in the European War, declared that the armies of the belligerent states now have in use more than 250,000, of which more than 100,000 are trucks, some having trailers and some not. Of trucks the German Army alone has nearly 75,000. The Allies were recently in receipt of additional trucks at the rate of 250 a week. Mr. Eustis showed illustrations of trucks actually in use at the front. Some were on battle-fields, others on the road to battle-fields. He said it was the English who first used motor-trucks in war; this was during the Boer War. These trucks were propelled by steam. Italy afterward used them in the Tripolitan War. Then followed Bulgaria, whose rapid advance toward Constantinople was in large measure facilitated by the use of motor-vehicles. The Greeks and Servians in the second Balkan War used trucks for transportation purposes.

GERMANY'S AUTOMOBILE INDUSTRY

Much interest has been felt in automobile circles in this country in the effects which the war has had on automobile-factories in Germany, especially those producing vehicles most in need for military purposes. Very little authentic news has come to hand, since news of all kinds from Germany has been so closely supervised by the censor. That the war had had great influence on the industry in Germany was assumed. For one thing, it was believed that quite one-half of the total employees of automobile-factories had been called to the front. To what extent the output of the companies would be affected no one knew, nor was it known to what extent military orders kept the factories busy. In *Automobile Topics*, however, appears an article, based on an article printed in the *Allgemeine Automobil Zeitung*, the same being in turn based on a letter to automobile-manufacturers asking for information as to the exact status of their operations, orders, and prospects during the next few months. The answers received are declared to form "a valuable and fairly complete picture of the state of the industry in Germany during the first half of October this year, or two months after war began." Following are items in *Automobile Topics'* summary of the original article:

"Chief among the troubles confronting the industry are the difficulties connected with the importation of rubber for tires and the transportation of raw materials in sufficient quantities to keep up manufacturing of cars ordered by the military authorities themselves, not counting those for private customers. Strange to say, the much-talked-of 'gasoline problem' has ceased to be a problem, despite the vigorous assertions of the British reports telling all about the shortage of gasoline. According to the information now available, German motorists can now obtain gasoline in all parts of the country, altho for the first few weeks there was an embargo on all gasoline, placed by the military authorities as a sort of precaution and to give the army heads an opportunity to sort of 'look things over.' The now almost universal use of benzol and denatured alcohol in all the transport trucks, and in the majority of the larger touring-cars used in the army, has released the early embargo on gasoline. The only motors in which gasoline is still absolutely necessary are those for the faster

aeroplanes. The older Zeppelin air-ships are using benzol and alcohol, while some of the latest are reliably reported to have been fitted with Diesel oil-burning engines.

"As might be expected, manufacturers whose specialty has been the production of motor-trucks are rushed with work, most of them working twenty-four hours a day, with army assistance. Engineers connected with military headquarters are supervising the manufacture of army vehicles in enormous quantities. Heavy tractors, three- and five-ton trucks, trailers, special vehicles for army use, ambulances, ammunition-wagons, and other types are turned out steadily to replace those destroyed in battle or ruined by the strenuous work demanded of them. Several other automobile-factories have been taken over by the authorities in their entirety and only the most trustworthy workmen have been retained. Foreigners of many nationalities have been discharged, and in these plants there is going on work the exact nature of which is shrouded in mystery.

"Orders from individuals are practically at a standstill in all the German plants, and no sales are expected until the end of the war. Then, indeed, all look toward an immense boom in all automobile branches. Some of the largest manufacturers have, in addition to their car-factories, big motor-cycle and bicycle plants, and these, it is reported, are working to capacity for both the army and the general public. Many whose automobiles have been commandeered by the military authorities have gone back to the bicycle, and others have purchased motor-cycles with side cars. The business in these is stated to have been double that of the same two months last year.

"Not a single automobile company in Germany, with the exception of 'small-car' makers, has an unsold chassis in its factory or salesrooms. Every finished and semi-finished chassis was immediately commandeered by the army, and special workmen were rushed to the plants for the purpose of building ambulance bodies, field-kitchens, and ammunition-wagons on these chassis. Completed pleasure cars were taken for the use of commanding officers, as scout-cars and for the transportation of general staff officers from end to end of the battle-lines in the east and the west. Conservative estimates place the number of cars with special army or commercial bodies in use by the army at 30,000, including tractors for guns and aeroplanes, and nearly 10,000 motorless trailers. In addition some 25,000 pleasure cars have been incorporated in the army equipment and are in daily use.

"One of the leading German automobile-manufacturers states that the influence of the war on the automobile industry in Europe will be felt in a way that will open the eyes of people all over the world. He expects a demand of at least 100,000 pleasure cars from Germany alone, as soon as the war is over, chiefly of the small-car type, easy and cheap to operate. In order to produce these cars in a reasonable time, it will be necessary for the manufacturers expecting a share in this business to plan for mass production along American lines. He thinks the time of individual work for the discriminating buyer is over and will not return.

"Economically considered, Germans will not be able to spend as much on a pleasure car as they used to, and the cheap small car is the necessary outcome."

MOTOR-BUSES THAT HAVE BEEN USED IN THE WAR

Practically all the motor-buses which had become such familiar sights in Paris and London were taken by the French and English Governments for the transport-

Mayor Rudolph Blankenburg, of Philadelphia:

"I would indeed hardly know how to do without it. It is one of the best publications of the character to be found in any country or in any language, and it has kept up its high standard since its first issue. To receive in concise form, an account of important happenings all over the civilized world, edited in such an intelligent manner, and at a price within the reach of all, is a privilege indeed."

William B. Tucker, Secretary, Philadelphia Board of Trade:

"There is perhaps no better way to express the appreciation of the Board of Trade of THE LITERARY DIGEST, than to say that since 1896 . . . the Board has been a subscriber, and your volumes since that time have been on the shelves of our library, serving as a reference to those seeking information as to current events."

W. Horace Hoskins, Chairman, American Veterinary Medical Association:

"Having many calls upon my time, professional, political and fraternal, I find THE LITERARY DIGEST very helpful in giving me in concise form our country's views on the every-day questions that are of world-wide import, and which make for the peace, prosperity, and happiness of mankind."

Nelson D. Warwick, Lawyer:

"I find it the only magazine that is fair to both sides of every question."

Judge Norris Barratt, Court of Common Pleas:

"I have been a subscriber for THE LITERARY DIGEST for the past ten years, and have derived much inspiration and pleasure from its columns."

M. L. Stern, S. M. Stern & Company, Manufacturing Jewelers:

"I have taken great pleasure in reading THE LITERARY DIGEST, and consider it good reading from an educational standpoint."

F. B. Wenzel, Insurance:

"I eagerly look forward to receiving THE LITERARY DIGEST from week to week. To me it is one of the most liberal educators on current topics available."

A. E. Burns, Pottery and Glassware Manufacturer:

"One is really amazed at the amount of knowledge gained in the short space of time required to read its pages."

H. A. Houlings, The J. G. Brill Company:

"I start and read from the first to the last."

Judge William H. Steaks, Court of Common Pleas, No. 5:

"It is 'safe and sane' as an educator, and is heartily welcomed by the family circle. I would like to see it in every household in America."

F. N. Johnston, John Lucas & Co., Inc., Manufacturers:

"Your magazine I consider a most valuable publication for the busy man, giving, as it does, well edited reports of the political thought of the country, and keeping one in touch with the important happenings throughout the world."

In Philadelphia

Practically Everybody Who Is ANYbody Reads

The Literary Digest

Recently we printed some letters from CHICAGO. Here are a few, taken at random, from thousands recently received from PHILADELPHIA.

IN EVERY BIG AMERICAN CITY, as well as in the smaller communities, the moving spirits in every profession, business and occupation find it indispensable.

William J. Coane, Second Vice-President and Sales Manager, The Ajax Metal Company:

"It keeps one up to date upon the principal topics of the day and does it in a way that inspires faith. Keep it as it is, don't change."

J. Walter Douglass, Lawyer:

"Your DIGEST is the 'Peer' of publications in that it gives to the studious man or woman, concisely as well as intelligently, just what he or she wants at the week end to keep abreast of the times."

Mrs. A. Renouf:

"THE LITERARY DIGEST is the last luxury I would wish to give up."

W. F. Therkildsen, Advertising Manager, W. Atlee Burpee & Co., Seeds:

"My experience as advertising manager of W. Atlee Burpee & Co. has been that THE LITERARY DIGEST is an excellent advertising medium. As to my personal opinion of THE LITERARY DIGEST, I consider it one of the most valuable papers that come to my table, and I appreciate it greatly. Your impartial handling of all subjects is certainly to be commended."

Hon. E. J. McAleer, Pennsylvania House of Representatives:

"If all your readers are as well pleased as I am with your paper, you might double your subscription price without fear."

TO "DIGEST" SUBSCRIBERS:

You can do your friends a favor by telling them how helpful this periodical is to you and how they would appreciate it just now in getting a comprehensive, clear, unbiased knowledge of the great European War.

Dr. Jesse Hall Allen

"THE LITERARY DIGEST is a real pleasure to me, and I always anticipate its weekly arrival."

Judson C. Dickerman, Chief, Bureau of Gas, Dept. Public Works:

"I make it a point to always read my LITERARY DIGEST from cover to cover, usually noting the advertisements as containing information and news of progress."

Miss Alice Logan, West Chester, Pa.

"THE LITERARY DIGEST I consider my greatest social asset, as it keeps me absolutely en rapport with all the affairs of the day. Backed by it I feel I can 'hold my own' in any discussion."

Willard B. Wright, Oil, Silk and Muslin Manufacturer:

"One of the best magazines that I have ever subscribed to."

R. A. Wetowitch, Sales Manager, Animal Oil Company:

"THE LITERARY DIGEST gives one in a few brief words, an intelligent, truthful and sane summary of clean and dependable news of the current week, and is necessary to every one, as much so as Dun's or Bradstreet's reports are to every business man."

Maurice Gordon Paul, Real Estate Broker:

"An invaluable addition to the reading of a man desiring to form an unbiased and non-partisan opinion of public affairs."

Rev. George N. Wakely, President, Inter-Church Federation, 21st Ward:

"It is valuable not only in its selection and condensation of what a busy man wants and has not time to cull for himself, but also for giving the many-sided view from all the varied standpoints."

Mr. D. Brown, Principal, Brown College Preparatory School:

"I have been a subscriber for twenty-seven years, and shall continue for twenty-seven more provided I need the magazine that long. I venture the opinion that no other publication in the country is of equal interest and educational value to all classes of people."

Leigh Mitchell Hodges, of the North American:

"It compresses the real news and progress of the world into a pill that is easily swallowed and tonic both the mind and the spirit."

Mr. A. J. Reach, of A. J. Reach Company:

"One of my most welcome periodicals, giving as it does a general synopsis of the most interesting news both at home and abroad."

Frank A. Mulhern, of William Mulhern's Sons, Importers and Wholesale Liquor Dealers:

"To my mind it is a literary necessity to every man."

Joseph E. Oppenheim, of the Snellenburg Clothing Company:

"For a busy man like myself, who only gets time to glimpse over the headlines of a newspaper, THE LITERARY DIGEST furnishes a splendid review of the real news and happenings of the world."

Charles H. LaWall, Analytical and Consulting Chemist:

"It is the one publication which satisfies the busy man by its breadth and conciseness."

H. E. Kelly, of the Vulcan Crucible Steel Company:

"A diligent reader of the magazine is bound to become broader minded, and a better American citizen."

M. Myerson, of Strat & Myerson, Manufacturers of Muslin Underwear:

"I would not be without the DIGEST if your price was tenfold. I am the most disappointed man when a copy of the DIGEST does not reach me on time."

Chas. W. Shelmire, Importer and Retailer of Dry Goods:

"For years THE LITERARY DIGEST has kept me in weekly touch with things worth while, in a quick, concise, and magnetic way."

Warwick James Price, Journalist:

"I am entirely within the line of fact to say that there is not an issue which is not, in some particular or other, of aid to me either in my writing or lecturing."

H. A. Gatchel, President Gatchel & Manning, Engravers:

"I have been a subscriber and interested reader of your publication for probably 30 years and during all of this time have never come across any magazine or publication that gave me the same amount of satisfaction and enjoyment, notwithstanding the fact that I have been a subscriber as well as an observer of quite a number of the numerous magazines and periodicals. When circumstances are such that I miss a weekly issue of THE LITERARY DIGEST, I always have a feeling of having lost or forgotten something."

Tycho Buck, Sr., Buck & Co., Shoes:

"Its knock throws our door wide open to bid it entrance, and such a response ought to come from the restless millions of thoughtful Americans; indeed, your paper deserves it richly, and all in our busy lives need its influence."

James C. Newlin, W. W. Lindsay & Company, Engineers and Contractors:

"I have been a subscriber to THE LITERARY DIGEST for some years, and have always found it a most satisfactory and interesting publication."

C. C. Hancock, Maker of Men's Neckwear:

"I regard THE LITERARY DIGEST as the best and readiest means of keeping in touch with the current of important ideas in contemporary life."

Edward S. Hutchinson, Civil and Mining Engineer:

"I am happy to say that it is always with the greatest satisfaction that I often look back over the years that have passed since I became a subscriber to the DIGEST. It is a broad-minded magazine which gives its readers a condensed and correct summary of personal and public affairs, both at home and abroad, in a way that is both attractive and enlightening to the business man, to the student, and to the professional man."

C. H. Graves, C. H. Graves & Co., Photographic Publishers:

"Should I for any reason be obliged to confine all my reading to a single periodical, I would without hesitation select THE LITERARY DIGEST. I've been a subscriber for many years and you may enter my subscription for life."

Read by men and women of intelligence and means—of weight and position in the institutions and industries of the nation

tation of troops and supplies to the front in the present war. In taking soldiers to ports of embarkation England employed about 20,000 vehicles, while others were used to transport supplies. The conditions of war have made it possible for these trucks to be loaded on the going trip with men and food and on the return trip with wounded. R. Douglas-Vickers writes of these matters in England in *The Commercial Vehicle*:

"Within twenty-four hours after declaration of war against Germany by Great Britain, one of the biggest motor-car camps on record was concentrated at a British port of embarkation. There was a general call to arms of all types of motor-vehicles, including motor-trucks subsidized by the Government, motor-omnibuses from London, and all types of passenger-vehicles. Up to this time 1,000 busses have been taken from the streets of London and fitted with bodies suitable for ambulance and transport work."

W. F. Bradley discusses the same subject as affecting the French Army, which, within a month after the war began, had about 70,000 motor-vehicles in use:

"What mobilization by motor-vehicle means in France was best demonstrated by the fact that, within ten minutes of the publication of the mobilization orders by the Government, soldiers had taken possession of the motor delivery vans owned by the Paris dry-goods stores. Within an hour of the mobilization notice 1,100 of the motor-buses were taken off the streets of the city and were on their way to the eastern frontier where the Germans were concentrating.

"The case of the Paris omnibuses is interesting. The entire service is in the hands of a company holding a monopoly, there being a contract whereby the whole of the vehicles shall pass into the hands of the military authorities the instant the mobilization decree is sent out. Most of the drivers of these vehicles are men eligible for military service. Every Frenchman carries a military pass-book in which are instructions as to where he must be on the first, second, third, fourth, or fifth day of mobilization. To get the full fighting force together requires twenty days, the most valuable units going first and the older men up to forty-eight years of age on the last days. Thus a motor-bus driver who had to serve with his bus simply finished the journey he was making and then drove straight to his depot. From that moment he was a soldier.

"According to the scheme which was introduced five or six years ago, the Paris omnibuses are transformable into meat-wagons. The windows are taken out and replaced by fine wire-gauze screens, a door of similar material is fitted, the seats removed, and the existing hand-rails are fitted with hooks to receive quarters of beef. A special floor is laid, this having a linoleum covering allowing the interior to be washed out with a hose or buckets of water. In common with all other motor-vehicles, the busses are made to receive hammocks for carrying wounded soldiers. It is just as important that wounded men should be removed from the fighting-line with rapidity as that food should be brought up to them with regularity. Thus, after coming up with food, the motor-vehicles must take back all men who have become useless as fighting units. Another use to which these busses are being put is the transportation of troops to points at which it is desired to make a quick attack. The busses can average fifteen miles an hour over ordinary roads; each one can carry forty men. Thus with fifty busses it is possible

An Overwhelming Demand

☐ The New Moon Six-40 has taken dealers, and buyers who have seen it, by storm, on lines, features and price. Our dealers have kept us swamped with orders since the new model has been out, but we've now increased our capacity to supply the tremendous demand. The new Six-40 can truly be termed the season's sensation.

Increase in Sales of Over 46%

☐ Just as proof, our season of 1915 models (three months to date) shows the remarkable increase of 46 per cent.

New Moon Six-40

is a wonderful car at a wonderful price. Study the photographs shown—they've not been retouched. Don't they display just the gracefulness and sturdiness that you want? Think of its having a 6-cylinder, 3½ x 5 Continental engine (unit power plant)—the motor they all take their hats off to. 1915 Delco Electric Lighting, Starting (new one-wire system) and Ignition with automatic spark advance—the system that's the standard of all.

A Few of the Many New Features:

Pure Streamline Body.	Full-Rolling Rear Axle.	Crown Fenders.
Continental Motor. (See above).	Dry Plate, Multiple Disc Clutch.	44-inch Leg Room in Front Seat.
Delco Electric Starting, Lighting and Ignition System. (See above).	One-Man Top with Collapsible Curtains.	Full Ventilating and Rain Vision Windshield.
Left Drive, Center Control.	Stewart Vacuum Feed.	122-inch Wheel Base.
		34x4 O. D. Tires—extra rim.

—in fact every possible thing in the way of equipment and appointments that makes for easy driving, certainty of operation and lasting comfort.

☐ See the car at the Moon dealer's show room—examine it—ride in it. Then you'll understand why it's one of the best and fastest selling cars.

☐ Should it happen that there is no Moon dealer in your city, write us and we'll see that you get literature that's complete as a personal examination.

within sixty minutes to bring up 2,000 men with quick-firing guns to any point within a radius of fifteen miles. According to reports received from the fighting-line, some deadly work has been done by means of the rapid movement of troops in motor-buses.

"All the Paris buses are of French construction. No foreign accessories are allowed; thus the magnetos are built in France, the carburetors are of French construction, and the tires are from various French concerns. The motors have four cylinders of 4.9 by 5.5 inches bore and stroke, and are placed under the driver's feet; a three-speed gear-box is fitted, and drive is by shaft and bevel, without torque or radius rods. Benzol is the fuel generally used, altho the motors are capable of running on gasoline and alcohol without any carburetor adjustment. Cooling is by thermo-siphon through a circular, coil-tube radiator having a fan in the center of the tubes.

"A few hours before the order of mobilization was issued and two days before the formal declaration of war, an order was issued forbidding the exportation of motor-vehicles, parts, fuel, and oils. Enough is known of the French organization to make a fairly accurate estimate of the number of motor-vehicles in use with the French Army at the present moment. Even the authorities can not do more at the present time, and it is only when the war has come to a close and the bill has to be paid that accurate figures will be obtainable. The following is the list:

Passenger-cars of all types.....	50,000
Motor-omnibuses.....	1,100
Army trucks.....	18,000
Four-wheel-drive tractors.....	300
Search-light vehicles.....	50
Wireless-telegraphy vehicles.....	20
Water-trucks and various special vehicles.....	100
	69,570

"The work undertaken by these trucks is the carrying of provisions and ammunition from the general stores to the troops on the fighting-line. Their value in this connection is enormous, for they are able to operate from a base 50 to 60 miles from the advance posts, making the outward trip early each morning, returning in the afternoon and loading up ready to start out again the next morning. Fed by motor-trucks, the troops are no longer hampered in their movements by the inability of the commissariat to get food to them with rapidity."

ELECTRIC TAXICABS

After tests extending over four months, during which promising results were obtained, a company in Detroit has undertaken to put out eleven electric taxis to replace twelve obsolete gasoline cabs. Eventually it intends to use electric cabs to replace its entire equipment of 175 gasoline vehicles. Better and more regular service is expected. Moreover, it has been shown that they can be operated at a saving of about one-third. Following are other items from *Automobile Topics* in regard to them:

"The experiment, which is attracting a deal of attention in electrical circles, is unique in that it is, so far as is known, the first instance in which an operating company has embarked on the construction of electric vehicles after an extended experience with gasoline machines. It was undertaken only after careful deliberation, and following an investigation of what the regular producers of electric cabs were prepared to do in the way of providing cab equipment. Leading up to the determination to study the performance of

the electric car under routine conditions was a long period of trials and growing discomfiture with the gasoline machine, according to officials of the company.

"Among the several considerations arguing in favor of the electric were its simple construction, entailing easy replacement of parts and therefore long-deferred obsolescence; its smoothness and silence of operation; its cleanliness, both in service and in the garage; and, finally, its probable economy. In one respect the taxicab company failed to enlist the indorsement of the electric-vehicle manufacturer. While several were ready to supply cabs, none was prepared to offer a true taxicab. In every case the specifications offered called for a modified pleasure car.

"In the conviction that a modified pleasure car would not serve the purpose, therefore, the taxicab company hired an engineer and proceeded to develop a machine of its own that should be a taxicab from the ground up. The resulting vehicle is in a sense a gasoline-car chassis with an electric-power plant, having flat, semi-elliptic front springs, three-quarter elliptic rears, and a full-floating rear axle with prest-steel housing.

"Considering that the design is the outcome of seven years' experience in taxicab operation, it is perhaps significant that the driver sits on the right. The steering is by a large wheel, and two control levers are mounted beneath it on the steering column; that on the right for driving, while the other is merely a cut-out and reverse switch. The motor is mounted under the waist of the chassis and drives through a long propeller-shaft equipped with universal joints. The battery is divided, one section being under a wide and low sloping bonnet in front and the other section under the driver's seat. The body is a roomy, low-hung limousine, with plenty of glass, wide doors, and comfortable seats for two or four passengers. The low, sloping overhang of the roof in front is a characteristic of the Detroit taxicab bodies and is designed to afford protection for the driver in all weathers.

"The cost for charging current at the three-cent rate, which the company is now paying, works out at something under one cent a mile. When operating a larger equipment the expectation is that current can be obtained at one cent a kilowatt-hour, thereby reducing the energy cost proportionately. It is also the expectation that charging plugs can be installed at all regular stands, so that whenever necessary the batteries can be boosted while the cabs are idle and without returning to the garage.

"Comparison of the total operating cost of the experimental cab with that of the gasoline equipment is hardly possible under existing circumstances, altho the book figures show an advantage for the electric as matters now stand. To charge the electric with its pro-rata share of the overhead that is mainly involved in maintaining the worn-out gasoline machines, however, would be unfair. General Manager Scriminger, therefore, prefers to base his estimate for ultimate comparison on a basis somewhat as follows:

	Per mile.
Driver's wages (sliding scale based on per diem mileage).....	5 cents
Depreciation.....	1 cent
Tires.....	2 cents
Overhead and repairs.....	8 1/2 cents
Energy, at 3 cents per kilowatt-hour....	1 cent
Total cost of operation.....	17 1/2 cents

"Which leaves a fair margin for general expenses not included in the overhead as well as for go and come in the estimated figures. 'If we can not bring it under 20 cents a mile, I shall be very much surprised,' is his conclusion."

"All at her wheel the village maiden sits—
Now, while she turns the giddy wheel around
Reveries the sad remembrance of things—"
Lifford

Times have changed—

Modern woman, too, sits at the wheel—but she is emancipated woman.

It is no longer the wheel of labor—but the wheel of progress and luxury.

With the touch of her finger upon this new magic wheel she commands the speed of the wind, the power of a score of horses, the white radiance that lights her way ahead.

And, the taming of these mighty forces, their application to this modern wheel, their perfect response to the will and hand of modern woman—

This is what Delco has done.

There are 181,000 Delco equipped cars now in use. Thousands of them are being driven easily and safely by women.

Old Hampshire Bond

WHY don't you use Old Hampshire Bond for your business correspondence?" When you ask a man who uses ordinary stationery that question the usual answer is either, (1) "Really, I don't know why 'they' don't," or (2) "My business will not warrant it." ¶ Too many business men consider the appearance of their letters with absolute indifference. They do this notwithstanding the fact that their letters are their representatives who make the most frequent calls on their customers or clients. ¶ Old Hampshire Bond is the Standard Paper for business stationery. It is made of new white rags, hand selected and loft dried. Thousands of substantial business firms use it exclusively, because they find it is the kind of paper which expresses subtly, yet forcibly, the standards of their business. There is a crackle of quality about a letter written on Old Hampshire which cannot be mistaken.

¶ Although it is such good paper, it may surprise you to know it will cost only 1/10 to 1/20 of a cent more per letter than the paper you are now using. A series of five letters, at the very least, costs you 25 cents (for your stenographer's time and postage). On Old Hampshire Bond the cost would not be more than 25½ cents—you have paid ½ cent (2%) to insure the efficiency of your five letters. ¶ If you would like to know more about Old Hampshire Bond, write us on your present letterhead and ask for our "Book of Specimens"—a book assembled and bound up to interest business men.

CURRENT POETRY

ALICE MEYNELL has written a war-poem. And, as might be expected of a writer so broad in her sympathies and so general in her appeal, it is a poem which, while definitely of and for England, is no narrow utterance of national hate. If poets will continue to sing of this war, they will do well to take this poem for their model, instead of the rimed invectives which have appeared by the hundred during the last three months. "Summer in England" appeared in the *London Times*.

SUMMER IN ENGLAND, 1914

BY ALICE MEYNELL

On London fell a clearer light;
Carousing pencils of the sun
Defined the distances, the white
Houses transfigured, one by one,
The "long, unlovely street" imperaled.
O what a sky has walked the world!

Most happy year! And out of town
The hay was prosperous, and the wheat;
The silken harvest climbed the down;
Moon after moon was heavenly sweet,
Stroking the bread within the sheaves,
Looking 'twixt apples and their leaves.

And while this rose made round her cup,
The armies died convulsed; and when
This chaste young silver sun went up
Softly, a thousand shattered men,
One wet corruption, heaped the plain,
After a league-long throb of pain.

Flower following tender flower; and birds,
And berries; and benignant skies
Made thrive the scurried flocks and herds—
Yonder are men shot through the eyes,
And children crushed. Love, hide thy face
From man's unpardonable race.

A REPLY

Who said "No man hath greater love than this,
To die to serve his friend"?
So these have loved us all unto the end,
Chick! thou no more, O thou unsacrificed!
The soldier dying dies upon a kiss,
The very kiss of Christ.

Here is a peculiarly American war-poem, which we take from the *Memphis Commercial Appeal*. America has been called a melting-pot, but this great war shows that the various metals are not as yet absolutely fused. Miss Kennedy's theme surely is fit for poetic treatment, and, except for the use of the "poetic" form "'neath," her lines are forceful.

✓ THE CALL TO THE COLORS

BY SARA BEAUMONT KENNEDY

Like the seeds of wind-flowers, lightly blown
On vagrant, gipsying breeze,
They are scattered wide throughout our land—
Aliens from over the seas.
They came from the crowded fatherlands
To share in our broader sphere,
And they built their nests and reared their broods
Through many a changing year.

But a vibrant cry comes unawares
From over the crested wave—
The voice of the warring motherlands
Calling their children to save:
"On our grain-grown fields War plants its guns
And lights its torch on the crag;
We need you, sons in the Other Lands,
Come back and fight for the flag!"

And deep in each listener's heart there stirs
A memory that has slept
'Neath blush of blossom and pallor of snows
While the years have onward crept;

Help him
—it is your fight, too

Yours as much as your neighbors.
You can HELP so easily and so much—with Red Cross Christmas Seals. For every Red Cross Seal you use lightens the load of someone afflicted with consumption—lets in a ray of hope and welcome relief in the long fight with the dread "white plague."

Put Red Cross Christmas Seals
on everything you mail or express home—
the official the more. Even one will help.

If you cannot buy Red Cross Seals in your town, write
to American Red Cross, Washington, D. C., for as
many as you want at 10c each.

Someone must do the
scientific experimenting—

If you are to have carbon paper that will do
its almost inconceivably delicate work and
fulfill its heavy responsibilities.

And he seen in a flash his native hut,
Where the foeman's banners float—
And he's German again, or French, or Slav
At thrill of a bugle-note!

For a man may wander across the world
And dwell 'neath a stranger's sky,
But the call of the blood will cleave all space
When it comes in a battle-cry;
And the nest he built and the brood he reared
Are left to an alien flag
While he turns him home, with his soul aflame,
To die for a silken rag.

There were many lovely things in Miss Amelia Josephine Burr's "The Roadside Fire," published two years ago. But her new book, "In Deep Places" (George H. Doran Company), is better than its predecessor. Some of the poems in it have the gaiety which only youth can express; some have the intensity of enduring passion. All of them show brilliant craftsmanship and reflect a sensitive and accomplished personality. Here follows one of the best examples of her skill, in these eight lines that will not let themselves be forgotten:

A MINOR POET

BY AMELIA JOSEPHINE BURR

The freely, flickering about
In busy brightness, near and far,
Let's not his little lamp go out
Because he can not be a star.
He only seeks, the hour he lives,
Bravely his tiny part to play,
And all his being freely given
To make a summer evening gay.

Where Bozen may be it is difficult to say. But so gay and joyous a place is pictured in the following lines that we cannot but hope some day to find it. Without doubt its happy citizens should crown Miss Burr their laureate.

IN BOZEN OF A SUNDAY

BY AMELIA JOSEPHINE BURR

In Bozen of a Sunday, the air is gay with chiming;
In the valley full of belfries every clapper is
sawing;
Bell-song and bird-song, each with each is riming
In Bozen of a Sunday, when the hills are glad
with spring.

In Bozen of a Sunday, between the walls of towns
That border merry Talfer with many-colored
sweet,
Children are gayer and sweeter than the poodles,
And they drown the river's chatter with the
patter of their feet.

The boys and girls go walking, when Rozen-
garten's flushing,
Her eyes are on the mountain-peaks, but little
does he care
For blush of the hills when he sees his sweet-
heart blushing,
Or for sunset on the snows when he can see it
on her hair.

The little feet, play-weary, stumble homeward all
around them,
For a chill steals down the valley as the gold to
silver gleams;
Shy cling of hands, as a touch unseen had bound
them,
And his eyes are full of tenderness, and hers are
full of dreams
In Bozen of a Sunday, when the hills are glad with
spring.

Since the three golden volumes of "Songs from Vagabondia" won the world's heart, American poets have sung but little of the Romany patteran. But, as this poem shows, the open road is as alluring

DETROIT SPRINGS

Remember—You Sit Right Over the Wheels

When you consider that the passengers in the tonneau are directly over the wheels it is apparent how important a feature are the springs.

Riding comfort can only be attained by equipping your car with the right springs, not too flexible, not too stiff, yet strong enough for perfect security.

Detroit Springs are especially designed for the particular car upon which they are to be used.

Our engineers decide upon the composition of the steel, the number and thickness of the leaves and the exact temperature of the three heat treatments. These specifications determine hardness, flexibility and resilience to a certainty, and the finished spring is tested to prove every quality.

Detroit Springs Are Guaranteed for Two Years

An exclusive feature that further adds to their riding comfort is the self-lubricating cups. Near the end of each leaf is a cup filled with a long-lived lubricant that prevents squeaking and reduces friction.

Look for Detroit Springs

on your next car. You who sit over the wheels will experience comfort in riding that will repay you.

Write for the interesting book—"From the Ore to the Motor Car." You will be amazed to learn what care and accuracy are involved in the making of a perfect spring.

CASSELL'S PHOTOGRAPHY

For the Amateur, the Professional, the Manufacturer, the Artist, the Scientific Student, for EVERYBODY Interested in Photography.

EVERYTHING ABOUT PHOTOGRAPHY IN A NUTSHELL

A great, big encyclopedic work covering the whole field of photographic knowledge and practice. The greatest book in the entire field of photographic literature—the result of the cooperation of many men, each having special knowledge of his own particular branch. Your outfit—your studio—your factory, is incomplete if you do not possess this all-inclusive work. Its alphabetical arrangement automatically solves every problem of photographic practice, chemistry, etc., etc.

Large Quarto, Cloth, about 600 Large Double Column Pages, \$3.75 Net; by Mail 24c Extra.

FUNK & WAGNALLS COMPANY, 354 Fourth Avenue, New York, N. Y.

A hurried glance through its pages reveals (among hundreds of other things) such practical topics as: Photographic Chemistry—Enlarging—Developing—Retouching—Various Processes—Artificial Light—Flashlight—Portraiture—Wild Animals—Architecture—Autochrome Process—Backgrounds—Filling in Backgrounds—Copyright—Box Relief—Printing—Translation Photos into Line—Drawing—Night Photography—How to Fit Out a Dark Room—Enamel Surfaces—Filing—Framing—Shutters—Lenses—Speed—Indoor Work—Instantaneous Photography—Natural Color Photography—Panoramas—Snapshots—Exposures—Stereoscopic Photography—etc., etc., throughout the entire list of photographic terminology. The book is profusely illustrated with half-tones, color plates and numerous diagrams.

Weis Christmas Suggestions for your Music Room

No. 1608

The giving of practical, useful gifts is the highest manifestation of the *Spirit of Christmas*. Something new, something different, something which will give daily enjoyment for many years is what you are searching for.

Untold pleasure will result from the giving of WEIS SECTIONAL MUSIC ROOM FURNITURE. These Sections are *new*—this is their first announcement; they are practical and will be appreciated; they are attractive in design and of beautiful finish; they fit modern music-room requirements.

The Player Piano, the various makes of Talking Machines, etc., have created a demand for suitable Files or Cabinets in which the Rolls and Records may be kept for easy access. Many homes have both a Player Piano and a Talking Machine. Sheet Music will ever continue in popular favor, thus Sectional Cabinets meeting all three requirements are making instant appeal to all Music Lovers. Sections shown below are beautifully finished Golden Quartered Oak or Genuine Mahogany, Polished Ends, finished Blanks. All three Music Sections look alike when doors are closed. Present a uniform appearance. Any assortment of these Sections in one stack. Get those you need now, add as your Music Library grows.

See your Dealer or get our Catalog.

No. 1646
Described
Opposite

No. 1608 Record File consists of Flat Top, No. 1680 Record Section (shown below) and High Leg Base. Top 20" x 17" in. Brings Talking Machines to proper playing height (33" in.) and provides a most accessible space for 80 Disk Records. Freight paid, see note, \$17.75

No. 1646 Player Piano Stack (upper right corner) appeals instantly to every Player Piano owner. Files 40 Rolls and 1200 Sheets of Music. A beautiful outfit which harmonizes with your furnishings. Height 40 in. Freight paid, see note, \$22.25

Catalog will be sent immediately if your dealer will not take your order.

Double the Enjoyment of Victrola Playing

Half your pleasure is lost when playing Albums. Filed Records.

Large table space is not always available. You know the annoyance of referring to the cumbersome Albums on chairs, floor or on your lap.

bersome Albums on chairs, floor or on your lap.

Weis Record File Sections Index Your Records for Quickest Finding.

No. 1680

Eighty Indexed Pockets hold 40 10-inch and 40 12-inch Disk Records. Each Record in separate pocket, preventing scratches and making filing easy.

Record Pockets tilt forward when index table drawn toward you. Pocket stays out until record is returned after playing. Simple, efficient index locates Records quickly. Drawer holds index book, needles, etc.

With top, as shown, \$15.00. Section only, \$12.80. See note.

Victrola Disk Files Make Filing and Finding Easy.

VICTROLA XVI fitted
with Weis Disk Files

Fit Victrola XVI \$200.00 instrument as shown below. These Compact Files replace the awkward, easily broken Albums in the machine you now have. Simply slide the Files into the place for Albums. No tools or work required.

Provide filing space for ten 10-inch and ten 12-inch Records. Each Record in separate, indexed Pocket, protecting it from dust and scratches.

Simple, efficient index makes finding and filing a pleasure. Order your new Victrola equipped with Weis Disk Files instead of inconvenient Albums. Your dealer can supply you.

Handsomely finished Oak or Mahogany Pockets are durable and have Tabbed Index. Pocket tilts forward, bringing the Record you want out of alignment and stays out until Record is returned after playing.

Complete outfit, including Handsome Index Book, etc.—(freight paid, see note, \$15.00. Fully described in Catalog. Write us or see your dealer.

Weis Record Files

are inexpensive, yet most practical and durable. Hold 12 Disk Records in 10 in. and 12 in. sizes. Records filed between Numbered Guide Cards. Index makes finding easy.

Deep Brown covering. Handsome appearance. Closes with snap catch, has leather pull for easy handling.

Fit in Horizontal Shelves of New Victrolas or may be used separately for surplus Records.

No. 1601—10 in. size.
Each 50cNo. 1602—12 in. size.
Each 65c

Delivery charges prepaid.

Do You File or Pile Your Sheet Music? Weis Sheet Music Section

No. 1640

is a practical, systematic Music File. Frequent thumbing, rough handling, because of inconvenient "Piling," ruins your Sheet Music. This convenient Filing Section is welcomed by all Music Lovers. 1200 to 1500 sheets may be filed on edge, between Alphabetical Guide Cards, so any piece may be found instantly. Drawer on Supporting Slide, won't tip forward. Fitted with compressor which holds sheets vertically and two sets A to Z Guides for "Vocal" and "Instrumental" Music. Doors close, obscuring drawer.

A desirable Gift which cultivates System and Order in children studying music.

Stacks with other Music Sections. See No. 1646. Freight paid, see note, \$11.50, with Top as shown, section only, \$8.00.

Dealers' Introductory Offer

A liberal Inducement for immediate acceptance, to any Music Dealer. We co-operate with advertising, etc. Write now.

CATALOGS of Music Room Sections and Sectional Bookcases sent promptly on request. Quick shipments for Christmas delivery.

NOTE.—We pay freight charges on orders of \$10.00 or more to R.V. Stations in Eastern and Central States. Consistently low prices in West and South.

as ever, when a true poet tells about it. And only a true poet could see that camp-fire among the Pleiades.

GIPSY-HEART

BY AMELIA JOSEPHINE BURN

My grandsire was a vagabond
Who made the Road his bride.
He left his son a wanderer's heart
And little enough beside;
And all his life my father heard
The fluting of a hidden bird
That lured him on from hedge to hedge
To walk the world so wide.

And now he walks the worlds beyond
And drifts on hidden seas
Undiscovered by a chart—
Blithe derelict at ease.
And sometimes when I halt at night
In answer to my camp-fire's light
His own uplifts a glowing wedge
Among the Pleiades.

Women are fair, but all too fond;
Home holds a man too fast;
I'll choose for mine a freeman's part,
And sing as I go past.
No lighted windows beckon me,
The open sky my canopy,
I'll camp upon Creation's edge
A wanderer to the last.

The *Toronto Globe* prints a poem dealing with a beautiful phase of the great tragedy—with the work of the women who day and night knit clothing for the men who have gone to battle. "Gray Knitting" is perhaps not a classic but surely exquisite in its sincerity and simplicity.

GRAY KNITTING

BY KATHERINE HALE

All through the country, in the autumn stillness,
A web of gray spreads strangely, rim to rim;
And you may hear the sound of knitting-needles
Insistent, gentle, dim.

A tiny click of little wooden needles,
Elfin amid the glanthead of war;
Whispers of women, tireless and patient,
Who weave the web afar.

Whispers of women, tireless and patient—
"Foolish, inadequate!" we hear you say;
"Gray wool on fields of hell is out of fashion."
And yet we weave the web from day to day.

Suppose some soldier dying, gaily dying,
Under the alien skies, in his last hour
Should listen, in death's prescience so vivid,
And hear a fairy sound bloom like a flower—

I like to think that soldiers, gaily dying
For the white Christ on fields with shame sown
deep,
May hear the fairy click of women's needles
As they fall fast asleep.

PERSONAL GLIMPSES

EARL ROBERTS

ON the evening of November 14, at the headquarters of the British Expeditionary Army in France, died Great Britain's most distinguished and beloved soldier, Field-Marshal Earl Roberts. Since his death the press of many countries has been full of laudatory comment and anecdote about the little commander. That England and her colonies, who knew him best, should sound praises to his memory, or even that we, to whom Kipling introduced him as "Bobs Bahadur," should do so, is not surprising. But when Germany, in spite of her hostility, joins in the expressions of sorrow at his death, and takes pains to register her admiration for what Lord Roberts has stood for, it is as great a tribute as a man may hope to earn. A paragraph from the *Berlin Lokal Anzeiger*, quoted in American newspapers, runs as follows:

On the occasion of the death of Lord Roberts the whole German press expresses itself alike, appreciatively, about the fallen enemy. Even in war, moments occur when the fighter salutes the enemy with the saber instead of striking him with it. Such a moment has arisen with the departure of Roberts.

Few men have so fully understood the meaning of the phrase "a gentleman and a soldier" as did he. Undoubtedly he was a militarist. Up to the time of his death he was doing his utmost to help Great Britain in the war, and was therefore working against Germany, but he was no meaner of the Teuton. He called no names, he screamed no epithets, nor sought to reproach the enemy for fighting. His ethics, like his religion, we are told, was remarkably simple. When two nations go to war, their business is to fight—fight hard, but fight fair. And that he so understood the matter is shown unmistakably in the following portion of a speech delivered by him in England shortly after the war's beginning:

May I give a word of caution to my countrymen against the unsportsmanlike practice of abusing one's enemies? Let us avoid what during the Boer War was described as "killing with your mouth." Let us rather devote all our energies to defeating our foemen by the superior fighting of British soldiers in the open field.

When we read the charges against the German troops, let us remember that gross charges absolutely untrue were brought against our own brave soldiers fighting in South Africa, but whether the charges are true or not, let us keep our own hands clean, and let us fight against the Germans in such a way as to earn their liking as well as their respect.

A warrior with over sixty years spent in the service of his country, it was singularly appropriate that death should seek him

Westinghouse Electric Systems Starting—Lighting—Ignition On the 1915 Models

THIRTY makes of cars are featuring the Westinghouse Systems of Starting, Lighting or Ignition on their 1915 models.

In testing out these systems, the engineers of the various cars have considered them in connection with the hardest conditions under which they could be run and their abuse as well as their use.

In all of these tests the Westinghouse Systems have come through with a perfect score. They have proven their efficiency, their economy and their sturdiness.

Here are the cars whose engineers, many of the world famous, have approved the Westinghouse Systems, and whose builders are placing them on their 1915 products.

These are the Socks I Want— They're Holeproofs!

This ad says:—Holeproof Hose are made from the finest Egyptian and Sea Island cotton yarns, costing an average of 74c per pound. Common yarn, selling for 32c, cannot be half so good as ours.

But we must use the best of materials, in order to guarantee these hose.

We guarantee six pairs of cotton holeproofs to need no darning for *six months*. And if any of the six pairs fail in that time *we will replace them with new hose free*.

Selling Hose to the Millions

We are selling stockings and socks to millions. If it were not for that fact we couldn't afford to make such hose and sell them at the price of common kinds. Holeproofs cost as little as 25c per pair!

Holeproofs are soft, close-fitting, stylish; and they are made in the lightest weights if you want them.

We pay \$60,000 a year merely for inspection to see that Holeproofs are perfect.

Why pay the same price per pair for hose that lack the Holeproof advantages!

Guarantees and Prices

\$1.50 per box and up for six pairs of men's cotton Holeproofs. \$2.00 per box and up for six pairs of women's or children's cotton. \$1.00 per box for four pairs of infants' in cotton. Above boxes guaranteed six months. \$1.00 per box for three pairs of children's cotton Holeproofs, guaranteed three months. \$2.00 per box for three pairs of men's silk Holeproof socks. \$1.00 per box for three pairs of women's silk Holeproof stockings. Boxes of silk guaranteed three months. Three pairs of Silk-Faced Holeproofs for men \$1.50, for women \$2.25. Three pairs of Silk-Faced are guaranteed for three months.

EXPECTANT MOTHERHOOD

By Dr. J. W. BALLANTYNE, of the Royal Maternity Hospital, Edinburgh

In the rare sympathy with which the author approaches the subject of motherhood, in the delightful literary style which characterizes every page, and in the intimate and frank nature of the advice that is given, we have here one of the best books ever written on this subject. Every young woman approaching matrimony as well as every "expectant" mother should solve for herself the mysteries of physiology through a careful reading of this work.

A large book. Nearly 300 pages. Price \$1.50. By mail \$1.61

FUNK & WAGNALLS COMPANY

out on the field of battle, surrounded by his own Indian troops. Nor is it less so that it should have come as the direct result of his determination still to serve his country in what way he might. When one is eighty-two, there would seem little left in the way of service, yet Lord Roberts did not hesitate to make the hazardous journey to France, to greet his old Indian regiment, of which he was still colonel-in-chief. The direct service was a small one, but he gave his life in its performance, and if the oldest patriot can give so much, his example will not be lost upon the younger generations. Nor has this been Lord Roberts's only activity at this time. The *Philadelphia Public Ledger* calls our attention to other deeds less conspicuous but no less valiant:

The veteran's devotion to the interests of the Army, his hard work in this connection, and his seeming good health had been the subject of comment since the beginning of the war. He was the most popular military figure in Great Britain and a national hero without rival in the affections of the people.

Despite his years he had never ceased hard work since his nominal retirement, and as he had often remarked, he lived a rigidly abstemious life that he might preserve his strength for the service of his country.

Lord Roberts worked day and night for the welfare of the soldiers from the outbreak of the present war. He took the greatest interest in the Indian troops and issued an appeal for funds for their wounded and sick. He also made requests for sportsmen to contribute saddles for the Army, which brought a ready response. He made other requests for the loan of field-glasses to officers during the war. And he wrote personal letters of thanks to all contributors.

The great little soldier, fearless of public opinion and regardless of the views of the predominant party, spent the last years of his life in a campaign for the adoption of a system of national service. Now, just as the truth of every word that he spoke, his assertions of the unpreparedness of England for war, and the possibility of raising a great army have been proved, he has died. To the very last he was devoted to the cause to which he had given so many years of toil, and the thought of the gray old man going day by day to the War Office to confer with Lord Kitchener and then hurrying to inspect some newly raised unit, has had much to do with the success with which the Government's call for men has met.

For "Bobs"—as he was affectionately known throughout the Empire—occupied a position in British life which was absolutely unique. Not only was he recognized to be supremely eminent as a soldier, but it was felt that he had won his honors by his own ability and that he valued them only as they enabled him to assist the rank and file of the army and the safety and honor of his country. There were days when a certain jealousy existed between the partisans of Roberts and the only other British general of equal reputation, Lord Wolseley, but in that there was never any suggestion that he participated, for, as Kipling sang, "E does not advertise."

His birthdays became notable events in the British calendar. Whatever he did was received as the act of a man of profound wisdom and patriotism, and it was only his age which prevented his appointment, instead of Kitchener, to direct the present war.

Another writer, in the New York *Evening Post*, compares the career of Lord Roberts with that of the Duke of Wellington, that other Irishman who also won his spurs in India, fifty years before Lord Roberts began his work there. While there are several points of resemblance, naturally the contrasts between them, mainly of personality, are far more striking. Both, for example, were worshiped by their countrymen and idolized by their soldiers, but in totally different ways. Wellington had the cold reserve of an aristocrat, while Roberts was as frank and warm-hearted in all his dealings as the humblest private in the ranks. The Army was the life and breath of him, and we read on:

He became saturated with the atmosphere of camp. He was more of a Tommy Atkins than even Tommy Atkins himself. It was the joy of the fight, the thrill of battle, the fun of the thing that appealed to him. A respectful soldiery gave to Wellington the title of "Iron Duke"; an adoring army called Roberts "Bobs"—a nickname born in the barrack-room. Tennyson's stately lines on the death of the man who "never lost an English gun" befitted the memory of Wellington, but what poet would have ventured to write about the victor at Assaye as Rudyard Kipling did in 1893 of the man who had marched to Kandahar?

There is a little red-faced man,
Which is Bobs.
Rides the tallest horse 'e can,
Our Bobs.

If it bucks or kicks or rears
'E can sit for twenty years.
With a smile round both 'is ears—
Can't yer, Bobs?

If a marker's lost 'is place,
Draw by Bobs;
If a gun 'as split its trace,
'Ook on Bobs.

'E's eyes all up 'is coat
An' a bugle in 'is throat.
An' you will not play the goat
Under Bobs.

What 'e does not know of war,
Gen'ral Bobs,
You can ask the shop next door—
Can't they, Bobs?

Oh, 'e's little, but 'e's wise;
'E's a terror for 'is size.
An'—'e—does—not—advertise—
Do yer, Bobs?

Lord Roberts was a man of deep religious feeling, but he never paraded his piety, he never forced it upon those around him. Every Sunday when in the field he attended divine service, yet not a word did he ever speak to his staff suggesting or ordering their attendance. His Christianity was a very simple faith; it had none of that mysticism, none of that perplexity, which entered into Charles Gordon's Christianity, but it was deeply

When Louise of Prussia Went to Napoleon

ONE hundred years ago Queen Louise went to Napoleon on a delicate and important mission.

A clever woman, a beautiful woman, was Louise of Prussia. Had she accomplished her mission that night, the history of Europe would be different today.

Beneath the surface of the mighty war now going on are the secret twisted threads of intrigue and passions of 200 years.

To understand this fearful upheaval in Europe you must know that hidden history of Europe frankly told in imperishable form in the

Library of Historical Romances

By Mühlbach

20 Volumes

The Hidden Threads of Europe's History in Romance

Louise Mühlbach was one of the greatest historical novelists that ever lived. Her husband was a famous professor of history. From his knowledge and her wonderful pen she wove the big facts of history into romances that have been breathlessly read by two generations. They have been translated into ten languages—they have been read and reread by millions of people. For this woman got to the inner heart of the men and women at the heads of armies and on thrones as no historian could.

Read the strange story of Frederick the Great, the man who made the German people and yet who loved best all things French.

Read of the Empress Josephine, of Marie Antoinette and Napoleon, and of Hortense Beauharnais, a simple girl who became a sad queen. And further back in the history of Europe are the beginnings of the reigning houses of today; read of Prince Eugene (that Gallant Knight); read of Talleyrand and William of Orange and of thousands of men and women who until now have been mere historical figures to you.

Here are more than 10,000 pages of fascinating romance, that you'll read because you want to—here you learn history in such fashion that you will never forget it.

Secret History of Eight Nations in these Volumes

Three books have never been offered before except by mail to restricted lists. To increase our list of book buyers we offer them to you now at reduced prices. Send the coupon for these volumes. Learn the secret history of Germany, France, Belgium, England, Russia, Switzerland, Austria, Holland during their great epoch-making times. These are the titles:

HOME FOLKS What 15c Will Do!

You have wished for a paper that gives all the news of the world, and that tells the truth and only the truth. The *Patriarch* is just the paper you have been longing for, and the little matter of 15c in stamps will bring it to you every Saturday for 13 weeks on trial. The *Patriarch* is an illustrated weekly, printed from large, easy reading type, published at the Nation's Capital, for the Nation; now in its 22nd year of increasing success. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the *Patriarch* is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—it is. Send 15c to show that you might like such a paper, and we will send the *Patriarch* on probation 13 weeks. It does not repay us, but we are glad to have in New Friends. Address: The *Patriarch*, Box 1, Washington, D. C.

Chateaux beside the Lure, near Dinant
Faint and picturesque scenes in this beautiful valley, now being cut off by war, are perfectly reproduced in natural colors in

LIEGE AND THE ARDENNES

This is merely one title of eighteen remarkable books of travel. Each volume contains twenty to twenty-four such illustrations in color. The text is absorbingly interesting with its travelogue description of the scenes and historical references which make clear the position of Belgium as the buffer state of Europe. Printed on a special fine English paper, bound in Art Cloth, beautifully stamped in gold and colors.

These books, published by the celebrated house of A. & C. Black, London, were sold at the rate of \$3.00 the volume—which would make \$54.00 for this complete lot. We bought the entire balance of the edition for members of the Ben Franklin Library Association and will sell what remains as follows:

- GROUP 1. Picturesque Places, 6 vols. Liege and the Ardennes, Montreux, Lausanne, Isle of Wight, Isle of Man, Geneva. Publisher's Price, \$18.00. Our Clean-up Price \$5.50**
2. English Counties, 3 vols. Publisher's Price, \$15.00. Our Clean-up Price \$4.50
3. Historic London, 4 vols. Publisher's Price, \$12.00. Our Clean-up Price \$3.85
4. Scottish Group, 3 vols. Publisher's Price, \$9.00. Our Clean-up Price \$3.15
 Above prices spot cash; f. o. b. Philadelphia.

All Books Guaranteed Satisfactory, or Money Refunded

No like opportunity will ever again be offered to secure such books, illustrated with unsurpassing beautiful color illustrations of famous scenes, many now ruined beyond repair.

Our object in making this offer—to acquaint book-lovers with the advantages of the Ben Franklin Library Association. Fairness to those who pay promptly has led the association to list, for the first time, in its new catalog

DON'T CUT TONSILS, WAKE UP!

Read "Tonsils and Voice," \$2.00

By Richard B. Faulkner, M.D. (Columbia University)
 The Only Book on Tonsils and Adenoids.

Prof. J. V. Markovitz, Johns Hopkins Laboratory: "A leading authority has come to me with the following confession: 'I have been fighting tonsils ever since I began my medical career, but I have not been able to get a handle on them. I have read a ton of books, and I have seen the tonsils in the person of my own child, but I have not been able to get a handle on them. This senseless, ruthless destruction of the tonsils is becoming each day a greater menace to the public good. It is a crime!'"

Cardinal Medical Journal (Baltimore): "Faulkner is the first, so far as we are aware, who has attacked the subject in a scientific manner. His book is an able disquisition, based on scientific facts, facts which, if better known and understood by the profession, would check the indiscriminate practice which is now the approved practice."

BLANCHARD COMPANY, Lock Box 446 F, Pittsburgh, Pa.

felt and strenuously observed. When he took the sacrament at Drienfontein, practically in the face of the whole army, soon after he reached South Africa at the time of the Boer War, there was not a hint of the parading of religion. It seemed to those who witnessed the scene only an act of simple faith. Roberts always preached temperance to his soldiers, and he was very severe on those who drank to excess. He would preside at meetings of the Army Temperance Association and extol sobriety, but he did not advocate total abstinence. He never used an oath, but he could use strong, forcible language when he found it necessary, altho he was the smallest officer in the British Army.

The ancestor to whom Lord Roberts owed the fact that he was born an Irishman was John Roberts, who served in King William III.'s Foot Guards at the Boyne, and then settled at Waterford. He had married a woman of Huguenot extraction. These were the great-grandparents of the hero of Kandahar. John Roberts had some ability as an architect, and designed both the Catholic and the Protestant cathedrals at Waterford. His grandson, Abraham, joined the old East India Company's service and remained in it for fifty years, fighting much of the time in Afghanistan and various parts of India. It was at Cawnpur that "Bobs" was born, on September 30, 1832, and as soon as possible his parents carried him off to Europe, for India is no place for British babies.

He began his education at a dame's school; then went to the grammar-school at Carrickmacross, in the County Monaghan. He eventually found himself in the playing-fields of Eton, where so many British soldiers of fame had been trained before him. But Freddie Roberts, as he was called, altho he became a magnificent horseman, was too small to take part in games, and whatever reputation he gained at school was for continuous industry and bright sagacity which earned for him the nickname of "Deductions" at Sandhurst, the training-school of young officers, to which he went after being at Eton for a year and a half. His career showed that the nickname had been selected with prophetic skill. From Sandhurst he went to Addiscombe, which was the special training-school for soldiers taking service under the East India Company; and having passed his examinations, he set sail from Southampton for Calcutta in the early part of 1852, with a second lieutenant's commission in the Bengal Artillery.

Forty-one years, with the exception of short leaves of absence, he spent in India, the half of his whole lifetime. Between them he and his father gave ninety years to that country. Sir Abraham Roberts had returned there soon after his son was settled in Ireland, and after that time saw him only once before the boy, at the age of nineteen, came out with his commission. We are told that, altho these two met at that time almost as strangers, they did not take long to become close friends. At first hand the boy learned his father's experiences in and knowledge of Afghanistan, and, as Lord Roberts himself has told us, it was this knowledge that became of first importance to him when, twenty-five

"Cyclo" BALL BEARING

Carpet Sweeper

It's a wonderful boon to the woman doing her own housework. No other cleaning device can take the place of this handy little machine for every day use. An extra-sweeper for upstairs saves steps. The Bissell comes in many handsome designs and finishes and has all the latest improvements. \$2.75 to \$5.75 at all dealers. Booklet on request.

Bissell Carpet Sweeper Co.,
 Grand Rapids, Mich. Niagara Falls, Can.

years later, he was in command of an army in the Afghan territory. He learned more. With his very introduction into India he was taught convincingly as his first lesson in colonial tactics "the value of sympathy and humanity in dealing with savage races, and the importance of endeavoring to control men rather by love than by fear." This is reflected nowhere better than in the preface of his autobiography, which reads:

The natives of India are particularly observant of character, and intelligent in gaging the capabilities of those who govern them, and it is because the English Government is trusted that a mere handful of Englishmen is able to direct the administration of a country with nearly 300,000,000 of inhabitants, differing in race, religion, and manners of life. Throughout all the changes which India has undergone, political and social, during the present [nineteenth] century, this feeling has been maintained, and it will last so long as the services are filled by honorable men who sympathize with the natives, respect their prejudices, and do not interfere unnecessarily with their habits and customs.

That Roberts practised what he preached, says *The Evening Post*, was shown incidentally when

Some native Indian officers visited London at the time of the late Queen Victoria's jubilee and dined at the messes of the "crack" regiments. Nothing could have been more striking than the veneration which those stalwart, dusky soldiers displayed toward the little field-marshal, humbly extending their sabers and simitars for him to touch in token of fealty. "Bobs," instead of contenting himself with merely touching the weapons, grasped the officers warmly by the hand, addressing them in Hindustani as "comrades," giving them to understand that all holders of the Queen's commission were equal in his sight, no matter what their color.

Lord Roberts's first great opportunity came with the Indian Mutiny in '57. His service then, and his distinguished service later in the Afghan uprising, are described briefly:

He joined the besieging force at Delhi, had three horses shot or sabered under him, and was himself wounded. It was owing to the admirable way in which he performed the difficult task of bringing up ammunition one night to the besieging force that the British were enabled to enter the city next morning. The fall of Delhi completed only half the task the British had to do. Lucknow had to be relieved, Cawnpur to be reoccupied, and the mutinous forces in the field to be destroyed. Young Roberts took a prominent part in the desperate fighting, and in that fighting he won the Victoria Cross, the climax of every British soldier's ambition. Lord Roberts, in his book, tells us how he saw one of his brother officers fall:

"I could not go to his assistance, as at that moment one of his sowars was in dire peril from a Sepoy, who was attacking him with his fixt bayonet, and had I not helped the man and disposed of his opponent, he must have been killed. The

next moment I desisted in the distance two Sepoys making off with a standard which I determined must be captured, so I rode after the rebels and overtook them, and while wrenching the staff out of the hands of one of them, whom I cut down, the other put his musket close to my body and fired; fortunately for me he missed fire, and I carried off the standard."

"For these two acts," he tells his readers in a modest note, "I was awarded the Victoria Cross."

In 1878 Roberts was appointed to the command of the Punjab frontier force—the lance-head of the command of India—and became a major-general in the army, a title that he had previously held only locally. That year matters had come to a crisis between the British and the Ameer of Afghanistan, the great Shere Ali. General Roberts was sent to subdue the rebellious Ameer. With one resistless rush he carried the enemy's stronghold, altho there were more than ten to one against his force. A month after he left Simla he had captured Kabul, where Sir Louis Cavagnari, the British envoy, had been murdered. In the following July, on hearing of the disaster of the Bombay troops under General Burrows at Maiwand, General Roberts, with the approval of Sir Donald Stewart, then in supreme command in Afghanistan, telegraphed to Simla urging that an expedition should proceed from Kabul to relieve Kandahar, where Burrows's routed forces had taken refuge, and restore confidence. The march of his force of 10,000, which left Kabul on August 9, 1880, plunged into regions beyond the reach of news, keeping the British Empire breathless with anxiety till it reemerged from the wilds on the 31st at Kandahar, and broke up the whole Afghan Army on the following day, first making the British nation realize that in Frederick Roberts it had found a new hero. It was he who had sent the "first-foot Marri scout" flying.

To tell how he hath heard afar
The measured roll of English drums
Beat at the gates of Kandahar.

Forthwith he became duly famous at home, and received a knighthood as a mark of his Queen's appreciation. But, above all, adds *The Public Ledger*, he established himself as the ideal of the British Army. And of the little General's subsequent career we read in that paper:

"Quick as lightning and tough as steel," he was called while he was still a young officer with his regiment, and he was known as a stern disciplinarian. Those who spoke to the little man standing stiff and straight did not soon forget the sharp, keen glance he could shoot at them or the quick, prompt way in which he could size them up.

But there was a very human side to him. Years afterward, as he visited Eton, he could tell the boys that in the midst of all the anxieties of the Afghanistan campaign he could remember when June 4, the school feast-day, came round and would get the old Etonians of the force around and speak of the days at the old school. Wherever he went in that campaign he had ever with him a body-guard of six native soldiers, two of whom never left his side, and he has spoken of his deep regret as the Kandahar force broke up and regiment after regiment filed past him

Your People All Need Bran

Your doctor will advise it every day, to avoid the need of drugs. Bran is Nature's regulator. Pills are artificial.

The most likable bran food is Pettijohn's. It is flakes of soft wheat with the bran left on. It is 3.9 per cent bran.

Its rare, rich flavor means better breakfasts, and the bran means better days.

A dish a day wipes out the pill habit in a most delightful way.

Pettijohn's

Rolled Wheat With the Bran

If your grocer hasn't Pettijohn's, send us his name and 15 cents in stamps. We will send one package by parcel post, and try to arrange for your future supplies. Address The Quaker Oats Company, Chicago.

down the Khyber Pass to the strains of "Auld Lang Syne."

With the conclusion of the Afghan War Sir Frederick Roberts became again the retired officer of high rank. But he was recognized now as one of the best men in the Army, and twice was selected for active service in the next few years. The first time when, after Majuba Hill, he was appointed Governor of Natal; again, when the Penjdeh trouble arose with Russia in Afghanistan, and he was designated as commander-in-chief of the force which was assembled.

In 1899 the South-African War broke out and British arms met with a great reverse. To Roberts more than to most men the dark days of that December were terrible. His only son and heir was a lieutenant in the Royal Artillery, and hearing that a battle had been fought by Sir Redvers Buller on the Tugela River he went down to the War Office for news. Like other fathers he sought the casualty lists.

As he entered the room he heard an officer say, "My God, there's Bob's son!" "What's that? What's that?" the old veteran cried, and then read his son's name amid the list of killed.

Later the story was known how young Roberts had died trying to save the guns, and as a tribute to his heroism Queen Victoria gave to Lady Roberts the Victoria Cross her son had not lived to wear.

But Lord Roberts had no leisure to indulge his grief. Buller had failed on the east, Methuen was checked on the west, and French, yet an unknown man, was merely holding his own on the center. Something had to be done to save the situation and to pull together the campaign, which had been allowed to become absolutely disorganized and might easily end in disaster. So to Roberts the War Office looked, and with Kitchener, the other always successful leader, he was sent out. He was then sixty-eight, and but one indulgence was granted to his years. He was permitted to take with him to the front Lady Roberts and his two daughters.

With Roberts and Kitchener in command, everything was changed. With them went large reinforcements, and now an army, and not a mere expeditionary force, was in the field. After Pretoria, Roberts went home.

There still further honors awaited him. His character as well as his success had still further endeared him to the people. They had read of his care of his soldiers; they had heard how Sunday after Sunday he had been seen going to church with his Bible under his arm; perhaps they smiled as they were told how the stern Kitchener had managed to nullify some act of his superior which had seemed to him too kind-hearted.

The very day he landed in England he had an audience with Queen Victoria, who handed him the Order of the Garter. Next day he made an entry into London, which was turned by the people into a triumph. He was received at Paddington Station by the Prince and Princess of Wales as tho he had been of royal rank, and a few days later on, after his elevation to an earldom, he was again received in

audience by the Queen—the last which she gave to any one before her death. When the Kaiser came to London to attend her Majesty's funeral he also honored the Field-marshal and decorated him with the Order of the Black Eagle.

"Roberts of Kandahar," the Emperor is recorded as saying, "has much of the subtlety and ability to perceive his opportunities that have distinguished the greatest military geniuses of the past. I hold him the ablest of to-day's soldiers."

Both houses of Parliament recognized his services by passing formal votes of thanks and granting him the sum of \$300,000 for his services in South Africa.

PSYCHOLOGICAL ATROCITIES

THAT many of the horrors of war are but the projections of the morbid imaginings of a few supersensitive people is by now coming to be generally understood. Stories of atrocities have an incredible manner of growth, appearing full-grown, fully substantiated, and incontrovertible in the very places where, it is afterward discovered, no seed of truth or fact was ever sown. One of the most striking examples of the ease with which these tales come into being and persist without foundation is instanced by Robert Dunn, the correspondent of the New York Evening Post. The story follows, with an instance of the discipline that actually prevails in war-time and the swift and sure punishment of any act of disobedience that might lead to deeds of violence on the soldiers' part:

The blithe Baron Russell, he of the certain V. C.—took me inspecting his mounts, and on the way rather scotched one's faith in half the tales you hear of brutalities. One story told here and at Crécy, by men and officers alike, always consistent in detail, even to names and places, concerned a bicycle-scout. Of three captured by Uhlans, two escaped and hid in a barn. They saw their comrade shot twice, bayoneted in the face, his body, while still alive, soaked with gasoline from the machine, and both thrown into a haystack which had been set afire. Yes, Russell had heard that; he was in the Intelligence Department, to which the bike-scouts belonged, and he had investigated, thoroughly, to this effect: Not one motor-scout was missing, and none of the name mentioned had ever belonged to the squad!

"But I mustn't tell you all this, or be seen talking to you. If they think you're a spy, what'll they think of me, eh?" and he screwed in his eyeglass. "Silly work mine. Translating prisoners' letters all day. What do you think? Why, each mother's son of them says, 'By the time you get this, we'll be in Paris.' . . . Hello. Look at them. Firing-squad."

We were back in the square. Four men shouldering rifles were leading off down the street two youths with heads forward. They stumbled, shuffled, but not an eye in the throngs seemed aware of them. I was glad, as they vanished over the bridge, that I had not seen their faces.

"What for?" I asked.

"Looting. Two this morning, too. But we were speaking of spies. You said you

BE KIND TO YOUR EYES

were at Cateau? Well, we never catch 'em in time. They hang around headquarters. Remember the church there? One was flying carrier-pigeons from the dome of it after we left, giving away our position."

A CHOCOLATE SOLDIER

One of the most pitiful sights on the scene of battle is presented, according to the *New York Tribune*, by the Kaiser's band-master, recently captured in the neighborhood of Ypres. This chocolate soldier was found helpless and alone, not even able to raise his baton in self-defense. It is hard to be a hero when one is only a drum-major. Of the capture we read:

It was on the outskirts of Ypres that a number of soldiers came upon this imposing functionary, seated, disconsolately and deserted on a tree-stump by the wayside endeavoring to tie up with a handkerchief a slight wound in his right hand. He was duly surrounded and informed that he was a prisoner. This increased his undoubted dejection, and he told his captors he had lost his band. He did not even cheer up when informed that it was most probable that if there were a band anywhere in the neighborhood it would be sure to join him in captivity.

"Only," said one of the men, "we told him that a German band would not be allowed to play in captivity because we have other prisoners, you know. We think he might have permission to wear the uniform, for it would always be a bright spot on the somewhat drab scenery of the prisoners' camp. He will not, of course, be allowed to keep the score of 'The Triumphant March into Paris,' the first performance of which was first for August 15, but regrettably postponed owing to circumstances over which he, at least, had no control."

THE WEIGHTY WEALTH OF YAP.

The island of Yap was not first discovered either by Gilbert and Sullivan or by Montgomery and Stone, but is nevertheless a notable islet in many ways. The *Philadelphia North American* calls our attention to the coinage system of Yap. One is led to consider that, should the Japanese levy an indemnity tax upon the islanders they would need to borrow a German 42-centimeter before they could blow their way out to the sea again:

The chief currency of the island consists of circular limestones with a hole in the center. These limestone coins look like grindstones, are from six to fourteen feet in diameter, and frequently weigh as much as five tons. They come from the Pelew Islands, where there are limestone-quarries containing the only stone used as currency.

A 500-pound stone will buy a pig and a 1,000-pound stone will purchase a wife. Banks are not needed in Yap, for the currency is so heavy that a native runs no risk of having his life savings stolen.

Usually he stacks his bank account in his back yard and never worries about it.

Frequently, when a man gets one of these coins, he does not take the trouble to bring it home. He knows that the big grindstone in such and such a house is

FOOD PRODUCTS
MAIL ORDER SERVICE

Products of certain localities are noted throughout the country but are produced in such limited quantities that national grocery store distribution is out of the question. For this reason the producers advertise to deliver direct to the buyer and Digest readers may be assured of prompt service and quick delivery either by mail or parcel post.

his and everybody else knows it. That is all that is necessary.

The richest family in Yap haven't a grindstone coin on their place. But the wealth of the family consists of the greatest grindstone coin ever quarried. While the stone was being transported to Yap on a raft, the raft capsized and the coin sank to the bottom of the Pacific. This little incident did not detract one iota from the wealth of the family in question. According to the currency rules, they own the stone, even if it is at the bottom of the Pacific, and every one in Yap recognizes their wealth.

AN AUTOMOBILE NURSE-MAID

DR. CHARLES P. STEINMETZ, of Schenectady, New York, announced, recently, that the one way to obtain wealth, the sure way, is to "do things other people don't do." This is an excellent suggestion, but will never be in danger of universal adoption, because doing what others don't demands thinking. As long as it is possible to earn a living by imitating others, by following rules, and with the help of mild experiments by induction, no large portion of workers will submit to the torture of deductive or imaginative thought. The Albany Knickerbocker Press, however, remarks upon one girl who is an exception to this rule. She is described as a young Chicago woman "who does her own thinking." She has invented a new trade. She has capitalized what was apparently worthless knowledge, and incidentally, she made her necessity serve her own pleasure, which was, perhaps, the best of all. We read:

Ruth Timme has done something others did not do. She found automobiles interesting. She learned all about automobiles and how to run them. She qualified herself to drive and care for automobiles in every way. She learned all this when she possessed a car of her own.

The time came when for some reason she no longer possessed an automobile. She missed her motoring trips sorely, but she observed that many persons who do have automobiles do not use them very much. She also observed that many persons who own motor-cars have children. She also noticed that many persons who own motor-cars are not able to keep a chauffeur. The man of the family drives and cares for the car. When he is away at his office the car stands idle for want of a qualified driver, tho his wife and children may long to use it, and might profitably use it for health and pleasure.

Here was something lacking.

Ruth Timme advertised, offering her services as an automobile nurse-maid. She was laughed at by her friends, but within a few hours after the advertisement appeared her telephone bell began to ring. She discovered she was exactly the person a whole lot of people in Chicago were looking for. So she went to work as an automobile nurse-maid.

She now has all the engagements she can fill, at fancy fees, to take other people's children riding in other people's automobiles.

Other Chicago women are imitating her. Ruth Timme has made a success of life. She has done something others don't do.

Getting Orders Through One-Third Faster!

Large and Small Concerns Cut Costs and Improve Service by Using The "Commercial" Duplicator

NEXT to the problem of getting business, the big problem in almost every business organization lies in the speed, accuracy and system with which the order is handled, billed, checked and shipped.

Thousands of concerns—large and small—have simplified the handling in routing of orders, have practically eliminated errors and cut the time of handling to a fraction by using the "Commercial" Duplicator.

The Other Man's Word for It

Lee & Cady, of Detroit, Michigan, have long been a user of the "Commercial." Regarding its ability to help in the handling of orders they say:

"The 'Commercial' Duplicator gets an order through the house from one to three hours quicker than any other process and saves at least one-third the time. We would hate to give it up as it would mean more work for the entire force, and also additional help."

Notice their statement includes not only the saving of time, but also they refer to the fact that they would need additional help if they did not have the "Commercial."

In another case, a wholesale house is now obtaining 7 to 20 duplications of from 700 to 1,700 orders daily—all of which were formerly copied by a tedious carbon process by typists, and then distributed to the various departments as required. Through the installation of two "Commercial" Duplicators all the delay, labor and expense of the old-fashioned method has been eradicated.

Write TO-DAY for Details of Our FREE Demonstration Offer and a Copy of the Book "Duplications of Business Forms and How to Make Them." Simply Address—

Duplicator Manufacturing Company

1200 Monon Building, Chicago

1579 Hudson Terminal, New York

1 to 100 Copies at Lightning Speed

The swift duplication and routing of orders is but one of many functions of the "Commercial." This amazing machine produces up to 100 clean, legible copies of any business form from the original—upon any and all weights of paper, thinnest tissue, or heavy cardboard—on small tags or full sheet Department Charts, with equal clearness—in one to five colors.

The "Commercial" Duplicator

Prove It On Your Own Work—At Our Expense

Nothing will prove the efficiency and money-saving power of this machine so quickly and so conclusively as a trial itself. Use it not only in copying Department Orders, but in copying any other forms such as may be required in your office: Sales Reports, Bulletins, Specifications, Charts, Shop or Factory Requisitions, Inventory Sheets—anything in fact of which one or more copies are needed, the "Commercial" Duplicator will reproduce quickly, accurately and at low cost.

Along The Beautiful Adriatic Just Before the War Began

ONE of the most refreshing volumes written in years—a live, snappy, rollicking tale of experiences aboard and ashore in the most delightful piece of Southern Europe—along the Adriatic.

Its pages breathe the very spirit of everything that goes to make Dalmatia delightful. Story, anecdote, ancient legendary, beautiful cities, old churches, countless architectural and other ancient treasures, etc., etc., criss-cross through its pages in entertaining variety.

You'll Never Forget It Once You Read It

DELIGHTFUL DALMATIA

By ALICE LEE MOQUE

The book is timely for its descriptions of places already in the wake of war; among these is Cattaro the recently bombarded fortification on the Adriatic. Unusually attractive is the great scenic and historic interest attaching to Pola, Sebenico, Gravosa, Spalato, Ragusa, etc.

Cloth bound, 362 pages. Profusely illustrated in color and half-tone. \$2.00 net; by mail, \$2.16.

COMMODITY PRICES MUCH LOWER

BRADSTREET'S index-number for November indicated a further decline in commodity prices; the number then stood at \$8.8620, while on October 1 it was \$9.2416, and on November 1 last year \$9.2252. This indicates a drop for November 1 of 4 per cent. from October 1, and of 10.2 per cent. from the record point reached on August 15 of this year, when the full effects of the war were in force. The only item which showed an advance on November 1 was breadstuffs. Five causes are cited by Bradstreet's for this decline: first, the effects of the war "have well-nigh spent their force, and while certain commodities are subject to sudden changes, the situation as to imported supplies is certainly easier." Secondly, the purchasing power of the people "has been curtailed as the result of widespread idleness, and this fact is reflected in the slowness of distributive trade to attain seasonal proportions." Thirdly, depression in cotton throughout the South "results in extraordinarily low prices, which phase of affairs makes for reduced prices on some manufactured textiles, altho Southern developments are now improving." Fourthly, the iron and steel industry "exhibits clear evidence of weakness and light profits." Fifthly, cereal crop-producing regions are "favored with exceptionally high prices, and in consequence, principally because of heavy exports, price-trends in that respect run counter to the general movement, which is downward." In its comments on the change, Bradstreet's says:

"The index-number for November 1 is the lowest registered for any corresponding date since 1908. It is 3.9 per cent. under that of November 1, 1913, while being 6.5 per cent. below the like date in 1912, at which time prices were extraordinarily high; it is three-tenths of 1 per cent. less than that for November 1, 1911; it shows a drop of two-tenths of 1 per cent. from November 1, 1910, and it discloses a fall of 1.1 per cent. from that date in 1909, when, as may be recalled, householders as well as manufacturers were bitterly complaining about the high cost of commodities. While prices here have fallen 4 per cent. in a month's time, English prices have receded just a little over 1 per cent. The groups making up the index-number are set forth in the following table:

	Nov. 1, 1913	Aug. 15, 1914	Oct. 1, 1914	Nov. 1, 1914
Breadstuffs.....	\$9.0841	\$9.1901	\$9.1073	\$9.1116
Live stock.....	4285	4860	4930	4415
Provisions.....	2.3891	2.3606	2.4441	2.3753
Fruits.....	2009	2408	1941	1736
Hides and leather.....	1.3675	1.4801	1.4375	1.4175
Textiles.....	2.5935	2.3704	2.3495	2.1854
Metals.....	6070	5707	5453	5279
Coal and coke.....	0170	0167	0167	0167
Oils.....	3765	3755	3636	3434
Naval stores.....	0744	0794	0794	0794
Building-materials.....	0831	0822	0816	0816
Chemicals and drugs.....	5017	1.0706	9420	8529
Miscellaneous.....	3410	3004	3006	2952
Total.....	\$9.2252	\$9.4496	\$9.2416	\$8.8620

"Only one group (breadstuffs) advanced within a month's time, nine groups declined, and three remain unchanged, these being coal and coke, naval stores, and building-materials, altho the undertone in such commodities as turpentine, resin, coke, and lumber is weak, and it is probable that attractive orders bring out cheaper prices

than those published. Live stock receded on reduced prices for heavy horses, bees, and hogs. Provisions moved downward because a variety of commodities declined; carcasses of beef, hogs, mutton, family beef, pork, bacon, hams, cheese, mackerel, coffee, sugar, tea, rice, and beans went off, the drop in mackerel being especially noteworthy, and these declines more than offset higher prices for milk, eggs, lard, butter, and peas. Fruits fell, chiefly on account of weakness in lemons. Hides and leather went off, thanks to lower quotations for union and oak leathers. Textiles descended owing to losses in raw cotton, hemp, jute, print-cloths, and standard sheetings. Metals slumped because of all-around weakness. Oils went off on recessions in linseed- and cottonseed-oil, exports of which have been affected by the European War, and, of course, the depression in the South also affects the first-named article, while weakness in flaxseed is reflected in the price of linseed-oil. Chemicals and drugs receded chiefly because of another sharp fall in the price of carbolic acid. The miscellaneous group worked downward, principally owing to a smart loss in the price of hops. Breadstuffs ascended as the result of an enormous demand for wheat for export, while other cereals also exhibited marked strength.

"Additional evidence of the easier movement is obtained from the fact that forty-nine commodities worked lower during the period October 1-November 1, while only twelve advanced and forty-five remained steady or unchanged.

"In the subjoined table the respective monthly totals are merged into averages for the years set forth, the index-number for 1914 being based on the months that have thus far elapsed:

1914	\$8.8620	1913	\$9.2070	1912	\$9.1867
1911	\$8.7132	1901	\$7.5746		
1910	8.9881	1900	7.8819		
1909	8.5133	1909	7.2100		
1908	8.0004	1908	6.5713		
1907	8.0045	1907	6.1150		
1906	8.4176	1906	6.9124		
1905	8.0867	1905	6.4346		
1904	7.9187	1904	6.6846		
1903	7.9344	1903	7.5324		
1902	7.8759	1902	7.7769		
Ten-year av'ge	\$9.3377	Ten-year av'ge	\$9.1926		

"Twenty-two full years, with eleven months of 1914, are covered by the foregoing. The present level is lower than the index-numbers for any of the years 1913, 1912, 1910, and 1907, but it is 2.4 per cent. higher than the index for 1911."

WHAT OTHER WARS HAVE COST

In a discussion of the economic aspects of the present war, the *New York Times* *Annalist* summarizes the cost of other wars in modern times and their "aftermath in trade and finance," as outlined originally by Edgar Crammond in *The Quarterly Review*, of London. Mr. Crammond says, as others have said before him, that there is no parallel in history to the strain placed on international finance by the present war, both during its progress and after its conclusion. He refers in this statement chiefly to the nations engaged in the war, the United States being in an exceptional position of advantage, altho it can not entirely escape the financial consequences. Mr. Crammond cites the Franco-Prussian War of 1870, the Boer War of 1902, and the

Russo-Japanese War of 1905. Following are points in the summary:

"In degree rather than in kind will the economic effects of this war differ from those of wars in the past. The struggle is hardly different, albeit it is being waged on a scale beyond all precedent. The Franco-Prussian War lasted from July, 1870, to March of the next year. The French lost 21,500 officers and 702,000 men. Sir Robert Giffen put the total cost of the war to France at about \$2,720,000,000. Counting the indemnities to Germany and indirect losses, the total cost was raised to \$1,000,000,000. Sir Robert estimated the national income of France the year before the war at \$1,000,000,000 and her annual savings at \$400,000,000. Thus the war's cost was equivalent to more than one year's national income and to twelve years' saving.

"The foreign trade of France at first was not greatly affected. In 1869 imports were \$625,500,000 and the exports \$615,000,000. Next year imports were \$556,000,000, exports \$572,000,000. By 1872 France's foreign trade had risen sharply. Imports amounted to \$689,000,000 and exports to \$735,500,000. It was in raw materials that the principal shrinkage during the war occurred, while the principal decrease in exports occurred in manufactured goods.

"The German troops engaged in the struggle with France averaged 1,250,000 men, and Germany's losses were 6,247 officers and 123,400 men. The cost of the war to Germany was officially estimated at \$387,750,000, which does not include the cost of reestablishing the army nor other incidental expenses of the war. Allowing for the indemnities paid by France and the value of the ceded provinces, Germany realized a profit of \$820,000,000.

"The South-African War had lasted over thirty-one months when it came to a close in May, 1902. The British forces numbered 418,000 men, and the losses in killed and wounded 44,700 men. The direct cost of the war to the Imperial Exchequer was \$1,055,780,000. The war added about 25 per cent. to the national debt. It absorbed a sum practically equivalent to two years' saving. The *Bankers' Magazine's* figures showed that the average amount of capital offered for public subscription in London for foreign and colonial investments for the three years from 1900 to 1902 was \$235,400,000, and the value of British exports of manufactures during these years averaged \$1,424,300,000. For the three years from 1906 to 1908, when the effects of the war had been largely overcome, the average amount offered for subscription for foreign and colonial loans, etc., had increased to \$524,600,000, and the average value of exports of manufactures to \$1,964,500,000. The writer makes no attempt to estimate the indirect losses occasioned by the South-African War. He cites that during the ten years following its outbreak the market value of British railway stocks declined by about \$1,500,000,000, and Government stocks by about \$950,000,000. The war was one cause of this decline, but other factors contributed to it.

"The Russo-Japanese War came to a close at the end of August, 1905, after having lasted eighteen months. The Japanese forces numbered more than 1,000,000 men, and their losses were about 135,000 men. The direct cost to the Japanese Government was over \$1,000,000,000, and Japan's indirect loss about \$175,000,000. The war was financed mainly by loans, 8.4 per cent. of the total being charged to national debt, while no less than 21.6 per cent. was met out of revenue.

"Russia employed well over 1,000,000 men, and her total losses were about 350,000. Mr. Crammond, while pointing out the difficulty of arriving at the actual cost of the war, owing to the form of the Russian budgets, estimates the direct cost of the

Safe 6% Bonds

Secured by First Mortgage on Downtown Chicago Building

We offer to conservative investors the State Building First Mortgage 6% Serial Bonds. We have purchased this entire issue of \$400,000 after a careful investigation, which satisfied us of the safety of these securities.

The bonds, in denominations of \$100, \$500 and \$1000, are a sound investment, for large or small sums.

We base our recommendation of these securities chiefly on the following reasons:

FIRST. The property securing the bonds is a new, fire proof, seventeen story office building now being erected on a corner in the downtown district of Chicago, one block from the City Hall.

SECOND. The property is appraised at double the total amount of the bonds.

Income tax certificates not required with the coupons of this issue.

THIRD. The assured net annual earnings are more than two and a half times the greatest interest charges.

FOURTH. The bonds mature serially in two to ten years, thus giving investors a choice of maturities.

FIFTH. Title is guaranteed and the building is fully insured.

Price, Par and Accrued Interest to Net 6%

We have specialized in securities of this type for 32 years. During all this time no investor has ever suffered loss of either principal or interest on any security purchased of this house. This is a record which we commend to your attention and which we believe to be an ample basis for confidence in securities we offer.

FUNK & WAGNALLS COMPANY, 354-360 Fourth Avenue, NEW YORK, N.Y.

For Critical Smokers

If you are as hard to please as I am, in this matter of cigars, I believe my private "J. R. W." Havana brand will delight you.

For many years I have had these cigars made to order, with my own monogram band. The leaf comes from a mountainous district in Cuba. It is especially selected for me by a man who resides there—a connoisseur in tobaccos.

And though I have smoked for 40 years I have yet to find another Havana cigar of so mild and exquisite a flavor and aroma.

I Want Your Opinion

I believe there are legions of smokers who are seeking just such a cigar—something exceptional, a rare, sweet smoke—not too heavy and strong.

With such men I am glad to share my discovery. For I know how much it means to get the very cigar one craves. It may be that this dainty Havana is just what you have been seeking. Try it. I will send them by Parcel Post, \$5 per hundred—\$2.60 for 50—charges paid.

Write me early before I must limit the number I can supply.

Five Cigars Free

If you will send me ten cents—towards shipping expenses—I will mail you five trial cigars. Smoke five with me—convince yourself. The price is \$5 per hundred, \$2.60 for 50—all charges prepaid. Use your letterhead, please—stating your position—or your business card, and write now for these cigars.

J. ROGERS WARNER

922 Lockwood Building, Buffalo, N. Y.

conducted to yield a direct profit, that it is a desirable condition that people should live at a distance from the cities and be given low-priced transportation thereto, and that the railroads should obtain their compensation indirectly in the movement of the freight to the suburban districts, and that even as regards other than commutation service passenger-rates should be as low as possible.

"With the official sanction of Federal authority, however, steps have been taken to make the passenger business more nearly pay costs, and already mileage tickets, certain through rates, and rates to intermediate points have been advanced. The matter of railway mail pay will be 'up to' Congress at the next session, and other services are now undergoing investigation. The matter of the transportation of baggage is one of these.

"State laws and Federal regulation provide that carriers must transport free of charge personal or sample baggage up to 150 pounds in weight, and in the case of immigrants at port of landing up to 250 pounds. In the very early days of railroading it was attempted by the carriers to charge for the transportation of baggage, but competition among the roads soon stopt this source of revenue, and later the custom of carrying baggage free was crystallized into law by the interpretation by the courts that the contract by the carriers to transport the individual implied the obligation to carry personal baggage.

"The baggage problem increased in complexity, and now the free handling and transportation of trunks and other baggage involve substantial costs to the roads. Chairman Elliott, at the New Haven annual meeting, referred to the movement on foot among all the railroads to permit the railroads to charge ten cents a trunk to cover the cost of handling. In theory, at least, it would appear discrimination to charge \$5 for carrying an individual from Boston to New York and to charge no more for carrying another individual with 150 pounds of baggage.

"Baggage facilities are by force of necessity located in the big stations on expensive real-estate sites, and the rent burden alone, if justly prorated, would appear out of all proportion to the revenue received from excess baggage. In addition to this are the wage cost of the force of employees, both in the stations and on the trains, devoted to the care of baggage and other costs of handling and moving.

"The New Haven, in the year ended June 30, 1914, carried over 87,000,000 passengers. On this road about 43 per cent. of the passengers travel on commutation or book tickets, so that only somewhat less than 50,000,000 of the passengers carried may be said to be in the baggage-carrying class. The road carries over 7,000,000 pieces of baggage a year, or, roughly, an average of one piece of baggage for every seven passengers.

"On another Eastern road, a 'freighter' and more typical of the country's railroads as a whole than the New Haven, which derives more revenue from passenger service than from freight, the ratio of pieces of baggage to passengers carried is one to 1.7. The amount of revenue which the roads receive from excess baggage is not appreciable; the New Haven somewhat over \$135,000, and the other road referred to \$47,000.

"The roads of the country as a whole in the 1913 year carried 1,033,000,000 passengers. On the basis of the condition prevailing on the two roads referred to above, this would mean that they carried between 150,000,000 and 200,000,000 pieces of baggage for which up to the 150-pound limit they received no revenue, the excess baggage revenue amounting to \$7,600,000. The average journey of the railroads' passengers is about 34 miles, and for the

Hello Boys!

Make Lots of Toys

Fun! I should say so! Boys never tire of building big steel models with the Mysto Erector—battleships, torpedo boats, bridges, aeroplanes, siege guns, elevators and 300 other models.

Parents—

Building with the Erector develops your boy's mechanical skill—teaches him the principles of engineering and electricity. Yet it gives him all the fun needed to keep him busy and happy all winter long.

Write for My Free Book

FREE MOTOR—With all sets over \$3 I give, without extra charge, an electric motor. It's a lively one and runs many of the models—elevators, draw-bridges, traveling cranes, machine shops and many others.

The Mysto ERECTOR

The Toy with Girders like Structural Steel

I made the Erector with turned-over girders so your boy could build big, strong models. He doesn't get discouraged; he can build easily and rapidly because few nuts and bolts are required.

There are more than 300 models possible to build—some of these 21 feet long, some 8 feet high. And they are exactly like real steel construction.

Write for My Free Book

The Erector is by far the most interesting and instructive Christmas gift you can find anywhere. Toy dealers everywhere sell it. Eight sizes, \$1 to \$25.

Write for my free book, printed in colors and filled with pictures and descriptions of Erector models. Tell me your dealer's name and I'll also mail a free copy of my boys' magazine, *Erector Tips*, which contains my prize offer for new models; tells how your boy can win a prize.

24 Years Testing Cows in England

—eleven different breeds—shows that the Jerseys produce butter at the lowest cost. 2902 Jerseys, aged from 2 to 17 years, have borne the test in competition with the other breeds.

Jersey Cows

The Jersey is the most efficient cow because she combines richness with quantity of milk, quality of all dairy products, persistency in yield, economy of production. If you keep but one cow, let it be the gentle, easy keeping Jersey. We are always glad to supply trustworthy information.

The American Jersey Cattle Club
324 W. 23d Street, New York City

baggage-carrying class probably considerably longer.

"In short, the railroads are put to the task of carrying free of charge baggage up to 150 pounds in weight for over a billion patrons, or between 150,000,000 and 200,000,000 pieces of luggage a year, an average distance of well over thirty-four miles. An average charge of but 10 cents per piece of baggage for handling and transportation would yield to the carriers over \$15,000,000 additional revenue, as much as it has been estimated the carriers will derive from the sources of relief pointed out directly by the Interstate Commerce Commissions in the rate case.

"Proposers of a charge for the transportation of baggage believe that it is in strict accordance with the recommendation by the commission that losses from unprofitable operations be eliminated. In theory, carrying baggage free is special service just as much as spotting cars, and, in fact, more vicious in its discrimination on account of the numbers affected. It is a service rendered and should be paid for solely by the beneficiaries, not by all alike irrespective of any benefit therefrom."

WANTED IDEAS

Write for List of Inventions Wanted. \$1,000,000 prizes offered for invention. Our four books sent free. Patents secured or forfeited as we choose. VICTOR J. EVANS & CO., 750 Ninth, Washington, D. C.

A Groan.—"Isn't your wife a clipper!"
"She's more. She's a revenue-cutter!"
—Judge.

Over the Horizon.—FRIEND—"This is a nice studio you have. Is the rent high?"
ARTIST—"I don't remember."—Cleveland Leader.

Qualified.—"Well, well! did you ever milk before?"
"Not exactly, but I've had a good deal of practise with a fountain pen."—Scribner's.

Prodigal.—NURSE—"Why, Bobby, you selfish little boy? Why didn't you give your sister a piece of your apple?"
BOBBY—"I gave her the seeds. She can plant 'em and have a whole orchard."—Judge.

Heart of Oak.—PUBLIC-HOUSE DIPLOMATIST (to second ditto, with whom he has been discussing the ultimate terms of peace at Berlin)—"I shouldn't be too 'ard on 'em. I'd leave 'em a bit of the Rhine to sing abaht!"—Punch.

Peace at Any Price.—"What is the shape of the earth?" asked the teacher.
"Round."
"How do you know it's round?"
"All right, it's square, then; I don't want to start any argument."—Columbia Jester.

Between Friends.—A country editor wrote: "Brother, don't stop your paper just because you don't agree with the editor. The last cabbage you sent us didn't agree with us either, but we didn't drop you from our subscription list on that account."—Boston Transcript.

Cannon Food.—CUSTOMER—"Here, waiter. Where are the olives? Hold on. Bring me half a melon and some cracked ice."
THE WAITER (loudly)—"Dumdums, half a bombshell, and a bowl of shrapnel."—Cleveland Leader.

Much Worse.—"Mirandy, fo' de Lawd's sake, don't let dem chickens outer dis here yard. Shut dat gate."
"What fur, Alick; dey'll come home, won't dey?"
"Deed dey won't. Dey'll go home."—Columbia Jester.

A Difference.—HOSTESS (at party)—"Does your mother allow you to have two pieces of pie when you are at home, Willie?"
WILLIE (who has asked for a second piece)—"No, ma'am."
"Well, do you think she'd like you to have two pieces here?"
"Oh," confidently, "she wouldn't care. This isn't her pie!"—Louisville Times.

Their Recommendation.—Little Bobby Bentem went with his mother to buy a pair of knickerbockers. When he had looked at all the varieties in the store, he was still dissatisfied.
"I want that pair in the window," he protested.
"These are just exactly like them," assured the clerk; "but if you want that particular pair, I'll get them for you."
And he produced them, much to Bobby's satisfaction. They bore a sign which read, "These knickerbockers can not be beat."
—Judge.

SLIP-ON COMFY
In Military Shoe or Oxford \$1.75

"Comfys" for Every Time

Traveling-time

Bedtime

Bedtime, bath-time, traveling-time, lounging-time—all COMFY times. COMFYS are not ordinary felt slippers. Thick cushion soles make them distinctly superior. Exceptionally well made of high-grade felt, they are as good-looking as restful. They are making men seek solid comfort via the COMFY route, and devise new uses for slippers.

Our catalog No. 61-C shows the styles and gives prices. If your dealer does not sell COMFYS, order direct. COMFYS are made for women and children, too.

Dealers alive to men's trade should write to-day for catalog M.

FUNK & WAGNALLS COMPANY, Publishers, NEW YORK, N. Y.

The Best in Florida Grapefruit

Florida is the natural home of citrus fruits, and in the long growing season of the State grapefruit has time in which to store up nature's sweetness. The unequalled quality of Florida grapefruit, in juiciness, richness of flavor and texture, is due to the favorable soil and climatic conditions under which they are grown.

The Florida Citrus Exchange is a non-profit-making, co-operative association of growers, formed for the mutual protection of consumers and producers. Its members allow their fruit to remain on the trees until it has become fully ripe, sweet and full of juice.

This Mark Stands for Tree-Ripened Grapefruit

Booklet giving scores of ways of using oranges and grapefruit mailed for 4 cents in stamp. Address: Florida Citrus Exchange, 637 Citrus St., Bldg. Tampa, Florida.

Conspicuous in Most Up-to-date Groceries

Almost every modern grocery or fruit store carries Florida Citrus Exchange fruit in season. If your dealer does not have it, insist and he will get this fruit for you.

FLORIDA CITRUS EXCHANGE

35,000 Digest Subscribers Now Own It
ALL HUMAN KNOWLEDGE
SINCE THE WORLD BEGAN
IS CONCENTRATED IN

It gives accurate, concise, and the most recent information on every Word, Name, Place, Person, and Thing; on every Phrase, Term, and Expression in the living English language—on everything alive that can be spelled in English.

U. S. Commissioner of Education Claxton: "This great work can not fail to be a distinct contribution to English scholarship."

Lavish Expenditure to Make It Superior

It cost nearly \$1,500,000 to complete; for nearly four years 380 of the world's foremost editors and specialists labored upon it unceasingly.

John Wanamaker, Famous Merchant: "Artistic, complete and of unrivaled excellence."

A Reference Work Beyond Comparison

There are over 3,000 pages; 7,000 pictorial illustrations, including many beautiful colored plates; it defines 450,000 terms, many thousands more than any other dictionary. It is the only dictionary the contents of which are arranged in one alphabetical order—an immense time-saver.

Karl Kitchener, Secretary of State for War: "A valuable book which will be of great utility to me."

Most Authoritative Dictionary

Six months after publication 75,000 copies had been sold; it is the dependable authority in all branches of the United States Government, in Courts of Law, in the leading Universities and Colleges, and in the public schools. In commercial life the NEW Standard is popularly recognized as the *one* dictionary that never fails.

George W. Kirchwey, LL.D., Columbia University Law School: "It makes all other dictionaries look pale and insignificant beside it."

LEARN WHAT THE WAR-WORDS MEAN

Barrage	Mitralleuse	Belligerent	Neutrality

CURRENT EVENTS

EUROPEAN WAR

IN THE EAST

November 12.—General Rennenkampf's Russian troops capture Johannsburg, in East Prussia, gaining control of the frontier railroad connecting Lyck, Oertelsburg, and Soldau. The siege of Przemysl is resumed.

November 13.—Petrograd reports German troops marching on the Russian-Polish border, in a forty-mile battle-line extending from Rypin southwest to the Vistula at Wlozlawsk and extending along the left bank of the Vistula westward.

Vienna admits that the Austrians have evacuated Central Galicia, and that the Russians occupy Tarnow, Jaslo, and Karno on the road to Krakow. But a bad defeat of the Russians east of Przemysl is claimed.

November 14.—Fighting is reported between the Germans and Russians near Soldau, where the latter claim to have obtained the town of Rypin.

November 16.—Rome claims that the city of Krakow has been set on fire and that the inhabitants are deserting it.

Berlin states that a battle south of Stallupohnen has checked the Russian advance in East Prussia, and also that the Russian forces in the neighborhood of Soldau have been repulsed, falling back on Plock. There is a report of a German success at Wlozlawsk, on the Vistula, in Russian Poland, where 23,000 Russian prisoners are taken.

Austria reports a sortie from Przemysl that results in the defeat of a strong Russian column.

November 17.—Russia reports the German forces in East Prussia still falling back.

German reinforcements for the Austrian forces in Galicia are said to be concentrating daily.

November 18.—Petrograd reports the repulse of the German advance-guard between the Warthe and Vistula, but admits a successful German action near Lenczyca and Orloff, 50 miles northwest of Lodz. A continued Russian advance in East Prussia is claimed, with fighting near Gumbinnen and Wagerburg. Berlin reports new battles in the Lodz region and a Russian retreat from Soldau toward Mlawa.

IN THE WEST

November 12.—The German attempt to gain Ypres continues with violence, the British troops having held the city successfully for three weeks of daily attacks.

November 13.—The Allies report a general progressive movement, extending as far as Bixchoote, including retaking a village east of Ypres. Berlin claims heavy damage inflicted upon the Allies by German marines at Nieuport, and the repulse of French attacks east of Soissons, with heavy losses to the enemy.

November 14.—The Allies report the repulse of two severe attacks by the Germans near Ypres. Berlin reports that all operations have been much hindered by bad weather, but that slow progress is being made. The French are said to have been driven out of a commanding position near Berry-au-Bac, and to have suffered heavily in the Forest of Argonne.

November 16.—Fresh inundations by the Belgians extend the flooded area south of Dixmude.

November 17.—The Battle of Flanders is renewed in full intensity by the Germans. The Allies report progress between Armentières and Arras, in the Argonne, and on the heights of the Meuse.

November 18.—Violent cannonading continues along the battle-line in France. The Germans blow up part of Chauvencourt, near St. Mihiel. It is stated that the Allies' attacks south of Verdun and southeast of Ciry, near St. Mihiel, are repulsed to their loss.

GENERAL WAR NEWS

November 12.—Petrograd reports Armenians in large numbers joining the Russian troops against the Turks. Berlin reports that the Turks capture the fortifications of El Arish, Egypt.

November 13.—Hungary grants to the Roumanian population of Transylvania the long-sought rights of educational autonomy, the use of the Roumanian language, and an increased representation in Parliament.

November 14.—Mail advices bring first word of the sinking of the British super-dreadnought *Audacious*, struck by a mine off the north coast of Ireland on October 27.

November 17.—The first ship from Canada with Belgian relief supplies arrives at Rotterdam: the *Tremorrah*, from Halifax, with 3,500 tons of food, the gift of the people of Nova Scotia.

The Russian Squadron is said to have left Helsingfors, Finland, with the intention of engaging the German Baltic Fleet, of which a squadron bombards the Russian Baltic port of Libau.

The Russian Black Sea Fleet bombards Trebizond.

November 18.—Great Britain accepts a tender of the Pacific Islands by the

Japanese, and will hold them with an Australian force.

GENERAL FOREIGN

November 14.—Field-Marshal Earl Roberts dies in France after a two-days' illness of pneumonia contracted while with the British expeditionary forces, whither he had gone to visit the Indian detachments, of which he was colonel-in-chief.

All parties in Mexico declare an armistice to last until November 20.

November 15.—Parisians and Belgians in Paris celebrate the name-day of King Albert of Belgium.

November 16.—It is reported that Carranza announces his willingness to retire from office in favor of Eulalio Gutierrez, and that Villa also agrees to leave the country.

November 17.—General Obregon assumes military authority at the Mexican capital, claiming that pressure from Villa causes Gutierrez to reject Carranza's proposal.

November 18.—It is officially reported to this Government that Turkish land forces at Smyrna have fired upon a boat's crew of the cruiser *Tennessee* who were entering the harbor in the *Tennessee's* launch. Ambassador Henry Morgenthau at Constantinople is charged with demanding an explanation from the Ottoman Government. The commanders of the *Tennessee* and *North Carolina* are ordered to take no action involving this Government without instructions.

In Mexico the Constitutionalists under Carranza have established the capital at Orizaba. General Obregon, commanding Mexico City, sends a force in the field to check Villa, who has occupied Guanajuato and Irapuato, 50 miles to the northwest, without resistance, according to the report.

DOMESTIC

November 12.—Interviewed by representatives of the National Independence Equal Rights League, the President refuses to alter his policy of segregation of negro and white civil-service employees.

The *Thelma*, chartered by John Wanamaker to carry aid to the Belgians, sails from Philadelphia with a 2,000-ton cargo of food, contributed by citizens of that city in a campaign conducted by Philadelphia newspapers.

November 14.—On the recommendation of Rear-Admiral R. S. Griffin, Engineer-in-Chief of the Navy, Secretary of the Navy Daniels authorizes that the new superdreadnought *California* shall be equipped to be driven with electric motors. The *California* is to be built at the New York Navy Yard, and will be the first electrically driven war-ship ever built.

November 16.—The twelve National Reserve Banks, established by the provisions of the new Banking and Currency Law, open to receive the reserve deposits of the member banks and applications for rediscount.

Maj.-Gen. W. W. Wotherspoon, retiring, Brig.-Gen. Frederick Funston, now in command of the United States occupational force at Vera Cruz, is promoted to the rank of Major-General.

November 18.—Ohio begins State-wide preparations for the reception of Myron T. Herrick, retired Ambassador to France, who leaves Paris November 28.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"C. K.," Philadelphia, Pa.—The phrase "Non ti scordar di me" means "Do not forget me," and not "You do not remember me," which is "Non ti ricordi di me." Thanks are due to several correspondents for pointing out the lapsus calami in THE LITERARY DIGEST for October 17.

"J. P.," New York, N. Y.—"Kindly answer the following questions: (1) In acknowledging a letter, which is the proper way, 'I have yours of April 20,' or 'I have yours of April 20th'? (2) When closing a letter, is it proper to place a comma after 'I am' or 'Believe me' when used in the following manner, 'Thanking you for your letter, I am, Yours very truly'? (3) In a sentence such as this 'A friend of Mr. Brown's,' should Brown be written in the possessive case or not?"

(1) "I have yours of April 20" is correct commercial English for "I have received your letter of April 20." Where *th* is used the date should be inverted, "Your letter of the 20th of April." (2) The comma is commonly used and usage makes the rule. The phrase "Yours very truly" is a parenthetical phrase separated by commas. "I am, yours very truly, John Brown." (3) The possessive is required because Brown is in the objective case—object of the preposition "of." The sentence written in full would be, "He is a friend of (the number of) Mr. Brown's (friends)."

"W. C. F.," Hammond, Ga.—"Kindly inform me whether the semicolon is ever used in addressing a person or persons at the beginning of a letter; as, 'Dear Sir,' 'Gentlemen,' etc. Please give the distinction between the uses of the colon (:), the colon followed by the dash (—), and other marks that might be used in this way."

The colon is used to separate one complete clause from another. It is used also as a sign of apposition or equality to connect one clause with another that explains it, as in introducing a list, a quotation, an enumeration, or a catalog; or, to join clauses that are grammatically complete yet closely connected in sense; or, to mark any discontinuity in sense or grammatical construction greater than that which is indicated by a semicolon, but not sufficient to require a period or dash. The dash is an idiosyncrasy and serves no other purpose than to make the break more abrupt.

"M. H. B.," Orangeburg, S. C.—"Please tell me which form is better for a wedding invitation, 'Judge and Mrs. J. W. Brown,' etc., or 'Mr. and Mrs. J. W. Brown,' etc."

It is not usual to bring into family affairs the offices held by parents. "Mr. and Mrs. J. W. Brown request the pleasure," etc.

"L. W. P.," Rockford, Ill.—"In writing condensed statements of stories and other literary productions what is the preferred name for each statement—synopsis, abstract, or résumé?"

Synopsis is the correct word to use.

"M. V. V.," Weston, N. J.—"I do not care to have my reading marred by your grotesque facts of spelling. 'Altho' does not spell 'although' and 'confest' is manifestly an absurdity. Phonetic spelling stamps the user as a faddist."

The saving of two years in a child's education by training it along the lines which lead to phonetic spelling seems to us worth while. The simpler spelling used in THE LITERARY DIGEST is the earlier spelling. The original form of the word *altho*, if we could reproduce it here, is such that you would not be able to recognize it. The form which we use to-day and to which you object dates from the year 1449, and has been used in English through the centuries by such eminent writers as Peacock in 1449, and Shaftebury in 1711, and others to this day. As regards the word *confest*, in poetry this form is quite common to-day; but apart from poetry, it dates before the time of Milton, who used it in 1643; Rowe did the same in 1708; Shenstone followed his example in 1763, and Barlowe used it in 1808. Almost any work of the great poets of modern times can be consulted and this form found.

Whole Number 1285

1,200 BARRELS OF FLOUR THE FIRST RESPONSE IN THE CRUSADE TO RESCUE BELGIUM FROM STARVATION

THE SIZE of the tragedy in Belgium is just beginning to dawn upon the American mind. When the first ship-load of food reached Belgium some people breathed

easier, thinking the worst must be over, but the representative who received it for distribution cabled: "Tell our people it is but a drop in the bucket. Tell them to give and then give again." In normal times Belgium imported 4,000 tons, or a ship-load of flour a day, in addition to all the other foods consumed, and all the relief funds together do not make a distant approach to any such figure to-day. King Albert of Belgium says that "despite all that can be done, the suffering in the coming winter will be terrible." It is a case of millions of people in a desperate plight, and America is absolutely the only nation on earth to-day in a position to relieve it. We must help, or a nation starves. We will help, and when the history of this war is written America will have a resplendent place. While the European Continent is plunged in the bloodiest conflict of all time, and daily the death-toll is taken in thousands of human lives, America's duty is to *act*!

Ten ounces of flour a day will keep a soul and body together, with such root vegetables as can be had, says one authority, and a barrel of flour will keep one human being alive a year.

Experts calculate that quantities of food valued at from \$4,000,000 to \$5,000,000 monthly will be needed in Belgium "in order to avoid actual starvation."

"YOU TAKE THE WOMEN AND CHILDREN."

— Orr in the Nashville Tennessean.

While many in Belgium are dying, others are coming into the world. This is a time for personal sacrifice. Every \$5 contribution means a barrel of flour landed in Belgium, with nothing deducted for transportation or administration charges, or for any other purpose. Send the barrels of flour rolling, ten, twenty, fifty, hundreds! Five dollars sends a barrel, enough to keep some poor soul alive a year. Do not be content with one barrel or one gift; put aside something weekly and have your part in the brightest side of the most terrible war that ever cursed the world. If you can not give all you would like to, make up for it by canvassing among your friends. Show them this appeal, tell them about it, ask them to match your gifts, urge your pastor to ask the church to join the crusade with a large contribution.

The response to our campaign for a cargo of flour has been instantaneous. By letter, telephone, and personal visit the gifts are coming in with a generosity worthy of our LITERARY Digest readers. We are able to present this gratifying list of first givers:

TOPICS - OF - THE - DAY

OUR EVACUATION OF VERA CRUZ

THE BEWILDERMENT of many of our editorial observers as they contemplate President Wilson's Mexican policy seems to be only intensified by the withdrawal of General Funston's army of occupation from Vera Cruz. "Why we are leaving Mexico is as mysterious as why we ever entered that country," declares the *Baltimore American*, and another Republican paper, the *New York Globe*, remarks that "as there was no satisfying explanation for the occupation, the unities are preserved by the lack of any satisfying explanation for the evacuation." Our seizure seven months ago of Mexico's chief seaport in reprisal for an insult to our flag at Tampico is characterized by the *New York Evening Sun* (Ind.) as "the most puzzling act of the Wilson Administration." "Up to the minute of evacuation," the same paper goes on to say, "there remained the sense that some possible utterly unsuspected advantage from our possession of Vera Cruz might yet appear," but "now the departure of the troops writes 'Finis' across the unsolved mystery." Will history, asks the *Washington Post* (Ind.), record the Vera Cruz episode "as an expedition of revenge or as a romantic adventure?" Or "is it to be regarded as a policy put under way only to be abandoned at the crisis?"

But while many confess themselves bewildered, others are very definite both in condemnation and defense of the Administration's course with Vera Cruz. Those who regard the episode as an expensive blunder point out that it cost the lives of a score of our marines and more than a hundred Mexicans, and involved the expenditure, according to some estimates, of as much as \$10,000,000. They point out that for this Mexico will be asked to pay no indemnity, and that the demanded salute which was to wipe out the insult to our flag has never been fired. As the *Philadelphia Bulletin* (Ind. Rep.) sums up this view, "the Army never was needed at Vera Cruz, and its dispatch there has proved without result save in its cost of American lives and money." The evacuation, declares *The Public Ledger* (Ind. Rep.) of the same city, "is premature and ill-advised." And another Philadelphia paper, *The Inquirer* (Rep.), while admitting that our occupation of the Mexican port may have hastened the elimination of Huerta, goes on to say that Mexico is in a worse condition now than it was under the dictator. With Carranza making his capital at Vera Cruz and the

Villa and Zapata factions dominant at Mexico City, *The Inquirer* can see no peace in sight, but a depressing prospect of ever new disorders for that distracted country. Our troops took Vera Cruz from an established Government, says the *Detroit Free Press* (Ind.), but they return it to the leader of a faction. In Mexico's new civil war, according to the *New York Globe*, "neither side, so far as it is possible to discover, represents any principle." The *New York Evening Mail* (Rep.) describes our

withdrawal as "leaving Mexico to her fate." "Our policy of watchful waiting," says *The Mail*, "is now a policy of scuttling." And in still another New York Republican paper, *The Tribune*, we find the evacuation of Vera Cruz made the text for a scathing arraignment of the Administration's Mexican policy, which it calls "a program of barking and filling," "a fantastic improvisation," forming "a grotesque interlude in the history of our foreign relations." Some months ago we were given to understand from authoritative sources, *The Tribune* reminds us, that one of the purposes of Mr. Wilson's Mexican policy was to emancipate the Mexican masses from the evils inherent in peonage and the concentration of landholdings in a few hands. This critic goes on to say:

"Now, it must be obvious to anybody but a statesman intoxicated by his own phrases that such flamboyant, theatrical humanitarianism has no place in the conduct of the foreign relations of the United States. It may be our moral mission to encourage the mass of men, women, and children of other nations to seek a greater measure of political freedom and economic equality. But our Government has no diplomatic or military mission to go into other countries and reconstruct their institutions for the benefit of submerged elements.

"The only legal warrant Mr. Wilson ever had for seizing Vera Cruz was that given him by Congress on April 22, after he had already seized it. Congress authorized him to employ the Army and Navy for the purpose of obtaining reparation from the Huerta Government for indignities to the flag and sovereignty of the United States. It never sanctioned any other program, and the one thing it empowered the President to get he never got, since through his representatives in the Niagara Falls Peace Conference he abandoned the demand for a salute and pledged himself not to ask the Government of Mexico for any other sort of indemnification.

"There were sound reasons for intervention in Mexico, but these the President has never accepted as a basis of action. It is the Government's duty to do its best to protect the lives and

property of its own nationals in Mexico and the lives and property of European nationals there, since we should be averse to allowing any European nation to intervene on its own behalf. We would also be justified in intervening in order to prevent a general relapse into anarchy. We have done that in other Latin-American countries. But we had never dreamed before of intervening anywhere with the professed aim of compelling the 15 per cent. of the ins to share their property with the 85 per cent. of the outs.

"The Mexican peons are just as submerged as ever, so far as assistance from President Wilson goes. He has simply kept American troops, under General Funston, doing local police and sanitation duty in Vera Cruz.

"Nevertheless, the country will remain convinced that the evacuation was a blunder. Possession of Vera Cruz would at least have served as a warning to the forces of anarchy in Mexico not to cut loose. When they do cut loose we shall have to go back to Vera Cruz."

Even the *New York World*, which has frequently championed the President's Mexican policy, can see no excuse at this time for our withdrawal from Vera Cruz, which it calls an abandonment rather than an evacuation. Says this influential Democratic paper:

"Setting out to establish constitutional government in Mexico, we are leaving Mexico to its own resources at a time when its internal affairs are more chaotic than they were when we interfered with them. Have we served the Mexicans? Have we served ourselves? Have we served mankind?"

Turning now to the defenders of the Vera Cruz episode, we find the *Philadelphia Record* (Dem.) declaring uncompromisingly that "the American occupation of Vera Cruz was necessary; it continued as long as the necessity continued; it is no longer necessary, and it has ended." The *Wilson Administration*, says the *Brooklyn Citizen* (Dem.), "has come out of the Mexican crisis with honor," for

"Vera Cruz has benefited by the American occupation, and it is with regret that the people see the troops depart. The fleet under Admiral Fletcher remains to protect American and foreign interests in case of emergency. It depends now on the Mexicans themselves whether the troops shall come back."

Among other papers which find nothing to quarrel with and much to praise in our occupation and evacuation of Vera Cruz are the *Albany Journal* (Rep.), *New York Times* (Ind. Dem.), and *Evening Post* (Ind.), and *Springfield Republican* (Ind.). The *Times*, which in the beginning took issue with the Administration's Mexican policy, now admits that, altho "we have done all we could in an honest desire to help in the establishment of a decent and popular government in Mexico," we have not been successful. But "President Wilson can not be blamed for believing that Mexican protestations were sincere." Moreover,

"Washington influence hastened the downfall of Huerta, which was most desirable. He had tried to involve this country in a war which he thought would be beneficial to him. But war was avoided. The A. B. C. conference was not held in vain by any means. It served to prove to our neighbors in South America, and to Europe as well, our entire disinterestedness. We have escaped war, we have established new and stronger relations with our Southern neighbors, we have administered faithfully and well the affairs of the chief port of Mexico."

Those who predict that a speedy sequel to our evacuation of Vera Cruz will be a general throat-cutting of Americans and other foreigners in Mexico, remarks *The Evening Post*, are the same who assured us that the last withdrawal of American soldiers from Cuba was a terrible mistake, and that we should have to go back in six months to rescue the island from a welter of blood. Examining first the purely military aspect of the evacuation, this New York paper says:

"By some this is regarded as a fatal blunder, since it gives up our powerful 'grip' on Mexico. But this is fanciful. General Funston had some 6,000 men at Vera Cruz. If it were to be a

question of making head against the combined Mexican armies, he would have needed at least 50,000 men before the War Department would have dreamed of letting him march inland. Thus if our Government were ever to be confronted with the necessity of armed intervention in Mexico on a great scale, a large force would have to be raised and sent forward, irrespective of General Funston's handful of men at Vera Cruz. If that port had to be taken and occupied again, it could be with the greatest ease. The Mexicans have nothing that could stand against our battleships. As it is, a few war-vessels are to be left off the harbor, and their presence there will be as much of a reminder, or a threat, militarily speaking, as the sight of regiments on shore. In short, a cool view of the evacuation will make it appear of the slightest conceivable importance, so far as it affects the project of anything like a conquest of Mexico, while the true reasons for it are in quite another order of ideas."

Concerning these "true reasons" it goes on to say:

"They arise partly from the President's desire to make a strong appeal to Mexican patriotism. That any such thing exists will, of course, be scouted by our high and mighty Imperialists, but there it stands. What was meant by the great outpouring of students in the Mexican capital to rejoice over the announcement by our Government that the American flag would soon cease to fly over any portion of the territory of Mexico? It meant that Mexicans feel about it just as we should in their places. The holding of their principal port by the armed power of an alien Government has been just as distressing to them, in the midst of their domestic convulsions, as would have been to Americans the seizure of New York by the British in the darkest days of our Civil War. That the occupation of Vera Cruz was declared to be only temporary made it endurable for the time being; but it has all along been a source of grief to the Mexican people, a hurt to their national pride; and its ending to-day will no doubt cause something like a general jubilation."

"It ought also to cause the Mexicans to believe that the United States wishes to treat them with the utmost good faith and generosity. In this sense, to-day's withdrawal from Vera Cruz is like a fine gesture of confidence. It is an appeal to the Mexicans of a sort which they would be truly dense if they did not appreciate. Our country is leaving Mexico alone to work out her immensely difficult problems. This does not mean that we have ceased to take interest in her, or that we shall be any the less watchful and even zealous in protecting American rights within her borders."

Not even the friendliest observer of Mexican affairs, *The Evening Post* admits, can find much hope in their present posture. But our withdrawal from Vera Cruz "was the right thing to do, and the doing of it ought to give us all a special thrill of patriotic pride." The *Springfield Republican* finds the justification of the evacuation policy in three facts: First, "all Mexicans were humiliated by our prolonged occupation of their port"; secondly, "all Latin-American nations in both Central and South America would have bitterly misconstrued a longer stay"; and, thirdly, "the evacuation diminishes apparently the chances that our Government might become deeply involved in the domestic disturbances of Mexico while the world-war continued to rage." On the last point it goes on to say:

"That evacuation in order that our own strength may not be reduced in case of emergencies arising in the course of the European War has a selfish aspect may be freely granted, but in so tremendous a world crisis the vast interests of the United States can not fairly be ignored. The recent Smyrna incident serves as an illustration of the possible complications abroad liable at any moment to involve the United States. Turkey's participation in the war has much increased the risks which this country must encounter as a neutral Power deeply concerned in the present division of the whole earth into war and peace areas. It is the unquestioned desire of the American people as a whole that the United States should not become involved with any of the belligerents, and that a scrupulous neutrality between them should be maintained, while at the same time the rights of neutral States should be upheld with a firmness commanding the respect of the hostile Powers themselves. This is a task sufficient to try severely all the resources and talents of the Administration. To leave Mexico to shift for herself, from this point of view, becomes a thoroughly statesmanlike policy."

A LAWLESS WAR ON LAND AND SEA

SUGGESTIONS from across the water have urged America to protest by deed or word against alleged violations of the rules of civilized warfare on land and sea. And the only answer that can be given, if some of our most thoughtful editors are to be believed, is that there are no rules of war that any belligerent is bound to respect, and hence that this nation has no grounds for protest. Germany has protested against violation of the Declaration of London and international law by England and France in their treatment of neutral ships and enemy property on the high seas. The United States Government has answered that it does not consider the Declaration of London binding. Because, as the *New York World* explains, "not one of the great nations ever ratified the agreement." The German protest and the American answer mean, in the *New York Times's* opinion, "that for all practical purposes the Declaration of London has been thrown into the discard." From some of the Allies have come repeated demands for action by the United States, as a nation signatory to the Hague conventions, with regard to the German invasion of Belgium, the use of submarine mines and air-bombs, and the treatment of non-combatants, captured cities, and works of art. So far our Government has shown no intention of making any protest, altho many newspapers and public men of high standing have urged such a course. Nor is it likely to do so, if its view coincides with that of an apparently well-considered editorial utterance in the *New York Sun*. The broad fact, it declares,

"is that none of the codes formulated at The Hague in 1907 for the mitigation of the horrors of war, for the preservation of the rights of private property, for the safeguarding of non-combatants, for the protection of neutral individuals and communities, can be regarded as legally valid or in force under the present circumstances. . . . This is true whether the offenses in question have been committed by Germans, by British, by Austrians, by Russians, or by French."

Taking up first the Hague Convention ruling against the violation of neutral territory, *The Sun* points out that Article XX of this Convention says:

"The provisions of the present Convention do not apply except between Contracting Powers, and then only if all the belligerents are parties to the Convention."

Since it was not ratified by France or England, the German Government was released from its obligation when France entered into the war. *The Sun* is speaking, "of course, of Germany's violations of neutrality only so far as they relate to obligations contracted at The Hague; not to other treaty obstacles to freedom of war action." We are further informed that, in the seven other more important conventions of 1907,

"covering as they do almost the entire range of questions of mooted propriety of conduct during war, there is an article identical with or similar to that which is printed above, nullifying the entire Convention unless all the contestants are parties to the same."

"Thus the entire fabric of prohibition, restriction, regulation in the interest of humanity and more civilized methods of warfare, . . . becomes a mere scrap of paper, legally invalid and void."

"And what becomes of the persistent idea that the United States Government, as a party to these several conventions, is in duty bound to intervene by act or protest to enforce regulations which have been made inoperative by the provisions of the treaty itself?"

Strangely enough, as *The Sun* notes in a subsequent issue, for the United States to undertake to protest "against the non-observance of rules voided by the treaty itself would be to protest against the treaty itself."

Turning to the war on the high seas, we note the *New York World's* remark that

"If there had been generally accepted international law on the subject of seizures, searches, and contraband, there would have been no conference at London in 1909 to prescribe rules and provide for the establishment of a Prize Court at The Hague. The Prize Court was not established and the Declaration of London did not become binding because not one of the great nations ever ratified the agreement."

"The law of contraband therefore remains precisely as it was before the London Conference. It is national and not international. Being national, it varies from time to time as it is affected by self-interest."

AMOS PINCHOT ON HIS PARTY'S FALL

SOME MONTHS AGO Mr. Amos Pinchot warned the leaders of his party that Mr. George W. Perkins must retire from his conspicuous position in the Progressive battle-front, or the campaign would end in dire disaster. Mr. Pinchot's advice was not heeded, and the election was, in many respects, considered disastrous for the Progressives. Mr. Pinchot now concludes that his prophecies of evil were fulfilled as completely as were those of his Old Testament namesake, and is moved to make the most extended explanation of the election returns which has appeared from any prominent Progressive. That Mr. Pinchot can not be considered a spokesman for more than the radical wing of his party is apparent from the fact that he chooses the Socialist monthly, *The Masses* (New York), as the medium through which his words were to reach the public. To put the Pinchot position briefly, the Progressive party fell from its high estate of November, 1912, as a result of too much Perkins and too much platitude. A not unfriendly Democratic daily can not refrain from suggesting that there might have been too much Amos Pinchot. For the *Philadelphia Record* suggests as one reason for the party's decline the intolerant attitude of this "enfant terrible of the Bull Moose" toward the Perkins element. "Mr. Pinchot would have none but the strictly warranted pure and good in his party." If these views prevail, says *The Record*, "the Progressives will have disappeared by 1916." But Mr. Pinchot is convinced that "a new party has no place in the United States, unless it represents radicalism." The Progressives, he says in *The Masses*, foolishly followed "a shallow, middle-of-the-road leadership"—

"Carrying a withered and decidedly suspicious-looking olive-branch to labor and capital, and to democracy and oligarchy alike, it pleaded for universal approval. This plea was rejected. . . ."

"A new party, supporting issues worth fighting for, can not expect to win immediately. But, if from the beginning, the Progressive party had adopted a policy consistent with the aspiration of justice which gave it birth; if more of its leaders had sat down and asked what the social problem in America consisted of, and how to solve this problem, irrespective of immediate success at the polls, instead of asking, as did the majority of them, what political issues were the most likely to win, and what superficial economic reforms could be championed without running foul of special privilege—if this course had been followed we would have laid the foundation of a real party."

Moreover a new political party, to succeed, "must go to the public with something definite—a definite means to accomplish a definite and desirable end." But

"The Progressive program had something of everything in it, from the care of babies to the building of a birch-bark canoe. Yet it contained little which dealt with the actual problems of the United States in any but the most superficial manner. It was the expression of social aspiration, but not of a social program. . . . There is a great deal of talk about the visionary character of radical proposals. But nothing I have ever heard from the lips of the wildest radical exceeds in visionary impracticability the proposition of maintaining a third party, standing for nothing more concrete than a general aspiration of democracy, and financially fathered by representatives of the commercial interests which the public most thoroughly distrust. This may have been 'practical,' but it was not politics."

AN ARMY ESTIMATE OF ARMY NEEDS

FIERY SPEECHES both in and out of Congress have warned us that we are not adequately equipped for purposes of national defense, and the country, the New York Evening Mail notes, "has not been one bit stirred." But, it adds, "the sober, matter-of-fact statement of General Wotherspoon arrests attention." It certainly arrests editorial attention, and agreement, at least partial agreement, predominates over dissent. In his annual report the retiring Chief of the General Staff of the United States Army puts our present effective mobile land-fighting force at 2,738 officers and 49,968 enlisted men. This is the grand army of a Republic of 100,000,000 inhabitants, and, in the opinion of so eminent an authority, it is absurdly insufficient to protect our coasts from invasion, to say nothing of guarding our outlying possessions. To insure our safety, General Wotherspoon recommends an increase of the regular army to 205,000, and the creation of a reserve system which would give us 500,000 first-line troops in time of need. The General's statement wins the hearty approval of a large group of newspapers, including the Washington Post (Ind.), Star (Ind.), and Times (Prog.), the Philadelphia Public Ledger (Ind. Rep.), Baltimore American (Rep.), New York Evening Sun (Ind.), Boston Transcript (Rep.), and Chicago Herald (Ind.). And their opinion regarding our need of readiness is emphasized in a Chicago Tribune (Prog.) leading editorial, whose writer remembers that "in our own history even moderate preparedness would have saved us from invasion and abject humiliation in 1812, would have checked the rebellion at its inception, would have avoided or made far less costly the Spanish War." On the other hand, a group of papers, represented by the Springfield Republican (Ind.), Cleveland Plain Dealer (Ind. Dem.), Peoria Journal (Ind.), and St. Louis Republic (Dem.), are not in the least impressed by the "Wotherspoonian warning," and can not justify any move to make our military establishment much more formidable. When the Republican leanings of the first group

General Wotherspoon's disclosures of our military weakness, as summarized in part by the New York Sun's Washington correspondent, are to the effect that

"There are only 45,968 soldiers available for the mobile army within the United States; that the coast artillery is short 13,018 men; that the organized militia has a reported strength of

Copyrighted, 1914, by John McCutcheon.

A GOOD LITTLE UMBRELLA AS LONG AS WE HAVE FAIR WEATHER.

—McCutcheon in the Chicago Tribune.

8,323 officers and 119,087 enlisted men, but only 81.07 per cent. attended the annual inspections and only 73.87 per cent. the camps of instruction; that only 33 per cent. of the militia qualified as second-class marksmen or better, last year; that neither the Philippines, Hawaii, Alaska, nor the Panama Canal can be defended by the garrisons there; that the militia is short of horses, guns, ammunition, and transportation; that the regular army is woefully lacking in field-guns and ammunition; that the coast defenses are without adequate supplies of ammunition and material, and that changes should be made in the type of coast-guns to offset the superiority of modern naval guns, and that this nation with its present system can not possibly assemble rapidly enough sufficient forces, equipped for field operations, to cope with an enemy debarking on our shores."

We ought to have, for an efficient defensive force, 500,000 men with the colors, or in the reserves, in the General's opinion. To get them, General Wotherspoon would adopt a short-term enlistment of, say, three years, during which the men would have a thorough training before passing into the reserve for five years. This would require a standing army of 205,000 men. Moreover, "the same principle as to reserves could be applied to the organized militia." General Wotherspoon would also have sufficient munitions and stores accumulated to equip the entire half million men of the first line for a six-months' campaign.

The Springfield Republican takes issue with many of its contemporaries which heartily support General Wotherspoon's recommendations, by declaring our fears of foreign invasion completely unjustified. It notes that thirty-five transports and a large fleet of war-ships were required to provide a safe transatlantic passage, under the most favorable conditions, for 32,000 Canadian troops. A large fleet of transports could not possibly be missed by our cruisers, and "would be exposed to deadly attack by swarms of our submarines before it could even sight land." So it concludes that the successful invasion of the United States by a hostile army would be "a task more formidable than military science has ever contemplated."

"HEY, UNCLE, SUPPOSE IT TURNS COLD?"

—Sykes in the Philadelphia Evening Ledger.

are compared with the Democratic tendencies of the second, there would seem to be some basis for the Washington Times's prediction that the question of preparation for national safety "may have a determining political influence in the near future."

DEMOCRACY'S LIQUOR PROBLEM

ACCORDING to the Secretary of State, who has generally been accredited as the foremost representative of the Democratic party in the West, "the liquor interests are a millstone about the party's neck." According to the *New York World*, probably the most influential Democratic paper in the East, the party is no more "closely allied to 'the liquor interests' than the Republican party." Mr. Bryan has often aided the foes of the liquor traffic in State campaigns, even when it meant parting company with his own party's candidates. But in his recent proclamation in *The Commonwealth*, he would seem to be viewing the prohibition question as a national issue, at least within the party ranks. He says:

"The Democrats of the nation have an issue to face and they may as well prepare for it. The liquor interests are at bay; they are on the defensive. They realize that they have but a few more years in which to fatten upon the woes of their victims, but they are fighting desperately and are willing to hold any party between them and the fire. The Democratic party can not afford to shield the brewery, the distillery, and the saloon from the rising wrath of a determined people. Democracy is the nation's hope on political and economic questions—let it not, by taking sides with the liquor interests, repel those who put moral issues first. The young men of the country are democratic by nature, but they will not submit their claims to political preferment to those who conspire against the home and everything good—neither will they find pot-house politicians congenial party associates. The President has set a high standard in intelligence and morals, and the party can not afford to lower the colors to gain a temporary advantage. Those whose support depends upon subservience to the liquor interests disgrace the party while they are with it, and then leave it if it refuses to obey them. They are a millstone about the party's neck. The Democratic party is the party of the future—it has a chance to enter the Promised Land—why allow the liquor interests to lead it away into the wilderness? Get ready for the fight."

To which *The World* replies, taking up arms in defense of its party:

"We are not aware that the Democratic party as a whole is more closely allied to 'the liquor interests' than the Republican party. The prohibition sentiment in the Democratic South is much stronger than in the Republican North. Virginia, a Democratic State, adopted prohibition this fall, while California, a Progressive-Republican State, overwhelmingly re-

jected it. Senator Penrose, in Pennsylvania, owed his victory for reactionary Republicanism in no small part to the support of what Mr. Bryan would call the saloon crowd.

"Prohibition is a State issue, and is likely to remain a State issue for many years, with voters dividing on personal rather than on party lines. But whether it ever becomes a national issue or not, we should think that Mr. Bryan had enough important duties to attend to without assuming charge of a prohibition propaganda."

So Mr. Bryan has "found a new national issue," the *New York Evening Post* (Ind.) observes. But it does not care to commit itself upon the main point raised by Mr. Bryan further than to "remark, in passing, that the age of miracles will not have passed if he can turn the Democratic party into a Prohibition party."

SUMMARY OF THE EUROPEAN WAR

THE following digest of the newspaper reports of the war is a continuation of the first Summary, which appeared in *THE LITERARY DIGEST* for September 26. Owing to conflicting reports at the time the former chronology went to press, it seemed better to omit two items, which have since been established beyond any doubt. On September 1 and 2, General von Hindenburg won a great victory over the Russians in the Masuri Lake region of East Prussia. The fortified town of Maubeuge, on the French first line of defense, was taken by the Germans on September 7.

SEPTEMBER 17.—In France the battle-line lies roughly in three sections; the center is along the Aisne from the Oise to Sedan; from the Aisne and Oise an advancing wing stretches north; on the east the third section stretches from Sedan generally along the Meuse and Moselle to Toul. **Meuse and Moselle**—The Germans fall back on the Alsatian border from Nancy.

SEPTEMBER 19.—**East Prussia**—Following General von Hindenburg's brilliant defeat of the Russians in the marshes of the Masuri Lake region on September 1 and 2, the Russians are driven across the border into Russian territory. **Galicia**—The Russians cross the San River.

SEPTEMBER 20.—**The Aisne**—The Germans commence the bombardment of Reims. **East Prussia**—With a force of 120,000, General von Hindenburg follows the Russians across the border, commencing an advance on Grodno, on the Niemen River.

SEPTEMBER 21.—**The Aisne**—A fierce battle rages on the

—Bowers in the *Newark Evening Star*

heights of Craonne, 20 miles east of Soissons. **Galicia**—Yaroslaf is taken by the Russians. **Servia**—The Austrian Army of invasion is crushed in an engagement near the Drina River.

SEPTEMBER 22.—The Aisne—The Germans gain the heights of Craonne and take the town of Bethany, near Reims. **Poland**—The Russians begin an advance from Poland toward Breslau in Silesia. **Galicia**—The Russians advance from Yaroslaf and invest Przemyśl. **Naval**—The German submarine *U-9* sinks the British cruisers *Hogur*, *Cressy*, and *Aboukir* in the North Sea, with a British loss of 1,133 men.

SEPTEMBER 23.—Northwest France—The German right wing is driven back some 11 miles on Lassigny. **East Prussia**—General von Hindenburg forces the Russians across the Niemen River. **The Far East**—China replies to the Kaiser's protest against the Japanese operations, disclaiming any responsibility for the violation of her neutrality, owing to her inability to defend it.

SEPTEMBER 24.—Northwest France—The Allies occupy Péronne and advance on St. Quentin. **East Prussia**—A Russian force from the south occupy Soldau, on the frontier.

SEPTEMBER 25.—Northwest France—The heavy fighting concentrates between the Oise and the Somme and in small towns north of Albert and Amiens. **East Prussia**—Von Hindenburg makes a terrific effort to cross the Niemen, but fails.

SEPTEMBER 26.—Northwest France—The Germans capture St. Quentin. **East Prussia**—Von Hindenburg is forced to fall back on Augustowa. **Galicia**—Russian forces in Galicia and South Poland begin to converge upon Krakow. Przemyśl is heavily bombarded. **The Far East**—The Japanese take Weihai, in the province of Shantung, disregarding the protests of the Chinese Foreign Office.

SEPTEMBER 27.—Northwest France—The Allied attack eastward from Péronne is forced back on Albert, the two forces coming to a stand midway between these cities.

SEPTEMBER 28.—Belgium—The siege of Antwerp begins. **Poland**—Russian advances in the direction of Posen drive the Germans to the frontier, where a stand is made. **Galicia**—Russians advance over the Carpathians into Hungary.

SEPTEMBER 30.—The Far East—The Japanese begin the bombardment of Kiaochow. **General**—Italy protests strongly to Austria against the sowing of mines in the Adriatic, disastrous to Italy's commerce.

OCTOBER 1.—Northwest France—Heavy fighting begins north of Arras. **Meuse and Moselle**—The Germans have crossed the Woëvre plains in a north and south line, at the lower end reaching the Meuse at St. Mihiel, and resting on the north at Étain, 14 miles east of Verdun. **General**—Austria expresses official regret for the damage done Italian shipping by Austrian mines and promises an indemnity.

OCTOBER 2.—East Prussia—The week's fighting about Augustowa ends with a German defeat and expulsion from Northern Poland. **Galicia**—A Cossack advance reaches Bochnia.

OCTOBER 3.—Galicia—The Russians take Tarnow.

OCTOBER 4.—Galicia—Reinforcements from Krakow halt the Russian advance, and begin to force it back across the San River.

OCTOBER 5.—Belgium—The Belgian seat of government is removed from Antwerp to Ostend. **Northwest France**—Fighting centers at Arras. **The Far East**—The Japanese occupy

Jaluit, the German seat of government in the Marshall Islands, explaining this to be solely a temporary strategic move.

OCTOBER 6.—Meuse and Moselle—The Germans capture Camp-des-Romains, near St. Mihiel. **Poland**—A German attack forms along the Polish border, from Kalisz to Olkusz, striking generally northeast at Warsaw.

OCTOBER 7.—Belgium—The inner fortifications of Antwerp are under bombardment. **Northwest France**—The Allied north wing reaches above Arras toward Lille, with severe cavalry engagements to the north. The Germans take and hold Douai. **East Prussia**—Reinforcements from Königsberg check the advance of the Russians, tho the latter occupy Lyck. **The Far East**—The Japanese seize the Caroline Islands.

OCTOBER 9.—Belgium—Antwerp falls.

OCTOBER 10.—Northwest France—The Germans concentrate on

their effort, destined to last many weeks, to drive downward on Paris via the unfortified stretch of 100 miles between Arras and the sea. In anticipation of this attack the Allies are being massed on this line, and their upward-swinging left wing is heavily reinforced. **General**—Charles, King of Roumania, dies.

OCTOBER 12.—Galicia—Austrian reinforcements relieve Przemyśl temporarily. To the north, at Sandomir and along the San River, a long, indecisive battle begins, between Austrian and Russian forces. **South Africa**—A Boer commando in the Cape Province mutinies and martial law is proclaimed throughout the Union of South Africa. **General**—Ferdinand, the new King of Roumania, takes his oath of office.

OCTOBER 13.—Belgium—The Belgian Government removes from Ostend to Havre. The Belgian Army withdraws southward to join the Allies. **Northwest France**—The Allies' advance pushes across the Belgian border and occupies Ypres.

Poland—The hostile forces engage in the neighborhood of Grodish, Piasechino, and Pruskow, up to within 20 miles of Warsaw, in the Battle of the Vistula.

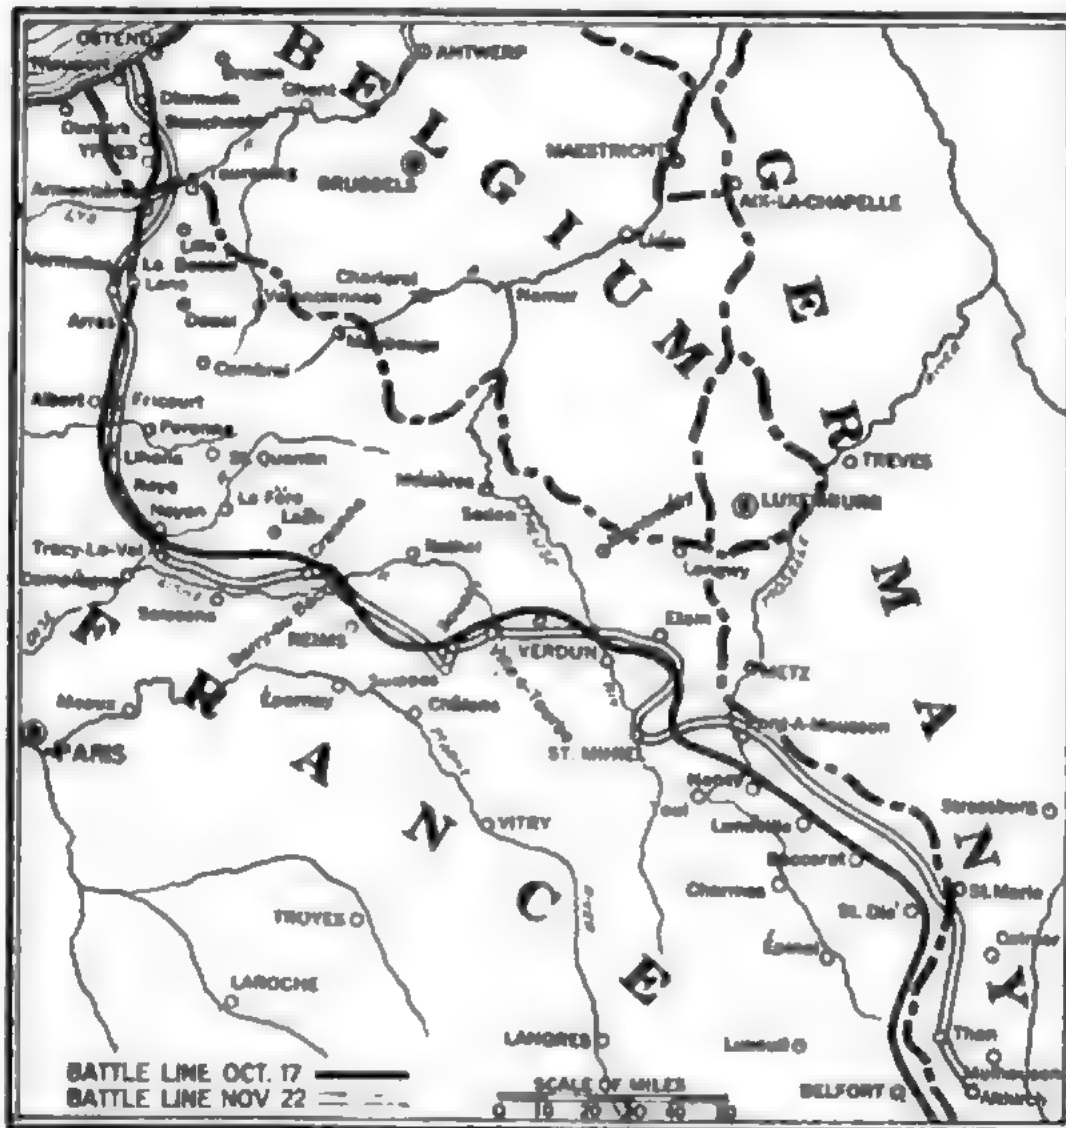

OCTOBER 15.—Belgium—The Germans occupy Ostend.

OCTOBER 16.—Northwest France—The reinforced Allied north wing swings in on Lille, retaking Armentières. **Meuse and Moselle**—The French reinforcements from Toul and Nancy succeed in forcing the Germans from St. Mihiel back toward the Aisne border. **The Far East**—In a heavy engagement at Kiaochow the Japanese retreat. A Japanese cruiser is sunk in Kiaochow Bay. **Naval**—The British cruiser *Hawke* is sunk by the German submarine *U-9*.

OCTOBER 18.—Northwest France—The Belgians succeed in joining the Allied north wing. Heavy fighting takes place between Lille and the sea, beginning the Battle of Flanders. **Poland**—In the Battle of the Vistula, Russian reinforcements descending from the juncture of the Bzura and Vistula rivers, and also from the direction of Nowoe Georgievsk, outflank the German left, at the same time that another force, crossing the Vistula north of Kozenitz, attacks the German right, turning the tide of battle.

OCTOBER 19.—Flanders—British gun-boats in the Channel bombard the Germans, driving them back from the coast at Nieuport. The German attack concentrates above Arras. **Servia**—The Servian Army surrounds Serajevo.

OCTOBER 20.—Flanders—The Belgian Army forms the tip of the Allied north wing, which reaches northwest from Ypres through Dixmude to the Channel at Nieuport. **Poland**—The Germans are forced to retreat from their fortified position 20

From the New York "Sun."

THE DEADLOCK IN THE WEST.

Changes in the Western battle-line between October 17 and November 22.

miles from Warsaw, deciding the Battle of the Vistula. The retreat is southwest along the Pilica River.

OCTOBER 24.—Galicia The Russians gain Rodymno heights on the west bank of the San, near Przemysl. From Przemysl north along the San a fierce battle rages. **South Africa**—A rebel force under Colonel Maritz is crushed by the loyalists.

OCTOBER 25.—Flanders—The tip of the Allies' north wing is pressed back to a position north of Dunkirk by the Germans crossing the Yser River, but holds that position. **Poland**—In the pursuit of the German Army of invasion, Lodz and Radom are retaken by the Russians. **South Africa**—Rebellious forces are being raised by General de Wet and General Beyers.

OCTOBER 27.—Naval—The British superdreadnought *Audacious* is sunk off the north coast of Ireland. Some reports declare it the work of a German submarine.

OCTOBER 29.—Turkey A Turkish cruiser begins hostilities against Russia by the bombardment of the town of Theodosia, in the Crimea. Odessa is also bombarded and several vessels in the harbor are sunk. **Naval**—

Submitting to the pressure of anti-German sentiment, Prince Louis of Battenberg resigns as First Lord of the British Admiralty.

OCTOBER 30.—Flanders—The Belgian Army destroys several dikes, flooding the lower Yser valley and driving out the Germans. This, combined with the shelling of the coast by British gun-boats, compels the German attack to move inland about Dixmude. **Naval**—Admiral Lord Fisher is appointed as Britain's First Sea Lord.

OCTOBER 31.—Flanders—The Allies gain the west bank of the Yser and all crossings. **Turkey**

The Allies demand an explanation of the bombardment of Russian seaports.

NOVEMBER 1.—Poland Official reports state that the whole Russian Army is now east of the Vistula. **Turkey**—The Turks bombard Sebastopol. **Naval**—A naval engagement occurs off the coast of Chile, wherein the British lose two cruisers, with severe damage to the remaining two. The five German cruisers engaged apparently suffer little.

NOVEMBER 2.—Turkey—The Turkish Ministry resign, leaving the Young Turk party in control. Naval operations against Turkey appear in the shelling of the Dardanelles by a British-French squadron and the bombardment of a fortified town, Akabah, in Arabia. The Turks assail Russian forces near Trebizond with some success, and also begin to advance upon the Egyptian border.

NOVEMBER 3.—Naval—A German squadron makes a raid upon the British coast near Yarmouth, in the course of which a British submarine is sunk by a floating mine dropt by the retreating Germans.

NOVEMBER 4.—Northwest France—During a lull in Flanders heavy fighting centers about Armentières and Nieppe.

NOVEMBER 5.—East Prussia—Russians attack in three points to the east and south: between Gumbinnen and Wirballen, in the Masuri Lake district east to Lyck, and south of Soldau. The Russians occupy Mlawka. **Turkey**—England and France declare war on Turkey. Jeddah, an Arabian port, is bombarded by a British war-ship. Russian troops invade Turkish Armenia and sweep easily south, occupying Kopruckeni on the way to Erzeroum.

NOVEMBER 6.—The Aisne—The Germans capture a strategic point in the Argonne near Vienne-le-Château. **Poland**—In the south the retreating Germans make a firm stand at Czenstochow. Above, the Russians cross the border and reach Pleschen, in Silesia. Cossack troops enter Prussia north of the Warthe.

NOVEMBER 8.—South Africa—The rebel force under General Buller is dispersed by General Lambert's command on the Orange River, southwest of Bloemhof.

NOVEMBER 9.—Flanders—Desperate fighting marks the Ger-

man effort to cross the Yser and take Dixmude. **East Prussia**—The Germans defeat a Russian force at Wysehtyniz Lake. **Galicia**—The Austrians fall back on Krakow. **South Africa**—The rebel general De Wet overcomes a British command under General Cronje near Doornberg.

NOVEMBER 10.—East Prussia—The Russians are pushed back in the north on Wirballen, but hold their ground at Lyck and Soldau. **Naval**—The German cruiser *Emden*, which has preyed on Allied commerce in Eastern waters continuously since the beginning of the war, is caught and destroyed by the Australian cruiser *Sydney* at the Keeling Coos Islands.

NOVEMBER 11.—Flanders—The Germans cross the Yser and capture Dixmude. **Galicia**—Przemysl is reinvaded by the Russians. **Naval**—A British torpedo-boat, the *Niger*, in harbor at Deal, is sunk by a raiding German submarine.

NOVEMBER 12.—Flanders—The German attempt to take Ypres continues into the fourth week, but the British defense holds. **East Prussia**—General Rennenkampf's troops capture Johannsburg. **Turkey**—The Turks capture El Arish, in Egypt.

NOVEMBER 13.—The Aisne—The French are driven from a commanding position near Berry-au-Bac, and suffer heavily in engagements in the Forest of Argonne. **Poland**—Germans are advancing into Poland in a 40-mile battle-line extending from near Lipno southwest across the Vistula at Wlozlawsk, toward the Warthe. A second advance is in evidence behind the southern headwaters of the Warthe, between Czenstochow and Krakow.

NOVEMBER 16.—Flanders—Fresh inundations by the Belgians extend the flooded area south of Dixmude. **East Prussia**—At Stallupönen, 20 miles east of Gumbinnen, the Russian advance is checked. Russian forces in the neighborhood of Soldau suffer a repulse. **Poland**—At Wlozlawsk, on the Vistula, the Germans successfully encounter the Russians, taking several thousand prisoners.

NOVEMBER 17.—East Prussia—The Russians are falling back between Gumbinnen and Wirballen, and also retreating from Soldau upon Mlawka. **Poland**—Heavy fighting retards the German advance, between Lodz and the Bzura River. Reinforces-

ments continue to pour in from Prussia. **Servia**—The Austrians are victorious at Valjevo, driving the Servians from their positions.

NOVEMBER 19.—Poland—The fighting on the Lenczyca-Plock line, between the Vistula and Warthe, assumes portentous proportions, and the German advance is blocked within 40 miles of Warsaw. To the south, a huge battle is under way, in two sections, one centering on Krakow, the other on Czenstochow. **Turkey**—Russian reinforcements pour into the Batoum district. Kurd forces suffer defeat in Persian Armenia. **General**—The Khedive of Egypt joins with Germany and the Young Turks.

NOVEMBER 21.—East Prussia—The Russians readvance and capture Gumbinnen. **Galicia**—The Austrians evacuate Sandec, south of Tarnow. **Servia**—The Servians make a successful stand against the Austrians, the forced out of Valjevo.

NOVEMBER 22.—Flanders—The Germans maintain a violent bombardment, but there is an apparent weakening of the offensive. **The Aisne**—The Germans make repeated infantry attacks in the Argonne region. **Poland**—Between the Vistula and the Warthe the Germans retreat slowly.

NOVEMBER 24.—Flanders—British war-ships off the coast destroy the German naval base at Zeebrugge and scatter the troops established through the sand dunes along the coast.

NOVEMBER 26.—Poland—Russia and Germany both claim victories at Lodz, with the destruction of several hostile army corps. **Naval**—The British predreadnought *Bulwark* blows up and sinks in the Thames; cause as yet unknown.

THE NEW SIEGE-BATTERY

Chapin in the St. Louis Republic.

MORTALITY IN THIS AND OTHER WARS

OFFICIAL LISTS of casualties have been so incomplete or non-committal, and unofficial estimates so patently exaggerated, that an effort to compute the mortality of the present war on the basis of some of its predecessors is not unwelcome. German war lists of dead and wounded published last month totaled about 500,000. English casualties of 60,000 have been admitted. In London, Mr. Hilaire Belloc, in *The Daily News*, fixes "the lowest conceivable minimum" of German waste by battle, sickness, fatigue, accident, and capture at 1,750,000. There has been a tendency among French and English writers to put their own losses below those of their enemy because of the Germans' massed frontal attacks. Yet many now bear witness to the deadliness of German artillery, and officers have been quoted who think the two sides have lost in about equal proportions. The *New York Tribune* reckons German losses up to November 15 at 850,000 in the West and 250,000 in the East, while "Great Britain has lost 70,000 men and Belgium 100,000, so that the losses of the Allies in the western theater may be put at 870,000. An *Evening Post* war writer figures that Germany has had 250,000 men killed out of a total loss of 800,000, and assumes a similar ratio of loss on the Allied side. Less responsible writers speak of a total loss of 5,000,000 men in the war up to date. In the midst of so much rumor, conjecture, and exaggeration on the one hand, and reticence on the other, Mr. Edward Bunnell Phelps, of *The American Underwriter* (New York), concludes that "the average mortality of the most recent of great wars unquestionably affords the soundest basis for any attempt at forecasting the mortality of the present war." He has confined his investigation to the experience of the Union Army in Our Civil War, the German Army in the Franco-German War, the British Army in the Anglo-Boer War, and the Japanese Army in the Russo-Japanese War. The average

showings in each case, he thinks, "afford at least some means of intelligently guessing at the possible mortality of the present war, and reveal the sheer absurdity of many of the wild estimates now going the rounds." And we read further:

"The great improvements in sanitation and in army medical and surgical methods, and the more or less continuous decrease from the time of our Civil War in the percentage of deaths in war-time due to disease, would naturally suggest that the total death-rate of this great European War would be much lower than the average for previous wars of the last half-century.

The clean-cut penetration of the modern steel-jacketed bullet, and the self-cauterizing effect of the increased velocity behind it, would also indicate a lower general war mortality. On the other hand, the application of newly discovered forces to the mechanism of war and its consequent elaboration, the practically continuous fighting in the early months of the war, and the German pace-making plan of mass-fighting would seem to offset, and more than counter-balance, the promises of a decreased mortality. Personally, I am inclined to believe that the death-rate of the present war is bound materially to exceed the average death-rate of recent great wars, if present conditions continue to prevail for any considerable length of time.

"Assuming for the moment that the first three months' fighting actually resulted in no higher mortality than was the average for the four great wars mentioned, namely, about 90 per 1,000 men per annum, the

total number of deaths from all causes in all the fighting armies from August 1 to November 1 last would have amounted to but 225,000, even if the average fighting force of all the warring nations did reach the extremely improbable figure of 10,000,000 men, at which some estimates have placed it. It is much more probable that the average strength of the contending armies up to November 1 last did not materially exceed 5,000,000 men, and in that event the war mortality for the first three months would only have approximated 125,000 at the average death-rate of the four previous great wars of the last half-century. Should the war continue for a full year, or up to August 1, 1915, at this rate of mortality the total number of deaths in the contending armies will range from about 450,000 to 900,000, as the average fighting force varies from 5,000,000 to 10,000,000 men."

EGYPTIAN CAMEL CORPS IN REVIEW.

A BRANCH OF THE EGYPTIAN ARMY WHICH SHOWS THAT THE AUTOMOBILE IS NOT TO HAVE EVERYTHING ITS OWN WAY.

LENGTH OF THE WAR

THE PROPHETS ARE BUSY, but display a singular lack of unanimity in foretelling how long the war will last.

All sorts of periods are set, from three months to three years, but it is worthy of notice that the most competent observers, while refusing to set dates, agree generally that this war will be long. The best qualified expert to incline to the "short-term" theory is General Berthaut, Deputy Chief of the General Staff of the French Army, who thinks that "the war will come to an end in another three months, and then not by force of arms, but by force of hunger, together with exhaustion of other means of carrying on the war." While the *Paris Gaulois* gives prominence to this extremely optimistic estimate, the *Kölnische Zeitung* seems to destroy its value by publishing a detailed examination of the resources of the German and Austrian Empires, both in money, provisions, and men, which concludes by showing that the Dual Alliance can throw into the field an entirely fresh army of no less than 18,000,000 troops.

A note of optimism is also prevalent in Russia, where the *Russki Invalid*, the organ of the Ministry of War, thinks that the operations against Austria will be crowned with success when the winter finally sets in, and proceeds:

"The campaign against Germany is a more serious matter, and will probably last throughout the entire winter, while the final crushing blows will be delivered in the early summer. Therefore, if no unforeseen complications arise, it is probable that the war will end before the anniversary of its beginning."

As "lookers-on see most of the game," a Swiss view is interesting, and the *Paris Temps* encourages its readers by quoting the opinion of Colonel Feyler, the military critic of the *Geneva Journal*, who says:

"This is a war of three phases, and the Germans have now entered upon the third and final phase, for they are now on the defensive on both fronts. The first phase was the sudden attack upon France; the second, the combined Austro-German invasion of Russia. The Russians have more than held their own and France is gradually expelling the invader, tho the latter struggles furiously. Has the reader ever seen a salmon netted? The fish exhausts itself in savage efforts to escape the inexorably closing meshes. The salmon typifies Germany to-day."

On the German side are a little chary of fixing dates. Field-marshal Evettovich, of the Austrian Army, in an article in the *Rome Messaggero*, gives 1916 as the limit:

"Next spring England can put another army into the field, and in the summer and fall other belligerents can collect fresh forces, but in 1916 no more can possibly be raised. The entrance of neutral States into the conflict will rather prolong than shorten the war."

An unnamed German journalist is quoted by the *Paris Journal des Débats* as saying that "the German Government has calculated that the war would last exactly nine months, but that the unforeseen resistance of the Belgians would prolong it by just two months." A more distinguished authority, the King of Bavaria, in reviewing the cadets at Munich, said, according to the *Berlin Lokal Anzeiger*:

"The war will last a long time, but we shall not rest until the enemy is beaten off the battle-field, and we have secured a peace that will protect us against attack for a long time to come."

The *London Daily Telegraph* publishes a long and interesting article by an American, long domiciled in Germany, who says:

"I have every reason to believe that the supply of gunpowder is causing the General Staff the gravest anxiety. They lack the saltpeter and nitrates necessary for its manufacture. They carefully avoid giving direct answers to all questions on this subject, and prefer to turn them away with some feeble excuse. When asked why they are using old ammunition they say, 'We wish to get rid of it.'"

"I do not mean to imply that there are not still immense reserves of ammunition in the country, but from my inquiries I am convinced that, even on a scale vastly below that of the present time, they will, for this reason alone, be unable to carry on the war after next June. I am sure that the most vital considerations of this struggle are Germany's lack of copper and gunpowder, or the essentials necessary to make the various explosives now in use."

The *London Daily Mail* gives prominence to an estimate of a distinguished French officer, whose name, it says, can not be divulged, but who is in a position to make such an estimate, that the Germans will not be driven back over the Rhine until February, 1916, and that peace will not be concluded before 1917; the *London Standard* is equally pessimistic in saying:

"The foolish talk of the war being practically ended and the Germans already hopelessly beaten is unworthy of brave and intelligent people, and should be severely discountenanced. Germany is still (unfortunately for the world) possess of the most formidable war machine that has ever existed."—*Translations made for THE LITERARY DIGEST.*

AUSTRO-HUNGARIAN VIEWS

NEVER VERY NEWSY, from an American standpoint of news values, the Austro-Hungarian papers since the war began have been even more bald than usual in their chronicle of actual events. But what they may lack in the way of news they very amply supply in the way of views. The war is discusst from every angle, future possibilities and readjustments are explored, brilliant accounts of vivid incidents are plentiful, but cold, hard news-facts are reduced to a bare minimum.

A few extracts from two of the leading German papers of the Dual Empire may be of interest. The Vienna *Fremdenblatt*, in discussing the situation of the Allies, says that France and England are at present like a rabbit that is caught between the attacks of a weasel on the earth and a hawk in the sky. England, it says, has built up the confidence of her people by a deliberate system of falsehood on the part of her Government, and the very foundations of the Empire will crumble when once the truth is revealed. The article continues:

"The frantic panic in which London contemplates the raids of German air-ships, the menace of the German invasion, the uprising of the Moslem world, and the revolts in the Colonies—all these and many other dangers are shaking the very fabric of the British Empire, and are destroying in every part of it the artfully fostered belief in old England's world-controlling mission and power."

The *Fremdenblatt* quotes and comments on an article in the Berlin *Lokal Anzeiger* painting a lurid picture of the English soldier in France, which reads like a reply to British pictures of the German soldier in Belgium. The English soldiers, it says, are "drunken ruffians," and are like the plagues of Egypt. We read:

"The landing of the English troops is a sad calamity for the French departments of Pas de Calais and Seine-Inférieure. John Bull abuses the generous hospitality of France and behaves as if the capital belonged to him, absolutely unmoved by the

famine that rages in the coastal cities from Dunkirk even to St. Malo. Lamentation and want appear on all sides. One constantly hears English officers say, 'Without us the French would have been lost,' and such utterances are common in the saloons which are thronged with drunken Englishmen. The police are forbidden to arrest these ruffians, and courteous appeals are made in the newspapers to the English commanders to move their men to the front as quickly as possible."

In the Hungarian capital the *Pester Lloyd*, the most influential German paper in Budapest, has an equally strong tendency along this line. As an example we will quote from a remarkable article on England's present situation as a naval Power. The *Pester Lloyd* remarks that England's command of the sea has passed to Germany:

"It is the fine form, skill, and courage of the German sailor that make him lead the world in efficiency. You have seen the blue-eyed youths of Germany at their tasks; you have seen their enthusiasm as sailors. What courage, what seamanship, is needed to carry on the daily routine of the great ironclads, while from without the enemy's shells are piercing the sides of the vessel and every hour of this unspeakably severe labor may be the last of the sailor's life! You have seen the eagerness to volunteer for this murderous service, so great indeed that the crowd overflowed the antechambers of the Ministry of Marine."

In another article the *Pester Lloyd* reviews the Anglo-Japanese Alliance, and says that Japan and Great Britain have agreed upon the partition of China:

"The object of the Anglo-Japanese treaty was that Great Britain might rely upon the assistance of the little island kingdom in maintaining and defending her position as a great Asiatic Power. Japan expected in return moral support; for, after the resentment excited by Japan's successes in the East, had it not been for the support of the British Empire, the Powers would have forced back Japan into her former insignificance. The question now is, How can Japan be prevented from realizing her predatory designs in China? Can it be that the savior of Asia will be the United States?"—*Translations made for THE LITERARY DIGEST.*

HIS MASTER'S VOICE.

THE KAISER (to Turkey, reassuringly).—"Leave everything to me. All you've got to do is to explode."

TURKEY—"Yes, I quite see that. But where shall I be when it's all over?"

CLOSING THE NORTH SEA

MINE AND COUNTERMINE is the naval policy of Germany and Great Britain in the North Sea, and this has been carried to such an extent that the British Admiralty has been compelled to issue a statement describing this body of water as a "military area," and warning neutral ships that they enter it at their own risk. A passage has been marked

RIDGING THE SEA OF TRAFFIC-DESTRUCTORS.

Exploding mines that have threatened ships of war and trade after they have been swept together by trawlers, whose crews brave the danger for a substantial reward.

out along which the English authorities are prepared to guide merchant vessels under British pilots and assure them reasonable safety. The rest of the prohibited area is now to be sown with mines which will render the German Navy powerless, say the English press. In commenting on this action, the *London Nation* says:

"The indiscriminate sowing of mines on frequented trade routes by the Germans, who do their work under the disguise of a neutral flag, has compelled the Admiralty to close the North Sea. The German policy had no military end in view; it aimed solely at the destruction of all commerce, whether neutral or British, and had rendered even the waters of the north of Ireland perilous."

The *London Daily Chronicle* considers that this action was unavoidable, and, while regretting the hardship to neutral commerce, thinks that—

"The German mine-laying, since the first weeks of the war, has been done not by war-ships, but by fishing-boats and merchantmen flying the Dutch, the Norwegian, or some other neutral flag. This is no fault of the neutral countries, who can not prevent Germans from hoisting false colors, and who have so far, indeed, been the chief sufferers, more neutral merchantmen than British having, we believe, been sunk by German mines up to the present date. At the same time it makes it nearly impossible for our Navy to stop the practice by a mineless blockade. Now that the Germans have gone so far as to sow with unanchored contact-mines the deep waters of the Atlantic trade routes, it has become necessary to wall their ships in more closely. A single German mine-carrier flying a neutral flag could in this way sow death in the path of every passenger-liner between Europe and America, quite irrespective of whether its flag was British or neutral, and whether its passengers were Canadian soldiers or American citizens."

After regretting that the Hague Conference did not formulate more stringent rules against deep-sea mining, the *London Times* opines calmly that the Germans would not have observed them in any case, and that the present action of the Government is therefore justified, and considers that—

"We may fairly expect friendly nations to appreciate our reasons for vigorous action. The conditions of modern maritime warfare, at all events as practised by Germany, call for new measures. We were prepared to fight in accordance with the humane principles which our representatives formulated. We can not be bound by rules which our adversary disregards."

Notwithstanding anathemas from England, the German papers show no contrition as far as the mines are concerned, but congratulate the nation on the success achieved by their use.

THE SEA PERILOUS: IS IT TO BE THE "NORTH SEA" OR THE "GERMAN OCEAN"?

IT IS NOW A CUMED AND MINED LAKE FROM DOVER TO ICELAND, AND ALL SHIPPING MUST ENTER AND LEAVE BETWEEN DOVER AND CALAIS.

GIVING THE KING AND QUEEN AN ENTHUSIASTIC SEND-OFF AFTER THE INSPECTION OF THE DOMINION TROOPS ON SALISBURY PLAIN.

THE WAR AS RUSSIA'S SALVATION

UPON THE BRINK of revolution, Russia was saved from civil strife only by the Kaiser's declaration of war against her. Such is the view of an English publicist who has had a long and close acquaintance with the land of the Czar. He signs his article "Anglitchanin," the Russian word for "Englishman." In the *London Contemporary Review* he describes how, upon his arrival in Petrograd,

"One hundred and twenty thousand workmen were on strike, and (this is the point) they were not on strike for higher wages. In no single case did the men make a demand from their masters. In no single case had a man gone on strike because of a visible grievance which his master could put right. No concession by the masters could have brought the men back to work. The only answer they returned, when asked why there was a strike, was that they were dissatisfied with their lives, with the present conditions of the workingman, and that they intended to disorganize the State until these conditions were altered. . . .

"Things seemed to the Russian Government about as bad as they very well could be, and orders were actually given for the severest possible repressive measures, which would perhaps have involved a large-scale battle, probably a massacre, certainly a state of war. . . .

"The moment it became clear in Petersburg that Germany was determined on war, the repressive measures were countermanded, two days before they were to have taken effect, and the workmen went instantly and quietly back to work. Many of those who were not called to the colors by the mobilization orders themselves volunteered for the front."

The actual declaration of war was greeted by a great outburst of enthusiasm. He describes the demonstrations in the streets, the appearance of the Czar—unguarded—and says:

"There could be no doubt of the sudden and genuine unity of feeling among the people. Even the police, usually hated, were no longer regarded as enemies. I myself saw a detachment of mounted police heartily cheered in the Nevsky Prospect by the crowd. They had probably never been cheered before in their lives."

He scouts the idea that Russia had any aggressive designs, and gives a quaint proof of his assertion:

"I have heard it said that Russia wished for war, and made it inevitable, and that a proof of this may be found in the surprising speed with which she was able to mobilize. She did, indeed, mobilize with surprising speed, but that is, as it happens, a proof that her intentions had not been warlike. No one was more surprised at this speed than the officials whose busi-

ness it was to manage the mobilizations. The plans for mobilizing on the German and Austrian frontiers were so old that the officials found that things were being done twice as quickly as they had expected, because, forsooth, they had omitted to consider the fact that the speed of trains had been nearly doubled since the plans were made, and that there were now double lines where before had been but a single track."

Most significant of all is his account of the changed political and social relations of the Russian people, and he predicts that Russia, as we have known it in the past, will disappear with this war. He cites instances where proscribed revolutionaries are at this moment working hand in hand with their former oppressors with the greatest cordiality on both sides:

"For example, the officials superintending the commissariat department found their arrangements disastrously inadequate, and were pulled out of their difficulty by a very able revolutionary who is now one of the Government's most valued advisers. Much of the Red Cross organization is in the hands of revolutionaries, and revolutionaries (only lately under the supervision of the police, who made a habit of searching their houses) now sit on the committees, in some cases controlling them, which deal with the housing and feeding of the women and children whose husbands and fathers have gone to the war. It is so throughout. It is impossible for those who do not know the conditions to realize the extraordinary nature of these events. But it is open to all to foresee their inevitable result."

"That result will, certainly, be a changed Russia. There have been writers, both English and American, who have said that England and France, the two free countries, were, in this war, the allies of the Czar and not of the Russian people. I think they should consider the opinion of the revolutionaries, who are better able to judge of that than we. They, for the first time in their history, are the allies of the Czar. They do not think to lose by it. Nor do they think they are acting against the interests of the people, whose cause they have at heart, and for whose sake they have sacrificed so much. No; they well know that it will be impossible to relegate to their old position of supposed enemies to the State men and women who have served the State so well in her hour of most serious need."

"The revolutionists will have helped in the salvation of their country. They will not, when that salvation is accomplished, be once more under the supervision of the police. They are now actually sharing committee work with their declared opponents. When the war is over, they will be left with an influence in the government of Russia, not derived from fear. The Czar will find himself at the head of a State much more like that of England in its constitution than could have been foreseen in recent years. The throne will be strengthened by widening its base, not by increasing its height."

SCIENCE - AND - INVENTION

FEEDING THE WARRING NATIONS

THE EUROPEAN food situation, with special reference to the war and to its probable future developments, is discussed in *The American Review of Reviews* by Prof. T. N. Carver, of Harvard, who is also "adviser in agricultural economies" to the United States Department of Agriculture. Professor Carver has been much occupied of late in creating, under President Wilson's Administration, the "Bureau of Markets and Rural Organization." Other officers of the Department have collaborated in preparing the article, and the interesting maps, in particular, are from data on file there. Professor Carver ridicules the assertion, heard frequently before the outbreak of war, that great bankers could have prevented it by refusing to finance it. That, he says, was very much like saying that the owners of horses, or hay, could prevent war by refusing to let the Government have them. A Government at war can get anything within its reach, and the only thing that admits of discussion is whether the necessary supplies exist or not. Compared with this problem, he assures us, even that of financing the war is of minor importance. We read:

"The question of food, not only for the armies, but for the non-fighting population as well, we will admit to be of equal importance with that of men or ammunition. But it must be borne in mind that the question of food is not a question of living as well in time of war as in time of peace. It is rather a question of finding the basic necessities of life. A people who would prefer to be whipt rather than undergo a change of diet or give up luxuries will probably get what it prefers. It is therefore important that we study the available supplies of these basic necessities before jumping to the conclusion that any of the warring countries can be starved into submission."

Professor Carver then cites figures showing the production of staples in the now belligerent countries in times of peace. In 1913, the per-capita production of wheat and rye was 1.33 bushels in the United Kingdom, 9.45 in France, 12.34 in Russia, 10.04 in Germany, and 7.73 in Austria-Hungary. In 1912 Britain raised 4.73 bushels of potatoes per inhabitant, France 13.94, Russia 8.35, Germany 28.40, Austria-Hungary 13.31. The next question to arise, says Professor Carver, is: Can each of the countries involved maintain in time of war the normal rate of production? There is, at present, he thinks, no sufficient reason for doubting it, altho much depends, of course, upon where and how the fighting occurs. He says:

"If any of the countries should be overrun by invading armies which sweep across wide areas, destroying crops as they go, after the manner of Sherman's March to the Sea, it would upset all calculations. Barring such contingencies, there is no very good reason for supposing that any country at war will permit its supplies of the necessities of life to run short if it is possible to prevent it. It would be as great a blunder to allow the

food-supply as to allow the supply of ammunition to fail. We can expect, therefore, that nothing short of physical impossibility will stand in the way of production.

"The ordinary campaign, which is not definitely planned to destroy crops over wide areas, is not to be considered as of more than local importance in reducing production. It is to be classed along with hail, winds, and floods, which occur every year over areas which seem large in themselves but are a small fraction of the total producing area. A glance at the accompanying maps, showing the areas of agricultural production, will convince any one that the campaigns thus far have touched only a small fraction of the total producing area of any crop. Sugar-beets

are probably hardest hit, because much of the fighting has been in a region of dense production.

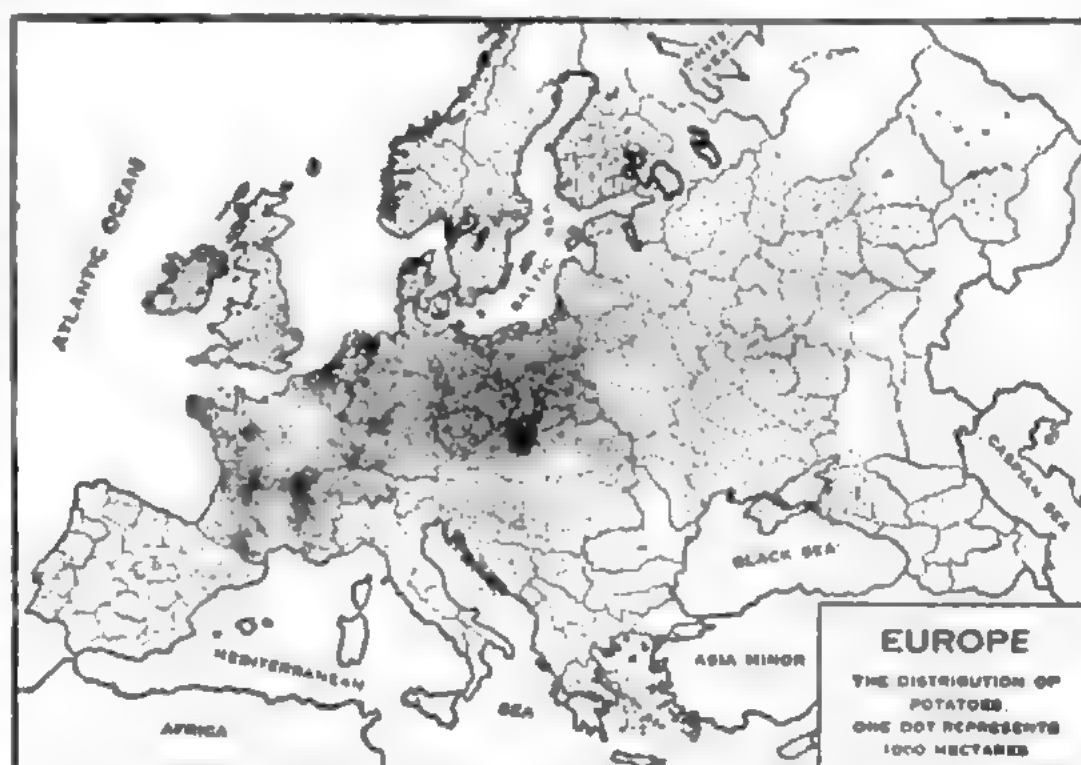

"The expectation that men will not be available for the planting or harvesting of crops will come true only in the most extreme cases where a country is making its last stand in defense of its national existence. If each country puts her entire available fighting force in the field, she will still have left her women and her old men and boys. As a matter of fact, all reports indicate that there is a surplus rather than a dearth of labor. That is, men are out of employment. This would naturally follow from the closing of factories which are not producing basic necessities. The fact that the peasant women in all Continental

countries are accustomed to working in the fields is of genuine importance here. It will involve no change of custom and no shock to their sense of propriety if increasing numbers of women should help with farm work. Mr. N. C. Murray, of the United States Department of Agriculture, is authority for the statement that agricultural production in the Balkan States was not much affected during their war.

"As to the old men and boys, we may be very sure that if they have to be withdrawn from any industries it will be from those which are not necessary to national existence. That is, they will be withdrawn from those which produce luxuries rather than necessities. In other words, the consumers will give up luxuries. The people who are unwilling to do this will probably be the first to sue for peace. That this abandonment of luxuries is already taking place is evidenced by the fact that many indoor industries are shut down, creating a surplus of laborers available for the outdoor industries.

"Another factor to be considered is that Germany, Austria, and Russia produce more than two-thirds of the beet-sugar, and almost one-third of all the sugar, both cane- and beet-, of the world. Both Germany and Austria are heavy exporters of sugar. In case their exports are cut off, and their imports of other food-stuffs as well, they will undoubtedly devote a part of this land, and it is the most fertile land in each empire, to growing crops for home consumption."

Farm machinery, Professor Carver goes on to note, is a means of saving labor. No European country has ever lacked ingenuity in designing or making machinery, and yet they do not use much of it on the farm, because labor is abundant and cheap. If the war makes farm labor scarce, the inventors could find ways of economizing it through superior tools and machinery. And

THE POTATO MAP.

Showing the principal areas of a crop that is of great importance to Europe. Germany is seen to be far better supplied than any other country. The maps with this article are reproduced by courtesy of V. C. Finch, Madison, Wisconsin.

yet if the army absorbs a large share of the horses, the scarcity of power will prevent the wide use of machines. The writer pursues the subject thus:

"How many of us realize how rapidly farm machinery spread throughout the North during our Civil War? The reaper, mower, thresher, corn-planter, and cultivator were all in use before 1860, but they multiplied more during the next five years than during the whole preceding period. One result was that agricultural production in the North increased every year of that war. In the State of Indiana, to take a single example, the wheat crop increased from fifteen million bushels in 1859 to twenty millions in 1863, in spite of the fact that, during the latter year, one in every ten of her male population was in the army. But the North had an abundant supply of horses and they were relatively cheap. It was merely a matter of finding ways of substituting horse-power, which was abundant, for man-power, which was scarce. If horse-power becomes as scarce in Europe as man-power, it is difficult to see what else can be substituted.

"The possibility of readjusting the standard of living in time of war has already been mentioned. This could be done in such a way as to gain more subsistence from a given acreage of land by substituting heavy-yielding for light-yielding crops; or in such a way as to gain more subsistence from a given expenditure of labor, by substituting crops which require little care for those which require much care. . . .

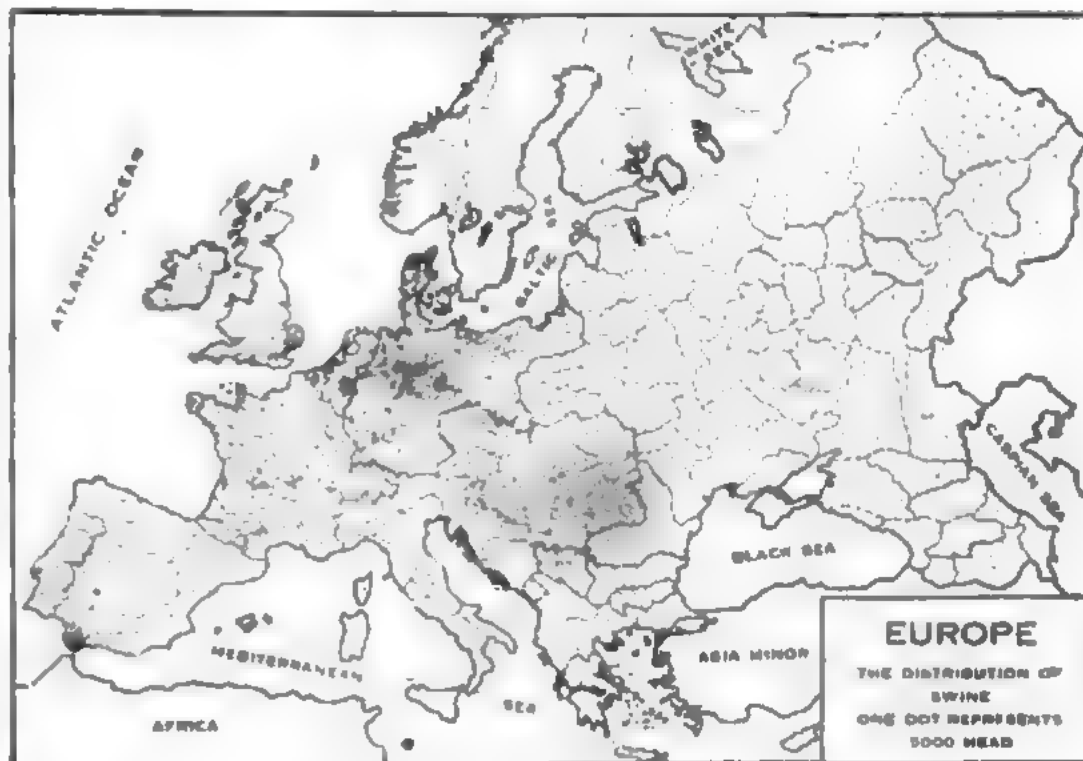

"On the whole, therefore, in the absence of effective blockades, or of wholesale devastation and pillage, there is little ground for hoping that any of the nations involved will be forced to sue for peace because of a lack of food-supplies. The chances are that the war will have to be fought to a finish on the fields of battle. We must prepare ourselves to believe that they who are finally beaten will be beaten by slaughter and not by starvation. The possible shortage of horses, if it becomes a factor at all, will be felt most acutely by the armies in the field, and will therefore be a factor in winning or losing battles rather than in supplying food."

In the same number of *The Review of Reviews*, Dr. Bernhard Dernburg, the Prussian statesman and banker, reviews in detail Germany's food resources and finds that his country has a supply of bread and meat amply sufficient to feed both the army and civil population for two years. Then, he says:

"The war will bring out any number of devices—processes that have been too expensive so far in competition—which will be taken up and made more perfect. Products will be turned

DERAILING A RAILROAD

NINETY MILES of perfectly good rails are to be pulled up in western New York and sold for what they will bring. They and the road-bed on which they lie represent an investment of two millions or so, but no one can be found who will take them as a gift, while as old iron they will

EUROPE'S PORK-SUPPLY.

fetch a little something. The road whose rails are thus to be rudely torn from their bed forms a part of the Buffalo & Susquehanna, and the action is taken on order of the New York Supreme Court on petition of the bondholders. Other roads with easier grades have taken its coal trade, and without it this part of the railway does not pay. Its proposed annihilation raises some interesting questions. Says an editorial writer in *Engineering News* (New York, November 5):

"Undoubtedly, the bondholders have the right to stop operating an unprofitable property and to get what little salvage they can out of it by taking up the rails. This salvage will be small, however, for, under present market conditions, relaying rails are salable only at a very low price.

"The abandonment of the road will be a serious matter to farming communities along it which depend upon it for transportation. The road-bed and tracks are in good condition, and represent an investment that could not be replaced, probably, short of \$2,000,000.

"Residents along the line of the road appealed to the New York Public Service Commission. Through the efforts of that body, the execution of the Court's order has been postponed for one month. It is hoped that prior to December 1, the date at which the Court's order is now scheduled to take effect, some one can be found willing to take over and operate the road.

"Of course, it is impossible to operate a road with thin traffic, such as this line has, at any such low rates per passenger-mile and per ton-mile as prevail on roads which do a large business. It would be far better for the farmers along the line to pay whatever rate is necessary to keep the road in operation rather than have it stop operations entirely. More economical methods of operating the road could doubtless be introduced, such as substituting independent motor-cars for regular steam-locomotive train service.

"Such instances as this form a useful lesson as to the inevitable result where a railway is unable to earn enough to pay its operating expenses and make some return, at least, to those who have furnished the money to build it.

"The railways are indeed public-service corporations and as such obliged to render reasonable service to all alike, so long as they continue in operation. But when any railway becomes unprofitable to its owners and they can see no hope for future profits, they have the undoubted right to stop operations, take up the rails and sell them for scrap."

CATTLE IN EUROPE

to use that have never been thought of before. Like a good housewife who must get along suddenly upon a limited stipend per week, because some hardship has befallen her husband, so a nation, convinced of its good cause, and fairly successful in arms up to the present, will find its way and be able to buck up against the humanitarian English proposal of starving it out."

FITTING THE SCHOOL TO THE CHILD

HAS OUR SYSTEM of education been starting at the wrong end? Instead of determining upon a curriculum and then putting every child "through" it, should we not first study the child and then ascertain just what training he should receive? It would appear as if educative methods

had been groping about in this direction for some time. The substitution of optional for required courses is our response to the demand in higher studies. In the primary school we are going further every day in the direction of treating different kinds of children differently. A card-catalog of all the children in a community, containing the record of each since birth and enabling the teacher to give each the treatment he most needs, is already the pedagogic ideal of some authorities. A practical step is described in *The Scientific American Supplement* (New York, November 14) by Sidonie Matzner Gruenberg, under the title, "An Experiment in Organic Education: Making the Course of Study Fit the Child." The article is

Courtesy of "The Scientific American"

MRS. M. L. JOHNSON.

A teacher who makes the school fit the child, rather than the child the school, on the idea that "development is the only true education."

a description of the methods used by Marietta L. Johnson in her school at Fairhope, Ala. Says the writer:

"The fundamental idea in the 'organic' system of education is that 'development is the only true education.' As an organism the child in his development passes through fairly definite stages, in each of which certain instincts and needs are prominent. The school should therefore seek to meet the requirements of the child in each stage; thus alone can his further development be assured. Theoretically, all schools follow this principle. But Mrs. Johnson is the only educator in this country who has consistently followed this through all the grades, and on all sides of the child's nature, and in connection with all of the school's work.

"In the early years the child's instincts call for freedom and much activity; Mrs. Johnson keeps the children out of doors as much as possible and lets them do everything that children of that age care to do. Since the large muscles develop before the smaller ones, and since control can be best acquired when the muscles are developing, the younger children in the organic school are engaged in gardening, gymnastics, stone-throwing, and other games long before writing is thought of. The instinct to make things is exercised by opportunities to work in clay, clay-board, water-colors, and weaving. That younger children are far-sighted is recognized in the character of the activities, and no close work is put before them.

"All these things sound very much like what is being done in thousands of other schools in this country and abroad. But these things are done in other schools spasmodically and as features added to the traditional course of study. Here they constitute the very heart of the course of study. Mrs. Johnson has done exactly what pro-

gressive educators have for years told us should be done, namely, she has made the course of study fit the child instead of trying to make the child fit the course of study.

"Instead of making requirements for the child to meet, the organic school accepts each child as a personality and offers him an opportunity to do the best he can every day. The best of one child is not the same as the best of another child; one excels in this direction, another in that. And every child has more power in one direction than he has in another. Mrs. Johnson does not brand a child as stupid because he is weaker in arithmetic than his neighbors or because he is slower in a running-match. 'The test of the school,' she says, 'is the condition of the child. If every child is happy and busy and healthy, all is well.'"

This idea of free opportunity, we are told, is carried so far that the school keeps no record of grades or achievement or attendance or promotions. Promotion is continuous; every child does the best that he can and stays with his own group. There is no truancy, because there is no temptation to stay away. The school is the most interesting part of the child's experience. To quote further:

"The absence of grading and of examination suggests to most people the absence of standards. But Mrs. Johnson has very definite standards, altho they are not the same as those we have acquired from the schools and colleges. Mrs. Johnson's standards are a healthy body, an alert and active mind, and a sweet spirit. And all of the work at the Fairhope School is planned to produce these three sets of results.

"For the health of the body there is an out-of-door activity adapted to the development and the strength and the needs of the child. For the mind there are the acquaintance with nature at first hand, the solving of problems in the making of things, the controlling of forces and of materials, the mastery of quantity in the measuring and weighing and calculating, the learning of stories from history and from literature, with their instinctive dramatization. There is constant translation of words into thoughts and actions. Finally, the health of the spirit is ministered to by the provision of 'sincere experiences' in relation to other children and in relation to the forces and materials of nature and industry. There is joy in the work because the work has meaning. Mrs. Johnson sees very clearly that half-hearted work is insincere, and that the attempt to develop 'will-power' through arbitrary requirements more often cultivates dishonesty."

There are no set requirements for the first six years of the school. When an opportunity to read is presented, the children embrace it eagerly because they have learned that books contain a great deal that they care about and because health makes the task easy. Books have never been associated in their minds with anything disagreeable or burdensome. They easily learn also to write, since they have both muscular control and

Courtesy of "The Scientific American"

WHERE SCHOLARS MAKE THE SCHOOL.

Mrs. Johnson's pupils learn to use their arms and hands before their fingers are trained to hold the pen, yet they are not behind the pupils in the regular schools.

interest. Mrs. Johnson holds that an institution has no right to ask "What do you know?" "What have you done?" "Where are your credentials?" It should inquire instead, "What do you need?" "How may we serve you?" The "standards" of an institution are thus measured by its services, not by its requirements. We read further:

"The first group of children with whom Mrs. Johnson began her experiment have reached the high school. In spite of their late start in reading, writing, and arithmetic, they were up to the 'standards' set for children in the regular schools, and excelled the others in health, in intellectual power, in initiative, enthusiasm, and spontaneity.

"This summer there was conducted a demonstration class and a normal class in the principles of organic education, at Greenwich, Conn., for the second time. Here teachers had an opportunity to become familiar with what is perhaps the most significant experiment in education yet undertaken in this country."

GRAVITY AS A SIDE PARTNER

GREAT business concerns are now allowing the earth's attraction to move their goods for them, from one department to another, whenever this is possible. In other words, boxes and parcels are allowed to slide down inclines or spirals from a higher story or loft to a lower one. Gravity, we are told by a writer in *Industrial Engineering* (New York, November), is the cheapest motive-power in the world, and, whenever possible, material should be handled by its means. This dictates an arrangement of buildings which will take the fullest advantage of the use of gravity in the transfer of finished and semi-finished material from one department to the next. He goes on:

"The ideal arrangement in such a factory is to have the raw material delivered to the top floor and the first manufacturing process carried on there. The final and intermediate manufacturing processes should be located upon the lower floors, with the shipping-room and finished storerooms on the ground floor. Material in process may then be transferred from one department to the next and to the finished storeroom or shipping-room by means of chutes. This arrangement eliminates all expense for motive-power, upkeep, and repair of conveyors, belts, and other transportation devices.

"The spiral gravity conveyor illustrated herewith has been developed . . . to fill the demand for a method of transferring material from one elevation to another with a minimum of expense and space required for the transferring medium. This conveyor consists of a helix formed of steel plates neatly fitted

together to give a smooth surface over which goods in process of transference will slide easily and smoothly. The pitch of the helix is such as to insure that any material placed upon it will slide downward to the outlet rapidly and yet at a rate of speed which will not be detrimental either to the goods themselves or to any material or package with which they may come in contact

during their descent. Steel sides confine the material on the conveyor to the surface of the helix. These sides, also being closely fitted and smooth, offer no obstruction to the rapid and easy passage of material."

These conveyors, we are told, are built in two types, the open and closed. Access to a conveyor of the open type may be had at any point in its length. The closed type is built around a central stem within a steel tubular shell. The open type is best adapted to handling heavy, bulky merchandise such as large boxes, barrels, factory products, etc. The closed type finds its widest field in the handling of small articles and packages, as in department stores. To quote again:

"This type of conveyor possesses considerable flexibility in the arrangements possible. Thus in the closed type, the three helices may be arranged to deliver to three different floors, each one either receiving goods at all the floors which it serves, or one helix may serve for transportation between two widely separated departments being inaccessible to others. A given helix may also be arranged to deliver from one department to another on the next floor and one to receive goods from this next lower floor and deliver them to departments still farther down but without the possibility of the material loaded at the first floor being delivered to the last one without previously stopping at the intermediate department.

"The number of floors which can be served by this type of conveyor is practically unlimited, and its capacity is

limited only by the speed at which articles can be removed at the outlet. Where the service is practically continuous and large quantities of material are handled at all hours of the day, or even where large quantities are moved within a short period of time at irregular intervals during the day, it is advisable to install in connection with the gravity conveyor an apparatus for rapidly clearing the outlets. For this purpose a belt conveyor is frequently advisable.

"The fire risk which would naturally exist with a flue of the character of this conveyor extending through the several floors of the building is minimized by a complete equipment of automatic fire doors. These doors which serve as the inlet openings to the conveyor are counterbalanced, the counterbalance being attached to the door by means of a fusible link. Upon the occurrence of fire within the vicinity of the conveyor, the fusible link liberates the counterbalance, allowing the door to close, and thus completely isolating the conveyor from the fire. Hinged drop doors similarly counterbalanced cover the outlets.

LETTERS - AND - ART

SHAW DRUBBING JOHN BULL AGAIN

MR. BERNARD SHAW, whose chief mission in life has seemed to be to chastise the English public by merciless polemic or satirical drama, is not at all deterred by England's trial by war. He has started in to present in three-page newspaper doses what he calls "common sense about the war." His old-time target, "British hypocrisy," is made the object of many a blow, one of them being an endeavor to prove that England is as much a militarist nation as Germany, and that the Junker party in England probably as ardently desired the war as the similar party in Berlin. He sees in the present war spectacle "the Junkers and Militarists of England and Germany jumping at the chance they have longed for in vain for many years of smashing one another and establishing their own oligarchy as the dominant military power in the world." He even goes into an elaborate argument to prove by literary citations, beginning with "The Battle of Dorking," that England began the talk about "The Day" when the account between the two countries should come up for settlement, and consequently too much blame can not be imputed to the Germans for keeping alive the same sentiment by making it the object of their most observed toast. Mr. Shaw also asks us to believe that the much-blamed von Bernhardt learned most of his lessons in *Weltpolitik* from England, for "his chief praise in this department is reserved for England." He quotes von Bernhardt as saying that English journalists had taught him "the doctrine of the bully, of the materialist, of the man with gross ideals; a doctrine of diabolical evil." "Officially, the war is Junker-cut-Junker, Militarist-cut-Militarist; and we must fight it out, not *Heuchler-cut-Hypocrite*, but hammer and tongs," says Mr. Shaw, and naturally raises a storm of protest on two continents. His first antagonist on the field is Mr. Arnold Bennett, who in taking exception to parts of Mr. Shaw's article says that "the objectionable part of the manifesto is so objectionable in its flippancy, in its perversity, in its injustice, and in its downright inexactitude as to amount to a scandal." In the *New York Times* Mr. Bennett writes:

"Shaw's bias is evident wherever he discusses the action and qualities of Great Britain. Thus he contrasts Bernhardt's brilliant with our own very dull militarists' facts, the result being that the intense mediocrity of Bernhardt leaps to the eye on every page, and that events have thoroughly discredited all his political and many of his military ideas, whereas we possess militarists of first-class quality.

"Naturally, Shaw calls England muddle-headed. Yet of late nothing has been less apparent than muddle-headedness. Of British policy, Shaw says that since the Continent generally regards us as hypocritical, we must be hypocritical. He omits

to say that the Continent generally, and Germany in particular, regards our policy and our diplomacy as extremely able and clear-sighted. The unscrupulous cleverness of Britain is one of Germany's main themes."

Mr. Shaw gives a Shavian version of the diplomatic history of the war in some of its aspects, and draws Mr. Bennett's accusation that it is a "staggering travesty." His main point is that Sir Edward Grey could have possibly averted the war by following the suggestion of Sazonoff that he tell the Kaiser if Germany showed fight, England would fight also. "The odds against the Kaiser will be so terrible that he may not dare to support the Austrian ultimatum to Serbia at such a price." On this point Mr. Bennett breaks out against Shaw:

"He accuses Sir Edward Grey of sacrificing his country's welfare to the interests of his party and committing a political crime in order not to incur the wrath of *The Daily News* and the *Manchester Guardian*. This is totally inexcusable. . . . I think Grey was the best Foreign Secretary that the Liberal party could have chosen, and that he worked well on the only possible plane, the plane of practicality. I am quite sure he is an honest man, and I strongly resent, as Englishmen of all opinions will resent, any imputation to the contrary.

"As for the undemocratic control of foreign policy, a strong point about our policy on the

eye of the war is that it was dictated by public opinion. [See Grey's dispatch to the British Ambassador at Berlin, No. 123.] Germany could have preserved peace by a single gesture addressed to Franz Josef. She did not want peace. Mr. Shaw said Sir Edward Grey ought to have shouted out at the start that if Germany fought we should fight. Sir Edward Grey had no authority to do so, and it would have been foolish to do so. Mr. Shaw also says Germany ought to have turned her whole army against Russia and left the western frontier to the care of the world's public opinion in spite of the military alliance by which France was bound to Russia. We have here an example of his aptitude for practical politics."

Another Shaw critic, Mr. R. B. Cunningham Graham, enters at this point, writing to the *London Daily News*:

"The controversy between men of peace as to the merits, demerits, causes, and possible results of the great war is becoming almost as dangerous and little less noisy than the real conflict now being waged in and around Ypres. The only difference between the two conflicts is that the combatants in Flanders only strive to kill the body. Those who fire paper bullets aim at the annihilation of the soul.

"Literature is a nice thing in its way. It both passes and gives us many weary hours. It has its place. But I submit that at present it is mere dancing on a tight rope. Whether the war could have been avoided or not is without interest to-day. In fact, there is no controversy possible after Maximilian Harden's pronouncement. In it he throws away the

"G. DON QUIXOTE SHAW."

As renamed in America; others dub him G. Bernhardt Shaw.

—*Cesare* in the *New York Sun*.

scabhard and says boldly that Germany from the first was set on war. Hence it becomes a work of supererogation to find excuses for her, and hence, my old friend, Bernard Shaw, penned his long indictment of his hereditary enemy, England, all in vain."

Mr. Shaw rouses Mr. Bennett's wrath also because he contends that the Belgium point was a mere excuse for England, and that without it she would soon have found another for getting into the fray. "He goes further," says Mr. Bennett, "and continually implies that there was no Belgium point," and "every time he mentions the original treaty that established Belgium's neutrality he puts after it in brackets [date 1839], an obvious barrister's device, sarcastically to discredit the treaty because of its age." Mr. Shaw practically anticipates his own reply: "I am writing history because an accurate knowledge of what has occurred is not only indispensable to any sort of reasonable behavior on our part in the face of Europe when the inevitable day of settlement comes, but because it has a practical bearing on the most perilously urgent and immediate business before us: the business of the appeal to the nation for recruits and for enormous sums of money." Finally, in the *New York Times*, where his earlier article appears, Mr. Shaw has a chance in rebuttal to Arnold Bennett, and he defends his original action:

"Mr. Bennett will not have any of my excuses for his unhappy country. He will have it that the Germans are right in admiring Sir Edward as a modern Caesar Borgia, and that our militarist writers are 'of first-class quality,' as contrasted with the 'intense mediocrity' of poor General Bernhardt."

"If Mr. Bennett had stopt there the Kaiser would send him the Iron Cross, but of course, like a true-born Englishman, he goes on to deny indignantly that England has produced a militarist literature comparable to Germany and to affirm hotly that Mr. Asquith is an honest man whose bad arguments are 'a genuine emotional expression of his convictions and that of the whole country,' and that Sir Edward Grey is an honest man, and that he (Mr. Bennett) 'strongly resents, as Englishmen of all opinions will resent any imputation to the contrary'—just what I said he would say, and that he entirely agrees with my denunciation of secret diplomacy and undemocratic control of foreign policy, and that I am a perverse and wayward harlequin, mischievous, unvarnished, scurrilous, monstrous, disingenuous, flippant, unjust, inexact, scandalous, and objectionable, and that on all points to which he takes exception and a good many more I am so magnificent, brilliant, and convincing that no citizen could rise from perusing me without being illuminated."

"That is just a little what I mean by saying that Englishmen are muddle-headed, because they never have been forced by political adversity to mistrust their tempers and depend on a carefully stated case as Irishmen have been."

"I did with great pains what nobody else had done. I showed what Germany should have done, knowing that I had no right to reproach her for doing what she did until I was prepared to show that a better way had been open to her."

"Bennett says, in effect, that nobody but a fool could suppose that my way was practicable, and proceeds to call Germany a burglar."

"That does not get us much further. In fact to me it seems a step backward. At all events it is now up to Mr. Bennett to show us what practical alternative Germany had except the one I described. If he can not do that, can he not, at least, fight for his side? We, who are mouthpieces of many inarticulate citizens, who are fighting at home against the general tumult of scare and rancor and silly cinematograph heroics for a sane facing of facts and a stable settlement, are very few. We have to bring the whole continent of war-struck lunatics to reason if we can."

A HUMORIST OF OTHER DAYS

SINCE SOMEBODY is humorous now to at least the extent of a column in every newspaper, the personalities of these writers do not loom so large as in days not so long ago. So the passing of Robert J. Burdette, remembered among the humorists of his ilk as "Bob" Burdette, calls for notice as a sort of literary landmark. It is perhaps possible that these men of the column of our own day are much quoted in their own home towns, but the generation to which Burdette belonged were "more widely quoted than the classics," recalls the *New York Evening Post*. Furthermore, Burdette and his fellows had "an important share in shaping our popular philosophy." The roll of these writers is thus called:

"In the old times when nearly everybody who read at all read books, they chose that medium for reaching their fellow countrymen, Artemus Ward and John Phoenix being among the last of this dynasty. The Civil War developed a new line of communication by the rise of the newspaper to a popularity it had never enjoyed before; and the metropolitan press blossomed with special articles, satirizing certain phases of government and politics, by Dowstirka, Nashy, Orpheus C. Kerr, Josh Billings, and others of their school. Then came a small and select company of writers, of the quality of Bret Harte, John Hay, and Mark Twain, who, tho starting in journalism, infused a charming strain of humor into real literature; and these were followed by the group in whose front rank stood Burdette—men whose humorous work gave to the provincial newspaper with which they were connected a stamp of distinct individuality."

"Among the lesser lights in this galaxy, but truly typical, was James M. Bailey, who edited *The News* at Danbury, Conn. His special gift was the quaint description of every-day experiences—the perversity of the stovepipe which the impatient householder is trying to put together; the eccentricities of the domestic hen, the pet dog, or the family carryall. He soon leapt into

national and even international fame as the 'Danbury News Man,' and his little weekly drew subscriptions from Chicago, Denver, San Francisco, and London, and was sold on the street-stands of several large cities. A member of the same group was Charles B. Lewis, of the *Detroit Free Press*, whose imaginary police-court reports, pivoted on the sayings and doings of a functionary named 'Bijah,' made a market for his journal in quarters where till then it had been little known. Messrs. Knox and Sweet, each a humorist in his own right, united forces for the establishment of the *Texas Siftings*, which, after furnishing for some years a fertile resource for exchange-editors all over the United States, presently took its place on the news-stands and in the regular stock of the train-boys; and almost simultaneously grew up the vogue of Opie Read's *Arkansas Traveler* and 'Bill' Nye's *Laramie Boomerang*."

Robert Burdette seems to have been a humorist in spite of himself. "He always declared that he never set out to be 'funny' but that, however solemn his thoughts, he could not resist the appeal of the comical side of almost everything that surrounded him, and the sportive pranks of his pen seemed to be independent of any intent on his part." Moreover:

"His humor lay almost wholly in his forms of expression and in an unexpected collocation of ideas, the effect of which upon the reader was cumulative. In spite of this never-absent tendency, he was also capable of writing forcefully on serious topics, and for a long period, in conjunction with the late Frank Hatton, he made the *Burlington Hawkeye* a power in Iowa politics. Throughout his editorial career he bore in mind a maxim impressed upon him by his first preceptor in journalism: 'It isn't knowing what to put into a paper that makes an editor; it's knowing what to keep out.' He also escaped a temporary

ROBERT J. BURDETTE.

One of the last of our humorists said to have been once "more widely quoted than the classics."

pitfall by sticking strictly to his editorial functions, and leaving the business management in charge of the counting-room—this bit of discretion being the fruit of one unhappy episode of his comparative youth, when he tried his hand at founding a local paper which, as he said, 'the gods loved, tho the advertisers didn't,' and which carried down with its wreck the savings of several toilsome years.

"He became so thoroughly identified with his work in Burlington that, in the mind of the outside public, his proper personality was merged into that of 'the Hawkeye man.' Meanwhile, there had swept over the country a wave of enthusiasm for the lyceum as a means of combined instruction and amusement, and Mrs. Burdette saw here a possible new opening for his talents. As he has told us, he 'wrote a lecture about two hours long—"The Rise and Fall of the Mustache"—and went out and said it without hesitation, manuscript, or remorse.' This experimental effort was so well received that his wife urged him to enter the lecture-field regularly. He demurred somewhat, because of his

chronic remorse and habitual hair-shirt.' It was after he had achieved a notable success on the platform that he was attracted to the East by an offer from the Brooklyn Eagle. About the same time he entered the ministry of the Baptist Church. Impaired health led him later to seek the climate of Southern California, where, as pastor of the Temple congregation, he preached for six years to assemblages which, Sunday after Sunday, crowded the great auditorium of Los Angeles."

GERMAN SAVANTS IN FRANCE'S INSTITUTE

IN THE WELTER of bitter and even ferocious comment so frequent in the European press these days, one meets with grateful surprise a trace of the lost gospel of "sweetness and light" in the *Paris Journal des Débats*. The writer is con-

sidering the reported suggestion that German savants who are members or associates of the French Institute be expelled from it because of a defense of Germany and protest against France and the Allies which was signed by 93 of Germany's foremost "intellectuals." As a patriotic Frenchman he of course condemns outright the whole course of German reasoning in this document, and his sentences would be anything but palatable to the savants across the Rhine, but at the same time he argues that any such harsh action as is proposed, based on whatever grounds and after no matter how long deliberation, could only be identified as the product of angry revenge. True, it would deprive the Germans of a title they would miss much more than they might be willing to admit; but at the same time would not the title itself lose in prestige once its "inviolability" had been broken? It is granted on no flimsy pretext, nor conditionally, the writer points out, and to impair the terms of its donation is to impair the first distinction it affords the recipient.

While there is no doubt that the Institute will not act hastily, the writer fears a rash and irate spirit in the public, who will be making the mistake of the "93 intellectuals" that signed the German protest, and he adds:

"No one would dream of defending the protest of the German intellectuals. Patriotism, it is true, often excuses exaggeration, but it does not permit of the shameless distortion of established facts. The way of the learned Germans is to set down mere affirmations. They seize upon the opposite of a bald truth and thrust it on you without the slightest attempt at proof. It is apparent that these professors and dignitaries . . . are accustomed to be believed on their mere statements by well-trained pupils. . . .

"German savants are specialists who, through method and hard work, attain a meritorious command of their specialty. Yet more and more do they show themselves incapable of the least open-mindedness. To compare them with their rivals in other countries . . . is to compare values that have no common standard. In Germany we find

a physician like Roentgen, but not a 'man' like Pasteur or Berthelot. Even Mommsen, who is unquestionably far in advance of any other German living historian, seems a mediocre mind when compared with Fustel de Coulanges. Mommsen's reasoning powers are marvelous when the Romans are in question, but he reasons like Bethmann Hollweg when his own country is under consideration."

All this is perfectly familiar to us, the *Journal des Débats* writer continues, but is it cause for ruling off the list of the Institute those men among the 93 that signed the protest who have been honored as members or associates of our learned societies?

WHERE CARNAGE HAS BEEN MERCILESS.

Arras, with its sixteenth-century Hôtel de Ville, was under bombardment from October 5 to 8; on the 21st, shells demolished the belfry, and on the 30th another onslaught completed the destruction. Compare the ruins pictured opposite.

diminutive stature—he was only five feet three inches in height and of slender build—and his lack of training as a speaker. He had, he reminded her, no voice, no presence, no gesture; his pronunciation was faulty and his grammar uncertain; but he yielded to her judgment, and plunged in, with the result that for ten years a single lecture earned him a larger income than all his other work. It is characteristic of the man that he always apologized, and apparently felt a sincere regret, for having once turned his freaksome humor loose upon the life and character of so good a man as William Penn. He consoled himself, however, with the reflection that all through his life he had been sorry one day for something he had done the day before. "So instantly," said he, "am I doing penance that I live in a state of

Quite possibly these honors may seem "undeserved," and we may even be a little more reserved in future in dispensing them to "persons who are plainly outside the pale of civilization as we understand it," but, we read:

"Granted that we are dealing with barbarians; yet shall we apply to them that system of reprisal in which they glory? In point of fact, our reprisal would have just this advantage over theirs—ours would be justified. They distort the truth when they say that the destruction of Louvain was a reprisal for the treachery of the inhabitants; but the Institute in excluding the apologists of vandalism would only be making reply to the apology. Nevertheless this is not at all the way to look at the problem. There is no doubt of the moral right possessed by the Institute, but there is doubt of the advisability of using this right."

[The honor that the Institute confers on learned foreigners, the writer goes on to say, is everywhere highly esteemed because this recognition of their works and of their talents stamps their fame with somewhat of "definitiveness." Then he asks:

"Does it not seem that these honors of the Institute must lose part of their high value in losing their very character of definitiveness? By no title that is precarious, conditional, or revocable is the free choice of the Institute fixed upon this or that foreign savant. Of course there are certain personal offenses, of which the French as well as foreigners might be guilty, that would in themselves involve expulsion without debate. In these days of war, however, it must be remembered how difficult it is justly to appreciate the point of view of foreign members who belong to a belligerent nation, especially when we ourselves are on the other side of the trenches."

In conclusion, warning the public against hot deeds of anger, the writer adds that the protest of the German intellectuals may properly be considered not as "the individual judgment" of each member of the Institute, but as a product of conditions, "however reprehensible, antisocial, anticivilized" is that protest.
—Translation made for THE LITERARY DIGEST.

A WORD TO BLOODY-MINDED POETS—If the poets should eventually run short of war themes, they are reminded that the efforts put forth to relieve suffering, no matter what the complexion of the giver's belief may be, ought to furnish a worthy topic. This is suggested by the *New York Commercial*, which is led by some poetic outpourings to note also that "non-combatants are always most bloodthirsty and personally hostile toward a national enemy," and that "the wild tales coming from the front of licentiousness, murder, and rapine find their circulation among those people who are farthest from the front." We read:

"From the banks of the Vistula westward to the coast of the English Channel and beyond to the British Isles there arise the cries of the literary cult purporting to represent the thought, the passions, and the hopes of the people engaged in the present combat. We wonder, for instance, if that widely circulated poem originating in Berlin really represents the sentiment of the German fighters, which, of course, means the German people, against the English. The chances are that the men in the trenches, on the war-vessels, in the German submarines, and on the air-ships know that the English soldier is not only a first-class fighting man, but an enemy to be respected and feared. We have yet to hear that, outside of the people who spoil good white paper with inflammatory thought, the Englishman is any more detested and hated in Germany than is the Frenchman, the Belgian, the Russian, or the Servian. To reverse the picture, we do not believe that the exclamatory product of Grub Street in London, in rime-meter, represents the stolid, phlegmatic, cocksure attitude of the average fighting Briton.

"The German poem on Hate strikes us as about as murderous in the line of flubdub as is that English product from the pen of a railroad station-master in England entitled 'The Day.'

"If the various nations were as sensible, as kindly, as peaceful, and as reasonable as the constituent units of which they are composed there would be no war, and there can be no hope of peace until the mob has been educated to as high a degree as the individuals composing them."

TRAINING THE "INTERNATIONAL MIND"

PRESIDENT BUTLER, of Columbia, has issued a plea to our colleges to set before their pupils the ideal of "the international mind." This ideal he finds necessary to the harmonious progress of the world "in cooperation and in peace." His words are taken by some as a plea for the end of the spirit of nationalism, tho this deduction is elsewhere regarded as forced. In his annual report to the trustees, Dr. Butler returns to a theme that he has previously treated:

"The great war which is devastating Europe has taught

"A MODERN POMPEII": ARRAS OF TO-DAY.

millions of men who have never before given thought to the subject how interdependent the various nations of the earth really are. These international relations are only in part diplomatic, political, and legal; they are in far larger part economic, social, ethical, and intellectual. In seeking out the facts which illustrate these interrelations and interdependencies, and in interpreting them, there is a new and hitherto little used field of instruction which is just now of peculiar interest and value to the American. If the world is to progress in harmony, in cooperation, and in peace, the leaders of opinion throughout the world must possess the international mind. They must not see an enemy in every neighbor, but rather a friend and a helper in a common cause. To bring this about implies a long and probably slow process of moral education. However long and however slow the process may prove to be, a beginning must be made, and Columbia has recently made this beginning definitely and earnestly, and its efforts have met with a cordial response. The international aspect of every great question which arises should be fairly and fully presented, and stress should constantly be laid upon the world's progress in interdependence."

There is nothing in these words, thinks the *New York Evening Sun*, to sustain the interpretation of some newspapers that Dr. Butler pleads for the end of nationalism—"other than bumptious, ingrowing nationalism—for the urging of wider international amity does not presuppose that one should":

"There is a place in the world for nationalism of the wholesome type which stimulates civilizations to excel, and the broadening of a people's mind and sympathies to the point of interracial congeniality does not mean that its truer benefits must be forfeited any more than one may argue that the family is inimical to the State. Sparta, more than two thousand years ago, broke under this latter fallacy, leaving no commensurate virtues. Blood must still be thicker than water without being thicker than mind."

RELIGION-AND-SOCIAL-SERVICE

THE GOSPEL AMONG BELGIAN REFUGEES

NEVER BEFORE, tho he has preached in some large churches, had Mr. S. Levermore, of the London Open-Air Mission, preached in one like the mighty "open-air church" at Folkestone, with its great throng of Belgian and French refugees, "a liberal sprinkling of the military, and always a crowd of English—excited and curious." It might have been

Gospel truth. The soldiers form a strong body-guard in the inner circle. Suddenly, a motor-horn is sounded. There is a cry, 'A wounded soldier'; but the car has already passed out of sight and the crowd rushes back. I strike up, 'Safe in the Arms of Jesus.' The soldiers and the dense crowd take up the chorus, until the sound rolls like the waves of the sea. The effect was electrifying. Then comes more speaking, with much help from the blessed Holy Spirit, as we explain, with text and with illustration, what it means to believe on the Lord Jesus Christ."

In the evening there is a big central meeting, under other auspices, in which the writer takes part. Here "we have the help of a French refugee, and there follow earnest addresses, interspersed with hymns, now in French, and then in English. It was a time of real power and blessing." But by no means all the Gospel work is done in meetings or by preaching—"for the nonce, the evangelist must be Jack of all trades." For instance:

"Here is a party struggling with an English newspaper. Over there in the little Belgian town are loved and dear ones, and these people have heard that the Germans are there. Their distress is pitiable; one of the women is weeping bitterly. 'Permettez-moi,' cries the evangelist. He translates. The tidings are good, and smiles take the place of tears. Naturally, the transition from temporal to spiritual things is easy. Sometimes it is a lesson in English for a crowd of Belgians, then a lesson in French for the English, with the Gospel for grammar, dictionary, and vocabulary.

"A sporting lady accosts me with: 'A thousand pardons, monsieur, but my sister and I have a bet on as to whether you are French or Belgian.' 'Well, mademoiselle, if you will promise me faithfully to read this Gospel throughout, I will tell you.' 'Agreed, monsieur.' 'Good; then I'm neither French nor Belgian; I'm English.' 'Then the bet is off,' she cries, 'but I'll read the book all the same.'

"Certainly, I never had such a grand opportunity for reaching the English aristocracy. Curiosity, and a desire to exploit their knowledge of French opened the door again and again for a word in season, and a gift of Gospel literature. A social tea for the refugees gave me a most gracious opportunity to speak, from Psalm xlv, of 'Dieu, notre refuge, notre force, et notre secours dans les détresses, et fort aisé à trouver' (very easy to find)—version Ostervald.

"During the long waiting for the boats I approached, saying, 'It is often more painful to wait than to suffer.' 'Vous avez raison,' they cry. Then I say, 'We have a little hymn in English that is often a great comfort to me.' Translating it into French, I began to sing, the people gather, and the rest is easy. Preaching, conversing, singing, translating, writing letters, and even giving lessons in French and English, all pave the way for 'the one thing needful.'

"One Belgian attracts a crowd by his vehemence, as he tells me the old story of priestly rapacity, concluding with, 'Let them come to England, and learn how these Protestants love us, and give their money and their time to do us good.' A short, earnest talk on the glorious Gospel of the grace of God naturally follows.

"'Here is my penny,' says a Flemish woman, as she receives a Gospel. I explain that the Gospel is without money and without price. 'How can that be?' she queries in amazement. The

BELGIUM HAS MANY LIKE THIS.

These ruins of the Nieuport Cathedral strongly resemble the famous remains of Melrose Abbey.

Dieppe or Boulogne rather than an English seaport town, Mr. Levermore says in telling some incidents of his work in *The Canadian Churchman* (Toronto). "I heard the resonant accents of the French tongue on every hand. . . . My satchel was filled with French Gospels and Testaments; a white band upon my sleeve bore the words, '*La Mission en Plein-Air, 19 John Street, Londres, W. C.,*' and I became the center of attraction for the Gauls, who straightway appropriated me as belonging to themselves." He tells of one Sunday which "was a great day":

"Out on the quay, at 9:30, the way was divinely opened for a really good meeting. Those good old standbys, 'Rock of Ages' and 'Jesus, Lover of My Soul,' were sung, first in French, then in English, and the people prest around. One sober-looking French sailor was deeply affected, crying aloud in French, 'Ah, monsieur, we can not do without God now!' It was a spiritual movement. The people prest closer and closer.

"Later on, when surely not fewer than a thousand persons, French and English, were awaiting a cross-channel boat, we mixed with the people, talking and distributing, and the Gospels were, in most cases, received with gratitude. Suddenly I strike up, 'How Sweet the Name of Jesus Sounds.' There is a rush and we have got the crowd. Then I talk to them in an unusual way—stories of our late beloved Queen Victoria, tales of the battle-field, stories of my Gospel travels, all pointing a

people gather and the opportunity is seized for a talk on Isaiah iv. 1, and Rom. iv. 5. Who shall estimate the results, under God, of these talks and silent messengers?

"Surely, in view of this unique and strange opportunity one can only join with Amos, in adoring worship of the Eternal God, who 'turneth the shadow of death into the light of the morning.'"

THE COMMON MAN'S RELIGIOUS VALUE

IN RELIGION, as in many other things, contends the editor of *The Living Church*, the "highbrow" is no more likely to think straight than is his friend who has less pretensions to culture. "Mrs. Cassidy may hanker after the Holy Jumpers in the back street; but Mrs. de Puyster probably dallies with mahatmas at the Century Club." In fact, declares the editor of the Milwaukee *Episcopalian* weekly, the man of culture is the more likely to run after strange religions and strange sects, because they "bring him the pleasant sense of perceiving something which would pass by the average man unnoticed." The trouble, according to this authority, lies in the persistence of an unchristian intellectual snobbery even within the doors of Christ's Church. We now concede that all human beings have souls. But if we concede that all have minds, the concession is made grudgingly, with the impression pretty well defined "that the apparatus of thought is the human brain plus a certain amount of cultivation." And after all, "it is not much to grant a motor-man a soul if you deny him a mind."

In matters of politics this point of view is evidenced by the demand for an educational test for voting, by "the tendency to ignore the plain man on the ground that what mind he has had better be employed in feeding cylinder presses and 'wiping joints' than functioning stumbly upon matters of government. Let him leave these things to his 'betters.'" But "the degree to which this thing has made way in religious matters is very much greater." And, worse yet,

"Its harm, oddly enough and quite conversely, is not to the so-called inferior class, but to the superior. That is to say, the people who, by reason of what is called education, assume that the uneducated never entertain opinions of value upon religious matters, thereby cut themselves off from the enormous weight of conviction and belief among persons whose thinking is not scientifically formulated, not validly logical, and yet is thoroughly wholesome and sane and salutary. It might be a balance-wheel for persons with whom education has led only to irresponsibility and vagary. But, unfortunately, it has been discounted already on the ground that it is the clumsy product of unskilled intellects."

It is not a matter of education, now "too cheap and general to be the *peculium* of the great ones of the earth," but of that "culture" to which there is but one road—the road of leisure, "shaded by social and financial protection and peace and lighted by taste." With this explanation, the writer continues:

"In any day or time, culture, genuine or alleged, can only be the privilege of the few, and the things that are common to all men are of more importance than the things peculiar to the few."

"And if there be such a thing as orthodoxy, it must be a thing appreciable to every man who is not subnormal. It is inconceivable that the value of religious judgment should depend upon the ability to distinguish between Corot and Tintoretto. The Incarnation, the Atonement, the Sacraments, a teaching authority, these things must be, if they have any reality, within the scope of the average intellect. Experts may be needed to state as a formula this technicality or that; but a religion whose theory is revealed and whose events are historic, which is chiefly concerned with a Baby, a gallows, and a brotherhood, that renews its vigor and loyalty by joining in a sacred feast, is designed to be dealt with and handled by the common man. What he thinks about it, and the degree to which it influences him, can never be a negligible quantity in general religious consciousness without grave peril to general religious consciousness. If God has given an orthodoxy he has given it to the ordinary man, with the supplementary arrangement that it may not be quite out of reach of the exceptional man. If religion is an accom-

plishment, like the French language, it is of no consequence to the *illuminati* what truck-drivers may think of it. But religion is not an accomplishment, but a staple article. Plain people not only must have it, but they actually get it and use it. There are a great many more plain people than any other sort, and consequently the question of where they get religion and what they do with it is of greater importance than the reception of religion by any other class. The importation of an inferior vintage of Burgundy is a hardship for a few well-trained palates; but an accident to the water-works affects every one alike."

Now culture, *The Living Church's* editor would point out, doesn't keep a man from "intellectual Wanderlust"—

"The uncultured may read *The Police Gazette*; but then the cultured may read *The Philistine*. Mrs. Cassidy may hanker after the Holy Jumpers in the back street; but Mrs. de Puyster probably dallies with mahatmas at the Century Club. And, after all, it is no flatter to say in a bar-room, 'All these here

IN THE WAY.

—Cesare in the New York Sun.

priests are grafters,' than to say over the tea-table, 'The religion of Calabrian peasants is wholly superstitious fear.' What is called culture does not prevent people from coquetting with groundless and half-baked philosophies, nor from making silly generalizations. Charlatanism seems to flourish quite as well among the cultured as among the vulgar, and clever and unscrupulous minds sway both classes, whether or not they are called demagogues. It is self-will and conceit that make men the prey of whatever and whoever catches them first, and these vices seem to grow healthily in cultivated and fallow soil alike.

"The nature and general ground-work of latter-day religions and cults are very plainly the supply meeting the demand and the garment cut according to the cloth. They appeal to the 'highbrow' for whom they are designed. It is only he who will find a religion on the 'high plane' where he dwells, instead of following the immemorial custom of his kind in catching his religion in the abyss and letting it lead him upward. Wholesome religion humbles a man first and then exalts him. The cultured is already exalted, and his religion must come to meet him walking on stilts. It must bring him the pleasant sense of perceiving something which would pass by the average man unnoticed. Instead of saving him from a sinful world, it must make him comfortable in an ignorant world where he feels isolated. And, naturally, while some one is inventing him a religion, it is a simple matter to include those details which will make him glad that he knows the names of Emerson's essays and what Millet preferred to have done with the double 'I' in his name. A great many expensive temples would not have been built had it been required that the theories on which they are founded must be discussed only in laundries and rolling-mills."

RUSSIA'S DELIGHT IN SOBRIETY

RUSSIA has been sober for the brief period of the war, and her criminal statistics already show the wisdom of the Czar's action in banishing vodka from the land. In thirty-three precincts of Moscow for the first half-year of 1914 there was an average of 896 criminal cases a month, while for the first "sober" month there were only 406. Crime was thus reduced 54.7 per cent., says the *Russkaya Vedomosti* (Moscow), and the decrease was almost as great in Moscow county. In four districts for the first half-year of 1914 there was an average of 100 cases monthly, while for the sober month only 93. "This is particularly significant," it is observed, "since the prohibition of the sale of alcoholic drinks in the country districts is not as effective as in the capital in view of the secret traffic in liquor." The vodka has been one of Russia's worst scourges, the profits from its sale constituted a large item in the Empire's budget, liquor being a government monopoly. We gave some account recently of Russia's action in connection with that of others of the warring nations in respect to the sale and drinking of alcohol. Of the results already observable, Mr. M. Menshikov speaks in the *Noroye Vremya* (Petrograd):

"The experiment of the last few weeks has shown that if the treasury loses something because of the ceasing of drunkenness, the people gain enormous and priceless advantages. . . . From all sides come telegrams and letters describing the wonderful transformation of the life of the people, the extreme decrease of crime. Detention-houses and jails, police courts and offices of examining magistrates are empty. Hooliganism in some localities disappeared entirely, street-begging has been considerably reduced. Cities and villages have assumed a quiet appearance. . . . Temperance has infused modesty and serious dignity into the conduct of the people. If we are now more or less certain of the outcome of the war, we owe it first of all to the excellent order with which the mobilization has been completed. This order would not have prevailed had the liquor-shops been open. Recall to mind how in the Manchurian War the reservists were called to the colors; their march was accompanied by the destruction of villages, railroad stations, and even towns, and it was necessary to subdue the rioters by armed force. . . ."

"Whatever may be the end of the present war with the Germans, we must be eternally grateful to it for the first extensive experiment in public temperance. It is true that the Government's fight against drunkenness was decided upon long before the war, but owing to comprehensible caution we began with compromises and half-measures. . . . The war compelled us to act more resolutely. . . . As early as two weeks after the closing of the wine-shops Russia felt as if resurrected. . . . All saw that perfect temperance was possible, that it was easily attainable, that vodka was not a necessity to any one. . . ."

"There is great hope that if the experiment in involuntary temperance continues as successfully as in the past months the Government authorities may gather sufficient courage to put an end to this inveterate public evil. Oh, what a great, saving deed that would be! It would be more than throwing off the Tatar yoke or the abolition of serfdom; it would be the destruction of the devil's power over Russia. . . . We do not yet know what the Russian nation is as a sober nation. . . . From times immemorial has alcohol been poisoning our blood. What will our future be, then, if our Government shall undertake the pious feat and actually sober the people? To lift an enormous populace from the abyss of drunkenness is not very easy. However, the power of God is immeasurable. This power has already been revealed in the fact that the people themselves welcome temperance. They themselves demand the checking of drunkenness and impose upon themselves the temporary burden of all privations. . . . Truly, no sermon, even apostolic, could turn our people toward piety as much as temperance. No education, no authority, could revive the nobility and the greatness of the national spirit to such an extent as temperance."

The same journal speaks editorially of the benefits observed:

"The stoppage of the sale of strong drinks was at first undertaken for the time of mobilization. This measure, however, has produced entirely unforeseen results--the possibility of total temperance. The voice of all has been raised in favor of extending the period of temperance, and now this popular wish has

been granted. The Emperor has issued the order to stop the sale of alcoholic drinks for the time of the war.

"The beneficent results of this measure are innumerable. In the expectation of a final victory over the external enemy the Russian people will conquer a not less merciless internal enemy which has hindered our material and spiritual prosperity not less than the Germans. The good habit of temperance will become fixt during the war, and Russia, at the end of her external trials, will resume her internal work with a resoluteness of which it was possible only to dream before."

THE POPE'S WAR ENCYCLICAL

WHATEVER THE COURSE and final settlement of the war, the position of the Catholic Church has been demonstrated in the Pope's recent encyclical. "No critic in the world can misunderstand it," says the *Brooklyn Eagle*, which thinks, considering the faith of many of the combatants, that it is well the Encyclical was issued. In it are enumerated four chief causes of war and bloodshed: Lack of mutual and sincere love among men; contempt of authority; injustice on the part of one class of people against another; and the consideration of material welfare as the sole object of human activity. Analyzing these causes, *The Eagle* observes:

"The Pope knows, of course, that it is obedience to temporal authority that makes men fight. By 'contempt of authority' he means the denial of a divine standard of morals and conduct. That lack of love and social injustice exist and have their effect on the minds of all men can not be denied. But the fourth cause stated, in a sense, includes all others. If material welfare were the sole object of human activity, then Germany might well think, as she does, that her vast army should be used at the psychological moment to make safe her trade predominance, and England might well think that she should seize the psychological moment to crush the trade of Germany. The Pope is right. Our ideals are defective. And from defective ideals all evils spring."

Viewing the secret root of all evil as that which looks upon material good as the only object of life, the Pope says that "the only way to bring about a better condition of affairs and peace is to extirpate this view" -- a "noteworthy and impressive" passage, the *New York Sun* observes, thus asking:

"While Catholics and Protestants are praying to God, the God of Sabaoth, for the success of their nation in this war, is not their material good the object of the prayers of most of them? A great commerce, wealth, power, colonies, the best armies and navies, the biggest guns, national material preponderance is the aim before and behind the conflict. Patriotism, national defense, all the noble sentimentalities bound up inextricably with the cause of the great nations concerned -- the case of Belgium is, of course, far different -- are the honorable and mostly unconscious pretexts of material ends.

"But how shall national ambitions be dissociated from national character? 'Christian humility' is very well for the next world or in an individual preparation for it, but it has no force against national pride. The natural, if sad, fact is that to covet, to rob, to kill, forbidden to the individual, are the duties, or so regarded, of the collective people. The passionate enthusiasm of millions of 'Christians' is to break the commandments of the Lord they worship, and history and poetry, the admiration of men and the love of women, follow as heroic those who from the strict Christian point of view are transgressors. They would be bad citizens if they were not bad Christians. The charge of incivism brought by the Romans against the early Christians must have been true, in so far as these were true to the highest Christian ideals.

"Modern States are more 'pagan' than Rome, which had its gods and ritual, supposed to be useful to the Republic or the Empire. Their aim is power. The religion of their subjects is but another sanction of national patriotism, which is often but an exaltation of the desire for power.

"All this is nothing to the reproach of Christianity, whose less than two thousand years are but a moment in the secular span of the world. Men are men, with divided duties. The self-sacrifice to encounter death which they display so constantly, the uncomplaining, unselfish ardor with which they give themselves for their country, right or wrong, have much of the martyr spirit of essential Christianity."

REVIEWS - OF - NEW - BOOKS

BOOKS FOR CHILDREN—A LIST OF TWENTY-FIVE OF THE BEST

Abbot, Willis J. *The Story of Our Army, for Young Americans. From Colonial Days to the Present Time.* Numerous illustrations. Pp. 687. New York: Dodd, Mead & Co. \$2 net.

One would think that this was actually a story of our Army; instead, it deals with the crucial periods in American history. What we would expect to find in a book with such a title would be a description of the make-up of the actual armies of the United States in the different struggles confronting the nation; not such a detailed—the none the less enjoyable—account of battles and maneuvers as Mr. Abbot offers. The book is an entertaining record of the Revolution, the War of 1812, and of the Civil War. By the time the reader reaches the Spanish-American War, he is at a loss to find out what are the specific excellencies or defects of the Army that are hinted at here and there. Mr. Abbot is in favor of a larger standing army. He writes entertainingly and has evident knowledge of and familiarity with American history. His book should find cordial readers. Especially in our schools should it supplement the dry-as-dust accounts.

Baker, Etta Anthony. *Fairmount's Quartette.* Pp. 358. Boston: Little, Brown & Co. \$1.30 net.

For the first time in many years we detect a lack of inventiveness on the part of Mrs. Baker, all the more to be regretted since we have confidence in her narrative ability. We would judge that this abatement is largely due to the fact that the Fairmount Quartette are too nice a set of girls to wear their welcome out in an endless "series" set. The present volume is marked by a conscious attempt for effect in each chapter, and even if the incidents are not repeated from other volumes, they are as reminiscent as to suggest sameness. The girls are just as healthy as ever, and Fairmount just as jovial. But we would suggest to the author, now that her girls are more than on the border of romance, to turn her talents in other channels of fiction. The rareness of "Little Women" is due to the reticence of Miss Alcott, who lived before the fashion of these literary days. Let Mrs. Baker emulate the creator of Jo, Meg, Amy, and Beth. Her Fairmount Quartette are no unworthy successors, even tho they have been overworked.

Banks, Helen Ward. *The Boys' Motley; or, The Rise of the Dutch Republic.* 8vo. Pp. 277. New York: Frederick A. Stokes Company. \$2 net.

What Miss Banks has done is to follow Motley, as she remembers "The Dutch Republic," and to give young readers some idea of the sturdy struggle for freedom that went on in the little country with its dikes by the sea. Each chapter is treated as a story in itself, and a cast of characters is given before each division, as tho it were a separate play. But tho simplifying the manner of narration, Miss Banks has given all the necessary historical detail which is connected with the patriotism of the Dutch on land and on sea. The color-plates are splendidly illustrative.

Bonstelle, Jessie, and DeForest, Marian (Selected by). *Little Women Letters from the House of Alcott.* Pp. 197. Containing facsimiles of original letters. Boston: Little, Brown & Co. \$1.25 net.

This book is not primarily intended for

young readers, but with its title, lovers of Miss Alcott—of all ages—will want to know about the real March family. What there is of charm about the book is due to the original sources rather than to the way in which the sources are handled. The picture of Mr. Alcott is that of a hard and difficult saint; there is no humanizing value to the portrait. The sketch of Mrs. Alcott is softer and nearer the Marmee conception; while the quotations from the children's diaries and letters simply whet the appetite for more. Mrs. Cheney gave us the real spirit in the "Life and Letters." The present authors tried hard to spread a false sweetness and light into a household where the sweetness and light were real and true.

Brauer, Sheila K. *Pleasant Surprises.* A novel picture-book with verses. Pp. 16. New York: E. P. Dutton. \$2.

An expensive little oblong book for little readers. The verses are not as good as Stevenson's "The world is so full of a number of things," but they accompany the pictures satisfactorily. The mechanical novelty of the pictures, however, will delight the juvenile eye of four years. With tiny fingers, take hold of the bit of ribbon that sticks out of each circle, and give it a pull. The scenes change, and there is much jollity to enjoy, many stories to be told. We can't say much about the art part of the illustrations, but there is no gainsaying the pleasurable feelings the nursery will have over the theatrical change of scene.

Brooks, Noah. *The Boy Emigrants.* Pp. 381. Illustrations by H. J. Dunn. New York: Charles Scribner's Sons. \$2 net.

This book is nearly fifty years old, yet in its sumptuous form of the present it comes to us with all the freshness of something written for the real love of adventure, and with the real understanding of what children like and how they like it served. Our first impression of this book many years ago was that it was the best "trail" story we had ever read. To-day, we re-read it, and have no cause to change our view. Indeed, what with the deluge of machine-made tales, we are even more confident that here is the true spirit of adventure, permanent in its narrative shape, because the author has felt his material, has dwelt with his characters, and through his art has made condition and personality live. The long trip of a group of boys crossing the continent on their gold-hunting expedition does not consist of mere incident joined to incident. Mr. Brooks touches upon those infinite details which go toward making things real, not wooden; warm, not unmoving. There is excitement, but the stirring situations arise naturally, and nothing seems to be forced. This is really a model of how a boy's book should be written. H. J. Dunn has painted splendid pictures after the fashion of N. C. Wyeth. These likewise bring out the poetry, action, and character of the story. The end papers alone—of an emigrant train—would grip the attention of the young reader.

Brown, Abbie Farwell. *Songs of Sixpence.* Pp. 216. 12mo. Boston: Houghton Mifflin Company. \$1.25 net.

This is a charming collection of poems, unfortunately of unequal value, technique, and sentiment. But all of them are marked by a sweet and imaginative approach toward life, and a few of them hint that the author, now and then, has slept in some verses which express her own grown-up thoughts. A book of verse inevitably is judged by the best examples in the volume, and it is therefore unfortunate that the very first poem should be such a poetic one, so fraught with a quality of old-fashioned sentiment. How many of her readers would like to see Miss Brown's "narrow city street that clambers with a will!" Then the curtain is drawn and we are given some verses that show how sympathetic the author is with the child mind. Sometimes there is a conscious straining for quaintness, for novelty. But any one who has ever written jingles, or simple poems, will understand how tricky some meters are, how easy it is to fall into the conventional expression. There is a little of Stevenson in "My Day"; there's real child fun in "The Little Corner Store"; there's grown-up tenderness in the "Wee Little Song." In the book there are some "Taller Poems" that bring out in diverse ways the New England spirit of the author. Altogether there is much to commend in "Songs of Sixpence."

Brown, Abbie Farwell. *The Lucky Stone.* Pp. 219. Illustrated by Reginald Burch. New York: The Century Company. \$1.25 net.

This is a bright and interesting little story, containing a mystery, a fairy-tale element, and the best of endings, with a romance thrown in. Sara Crewe was not more miserable in the beginning than the heroine of this little story; nor was she any more imaginative. The little tenement-girl in Miss Brown's book stirs the heart of a rich lady who not only plays fairy godmother in spirit, but also in actual surprises, and Maggie, teeming over with dreams, finds them all turning true—especially as they apply to gardens and fairy habits. Then follows a long fever, and the fairy godmother's care, and in the end, Mr. Graham, the social worker in Maggie's slums, arrives out in the country and appropriately falls in love with the rich young lady, and Maggie's future, between them, is assured. "The Lucky Stone" ran as a serial in *St. Nicholas*; there is dainty suspense from chapter to chapter—just the element children like.

Dixon, Royal. *The Human Side of Plants.* Illustrated. Pp. 201. New York: Frederick A. Stokes Company. \$1.50 net.

Do you know anything about plants that sleep, plants that walk, plants that fish and lure? If not, then this new book will have a fascination for you. The young student of nature will find "The Human Side of Plants" a good handbook for his investigations, and when he has read it, when he has practically verified the information therein, he will feel a closer relation to plant life. Plants can mimic, can fly, can ride on animals; they can steal, can

Once the Christmas of Kings— Today the Christmas of Millions

Time was when a watch was the royal gift, crested with jewels and requiring a lifetime of careful labor to complete a single mechanism.

What of all her rich possessions did Queen Bess handle and consult so often as the watch which had been Lord Leicester's Christmas offering?

What today does the prince or princess of the American home make so constant a companion and so trusted a guide as a watch?

What of all things so happily fulfills the Christmas thought, combining hourly usefulness and beauty and sentiment and mystery?

The old masterpiece valued at so many thousands that all but royalty were excluded from possession, was not worth as much as a timekeeper as the Ingersoll Dollar Watch of today.

A watch is still the royal gift, yet the giving of a watch, once so rare a privilege because of its great cost, is yours today for little more than the cost of a pocket handkerchief.

So millions of homes on Christmas morning will be happier because of a great American invention which has come to full perfection in the newest models of the Ingersoll Watch.

No boy or girl, no man or woman can fail to find some welcome use for one of the five Ingersoll models.

Employers often buy them by the dozen as gifts to employees, teachers for each member of their classes.

Sold by 60,000 dealers in the United States.

Robt. H. Ingersoll & Bro.
315 Fourth Avenue, New York

entertain, and exercise. They are builders, they can light their own way, they can predict the weather, and they can go to sleep. They are queer, sly things, these plants discussed by Royal Dixon, and we wonder at the similarity between them and us in so many respects. Photographs and color-plates are generously distributed throughout.

Drayton, Grace G. The Baby Bears: Their Wishing-Rings. Pp. 167. New York: The Century Company. \$1 net.

A jolly collection of pictures for very young youngsters, telling of the good deeds—and in a few instances of the mischievous acts—of two little bears given wishing-rings. The nursery will delight in the simple little tales which may be amplified to the point of satisfying any number of questions as to the whys and wherefores. The book is oblong, and there are only two lines of text, proper and jingly, on an almost blank page opposite the full-page drawings, which are done in flat wash sepia. Small book-lovers enjoy just such a persistent hero and heroine as appear on nearly eighty pages of illustrations. A gay cover will greet the recipient on Christmas morning.

Ford, Julia Elsworth. Imagina. Illustrations by Arthur Rackham and Lauren Ford. Pp. 179. New York: Duffield & Co. \$1.50 net.

Mrs. Ford has taken a little fellow, whose mother is a mystery to him, whose father is a fleeting reality, and whose nurse is an ever-threatening actuality, and has made him build his dreams, and explore his large home for himself. His fairy girl materializes after a fashion, and he finds a picture of his mother hidden away in a forbidden room in the house, and tho the incidents are disjointed, we can see where Mrs. Ford wished to win our sympathy. The text is interspersed here and there with rather mediocre and ungraceful verses contributed to the volume by various poets. Arthur Rackham has done two excellent color-pages for the book in comparison with which the pen drawings of another artist appear rather cheap. But we can say for the latter that they have certain freedom of design.

French, Allen. The Runaway. Pp. 368. Illustrated by C. M. Relyea. New York: The Century Company. \$1.25 net.

Mr. French began with a stirring story, and for many pages we thought we had found a real mystery plot. But when the young villain had placed upon his shoulders every contemptible attitude a boy could have; when the wronged character ran the gamut of suspicion, seemingly losing his memory, yet showing by every move that he was wiser than the country folk of New England would believe; when we found every one curiously regarding the mystery, yet seemingly inert in the solution of it, we felt then that Mr. French would fail in having the real goods. And he did fail, as soon as the personification of the mystery appeared on the scene. Unjustly suspected, the silent boy turns out to be a victim of circumstances, and incidentally brother to a crook. This crook in every way tries to hoodwink the people who have been kindest to the brother. The story ends inanely, with just meting out of reward and punishment, and reformation purifies the life point of view of all those who have erred. Mr. French has written better books, notably "The Junior Cup" and that excellent "Sir Marrok." The

A Welcome Gift to All

The everyday usefulness of a fountain pen makes it a most desirable Christmas gift for a man, woman or child.

Conklin's
Self-Filling
Fountain Pen
NON-LEAKABLE

is doubly appreciated because it fills and cleans itself in 4 seconds. It is the original and recognized leader of all self-fillers.

Beautiful gold-banded, engraved, filigree or full-mounted silver and gold gift pens in elegant gift boxes. Exchangeable after Christmas if point doesn't suit.

Sold by Stationers, Jewelers, Druggists, on 30 days' trial.
\$2.50, \$3.00, \$3.50,

present narrative, while it grips the attention, is too long drawn out. We like Relyea's illustrations.

Fuller, Eunice. The Book of Friendly Giants. Illustrated by Pamela Colman Smith. Pp. 327. New York: The Century Company. \$2 net.

All our lives we have been brought up in the belief that giants were ungovernable beings who roared and ate folk alive, and tore up California redwood trees—or trees just as large—in their rage. But here is a defense of giants. We come to find that they are good beings—some of them—careful not to tread on cities if they can avoid so doing, gentle in their promises, and considerate in their rewards. This book of giant fairy-tales comprises legends from many lands—each tale exploiting the virtue of a giant. Imagine one of these heroes taking a poor little fellow on a trip to Central Park, imagine another giving to an ambitious lad a loaf of bread that turns into gold by simply biting upon it without destroying its size and shape. Young readers should welcome this entertaining volume; after going through it, they will modify their opinions of giants. Particularly decorative and agreeable are the illustrations.

Gilbert, Ariadne. More Than Conquerors. Illustrated. Pp. 428. New York: The Century Company. \$1.25 net.

An excellent and invigorating collection of biographies, cordially recommended for home and school use. The title might lead one to believe that the author would rub in the moral example of her subjects, instead of which we find after a little reading that she attempts to make each person selected live before us in the midst of his or her human interests and foibles. A most graphic picture is given of Scott, and such treatment as is here practised is sure to make the young reader want to know more about the Wizard of the North. A most lovable portrait is that of Thackeray, and the same may be said of the picture of Phillips Brooks. The author displays in this little book a sympathetic touch, and we like the way she herself has read biography. In her fourteen sketches, in their selection reminding one of a Hall of Fame, she has emphasized what seems to us to be just the right details, and the purpose of the book, as noted in the introduction, is allowed to take care of itself without any forcing. As a book of collective biographies, this is one of the best examples that has come to our desk for many a year.

Griswold, Latta. The Winds of Deal. Illustrated by George Harper. 12mo, pp. 320. New York: The Macmillan Company. \$1.35 net.

Here is an author who has just escaped writing a distinctive story. His style is agreeable, and the constructive part of the plot particularly well done. It is a tale of character rather than of startling incident. Had the author been content to study the weaknesses of his hero, unconsciously led in school by a boy whose influence was none too good for him, the result would have been an effective portrayal. But the tone of the book is disappointingly vulgar at times, even tho a strong counter-current set against the negative elements in the hero's life. Try tho he does to overcome a tendency to lie, cheat, steal, and run away, he goes on the supposition that confession saves the soul. When salvation comes at last—when he takes unto himself his true friends, including his father and sister, and discards his undermining asso-

The most practical interior finish we have ever used on walls and ceilings. We imagine we will show an increase of between 20 and 25% in light.—R. J. Reynolds Tobacco Co. (Makers of Prince Albert).

How to lower your manufacturing expenses

In one big mill it was discovered that the cost of production was 20% lower—during daylight hours—than when artificial light had to be used. All efficiency engineers testify that more daylight means more dividends. And they say that most plants only get from 1/500 to 1/1000 of the strength of pure daylight.

If your plant is one of these "dark" ones, you can actually increase the daylight 19% to 36%, by covering walls and ceilings with Rice's Gloss Mill White. Employees will work better, because they can see better. There will be less spoilage. Accidents will be lessened. Electric lighting bills will be cut. Over 3000 big firms now use this interior finish, and will verify these statements.

RICE'S GLOSS MILL-WHITE

is the original mill white. All others are pure imitations. It is the **only** mill white which contains no varnish. For that reason, we **guarantee** that if Rice's does not remain white longer than any other gloss paint, applied at the same time and under the same conditions, we will give, free, enough Rice's to repaint the job with one coat. We also guarantee that, properly applied, Rice's will not flake or scale. You cannot lose under this guarantee.

If you want to reduce the cost of production and lessen accidents in your plant,—if you want a paint that does not necessitate repainting every six months—look into this matter. It costs you nothing to investigate. Send for complete information.

Sold Direct from Factory

Rice's is sold direct from the factory in barrels containing enough to cover 20,000 square feet—one coat.

THE TOLEDO METAL FURNITURE CO., 2529 Dorr Street, Toledo, O.

ciates, we have little confidence in or admiration for our hero, even tho he is not a sneak, and takes whatever medicine is in store for him like a man. Not the least interesting character in the book is a young teacher whose experiences are artistically and unobtrusively traced. Mr. Griswold, we hope, will be heard from again.

Haines, Donald H. *The Last Invasion*. 8vo, pp. 340. New York: Harper & Brothers. \$1.25 net.

A play was written last year, and accepted for presentation, reflecting the world-struggle which is taking place on the Continent. When the conflict broke forth the play was put upon the shelf. Many years ago, when England was disturbed by the thought that Germany might invade her country, a play was written called "An Englishman's Home," the chief point in the play being England's unpreparedness to defend the home from invasion. Now comes a book in the realm of juvenile literature which predicts the invasion of the United States by a Blue Army, closely akin in get-up to the Prussian soldier, and our unpreparedness in the beginning to cope with the concerted attack of two armies, one secretly landed in the South, the other in the North. Two boys find themselves the center of the turmoil, and they have many adventures in an automobile and in an air-ship. The story is clever in its tactics, and shows that the author has given himself over at odd times to the wild idea that a day might actually arrive when some foreign Power would throw the Monroe Doctrine to the winds and make us stand upon our national strength and defenses. Many a young reader will be excited by the story.

Harris, Joel Chandler. *Uncle Remus and His Friends*. With an introduction by Myra Lockett Avery. Illustrations from photographs. Visitor's Edition. 12mo, pp. 357. Boston: Houghton Mifflin Company. \$1.25 net.

The publishers are issuing what they call the "Visitor's Editions" of famous books, and on looking through the well-known volume at hand we understand exactly their aim—to familiarize the public with the actual scenes of the author's life or writings. For instance, views of Mr. Harris's home in Atlanta are given, as well as glimpses of Snap Bean Farm. An appreciative introduction is written for the book, which ably depicts the human kindliness of the creator of *Uncle Remus*. Many little sidelights are thrown on his workaday life, and the relations he had with his neighbors, black and white. Then there is a short account of the Uncle Remus Memorial Association, with mention of what it has accomplished toward establishing forever the name of Mr. Harris in Atlanta. Then we come to the Uncle Remus stories themselves, and we say, as we have always said, that the creation of this folk-lore—even tho we should write the re-creation—is the greatest monument that Mr. Harris could have; for it represents him as being one of the most significant contributors to American literature we have had. His only handicap is the difficulty in mastering the dialect, which, when it is mastered, is inimitable.

McSpadden, J. Walker. *Stories from Wagner*. Illustrations by H. Heindrich and F. Locke. 8vo, pp. 282. New York: T. Y. Crowell Company. \$1.50 net.

A new edition of a very estimable telling of the stories from Wagner. In Mr. McSpadden's introduction he presents sufficient biographical data to place the different Wagnerian operas, and then in

dicates the many sources from which the plots were taken. Those who have the opportunity of hearing the operas will find this book better than a spiritless libretto, and children will find in the stories what their imagination craves. All the more whetted will juvenile interest be by the color-plates plentifully sprinkled throughout the book. As for the format, the publishers are to be congratulated on the handsome cover design and the excellent typography.

Ogden, H. A. *Boy's Book of Famous Regiments*. With the collaboration of H. A. Hitchcock. Illustrations by H. A. Ogden. 12mo., pp. 260. New York: McBride, Nast & Co. \$1.50 net.

There is not a boy who will fail to find something to interest him in the historical accounts of famous regiments that have helped to make history. Boys will read about companies that have persisted through the ages, and whose reputation is sustained by soldiers to-day just as brave as their ancestors of several centuries before them. Every nation has its heroes, celebrated in legend, poem, and story. These heroes were members of regiments who have shared either in the same glory or have had the glory of their soldiers put upon them. Whether British Brigades, French Mousquetaires, or Revolutionary Minute Men; whether grenadiers, hussars, infantry, or cavalry,—England, France, Germany, Austria, Russia, Italy, and Sweden have the same story to tell of regimental bravery and individual honor. There is a chapter calling attention to the regiments of Europe now active in the Great War of 1914.

Olcott, Frances Jenkins. *Good Stories for Great Holidays*. Arranged for story-telling and reading aloud, and for the children's own reading. Square crown 8vo, pp. 461. Boston: Houghton Mifflin Company. \$2 net.

To judge by the subject-index of this sumptuous volume, stout in variety, Miss Olcott has taken care of all sorts of virtues and all sorts of interests. To judge by the actual contents, she has shown a judicious method in her selections, planning her work primarily for the story-teller who, on occasions, is most anxious for suggestive material. Due to copyright restrictions, we imagine that much Miss Olcott would have liked to use was denied her editorial grasp; her reference lists, therefore, supplement what she has gathered. The variety extends down the ages, and even the Venerable Bede, William Caxton, the *Gesta Romanorum*, and Ovid are represented in the Index of Authors. We should regard the book more a reference volume than one primarily suited to children who want to read a story, tho there are good stories to read. This book will do for many what "Holy-Days and Holidays" has done for the grown-up in the library; it affords much material ready at hand for the teacher, the librarian, and the mother either too busy to look elsewhere or too ignorant of sources to look anywhere. The cover design will assuredly catch the eye.

O'Neill, Rose. *The Kewpie Kutouts*. Illustrated in colors. Pp. 48. New York: Frederick A. Stokes Company. \$1.25 net.

Rose O'Neill is not a believer in simplified words; she is just as willing to speak of "Fate's stern sublimity" in order to get a rime for "equanimity" as Mother Goose was to make "Jack jump over the candlestick"—a foolish thing for a sensible boy to do—in order to rime with "quick." We do not gainsay the popularity of the Kewpies,

Another triumph of MAZDA Service

Late developments in our Research Laboratories at Schenectady, the headquarters of MAZDA Service, have given birth to a new lamp—not for homes, but for general commercial lighting—a MAZDA lamp based on the new principle of using inert gases like nitrogen or argon, in place of vacuum.

In this lamp, MAZDA Service has achieved the seemingly impossible task of producing not only a lamp that gives twenty times as much light as the largest incandescent lamp made ten years ago—but a lamp that gives twice as much light per dollar's worth of electricity as the smaller MAZDA lamps in common use.

And the unending effort typified in the making of this wonderful lamp—this making of new lamps that are not yet old—this incessant search and study and experiment that hurries to the makers of MAZDA lamps every new idea and every late discovery—it is this that makes MAZDA Service so important to you.

For it is this that assures you that every lamp marked with the name of MAZDA Service (whether you buy it tomorrow or years hence) is the best lamp science has developed up to that time—a lamp that gives you better, brighter light and more of it from the electricity used—a lamp that embodies the new discoveries of the world's ablest lamp investigators.

Austin's Shops, 26 Court St., Binghamton, N. Y.

for Rose O'Neill has made a fortune out of her idea, any more than we gainsay the popularity of the Brownies. Billikens are not in their class. They are likely to reign forever, even tho we can't buy celluloid Kewpies any more, inasmuch as they are made in Germany!

Robinson, Gordon. Old-Time Nursery Rhymes. Illustrated by Robinson. New York: E. P. Dutton & Co. \$1.25.

This is a Nister book that would have been better if the supercalendered paper had been used. The line drawings, on rough paper, lose their freedom and lightness. The illustrator, however, displays a certain deftness in the use of simple idea and line that will immediately commend itself to the young child. There are few artists who have grasped this fact of simplicity. The whole secret of success in the picturing of a book for young folk is the strict adherence to minimum of detail. Which does not mean that the artist has to be literal to the point of unimaginativeness. The masters of line are Caldesot and Charles Robinson. We have seen better work from the pen of the present Mr. Robinson, but nevertheless "Old-Time Nursery Rhymes" will please. The cover design is fashioned after the old-time picture-book style—a design such as one used to embroider on splashers, when those were the rage.

Sherman, Clifford Leon. The Dot Book. Boston: Houghton Mifflin Company. \$1 net.

This is an ingenious invention with a pleasant surprise on every page. If most people are like the present reviewer, they will relish any good fun like that contained in "The Dot Book." Take a soft pencil, turn to any page, connect all the numbers in their regular order, beginning with one, and you shall see what you will see. You would say, "What a clever person I am," if you did not thoroughly realize that the cleverness is all Mr. Sherman's. For a party, for a rainy day, for any spare time, "The Dot Book" is a treasure.

Tomlinson, Everett T. Scouting with Daniel Boone. Illustrated by Norman Rockwell. Pp. 301. Garden City: Doubleday, Page & Co. \$1.20 net.

Mr. Tomlinson has given us a bit of fiction with a smattering of historical and biographical truth. There is more scouting than there is Daniel Boone, and tho we gain an idea of the intrepidity of the backwoodsman, the chief center of interest is in the young hero who wins Boone's confidence and really out-Boones Boone. We are told that this is the first of a new series; if so, we would ask Mr. Tomlinson to show less haste than he has here. For of the many volumes he has written for this year's trade, there is not one that exhibits any feeling for style or any care in the plotting. We used to wonder at the graphic visualizing of this author in the many historical stories he has written, but in "Scouting with Daniel Boone," tho every now and then he indicates that he knows whereof he speaks, he has relied too much on the fact that Indians existed in those days and did scalping and skulking; he has peppered his text with hairbreadth escapes and secret missions, until we wonder how history could ever have praised Boone and let such a hero go unrewarded. This is biography fictionized.

Withington, Paul. The Book of Athletics. 8vo, pp. 512. Boston: Lothrop, Lee & Shepard Company. \$1.50 net.

Let those who are interested in athletics get hold of this book to read the various

opinions of experts. The editor, who is a Harvard man of many activities, has a word or two to say on the essentials of an athlete, giving encouragement to those not of the athletic physique; and he also emphasizes his opinions regarding the value of competition in sport. Then each of his corps of assistants, a champion in his particular field, writes technically on his subject. In this way, the reader learns much regarding each individual move in football and baseball, and is carried through the intricate demands of the track, the field, and through the training which the champion on the water has to go through. Graphic illustrations are supplied, showing the essential Titanic interest in each sport, and when it comes to wrestling a sort of moving picture of how the thing is done is supplied. We remember but one book as full of what the athletic reader wants to know, and that was Walter Camp's fascinating account of football, issued some years ago. This manual, which was first published in 1895, has been so enlarged as to be almost a new book.

AN ADDITIONAL LIST OF THIRTY

Altshuler, Joseph A. *The Guns of Bull Run.* Pp. 248. New York: D. Appleton & Co. \$1.30 net.

A typical story of adventure written from the Southern standpoint, the hero going through all the incidents leading up to Bull Run. There is much accurate detail about the launching of the Confederacy, and the reader is introduced to many of the Southern generals, especially Beauregard and Stonewall Jackson. Mr. Altshuler seems to have started out on a Civil War series.

Andersen, Hans. *Fairy Tales and Wonder Stories.* With more than one hundred illustrations by Louis Rhead. Introduction by W. D. Howells. Pp. 443. New York: Harper & Brothers. \$1.50.

A very rich volume, with pen-and-ink drawings in wood-cut style. Mr. Rhead, in years previous, has illustrated "Gulliver," "Tom Brown," "Swiss Family Robinson," and "Robin Hood," and in all of his work he has shown imaginative sympathy. Mr. Howells, inclined to be sentimentally appreciative, gives the Tales this recommendation: "I suppose there never were stories with so little harm in them, so much good." The format of this book is attractive.

Andersen, Hans. *Fairy Tales.* Illustrated by Dugald Stewart Walker. Pp. 268. Garden City: Doubleday, Page & Co. \$1.50.

The drawings in this edition are very distinctive, tho sometimes the color-plates are such a riot of detail as to detract from the ideas. Mr. Walker explains some of his drawings in a fantastical manner which is not as fantastical or as agreeable as the pictures themselves. His work needs no explanation. The publishers hail him as an equal of Rackham.

Arabian Nights. Illustrated by Milo Winter. 8vo, pp. 293. Chicago: Rand, McNally & Co. \$1.35 net.

The pictures are broad in color, and display a certain grotesque humor. The text has been prepared by one who believes in foot-notes for the explanation of certain Arabian terms, and the introduction gives an historical setting for the "Entertainments."

Barbour, Ralph Henry. *The Brother of a Hero.* Illustrated by Charles M. Relyea. Pp. 302. New York: D. Appleton & Co. \$1.35 net.

There is no telling what boy literature would do without Mr. Barbour. The present story narrates how a younger brother, more studious than his famous elder brother, is gradually discovered by the "coach" and trained to become a hero in his own name. Football is the dominant theme.

Barbour, Ralph Henry. *Left End Edwards.* Pp. 365. New York: Dodd, Mead & Co. \$1.25 net.

The twelfth in a series called "The Pothall Eleven." How Mr. Barbour can attack each book with refreshed vigor, and describe football over

EASTMAN KODAK COMPANY, ROCHESTER, N.Y., *The Kodak City.*

Actual Size

and over again as tho it were a new game, is a marvel to the reviewer who has to read his books. In the present story the great game is glorified, and all the little ills that beset it are overcome in victory at the end. Boy foibles are well depicted, and friendships and misunderstandings dealt with understandingly.

Beard, Patten. *The Jolly Book of Boxcraft.* Pp. 188. New York: Frederick A. Stokes Co. \$1.35 net.

Let a child grasp the idea contained in this book, and an empty cardboard box, whatever its shape, will not be safe. Especially prized is a shoe-box, out of which everything can be made according to the ingenious inventor of "boxcraft." Garages, house-boats, automobiles, theaters, railroad carriages and stations, besides every kind of a building, can be shaped with deft fingers under the guidance of Miss Beard. In giving her credits in an author's note, she does not fail to mention the help accorded her by a number of juvenile playfellows.

Book of Battles, The Boys'. Pp. 410. Boston: Houghton Mifflin Co. \$2 net.

There is no disguising the fact that our chief interest these days is centered on war. This interest has invaded the realm of children's literature, and "The Boys' Book of Battles," therefore, is timely, even tho it deals with Marathon, Thermopylae, Trafalgar, and Waterloo, rather than with recent struggles in Belgium. This anthology contains some stirring matter in it, and boys will read it eagerly. The illustrations are excellent.

Camp, Walter. *Captain Danny.* Pp. 303. New York: D. Appleton & Co. \$1.35 net.

The cover design glorifies baseball; so does the story. But incidentally the plot traces the struggle which exists between a professional coach and the captain of a "Prep" nine. The latter wins out, and so does his team.

Chisholm, Lowry. *In Fairyland: Tales Told Again.* With pictures by Katharine Cameron. Pp. 211. New York: G. P. Putnam's Sons. \$1.50 net.

The pictures are gaudy in color and heavy in imagination, even tho after a literal fashion they illustrate the text. The stories are mildly told, and modified to soothe the nerves!

Cave, Edward. *The Boy's Camp Book.* Pp. 194. Garden City: Doubleday, Page & Co.

This is a guide-book based upon the annual encampment of a Boy Scout troop. Herein you will find all about camp-grounds, tents and tenting, camp discipline, and, what is very important, cooking. In fact, this little book, written by one intimately connected with the Boy Scout movement, should save the novice much preliminary trouble.

Clark, Janet MacDonald. *Legends of King Arthur and His Knights.* Illustrated by W. H. Margeson, R.I. Pp. 307. New York: E. P. Dutton & Co. \$2.50.

This is a Nister book, and it was manufactured in Bavaria before the war. It is artistically printed on glazed paper, with rich gold edges. The text is simply written and contains all the romantic glow of the Tennyson poems. The pictures are well in accord with the drama of the legends.

Clay, Oliver. *The Treasure Finders.* Pp. 266. New York: Duffield & Co. \$1.25 net.

A series of biographical sketches, narrating how the adventurers of four countries sought a new land. The book is sympathetically treated by one who has evidently read history with understanding. As the foreword states: "History is not a dry study; it is full of action, and this action is what makes a story." Ten explorers, from the vikings to Henry Hudson, are the heroes of this compact volume. This is only one of a contemplated series.

Cousens, Penrhyn W. *The Diamond Story Book.* Illustrated by Ethel Green. Pp. 418. New York: Duffield & Co. \$1.50 net.

Mr. Cousens is likewise the compiler of an excellent volume entitled "A Child's Book of Stories." In the above volume he goes afield for his data, culling from all countries, and bringing folk-lore within the compass of his needs. All the

KATHRYN MURRAY

Dept. 312, 309 State Street, Chicago
The First Woman to Teach Scientific Facial Exercises

nations now at war are brought peacefully under a table of sources, and among the best storytellers we find mentioned Madame d'Aulnoy, Dickens, Mrs. Ewing. The contents are varied and rich, but the style of the original has been changed to satisfy juvenile needs.

Crozier, Gladys Beattie. *Children's Indoor Games. Children's Outdoor Games.* E. N. Dutton & Co. \$1.50 net each.

Most of the suggestions contained in these small manuals have found their way into English papers, and so have some practical appeal. While parents will welcome "Quiet Games for a Tea-Party," we are doubtful whether tea-parties could be appropriately brought within the scope of the Boy Scout movement, as the author suggests. If you have never run a garden obstacle race, you will find full directions how to prepare yourself in the "outdoor" volume. Altogether, the author offers you much fun in small space.

Curtis, Alice Turner. *A Little Maid of Massachusetts Colony.* Pp. 226. Philadelphia: Penn Publishing Co. \$1.80 net.

The publishers promise that this story will interest girls from seven to eleven. The characters in it figured last year in "A Little Maid of Province Town," and the introduction tells what to expect in this new volume. It is, of course, a Revolutionary tale, and the little heroine has great adventures with the Indians, with the English, and among her friends.

Eaton, Walter P. *Boy Scouts in the White Mountains.* Pp. 301. Boston: W. A. Wilde Co. \$1 net.

The third in a series by the well-known dramatic critic. We are introduced to the same healthy set of heroes as heretofore described in various adventures, and we go with them through a White Mountain hike, the incidents showing how far Mr. Eaton understands the boy demand for excitement rather than character. In *Peanut*, however, we come very near meeting a real personality.

Fitzhugh, Percy K. *In the Path of LaSalle; or, Boy Scouts on the Mississippi.* 12mo, pp. 374. New York: T. Y. Crowell Co. \$1.25.

This author, in previous volumes, has taken his young readers to Panama and down Lake Champlain. The hero, carried from home accidentally, joins the Geological Survey, and has many adventures during the time he studies how to conquer unruly waterways. How he finally meets his friends makes a happy conclusion to a book cram full of incident.

Grahame, Kenneth. *The Golden Age.* With color illustrations by R. J. E. Moony. Pp. 262. New York: John Lane. \$3 net.

A rich and sumptuous cover introduces us to a classic which grown-ups like to read. There are wide margins to this edition, and plenty of white space. We only wish we liked the decorative color-plates as much as we relish the text.

Kunes, Dr. Ignacz. *Forty-four Turkish Fairy Tales.* Illustrations by Willy Pogány. Pp. 264. New York: T. Y. Crowell Co. \$3 net.

The author culled these stories from the tellers, not from books. As there are the Arabian Nights, with emphasis upon the nights, he claims for the Turkish fairy-tales that they are the stories of the Thousand and One Days, with emphasis on the days. Librarians will welcome such richness, and will adapt it to younger hearers than the book appeals to. It is a rich volume, with delicate decorations by Mr. Pogány. The typography is rather confusing, due in large measure to the annoying sharpness of the punctuation. Printed in England, we fear this volume appears at an inopportune moment, even tho fairy-tales are fairy-tales despite wars.

Lang, Andrew. *The Olive Fairy Book. The Red Book of Heroes.* New York: Longmans, Green & Co. \$1 net each.

These are reprints, and tho they are as rich as ever in format, with no curtailment of the contents, they are moderate in price as compared with the price at the time of their first publication. It is strange not to have a new Lang book this season. But he left behind him an ample series of rainbow books to be remembered by.

Stewart Parcel Post Rate Indicator

Low, Orton. Literature for Children. Pp. 293. New York: The Macmillan Co. \$1.90.

The author seeks to set the boy on the right track as to what is real literature. Having discussed the value of literature in the elementary schools, and having accentuated the advantages of learning lyric poetry, a large part of his book is devoted to graded selections for memory work. Part III deals with "Sources of Standard Prose for Children," and he concludes his survey by appending a very useful bibliography, which calls attention to various editions. The arrangement of the book might have shown better unity. But it is to be recommended.

Mable, Hamilton Wright. Myths Every Child Should Know. Illustrated and decorated by Mary Hamilton Frye. Pp. 224. Garden City: Doubleday, Page & Co. \$2.00 net.

A very sumptuous reprint from the Every Child Shall Know Series. Hawthorne, Kingsley, and Church are a few of the sources drawn from. The type is clear and the margins of the page generous.

Molesworth, Mrs. The Cuckoo Clock. Pp. 283. Illustrations by Maria L. Kirk. Philadelphia: J. B. Lippincott Co. \$1.25 net.

The Kirk color-plates are too literal to add anything to the quaintness of an already famous book. Here is a story any child would relish, and we welcome the new edition to a series which we are glad the Lippincotts are issuing. It would seem, according to this series of commendable reprints, that the "Stories All Children Love" are stories written over two generations ago. Is this a silent, but well-merited slap at the overflow of books to-day?

Perkins, Lucy Fitch. The Fakimo Twins. Pp. 193. Boston: Houghton Mifflin Co. \$1 net.

Illustrated by the author in very agreeable fashion, this latest volume is akin to three other "twin" books. They all purport to tell a gentle story, sprinkled over with a good coating of manners and habits. The style is simple.

Robertson, T. Brailford. The Universe and the Mayonnaise. Illustrated by K. Clausen. Pp. 125. New York: John Lane Co. \$1 net.

Starting out to tell an odd story, the author fixes the attention of his juvenile reader upon certain phenomena of nature that are of interest, and discusses them. In this way, simple talks on the heavens and the earth, on evolution and other scientific matters, are given. We remember a useful little book when we were young called "The Earth We Live On," which aimed to do something of the same sort, and we remember the manner of explaining, even through this space of years. This book is more popular, but there is much the same kind of information in it. There are some clever thumb-nail sketches, but the color pages are mediocre.

Steedman, Amy. Legends and Stories of Italy. Illustrated by Katharine Cameron. Pp. 183. New York: G. P. Putnam's Sons. \$1.

The illustrations are pale in color and badly drawn, but a sweetness pervades the text, a simple spirituality that will appeal to imaginative children all the more appealing when they have a tinge of sacred history about them. Moralists should find good material here for the story hour.

Stigand, Capt. C. H. Black Tales for White Children. Pp. 200. Illustrated by John Hargrave. Boston: Houghton Mifflin Co. \$1.50 net.

A publisher's note explains that most of these stories have been translated and arranged by Captain and Mrs. Stigand, the former an interpreter in Swahili. The stories are fable in character, and some of them contain as direct a moral as Aesop. But the brutal element in them will not please the anxious parent. Our criticism is that they are generally of more interest to the student of folk-lore than to the child who should be kept at Andersen and Grimm until the countless treasures of these two are exhausted. The narrative style in these African tales is strictly in accord with the fable tradition.

Taggart, Marion Ames. Beth's Wonder-Winter. Pp. 349. Boston: W. A. Wilde Company. \$1.25 net.

It is about time we came to the end of the Six Girl Series, for while the new book is full of the Taggart spirit—which means sweetness and

healthy spirit—we would like to see this excellent writer doing more careful work and more distinctive plotting. We like the sequel for children, but the infinite repetition is deadening. There is one excellence, however, about Miss Taggart's books, and that is that each year her characters actually grow older.

Tomlinson, Paul G. The Land of the Caribou. Pp. 275. New York: Charles Scribner's Sons. \$1 net.

The adventures of four classmates on a cruise to Labrador. The author is a relative of the popular Everett T. Tomlinson. How this book came to be written is told in the author's preface. "A few years ago," he says in part, "a yawl was purchased by Princeton men as a gift to Dr. Grenfell, the well-known medical missionary. A crew was selected to sail the boat from New York to Labrador, and present it to him for use in his work. This crew was made up of undergraduates, and the author was fortunate enough to be one of those who were chosen." The book is full of hunting adventures, especially stalking the great caribou.

Tomlinson, Everett T. Captain Dan Richards. Pp. 300. Philadelphia: The Griffith & Rowland Press.

A typical college story. Dr. Tomlinson sees the boy's problems through his own eyes, and, tho given usually to writing historical narratives, this book, if a word in the prefatory note suggests anything, was written in response to a demand on the part of some of his many readers. The moral tone is strong.

Turner, Martha Strong. Strange Playmates. Illustrated by Grace Quackenbush. Pp. 94. New York: Duffield & Co. \$.50 net.

A mild little story for three-year-olds, in which the tiny heroine takes a dream trip and meets queer friends. There are color-pictures and line sketches.

Only Too Evident.—FOUR YEARS (in Sunday-school)—"We've got a new baby at our house."

RECTOR (not recognizing him)—"And who are you, my little man?"

FOUR YEARS—"I'm the old one."—*Life*.

The Challenge Met.—Mrs. A.—"While I was going down town on the car this morning the conductor came along and looked at me as if I had not paid my fare."

Mrs. A.—"Well, what did you do?"

Mrs. A.—"I looked at him as if I had."—*Short Stories*.

WARNING!

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even tho they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonus. THE LITERARY DIGEST mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

CURRENT POETRY

HATE is the inspiration of few poems worth reading. This is why much of the verse that this war has called forth has been forgotten in a few days. The "Hate Song," a translation of which was recently published in the Letters and Art Department of THE LITERARY DIGEST, has its temporary fame, or its notoriety, but it can never grip the hearts of its readers of any nationality as strongly as does the poem we quote below, from the *New York Sun*. True, it contains some flings at the French and English, but they are to be expected and allowed for at a time like this.

We have not seen the original of the poem, as it appeared in the *New-Yorker Staats-Zeitung*, and therefore can not say whether or not it is unrimed, like the translation. The English of the translation is not always idiomatic, but its simplicity gives it force. Mr. Ewers's poem is notable for its genuine passion, its startling realism, its dramatic power. Few poets could put so much of the war into their lines.

MY MOTHER'S HOUSE

BY H. H. EWERS

(Translated by Oscar Mueller)

My mother is an old lady,
Perhaps sixty or even more
(She does not like to speak about it).
My mother is a German woman,
Is only one of so many millions.

My mother's house overlooks the Rhine,
It's a gay house, it's a free house,
It's an artist's house,
Resounding from laughing and gaiety
During fifty years and more.

Now mother converted the gay house
Into a sad house, a hospital.
Sixteen beds did she give, and in each
Lies a soldier.

My old mother writes:

In your library
Among all your treasures
That you gathered in all parts of the world,
Among vases from China
And the heathen gods of the South Sea,
Among your Buddhas
And Shivas and Krishnas,
Lies a youthful chap
Fresh from high school,
Eighteen years old.
But he can not see your treasures.
They stabbed out his eyes
In Loucin near Liège.

In your Indian Room
Lies a sergeant,
He was laughing to-day and jokingly tossed
Your little elephants of ivory.
He always says: "Soon will I return to the front."
He is tightly strapt in bandages—
The day before yesterday they cut off
Both of his legs.
And he does not know it.

In the room decorated with my beloved Dutch,
The Teniers and Ostade, the Kookkoek and Ver-
bockhoeven,
Lies, his right arm torn to pieces,
A lieutenant of dragoons.
He does not like the paintings, not knowing them.
So I bought him yesterday
A "Kaiser" picture and hung it over his bed.
You do not believe how glad it made him.

But in the adjoining room
With your ancestors,
Lies a captain of the guard

Give your boy
more
THINK power!

His mind now is plastic—is easy to shape, to form, to mold. Supply him with brain-building, man-building play-things—give him

THE AMERICAN MODEL BUILDER

—a big man's game that makes him think constructively; that teaches him to invent, to construct, to build, to "use his head"—through his hands, that provides him—and you—with hours of clean, quiet fun.

The American Model Builder contains all main mechanical parts used in modern engineering—spring-tempered, nickel-plated steel girders, gears, beams, pinions, pulleys, bolts, nuts, etc., with which he can build bridges, derricks, elevators, towers, aeroplanes, ferris wheels, printing presses, etc. Fathers—and BOYS, too—

Write for handsome, illustrated free book, "The Story of Steel," which shows dozens of new models and tells all about the American Model Builder.

Eight sizes, 50c up, at Sporting Goods, Toy and Department Stores everywhere.

Paragon Electric Co.

Dept. D 12, 9 So. Clinton St., Chicago, Ill.

He is as pale as his linen,
Sleeps all the time,
So much blood did he lose:

But, if he's awake, he looks at the pictures,
And says: "He over there surely fought
At Sedan in Eighteen-seventy.
And he at Grossgoerschen a hundred years ago,
And the old one over there with the braid,
He fought at Leuthen."

In the terrace room, the one to the left,
Lies another lieutenant, he asked that his bed
Be placed close to the window.
He never speaks, but starts all the time
Into our garden, and the monastery adjoining
Where the old monks are walking.

He has a bride, she was in Paris
When the war broke out and she disappeared.
And he heard of her—nothing.
Perhaps she is dead, he thinks, perhaps—
Perhaps—Then he sighs and groans:
"Perhaps." And he kisses her picture.
She was very beautiful,
His poor, German bride.

In the garden room lies a major,
He is scolding all day long
Shot through the abdomen, must be very painful,
And he does not suffer so much, if he can scold
The Russ, the Jap, and the damned English.
So I ask him: "How do you feel?"
He always says: "The damned rats
Bit a hole into my stomach."

There is one, in the small guest-room,
A senior lieutenant of the Eighty-second,
He's shot in the head
But not very dangerous.
He said yesterday: "Doctor,
I have fifty thousand marks.
They are yours if you patch me up
So I can return to the front
In three weeks." (That's what they all think.)

In your bedroom lies a humor,
He has nineteen wounds, all over,
From shrapnel fire.
They brought him unconscious a fortnight ago,
He groans much and yells loud:
Never awoke once
In all that time,
But his hot hand clinches
His Iron Cross.
The doctor says: "We surely
Will save him, if he does not die from starvation."

In the dining-room lie three,
A pioneer and two of the infantry—
Such dear blond chaps.
They will be saved,
But the pioneer
Is doomed,
For dumdum wounds
Are difficult to heal.

About everything writes my mother,
About the Uhlands in the breakfast-room,
The two chamberlains in the parlor,
The general,
Who lies in the state-room—
About everything writes old mother,
But about herself
She does not say a word.

My mother's house overlooks the Rhine,
Is now a hospital for sixteen,
And yet is only one such house
Of many thousands in Germany.

My mother is an old lady,
Perhaps sixty or even more,
My mother is a German woman,
And yet only one of so many millions.

To translate French verse into English
is not difficult. But to make an English
poem out of a French poem is a task that
calls for poetic talent of a high order. And
this is what Mr. Thomas Walsh has done
in this noble sonnet, which was printed

STEINWAY

IF you are thinking of purchasing a piano as
an appropriate gift this Christmas, consider
what a Steinway would mean in your home.

Necessarily the Steinway is priced slightly
higher than pianos of other makes. This
difference in cost merely reflects the superior
qualities of the Steinway. The price makes
possible the incomparable tone, resonant and
sweet, and the perfect workmanship that
makes every Steinway a lifetime possession.

*We shall be glad to send you, free, illustrated literature,
with the name of the Steinway dealer nearest you.*

THE U. S. PLAYING CARD CO., CINCINNATI, U. S. A.

in Mr. Don Marquis's column, "The Sun Dial," in the New York Evening Sun.

THE CATHEDRAL OF REIMS

RENDERED FROM THE FRENCH OF EDMOND ROSTAND BY THOMAS WALSH

They make it only more immortal still.

The vandals mar, yet lives the work of Art.

Let Phidias witness, and Rodin impart.

How in these fragments speaks the primal thrill
The fortress crumbles on the gunpowder hill;

The shrine, tho broken, lives with nobler heart

Our eyes, raised wistful where its spires would start,

Find heaven grown lovelier through its shattered grille.

Let us be grateful. . . . Fate would long withhold
What Greece could boast of on her hill of gold.

A Beauty in its outrage sanctified. . . .

Let us be grateful, now the hands upon

The blundering German cannon would provide
Their shame forever and our Parthenon!

And here (from the Ottawa Citizen) is a strongly partizan poem by a Canadian poet. It deserves popularity, for it is sincere and colloquial and it has a splendid swing. The stanzas about the "crew of city clerks" and the "little one-armed man" are excellent.

THE KINGDOM OF THE SEA

BY LLOYD ROBERTS

What price will England pay for it if England holds the sea?

For neither earth, nor air, nor sea is given duty free.

If English ships would stay then English men must pay—

Think well before you ask of God the Kingdom of the Sea!

What price did England pay for it three hundred years ago,

When Philip's great Armada came driving huge and slow,

In arrogance and pride, red tyrants of the tide,
To blight the North Sea Islands with their bigotry and woe!

'Twas but a flock of privateers that sunk the fleet that day.

'Twas but a crew of city clerks that left their shops to pay

For their red-cheeked English wives and their peaceful English lives

And the right to cut their broadcloth in the same old English way.

What price did God demand of her at Nile and Trafalgar,

When all the seas about her coasts were thundering with war;

When the Man of Destiny set claim upon the sea
Swearing the Lord had deeded him the waves for evermore?

'Twas but a little one-armed man who went to pay the debt.

He ran a string of flags aloft lest any man forget
The bill that he must meet that day with England's fleet—

And all who read of Trafalgar will know how it was met!

O Admirals of England, the debt is due to-day!
God makes demand of England—have you the price to pay?

Does the cash that He demands still lie in British hands?

If so, then England's glory will not be swept away.

What price will England pay for it if England holds the sea?

For neither earth, nor air, nor sea is given duty free.

If English ships would stay then Englishmen must pay

As Englishmen have always paid since England held the sea!

PERSONAL GLIMPSES

WITH THE NON-COMBATANTS

WHEN the American Christmas ship *Jason* left for Europe, laden with a precious cargo of edible Christmas gifts for Belgian women and children, many good-hearted people were deprived by its departure from sharing in the cheering Yuletide planned for the sufferers abroad. But those whose beans and flour and potatoes came too late may be assured that an opportunity yet remains for rendering assistance to these unfortunates. There are still some of them, so the newspapers tell us, whose Christmas will be bleak enough to inspire all the sympathy of which we are capable. Indeed, it is possible that for many of them Christmas will pass by unnoticed, unmarked in the endless procession of to-days and to-morrows full to overflowing of want, privation, and misery unbelievable. A correspondent of the *New York Evening Post* writes of some of these cases, witnessed near the Dutch frontier, where thousands of homeless Belgians crossed when war came. There are a quarter of a million of homeless men, women, and children within the shelter of neutral ground, and Holland is wholly incapable of rendering them adequate assistance. Says the writer:

I don't fully realize what sort of crime one must commit to deserve hell itself. But if one has gone through that part of the war which has been raging on the Dutch frontier, he will think twice before committing the misdeed punishable thereby.

This is hell or else it is a fine imitation of it. That's all I can say after having lived in the midst of this pandemonium for a week or so. About 350,000 Belgian people, all sorts and conditions of men, have crossed our frontier, utterly destitute, some of them; bereft of their homes and hearths, crying over their killed, or, worse still, missing brothers or husbands or children; men who are in the dark about the fate of their children or woman-folk, soldiers who threw away their arms and uniform in frantic panic and who donned a mufti now of the most incongruous garb; people accustomed to the assistance of well-trained servants, to traveling in their own cars and in the best comfort money can buy, but who have to tramp it now, carrying their own baggage themselves. The woe-gone faces of these miserable stragglers who have lined every road from Belgium into Holland were a sight never to be forgotten.

Were conditions normal in the Netherlands, it would be difficult enough to care for all of these; but when one considers that the country is in a state of war, almost in a state of siege, with railroads tied up, supplies scarce, and half the machinery of government at a standstill, an adequate conception of the situation is beyond imagining. To this sparsely settled region, says the writer, so many needy ones added make as great a burden as Greater New

A GIFT SUGGESTION

Three-fold is the pleasure in a gift as distinctive as this paper. For the giver, there's satisfaction in knowing that nothing could be more appropriate. In its use there's delight for the recipient. Finally there's the gratification of friends complimented at receiving letters written on such beautiful paper.

Crane's Linen Lawn
[THE CORRECT WRITING PAPER]

Make winter gardening a continual source of pleasure and profit. We manufacture 2, 3 and 4-sash frames, single and double glazed, besides the specials listed below. Complete planting instructions with each frame. Prompt shipment and satisfaction guaranteed. Send your order today.

Special No. 2 Beginner's Garden

To meet a popular demand, we manufacture this special sash and frame. It's 8 ft. 4 in. long and just wide enough to put in a 3 ft. space. Sash has six large lights of extra-heavy glass so that plants receive the maximum of life-giving sunlight. Carefully packed, easily set up. Price complete, freight paid anywhere in the U. S. \$10.50. For double glazing \$1.00 extra.

If a census of business men in the large cities

could be taken to discover their average physical condition, the results would be astounding. Business today is carried on with a rush. The average man burns out his life and nerve tissues faster than the body can build them up. Result, nerves all gone, energy depleted, stomach upset most of the time. The body is full of poisons and, until they are cleaned out, good health is but a "vision."

The remedy—be careful of what you eat, exercise more and keep the body flushed out by copious drinking of

BUFFALO LITHIA SPRINGS WATER

This mineral water is almost a specific for run-down conditions. It tones up the nerves and purifies the blood by cleansing the system of the poisonous products of faulty metabolism. Leading physicians have endorsed and prescribed Buffalo Lithia Springs Water for over forty years.

HUNTER McGUIRE, M.D., LL.D., *late President American Medical Association*, said: "I know from constant use of it personally and in practice that the results obtained from its use are far beyond those which would be warranted by the analysis given. I am of the opinion that it either contains some wonderful remedial agent as yet undiscovered by medical science, or its elements are so delicately combined in Nature's laboratory that they defy the utmost skill of the chemist to solve the secret of their power."

Buy a case of Buffalo Lithia Springs Water from your druggist. 6 to 8 glasses a day will do much toward bringing back your good health again.

Write for our booklet, "Springs of Health."

Buffalo Lithia Springs Water Company
Buffalo Lithia Springs, Virginia

We began planting pecans nearly thirty years ago. Now we have some thousand acres of groves. We introduced several leading varieties and have been awarded highest honors and prizes.

The finest pecans grow in the Gulf Coast country, larger, thinner-shelled, better flavored. Our groves contain the best kinds and our long experience has taught us how to produce meaty and tasty nuts.

Three pound package of fancy pecans, prepaid to any address, \$3.50. Ten pound package, \$3.00. Money refunded if not satisfactory. Order now for the holidays—these packages of pecans make ideal Christmas gifts.

Griffing Brothers, Jacksonville, Florida

York would suffer were it suddenly faced with the problem of feeding and housing fifty millions of people. Extreme as that sounds, we are assured that it is a just comparison. Naturally, the result in human suffering reaches tremendous proportions. A few examples are given:

Pigsties, hastily cleared from their usual habitations, covered by new straw, were welcomed as a shelter by men and women who no longer than a fortnight ago would have scorned a sleeping-room in the modest farmhouse adjoining them.

I visited myself the 4 x 6 x 5-foot "room" under the bare straw-thatched roof, where the Burgomaster of Breendonek, near Ghent, Count Buisseret de Blarenghien, a nobleman of endless means and lineage, spent the night. I am quite sure that the rawest farm-hand would sniff at it and prefer to resign before sleeping there.

At Bergen-op-Zoom, where the high road from Antwerp goes by, and where during the day and night of the Antwerp bombardment between two and three hundreds of thousands of people trudged by, where in a town of some 10,000 souls, 70,000 foreigners are stopping and have to be cared for, the sights were horrible.

I visited the temporary hospitals there, three of them at least—one destined for children only. Sick babies, left in sheer panic at the roadside or entrusted by the parents to the care of friends who lost the poor mites during a halt in their flight, were abandoned perhaps as an incumbrance.

A woman gave birth to a baby in the shrubbery lining the road. She was found dying, four days later, without being able to give her name, to utter a syllable. But the baby lives and will thrive; nameless, were it not for a Dutch "non-com" who adopted her and had her baptized—"Wilhelmina van der Woude" (of the Forest).

And such sad cases, of children born in the night of horror, of children without a name, are no exception. In this one hospital there were ten of them. . . . How many there are among fugitives who, themselves longing for help, took upon themselves the care of the straggling child which they picked up, the child of some unknown compatriot?

To be among these people, to hear their tales of woe and suffering, to see those emaciated, haggard faces, to feel the agony they live in; worst of all, to see the nervous convulsions of their faces, their hands! And the sudden fright that overcomes them at the hearing of any sudden unusual sound, such as the upsetting of a chair, the loud honking of a motor-car!

The opportunity for outside aid is found in the inability of Holland, not only to feed and house all these refugees, but even to entertain them longer within the country's boundaries. So far, we are told, almost no one has asked money of a refugee, and all have given freely, often where the gifts could be ill-afforded. But there comes a time when charity must begin at home. And "you can not give bread and meat if you don't have it yourself!"

The Dutch Government, and at its command the local authorities, do their utmost to induce the Belgians to leave. A conference, held at Antwerp, between

Ambrosia Chocolate Co., 331-4 Fifth St., Milwaukee, Wis.

the Dutch, German, and Belgian authorities resulted in a proclamation, the gist of which will have been cabled to you probably.

But the fugitives, altho they doubt not the statement of their own countrymen, nor the good faith of the Dutch, seem to have misgivings about the real intentions of the Third Party! And upon the attitude of the latter everything—their safety, their possessions, their lives—depends. They almost fear that they will walk into a trap, and that their return to Antwerp is only meant as an asset to prevent an attack of the Allies in case of a German reverse.

The Belgo-German publication that the Antwerp fugitives might return scathless was therefore hailed with delight by a number of well-meaning Dutch, and not less by the fugitives themselves. But the actual text of the proclamation to the effect that this invitation to return applied in the first place to officials, people of independent means, and regular wage-earners put a damper upon this satisfaction. For this means that the officials may work for the German authorities, that the wage-earners can be perfectly well employed in Antwerp and elsewhere to keep things going, and that the well-to-do may come to pay their share in the various war indemnities levied!

And, finally, it means that the rabble, the economical non-cultured, the vagabonds, the penniless, may stay here at Holland's charge. The majority of the first classes refuse to return. They stay here to await the upshot of events and to escape the tender mercies shown to the populations of Louvain and Malines or the fate of being taken as hostages or muled in all sorts of fines.

The poor among them simply don't return and can't. How would they find a living if they got back?

To this problem at least one State in our Union, Louisiana, appears to have found a solution. The Charleston (S. C.) *News and Courier* notes Louisiana's plan, already in process of perfection, and points out the possibilities in it for profit that should induce other States to follow suit:

Louisiana is wasting no time in taking advantage of the opportunity which the European War affords every State of this country which wishes to increase its farming population. A movement, begun in New Orleans by Father Bogaerts, a Belgian priest resident in Louisiana, has taken definite shape, and plans are being made to bring to Louisiana one hundred Belgian families driven from their homes by the German invasion. According to the *New Orleans States*, information received in Louisiana indicates that there will be little difficulty in getting the hundred families which it is planned to bring over, since there are thousands of homeless Belgians who are now eager to come to this country for good.

Louisiana is taking time by the forelock, and if the plans now being made materialize, the State will be greatly the gainer as a result of the initiative of some of its citizens. The Belgians are among the best market-gardeners and farmers in the world and they are a peaceful, law-abiding people who will make good citizens. When the war ends, there will be a great influx of immigrants into the United States from many parts of Europe, but a great many

All that remains

ONE year ago this was a country home, in the suburbs of New York, famous for its old-fashioned comforts and its exterior and interior beauties.

Because of a lack of preparedness to extinguish fire at its inception, today the charred ruins stand like a grim skeleton—a mute and pathetic warning to home owners of the costliness of procrastination.

Pyrene

TRADE MARK

"THE MOST EFFICIENT FIRE EXTINGUISHER KNOWN"

would have prevented, during the past year, the destruction of hundreds of suburban homes in which the means of checking the blaze during the first five minutes had not been provided.

The purchase and use of Pyrene Fire Extinguishers by the United States Government, such institutions as the New York Central and Pennsylvania Railroad Systems, and scores of promi-

nent corporations assure the home owner of Pyrene efficiency.

The moment Pyrene liquid strikes heat it is transformed into a gas blanket heavier than air, which smothers the flames by excluding the oxygen.

Being a dry liquid, it neither stains nor injures the most delicate furnishings.

Fire, once started, will not wait.

The Extinguisher—handsome and strongly built of solid brass—is an ornament to any interior. Price \$7. (Leasing Dealers Everywhere. Write for Literature.)

Brass and Nickel-plated Pyrene Fire Extinguishers are included in the lists of Approved Fire Appliances issued by the National Board of Fire Underwriters, examined and labeled under the direction of the Underwriters' Laboratories.

A Gift That Endures
And Endears — The

CELLO

METAL
HOT WATER BOTTLE

SPARKLING like a big silver bucket, in dainty box with holly designs, the Cello Metal Hot Water Bottle is an ideal present for Christmas.

But the beauty of the Cello is its faultless service and perpetual economy. It is made of the finest brass, heavily nickel-plated, which we have found to be the only material that will positively withstand the severe test to which a hot water bottle is subjected. No rubber to dry up, crack, leak and burst. Sold to you with a guarantee, not a caution against boiling water.

So comfortable too, the Cello has no awkward angles but is curved to fit the body. Stays hot all night. The dainty blue flannel bag makes it soft as a pillow. Extra long handle for massage. It will serve you faithfully for a lifetime.

Ask for the Cello at your drug or department store—in 1, 3 and 5 pint sizes, prices \$1.75, \$2.00 and \$2.50, respectively. 15c extra for 1 pint massage handle; 50c extra for 3 and 5 pint sizes. If you shouldn't find the Cello, order from us direct, mentioning size wanted and name of your dealer, and we will deliver by parcel post prepaid. Your money back if you are not more than satisfied.

A. S. CAMPBELL CO.
380 Commercial St.
Boston, Mass.

Can be filled from any faucet or bottle without slightest danger of scalding or burning the hands.

AIR CHAMBER AND STEEL-WARE COIL RUBBER WASHER

EXPANSION BRONZE SPRING

LOCK SEAM

Air chamber around neck makes it comfortable to handle. Patent spring in neck prevents water from escaping. Expansion contraction and vacuum keeping the coils always in shape. A feature making the bottle perfect. The Cello is perfectly sanitary, self-sterilizing every time you fill it.

of these people will not be immigrants of the most desirable kind. Those States or communities which do not wait for the end of the struggle, but which immediately offer homes and opportunity to the homeless Belgian farmers and which take steps to secure these Belgian farmers, will get new residents who will contribute largely to the welfare and prosperity of their adopted homes.

"Louisiana," says the *New Orleans States*, "has vast fields of rich and uncultivated land which would offer admirable opportunities to the Belgian farmers." What about the several big land-development undertakings in lower South Carolina which were designed to bring white farmers here from the Middle West and the Northwest? Belgian farmers ought to be just the kind of settlers that the men back of these development enterprises are looking for.

WAR IN THE STORM

IN the second week in November the merciless Battle of Flanders was rendered more cruel still by a hurricane of wind and rain that soaked and chilled the men in the trenches, driving the cold into the very bones of those who fought against it. The war in Flanders up to this time, according to correspondents' stories, had not had many of the romantic features which readers search for so diligently in American news columns; now it became so tense, sullen, and desperately stubborn a thing as beggars description. As the hurrying shells and the raking fire of mitrailleuses were not enough, there came, surmounting all the ordinary havoc of war, torrents that filled the trenches to the fighters' waists, and wind that screamed derision at the ragged uniforms and the crouching soldiers whom they clad. The story of a *London Daily Chronicle* correspondent, printed in the *New York Times*, telling of the progress of the storm, is written, apparently, while it is still going on. There is, he says:

A howling gale shrieking across the dunes and swirling up the sands into blinding clouds and tearing across the flat marsh-lands as if all the invisible gods of the old ghost-world were playing at racing in their chariots.

In the trenches along the Yser men crouch down close to the moist mud to shelter themselves from the wind, which is harder to dodge than shrapnel shells. It lashes them with fierce cruelty. In spite of all the woolen comforters and knitted vests, made by women's hands at home, the wind finds its way through to the bones and marrow of the soldiers, so that they are numbed. At night it is an agony of cold, preventing sleep, even if men could sleep while shells are searching for them with their cry of death.

The gunners have dug pits for themselves, and when they cease fire for the time they crawl to the shelter, smoking through little outlets in damp blankets in which they have wrapt their heads and shoulders. They tie bundles of straw around their legs to keep out the cold and pack old newspapers inside their clothing

"It Reminds You"

THE HESS CALENDAR TICKLER

See how nearly self-running, how simple it is:

- | | |
|-------------------------------------|------------------------------|
| A. Current date | D. Cards for balance of year |
| B. Entire current month | E. Home pocket and blank |
| C. Day of year and days yet to come | F. Yearly calendar |

Memo are filed before any desired date. The current day slip is discarded daily, so the memo must come up at proper time. Or it can be refilled without rewriting. With The Hess Calendar Tickler there is no drawing to open, no lid to lift. It is always in plain sight—permanently above desk papers, etc. Saves its cost a hundred times in time, trouble and preventing costly "slip ups."

as breastplates and swear to keep themselves warm, at least in imagination.

The wind gave a new horror to this war. There was something devilish in its howling, in its long angry roar, as it came with enormous force across the flats and then hurled itself against the walls of a village or the roof of an old barn, as if nature herself had been seized with the fury of destruction.

It was very hot, as well as very cold, at Oudecapelle and Nieucapelle and along the line to Styvekenskerke and Lombardtzyde. The German batteries were hard at work again, belching out an inexhaustible supply of shells. Over there the darkness was stabbed by red flashes, and the sky was zigzagged with forked lightning made by machinery. At intervals the whole horizon was illuminated by waves of vivid splendor which shone for some moments upon the blanched faces of men who waited for death. High above the witchlike howlings of the wind furies came the shrilly whistling notes of the shells, like nightbirds, rushing through the storm in search of prey. The guns of the Allied batteries answered back, roar echoing roar. The thunder-claps of the wind were less loud than the concussions of gun-fire, and yet mingled with them and prolonged them and became a part of the storm of deadly sound increasing the horror of war.

Through the darkness along the road infantry tramped toward the lines of trenches to relieve other regiments who had endured a spell in them. They bent their heads low, thrusting forward into the heart of the gale, which tore at the blue coats of these Frenchmen and plucked at their red trousers and slashed in their faces with cruel whips. Their side-arms jingled against the teeth of the wind, which tried to snatch at their bayonets and drag the rifles out of their grip.

They never raised their heads to glance at the Red Cross carts coming back.

RUNNING A WAR IN PAJAMAS

THE days when the commander of an army rode at the head of his troops and led them into the fray, with brandishing of sword and triumphant battle-cry, are buried in the romantic past. Nowadays, he is likely to be far beyond even the sound of his heaviest artillery, snugly busy in a little room that is a hundred miles from the line of battle. Those who would seek romance in the career of a modern Chief of Staff must look for it not with the wide eyes of youthful days, but through the microscope provided by a more mature scientific era. It is still there, if we seek with patience. Romance is not dead; it has only adopted the tactics of the chameleon and changed its gay colorings for the gray of a more practical age. In the case of General Joffre, Commander-in-Chief of the French force, a correspondent of the New York Evening Sun has obligingly supplied us with the necessary microscope, and furnishes us with the following word-picture of the manner in which a modern army is led into battle:

A man in pajamas (at least he wears them most of the time, being too busy to

At Shaving Coupons packed with every RNET BRUSH. Good for valuable

dress) is running the thousand and one details of the French Army. General Joffre is at the head and he handles the big questions, presses the buttons, so to speak, but General Bertholet, Chief of Staff, does the actual work. This is how General Joffre keeps track of his 200-mile battle-line.

After several trips along the fringe of the war, after meeting thousands of soldiers on the same day, some going north, some going south, in what appeared to be a hopeless tangle, it struck me more forcibly than ever that the modern fighting machine is the most complicated thing on earth.

I tried to imagine myself commanding all this to grasp how a 200-mile line of this sort could be controlled and how it could possibly be kept from getting tangled up with itself and without interference by an enemy. My curiosity grew until I decided to find out how all this business is managed by one man.

In General Joffre's headquarters, in a certain long room, hangs a special map, the scale of which is 1-1000. It shows every road, canal, railway, bridle-path, pig-trail, bridge, clump of trees, hill, mountain, valley, river, creek, rill, and swamp. This is part of the outfit. Another part is a wonderful collection of wax-headed pins of all colors and sizes. These represent army units of all sizes and all organizations.

Into the long room run many wires, both telephone and telegraph. Wireless apparatus is also in this room. The way it all works seems wonderfully simple when it is explained.

The battle is about to commence. The troops have been distributed all along the 200-mile line. The Germans are facing them. A bell rings:

"Hello! Yes! The Germans are attacking General Durand's division? They are in superior numbers? The General needs reinforcements? All right."

The staff officer who has taken this information over the phone hurries to where General Bertholet is sleeping. The General has just dozed off. This is the first sleep he has had in thirty-six hours, but General Bertholet is wide-awake in an instant. He jumps to the floor, still wearing his pajamas, the only garment he has worn in several days. The staff officer reports.

In a twinkling General Bertholet, who knows his map as he does his own face, locates Durand's division. He knows that ten miles back of Durand's command are quartered a number of reserves, under General Blanc, according to the pins. Bertholet also learns from the pins that a number of auto-buses are near Blanc's soldiers.

"Order General Blanc," he commands, "to reinforce Durand at once with 10,000 men, four batteries of 75-millimeter artillery, ten machine guns, and three squadrons of cavalry. Tell Blanc to transport his troops in auto-buses."

Within two minutes General Blanc has received the order. Within five more he is executing it, and General Durand is informed help is coming to him.

Then General Bertholet takes another nap, if the battle will permit. If it does not he stays awake to direct men who are miles away from him.

Every time a bridge is blown up or a pontoon has been thrown across a stream or a food convoy shifts, General Bertholet gets up and shifts his pins to indicate the change. Nothing happens along the 200-mile battle-line but that General Bertholet

Sozodont

FOR THE TEETH

For three generations (since 1846) Sozodont has kept the teeth of its users from decaying.

Decay is caused by food decomposing in the crevices of and between the teeth; and also by acids in the mouth which first eat away the enamel and then gradually create a cavity. Sozodont prevents these inroads from starting.

Sozodont is a liquid, and only a liquid can permeate into the infinitesimal crevices between and in the teeth. And Sozodont is so prepared that wherever it goes acids are neutralized and foods or foreign substances immediately removed, leaving the teeth thoroughly and antiseptically clean with no chance for decay.

Sozodont itself is not a tooth polish — nor does it whiten teeth — but for these purposes Sozodont Tooth Powder or Sozodont Tooth Paste should be used. Which do you prefer?

Let us send you a booklet written by a prominent dentist on the value of a clean mouth and clean teeth. Just mail your name and address — there is no charge.

Hall & Ruckel, New York
Makers of Sozodont since 1846

A CHRISTMAS SURPRISE

Digitized by Google

Hello Boys!

Make Lots of Toys

This Christmas thousands of boys will have bushels of fun building models with the Mysto Erector. Don't you get left! Ask your parents to give you a set so you can enjoy yourself all winter long.

I know what boys like. That's why I made the Erector girders with turned-over edges so your boy could build big, strong models that look exactly like real steel construction.

He can build easily and quickly. And he can make over 300 models—battleships, airplanes, derricks, traveling cranes, elevators, bridges, wagons. It's great fun!

The Mysto ERECTOR

The Toy with Girders like Structural Steel

It's by far the most interesting and instructive Christmas gift you can find anywhere. It is so fascinating that every member of the family will enjoy watching and helping the boy construct the 300 and more models.

With all sets over \$3 I give, without extra charge, an electric motor that runs many of the models—elevators, third rail cars, work-shops with cute little hand saws, power presses, lathes, etc., that really go. The Erector develops the boy's mechanical skill—teaches him the principles of engineering and electricity.

Write for My Free Book

It's printed in colors and filled with pictures and descriptions of Erector models. I'll also mail you a free copy of my boys' magazine, *Erector Life*, which contains my prize offer for new models; tells how your boy can win a prize.

Toy dealers sell the Erector, \$1 to \$25. If your dealer hasn't it, or you cannot conveniently get it from him in time for Christmas, send remittance direct to us and we will ship prepaid. \$1 set builds 58 models; \$2 set builds 120 models; \$3 set builds 176 models; \$5 set builds 207 models and includes electric motor. Big manual of instructions free with every set.

The most costly furniture in a library can never compensate for the absence of a Standard Dictionary.

Be a Positive Man

That is the message of Charles Ferguson's book **"THE AFFIRMATIVE INTELLECT"**

It is a book to arouse and startle to action. It will stimulate the man who vacillates—who lacks the deciding power and the go-ahead courage so necessary for success. At stores, or mailed for 50c and your address on margin of this ad.

Charles Ferguson has been called the *Arizona Philosopher*, from his residence at Tucson, whence he has uttered a happy philosophy which is peculiarly fitted to these modern times. His book

"THE RELIGION OF DEMOCRACY"

is universally proclaimed a work of genius. Says the *Washington Times*: "Since Emerson, nobody has gone so straight to the point, in a manner so free from personal prejudice and vanity." There is a great deal of the practical in his philosophy which every man can take unto himself and use.

Price \$1, Postpaid. FUNK & WAGNALLS COMPANY, New York

let, still in pajamas, leaps from his bed and changes the pins on the map. The map must be kept up to the minute. General Joffre must be able to look at it any time of the day or night.

As far as possible, through information brought in by spies or aviators, the forces of the enemy are kept track of in the same manner. No detail that is of use is overlooked. The pins indicate even the size of the guns, the kind of ammunition they use, and so on *ad infinitum*.

THE REAL PERILS OF PEARL WHITE

PEARL WHITE appears on the screen as the inextinguishable and, apparently, immortal *Pauline* of the movies, the apotheosis of the old-time melodrama heroine. Twenty years and less ago the heroine of melodrama was content to be pursued through five vivid acts and thirteen scenes by a villain whose villainy was displayed at its utmost in the saw-mill scene in the fourth act. But the villain of the ten-twenty-thirty days is pale and ineffectual beside the corps of villains in the movie. And the fair heroine of the old familiar one-night-stand tank drama would perish ignominiously if faced by half the perils that surround her more advanced sister of the screen. According to an interview published in the October *Photoplay*, the perilous *Pauline* is, in private life, a most human and engaging young lady who harbors something of a grievance because the real perils that she incurs in professional life are rarely appreciated by the audiences to whom her adventures are familiar. The perils they see are those carefully rehearsed, acts of which the producers are certain, otherwise the picture would never be shown. The real ones, into which real danger enters, appear only on the film that is thrown away, if photographed at all. There was, for example, the "yellow peril." Miss White tells the story in her own words:

A real peril that wasn't filmed was the time we were taking pictures in Chinatown. Chinamen, even when they have the most commonplace things to say, cause excitement enough saying them; but on this occasion there was real excitement. One Chinese restaurant-keeper had promised the use of his restaurant for taking exterior scenes. But when we got down there he had changed his mind about it, so the director went ahead and prepared to take the picture anyway. And it took real policemen to quell the riot.

The director had asked if I minded getting in the scene he intended to take, whether Mr. Chinaman liked it or not; I didn't mind. It wasn't any more risky than the other perils; so when the policemen were called I was right in the midst of the excitement; my cape was torn almost off me; I had a really nice gown on and it shared in the damage. I myself wasn't hurt a bit, tho some of the men were.

The interior scenes of that episode were taken in the studio, so we transplanted some Chinamen for the occasion. They had never worked before the camera and

"The sap, the gum, the leaf, and even the odor of the long-leaf pine act as a tonic."

Neurasthenia—Symptom, NOT Disease

Neurasthenia is due largely to habits which may be corrected by giving attention to causes of the ailment.

This is fully explained by Dr. John Harvey Kellogg, who gives you in his new book—"Neurasthenia"—results of his experience with thousands of cases treated during the nearly forty years he has been Superintendent of the great Battle Creek Sanitarium. Dr. Kellogg's book is not a dry book—nor couched in technical terms. On the contrary, Dr. Kellogg has the happy faculty of making his writings easily understood and intensely interesting. If you suffer from nervousness—exhaustion—sleeplessness—or any other form of Neurasthenia, get this book and study it. It shows the way out—teaches you how to obtain relief from the dread fangs of nervousness.

The book contains 250 reading pages, printed on fine book paper. There are several full-page illustrations, diet tables and valuable instructions as to exercise, relaxation, rest and sleep. The regular price of the book is \$2.00 but, to give the work widespread distribution, Dr. Kellogg permits an edition in library paper covers and, while these last, we shall sell them at only \$1 a copy. You take no risk sending money because, if you are not entirely pleased and satisfied with the book, it may be returned for prompt refund. Order at once and get relief from nerve suffering. Address—

Prophylactic

ONE Tooth Brush in universal use today—everywhere

their initiation was a disastrous one for me. As *Owen's* accomplices they were to hide in a secret recess behind a sliding panel, in the wall. I was supposedly unconscious when they rushed off with me, so, of course, my eyes were closed and I didn't see that I wasn't going to fit into that little doorway.

The way I learned it was by a terrific jar when my head and the wall met. And not only that, but both my arms were skinned clear to the elbows on the sides of the narrow wall opening.

After an intermission for an ice-pack at the back of my neck and some cold cream and powder on my arms, we did the other scenes. There was a struggle with the Chinamen that I'll never forget because it was my first, and I hope my last, experience with ju-jitsu. Ordinarily, I can give a man a pretty good struggle, but those men just trotted out their knowledge of the art of ju-jitsu, and I didn't realize how in earnest they were about my not getting away from them until my arms and neck were bent backward until I thought they were going to break. They certainly took their part in that episode seriously—and I applied soothing creams and oils to bruised spots for days afterward—seriously.

Another story that she tells illustrates even more clearly how the thrill that is prepared may be most innocuous for the performer, while the real peril may lurk, unknown to the audience, just outside the range of the camera's eye. On one occasion *Pauline* was turned loose in a runaway balloon. Neither the flight itself nor even the fact that, for some time, she found no way to bring the balloon down was sufficient to spoil Miss White's keen enjoyment of her swift, even journey cloudward over the earth. The unpleasantness came later, when she had discovered the cord that let out the gas and allowed her to sink back to the ground again. She was relieved to observe that she was approaching a vacant lot, but, she adds:

By "vacant" I mean the lot had no house on it; but it was densely populated as regards people. There seemed to be a million faces looking up at me as that basket finally picked out a spot to settle down on, and then it was caught by eager hands and there was hardly room allowed for it to settle on.

Word went up from the back of the crowd that I was *Pauline* of the "Perils," and those in the back crowded forward and those forward had to push to hold their places, so they prest up against the gas-bag. I was under it and couldn't help inhaling the gas.

And that's where the danger came in. The people didn't mean to be thoughtless, but with everybody pushing them they couldn't help but push, too.

One man snatched my purse for a souvenir, so he said. Another man told him to return it and hit him when he refused. Then the friends of the first man came to his help and about ten fights ensued.

Another man took out his penknife and cut a big piece off my coat; this, also, for a souvenir. Others saw him and did the same thing. There's about eight square inches of that coat that isn't there at all.

And all the time I was inhaling the gas, I knew I was losing consciousness and realized there was little hope that anybody there would see my danger and get me out. If it hadn't been for the mounted police coming to my rescue, that would have been my last peril, I feel certain of that. But they had been on the lookout for me ever since I floated away in the balloon that should have been tied but wasn't. The water-station was the nearest place, so they took me there and I had to stay for three hours until the crowd dispersed.

PARRYING THE CENSOR

IN the unhesitating opinion of the harassed and hampered press, the French censorship is as irresponsible and intractable as it is omnipotent. The threats and entreaties of the newspapers, we are told in a dispatch to the *New York Times*, have proved utterly in vain. Consequently, a new weapon has now been employed—ridicule. In France a duel with rapiers or pistols is usually quite a harmless affair; but a duel with ridicule is terrible in its ferocity. In their extremity the Parisian editors have put aside all pity or consideration for their fellow men, and have grasped this dreaded shaft, to hurl it at their tormentors, the censors. An example is given, in the attack made by the *Temps*:

Pierre Mille, one of the best-known contributors, writes a column article, beginning: "Regarding the origin of the convulsion which is shaking Europe, together with the least known diplomatic secrets and the most concealed strategic projects, I am going to make some most important revelations."

Before he can reveal anything here, however, the censor intervenes with a four-line cut. He continues:

"It will be remembered that Napoleon once cried before the Pyramids." (Here is another slash.)

The writer goes on:

"But we do not need the support of history or the remembrance of the victories won by Jeanne d'Arc at (name excised) or at Valmy by (another obliteration). One fact I will add." (Here follows a ten-line cut.)

He continues:

"His undaunted attitude at " (This time ten lines more disappear.)

The article proceeds:

"She cried in a trembling voice: 'Oh, daughter, cruel!' (the woman's speech is all excised save the words 'The devourers fight among themselves,' altho the passage appears to be taken from nothing more modern or harmful than a famous tragedy).

The writer makes a last effort:

"The adversary's position was now very serious. Throwing himself upon his knees, he cried: 'Our Father, which art—' (Even of the Lord's Prayer the censor allows only this beginning and the final 'Amen.'")

The *Temps* says in a postscript:

"We regret the slashing which the censor finds it necessary to inflict, but despite it our contributor asserts that the article can still be understood."

In Times Like These

—the sensible thing to do with your money is not to tie it up in long-term bonds, but to put it where you can get it when you want it.

You want a security that is *absolutely safe, that can be readily converted into cash, that carries a fair rate of interest.*

That is your present investment problem—the Six Per Cent. Short-term Bond issued by the Commercial Security Company is the logical answer.

If you want expert opinion on these bonds, the officers of 300 banks which have bought them will tell you:

"We invest our own and our depositors' funds in them."

Commercial Security Short Term Sixes are secured by Commercial Paper—acknowledged to be the best security in the world.

They come due in from 1 to 30 months—you can choose the maturity suited to your particular needs. They bear full six per cent interest and are exempt from the income tax.

Write for booklet M-21 which describes the bonds in detail and explains the relative advantages of long term and short-term securities.

ARMS AND MUNITIONS OF WAR BOUGHT HERE

WHILE no estimate of the amounts of contracts made in this country by European nations at war, for arms, ammunition, etc., can be made from any available statistics, it is now known definitely that the contracts already made, and under way, are enormous. Every firm in this country which makes goods that are used in fighting battles "is working to its extreme capacity," says the *New York Evening Post*. For some time orders have been "pouring in for rifle, cannon, shells, and cartridges, for aeroplanes by the hundreds, for motor-trucks by the thousands, for automobiles by the hundreds, for motor-cycles in unlimited quantities, for barbed wire by the thousands of tons, for railroad materials, entrenching tools, blankets, uniforms, underclothing, shoes, overcoats, medical supplies, and many other articles." Some exaggeration has appeared in newspaper reports of orders already placed, but it is declared to be strictly true that the limitations imposed on orders are not due to the limited wants of European buyers, but to the capacities of our manufacturing plants. Few manufacturers of arms and ammunition offer exceptions to the rule, that manufactories are now running day and night, are adding additional machinery, and enlarging their plants otherwise. Agents of European governments and of contractors dealing with those governments have been in New York by the thousands for some weeks, while others have made their headquarters in Washington, Philadelphia, and Chicago. These buyers come from Great Britain, Germany, France, Belgium, Russia, Holland, Italy, Japan, and Austria. They are particularly numerous from Russia. Robert Pluym arrived here on November 15, in order to purchase hydroaeroplanes, motor-trucks, and barbed wire for Russia. In an interview he said:

"To get here, I had to come by way of Finland, cross the Gulf of Finland to Sweden, and then go to Bergen, in Norway, and finally by steamer to Newcastle, England, threading a dangerous way through the fields of unanchored mines which the Germans have spread broadcast in those seas. We were three days on this comparatively short trip, for we did not dare to steam at night, when we could not see the mines. I have made up my mind to return by way of Vladivostok and the trans-Siberian.

"Russia offers a splendid market to America. Your country has every opportunity to take over all the trade we formerly gave to Germany. You know Germany exported to us \$500,000,000 worth of goods annually, and most of these goods should be supplied us by America after this. The Germans are still trying to get goods to Russia by sending them into Denmark and having them reexported under Danish trade-marks; but this has been discovered and is practically played out.

"We can use an unlimited number of motor-trucks, for instance, and huge quantities of barbed wire. I am now engaged in trying to run down a very ingenious combination of Maxim gun and motor-cycle. It was invented by a Canadian artillery sergeant who is now at

the front, and the Canadian troops are equipped with them.

"I have also furnished the Russian Government with several hundred automobiles, some of which are used for staff transportation and some in the ambulance service. I am after all the hydroaeroplanes I can secure, not only of the regular size, but of the transatlantic *America* type as well. Other nations are placing orders. Another order I have is for seventy-five machines with which to manufacture a soft, heavy cotton cloth of which underclothes for the troops are to be made. This cloth has all the properties of woollens.

"I have also been charged with the task of finding some American motor-truck concern which will be willing to take over the operation of a line of motor-trucks between Khiva and the Caspian Sea, across the 400 miles of desert which separate them. It is around Khiva that our great cotton-fields are situated, and at present it is necessary to bring the cotton to Russia by a roundabout route which takes two weeks. If we could establish this line of motor-trucks, it would be possible to rush goods across the desert in forty-eight hours, traveling day and night; and this would mean a saving of millions of rubles. The desert surface is quite firm and hard, and all the road-building that would be necessary would be the leveling of two low hills. The project would require an investment of \$250,000 perhaps, and would net enormous profits, for, of course, there would be no competition."

HOW WE HAVE GROWN SINCE 1850

Bradstreet's presents a summary of data compiled for the Department of Commerce and Labor, showing what material progress this country has made since 1850. It deals with population, foreign commerce, national wealth, bank clearings, farms, factories, railroads, and savings-banks. Following are some of the striking comparisons made:

"We find that the number of inhabitants has more than quadrupled in the interval since 1850. In that year the population of the country was a little over 23,000,000; now it is nearly 100,000,000, the figures for continental United States being estimated by the Treasury Department officials at 99,592,000 on November 1. In the same period the foreign commerce of the country has grown from about \$48,000,000 to \$4,259,000,000, the latter amount being over thirteen times the former, while the per-capita value of exports has risen from \$16.96 to \$23.27. The national wealth has grown from a little over \$7,000,000,000 to approximately \$140,000,000,000, the latter sum being almost twenty times the former. Money in circulation increased from \$279,000,000 in round numbers to \$3,419,000,000, so that the volume is over twelve times as great as in 1850. Indeed, if the latest estimate given in the last circulation statement, of \$3,715,522,306, be taken as a basis, the amount is over thirteen times as large as in the middle of the last century. New York's bank clearings have grown from approximately \$5,000,000,000 to over \$98,000,000,000. Figures for the country's clearings do not, apparently, go back beyond the year 1887, when they were a little over \$52,000,000,000, but in little over a quarter of a century they increased to \$174,000,000,000 in round numbers.

"Greatly increased development has marked the activities on the country's farms, in its factories, and on its railroads,

in the intervening period. The value of farms and farm property increased from not quite \$4,000,000,000 in 1870 to \$41,000,000,000 in round numbers in 1910. The value of manufactured products grew from a little over \$1,000,000,000 to over \$20,000,000,000. In railway development the increase has been phenomenal, the number of miles in operation having grown from 9,021 miles in 1870 to 258,000 in 1912. In the last quarter of a century the number of passengers carried has increased from about 492,000,000 to 1,000,000,000, and the volume of freight handled from 652,000,000 to 1,845,000,000 of short tons. The growth of thrift as indicated by savings-banks deposits has been remarkable in the extreme. In 1870 there were only 251,354 depositors, with \$43,431,130 of deposits to their credit; now the depositors number 11,000,000 in round numbers, and their deposits, exclusive of those in other savings institutions, amount to about \$1,750,000,000, or more than one hundred times the amount to the credit of depositors at the middle of the last century.

"Statistics of expenditure for education in the earlier portion of the period under consideration are lacking, but it is known that in 1870 the expenditures for public schools aggregated \$63,300,000 annually. Now the total expenditures on account of education approximate \$500,000,000 a year. Among the agencies for the diffusion of intelligence must also be mentioned newspapers and periodicals. Enumerations of these were made only sporadically in earlier times, but figures are available regularly since 1869. In that year the number of newspapers and periodicals was estimated at 5,219, while in 1910 the number had grown to 22,725, or nearly four times the number counted a little over forty years before."

THE MONEY COST OF THE WAR

Estimates heretofore made of the cost of the European War showed such large totals that they were regarded in some quarters as excessive. Attention, however, is called by *Bradstreet's* to the fact that, by the middle of November, sufficient official figures had come to hand from two countries to throw definite light on the subject. M. Ribot, the French Minister of Finance, had stated that the cost to France during the first two months of the war averaged \$7,000,000 a day, and this average was nearly maintained throughout October, with a possibility that the average would soon approach \$6,000,000 a day instead of \$7,000,000. In England it was announced by the Prime Minister, when moving a large additional war credit, that up to November 15 the British expenditures had reached a point between \$4,500,000 and \$5,000,000 a day. He could give no hope that these expenditures were likely to diminish. With the additional credit obtained, it was expected that the British Army, not including the so-called Territorials, would number 2,186,000 officers and men, which would be "far in excess of the strength of any other army heretofore maintained in the field by the United Kingdom." Other items in *Bradstreet's* article are these:

"Lloyd-George in proposing increased taxes estimated that the cost of the war for a full year, providing of course for an increase in the number of men under arms to about 3,000,000, would amount to at least \$2,250,000,000. This sum would be six times as great as the largest amount ever before spent by Great Britain or in a single year, and would average \$6,000,000 a day, or about the Franco is now spending. The Chancellor said that the coun-

Two Good Suggestions on Inventory

- First:** Have your inventory sheets printed like the above form with perforated extension strip. This strip insures two independent extensions of every item—a method that turns the spot light squarely upon every possible error in the work.
- Second:** Buy a Comptometer and set it to work on your inventory. With a few days' practice an operator will be able to extend items like the above in four or five seconds each. Enter the original extensions on the detachable strip. Then tear off the strip and turn the sheet over to another operator who will enter his extensions in the remaining column. Compare the two totals and—well, if there is anything wrong, it will show right there.

Adds
Multiplies

Comptometer

Divides
Subtracts

Instead of having the office upset for days, and even weeks for figuring inventory, you can make a quick and easy job of it with the Comptometer—have it done and out of the way in half the time and know for sure there are no mistakes in it.

When through with the inventory you will find the time-saving speed and accuracy of this machine just as valuable on your everyday work, proving Postings, balancing

Accounts, footing Trial Balance, extending and proving Invoices, Payroll, Estimates, figuring Costs, etc.

Why not ask for a practical demonstration in your own office—it will cost you nothing. Let our representative figure a few pages of Inventory for you and see for yourself how easily and rapidly you can handle this disagreeable work with the Comptometer.

H.B. Glover Co. Dept. 27 Dubuque, Iowa

find \$2,676,835,000 by the end of the financial year or there would be a deficiency of \$1,097,555,000. To meet these heavy charges, he proposed the doubling of the income tax and the imposition of taxes of 1 cent a pint on beer and of 6 cents a pound on tea. In addition, a war-loan of \$1,750,000,000 was offered for subscription, the loan to be issued at 95, to bear interest at 3½ per cent., and to be redeemable at par on March 31, 1928. It was announced on the afternoon of the issue that \$500,000,000, or two-sevenths of the whole amount, was taken by a single firm, and \$3,000,000,000 were subscribed by Thursday. With these provisions, the Chancellor of the Exchequer intimated, the Government would be prepared to carry on the war until July in case that course should be necessary. While declining to speculate as to the length of the war, he said that it might be shortened or lengthened by accident, but as a prudent financial officer he was bound to estimate for a longer period.

Less is known about the expense of the war to Germany and Austria, but estimates made in the former country a couple of months ago put the daily cost at about \$5,000,000, and it has since been suggested that that figure was too low rather than too high, and that it would be nearer \$7,000,000. It seems unlikely that Austria's expense could fall much below the figure first mentioned for Germany, and the Russian expense per man might be less, the size of the Muscovite Army would probably call for an aggregate not lower than that of Austria. A glance at the figures given above will indicate how large a total expense is involved in the actual conduct of the war alone, without taking account of the loss involved in the destruction of property, the stoppage of trade and industry, the losses of crops, and the general derangement resulting from the Titanic conflict.

Taking Lloyd-George's estimate for the United Kingdom as nearer the mark, for an average over a long period with augmented forces, than the figures given by Mr. Asquith for the first three months of the war, and combining with it the latest average for France, the lower estimate for Germany above mentioned, and the figures suggested for Austria and Russia, we get a cost of \$27,000,000 per day for the five leading combatants. This does not take account of the cost of the war to Belgium, Serbia, Japan, and Turkey, which, while not so great as that for the five Powers already mentioned, yet must foot up a heavy total. The cost for the five leading nations now at war would, on the basis above indicated, amount to almost \$10,000,000,000 for a year, and adding to that the expense to the four lesser combatants and the cost of mobilization in other countries, such as Holland, Switzerland, Roumania, and Italy, which have had to take measures to defend their neutrality or to provide for possible involvement in the war, the estimates of those who fix the total cost of the war for a year at over \$14,000,000,000 may not be so far out of the way.

DIRECTORS TO BE REMOVED UNDER THE CLAYTON LAW

Under what is known as the Clayton Law, passed at the last session of Congress, many directors in corporations and banks must cease to serve within two years from October 15 last. Close and general attention is now being given to this law by the management of these institutions. It will affect the great steel companies and many other of the best known industrial plants whose activities in large degree pertain to supplies for railroads. Under this law, no railroads or other common carriers will be allowed to purchase supplies at a value of

CORONA Folding Typewriter

—is going to be a favorite Christmas gift with many people

There is now no reason for writing a letter, report, or anything else, in long hand—whether traveling, at home or elsewhere. Carrying a Corona is no trouble at all—it weighs only six pounds, and when folded occupies about the same amount of space as a large camera.

Thousands upon thousands use the Corona; so should you—and so should that someone dear to you who you are going to remember this Christmas. So, to be sure of pleasing, give him or her a Corona Portable Typewriter.

Send now for Booklet No. 14

PARK & TILFORD 225 5th Ave., N. Y. F. R. ARNOLD CO. 7 W. 22nd St., N. Y.

more than \$50,000 in any one year from any corporation, company, or partnership when the railroad or other common carrier has on its board of directors, or as president, manager, or purchasing or selling agent, any person who at the same time is a director, manager, or purchasing or selling officer of, or who has any substantial interest in, such corporation, company, or partnership. Judge Gary, for example, of the Steel Corporation Board, has already retired as director of a number of outside corporations. Other well-known men now on the Steel board must have retired within two years from October 15, among them J. P. Morgan, Henry C. Frick, Norman B. Ream, George F. Baker, Daniel G. Read, and George W. Perkins.

Among banks important changes will also be necessary. The same law provides that two years after October 15 no person shall at the same time be a director or other officer or employee of more than one bank or trust company which has deposits, capital, surplus, or undivided profits aggregating more than \$500,000. Among prominent bankers who will be affected by this law *The Journal of Commerce* mentions George F. Baker, Francis L. Hines, James A. Blair, Henry P. Davison, A. Barton Hepburn, James J. Hill, Thomas Stillman, Frank A. Vanderlip, Cleveland H. Dodge, Henry C. Frick, William A. Marston, William Rockefeller, George J. Gould, and Albert H. Wiggin.

THE SPICE OF LIFE

Austrian War Lament

We Austrians can not stand the drizzle
Of Russian shrapnel at Przemyśl!

The Russian hordes are in the track of
Our noble men who flee to Krakow.

A million Cossacks may delouse,
At any moment, at Olkusz!

A million more reported are
At Kamionkastrumilowa!

And yet another million have
Consumed all food at Yaroslaf!

Ah! ev'rything they cleared—as well as
The larders of Jaszarokszellas!

Then down they poured, like molten lava,
On rural, innocent Suezawa!

And now they march, with hungry screech,
On harmless little Drohobycz!

Curs'd be the foreign rascals, greasy,
Who chased us at Tustanowice!

Steel motor-cars—ten guns in each car—
Are rolling on toward Wieliczka!

How truly awful will it be
If Cossacks mangle us at Stryj!

No one may even dare to guess of
The patriots who fell at Rzeszow.

Of Czechs, 'tis said, they've buried a
Battalion at Csikszereda!

As at the banquet of Belshazzar,
The finger writes at Njiregyhaza!

So, ere the sky with dawn grows streaky
Let's fly to dear old Zaleszezyki!

—"Terror" in London Opinion.

Turn to Real Estate For Your Investments

When values in the stock and bond market shrink and the financial world is upset, the attention of the investing public is attracted to real estate and to obligations based upon it as the most stable and certain form of investment. That has been the history of every financial disturbance in this country. *It is true today.*

Real Estate must be used to live on and work on. The measure of its use is the measure of its value. New York real estate is the most valuable real estate in the world, and offers the safest and best channel for investment.

For more than a quarter of a century, the American Real Estate Company, the oldest and one of the largest real estate operating companies in New York, has extended its business through the sale of its 6% obligations to the public. It continues their issue today in two convenient forms:

Coupon Bonds, in denominations of \$100, \$500, \$1,000, etc., paying 6% interest, payable semi-annually, principal due and payable in ten years.

Accumulative bonds, in denominations of \$1,000 and upward, purchasable by instalment payments running for 10, 15 or 20 years. These instalment payments bear interest at the rate of 6% compounded annually, and at maturity principal and interest are paid in one sum—the face value of the bond.

If you are receiving anything less than 6% on your money, write us for detailed information regarding American Real Estate Six's and the business upon which they are based.

A MESSAGE TO
GIRLS : From
Eliza M. Mosher,
M.D.

JUST THE BOOK FOR THE GROWING GIRL.
This new book by Dr. Mosher deals in a fundamen-
tal and very original way with habits of posture,
good and bad, and their influence upon the body;

and

with physical efficiency through
an understanding of the needs
of the body in relation to foods,
and the removal of waste; the
care of the skin, and the efficient
clothing. The story of motherhood
is told in a very interesting manner, and valuable ad-
vice is given regarding the physical preparation for it.

Price by mail \$1.00. FUNK & WAGNALLS CO., New York.

Happiness

Humorous Sally.—"Your cousin Sarah
is such a volatile creature."

"Yes; we call her Sal Volatile."—
Boston Transcript.

Perplexed.—INQUISITIVE INCUBATOR
CHICK—"Say, do they figure your birth-
day from the day you're laid or the day
you're hatched?"—*Puck.*

Time Wasted.—"Dinah, did you wash
the fish before you baked it?"

"Law, ma'am, what's de use ob washin'
er fish what's lived all his life in de water?"
—*Philadelphia Leader.*

The Danger.—"Pa, a man's wife is his
better half, isn't she?"

"We are told so, my son."

"Then if a man marries twice there
isn't anything left of him, is there?"—
Boston Transcript.

His Experience.—MRS. HENPECK—"Is
there any difference, Theodore, do you
know, between a fort and a fortress?"

MR. HENPECK—"I should imagine a
fortress, my love, would be harder to
silence!"—*London Opinion.*

Defined.—BIX—"I see there's a report
from Holland that concrete bases for
German cannon have been found there."

DIX—"Don't believe a word you hear
from Holland. The geography says it is a
low, lying country."—*Boston Transcript.*

Filial Fondness.—"What is in the mail
from daughter?" asked mother, eagerly.

"A thousand kisses," answered father,
grimly, "and sixteen handkerchiefs, two
waists, and four batches of ribbons for you
to wash and mend."—*Kansas City Journal.*

A Daughter's Laughter

With increasing amusement he laughed,
Because of his daughter's wild laughter;
Then he said: "Tho I seem to be daught,
I am sure that my daughter is daughter."
—*Ladies' Home Journal.*

Likely.—JUDGE—"Officer, what's the
matter with the prisoner—tell her to stop
that crying—she's been at it fifteen
minutes" (more sobs).

OFFICER—"Please, sir, I'm a'thinking
she wants to be bailed out."—*Nebraska
Argonaut.*

Happy Childhood.—A small boy seated
on the curb by a telephone-pole, with a tin
can by his side, attracted the attention of
an old gentleman who happened to be
passing.

"Going fishing?" he inquired, good-
naturedly.

"Nope," the youngster replied. "Take
a peek in there."

An investigation showed the can to be
partly filled with caterpillars of the
tussock moth.

"What in the world are you doing with
them?"

"They crawl up trees and eat off the
leaves."

"So I understand."

"Well, I'm fooling a few of them."

"How?"

"Sending 'em up this telephone-pole."—

Expectant Motherhood

A new book by J. W.
Ballantyne, M.D., Phy-
sician to the Royal
Maternity Hospital,
Edinburgh

This important new book explains the
hygienic rules which the parents, and espe-
cially the mother, must obey if their child
is to come into the world well and strong.
Dr. Ballantyne, as physician to the Royal
Maternity Hospital, Edinburgh, is able to
write on this subject with authority. He
not only tells the expectant mother what
she ought to do and ought not to do, but,
with singular clearness and charm, explains
the physiological reasons for the directions he
gives. In this respect the book is unique.

CURRENT EVENTS

EUROPEAN WAR

IN THE EAST

November 19.—German reinforcements continue to pour in, to strengthen the great German drive into Poland between the Vistula and the Warthe rivers.

November 20.—The German Army in Poland sweeps in to the Lenczyca-Plock line and beyond, where their progress is checked by the Russians, and a desperate battle is begun. Another huge battle is in progress along the southern headwaters of the Warthe, on a fifty-mile line between Krakow and Czenstochow. In East Prussia is a long-drawn-out campaign through the Masuri Lakes, where Von Hindenburg won his conspicuous victory September 1.

November 21.—Berlin reports the Russians as falling back before the German advance in Russian Poland, and claims that the latter have reached Lodz.

November 22.—Germany claims progress in Russian Poland, reaching to within forty miles of Warsaw, but Russian advisers report the battle between the Warthe and the Vistula at a standstill. Petrograd reports the capture of 2,000 prisoners near Krakow, and says that the Austrians have evacuated Neu Sander, a railroad junction on the Dunajec in Galicia.

November 23.—In the battle between the Vistula and the Warthe, where General von Hindenburg and Grand Duke Nicholas lead the opposing armies, the advantage is said to be with the Russians. A great battle is in progress, but the German advance is already definitely blocked, according to reports.

November 24.—The German advance in Russian Poland is reported as being forced back upon the border, and turned away from the German base at Thorn. The storm-center swings southwest, joining the Russian attack on Czenstochow, and eluding a planned German move on the Russian left wing from Weljan, on the border below Kalisz.

IN THE WEST

November 21.—The French report the repulse of repeated German attacks in the Woivre district, the capture of a height near Verdun, and the taking of some trenches in the Argonne.

November 22.—The French War Office announces a violent bombardment of Ypres, in which much of the town was destroyed. Germany reports much hindrance by the bad weather in France and Belgium.

November 24.—British war-ships shell the German naval station at Zeebrugge, says a dispatch, destroying German submarines in process of building at that point, and driving the Germans from all shelter along the whole Belgian coast.

GENERAL WAR NEWS

November 19.—Berlin reports a recent complete victory over the Servians at Valjevo in which the Austrians took 6,000 prisoners.

Russia reports the sending of reinforcements against the Turks in the Batoum district, in the region of the Choruk Su River, and also a defeat of the Kurds in Persian Armenia.

November 20.—The Khedive of Egypt is

There's a quaint and pretty Indian superstition that those who are photographed lose something of their personality—that this personality becomes a part of the picture.

Be this superstition or be it sentiment, the idea bears both truth and charm. For a picture means something, is personal, gives the homely touch of friendship—especially at Christmas time.

There's a photographer in your town.

J. S. Ogilvie Publishing Co., 57-1 Broadway, New York City

THE LEXICOGRAPHER'S EASY CHAIR

Readers will please bear in mind that no notice will be taken of anonymous communications.

"B. J. E." Presidio of Monterey, Cal.—"Did the United States repudiate the 'Continental' money issued in payment of the Revolutionary War?"

We find no specific evidence of repudiation, but we know of an instance where persons who acquired it lived to realize its worthlessness, and Continental "money" was used as a pillow for the head of one who died and was buried. We advise you to address your inquiry to the Secretary of the Treasury, who may have access to more direct information than we have.

"L. P. L." Brooklyn, N. Y.—"Kindly tell me whether it is correct for me to have my whole name engraved on my visiting-card—'Miss Lillian P. Leon'—or 'Miss Leon.' I am the only daughter."

The correct form for an only daughter is "Miss Leon."

"A. R. L." New Orleans, La.—"Will you be kind enough to reply to the following: (1) Is it correct to say, 'These data have been gathered,' or 'This data has been gathered?' (2) In referring to correspondence consisting of several letters on one subject—one copy of which has been made of each letter—would the correct form be 'copy of correspondence' or 'copies of correspondence?' Thus, 'I enclose herewith copies of correspondence,' or 'I enclose herewith copy of correspondence.'"

(1) *Data* is the plural of *datum*, and should be used with a verb in the plural. (2) As the word *correspondence* implies letters that have passed to and fro, thus giving a plural sense (and one letter could not constitute correspondence), it is not necessary to use the plural *copies*.

"R. F." Chicago, Ill.—"Will you tell me if the word 'transpire' can be used synonymously with 'perspire,' that is, would it be correct to say 'a man transpires,' meaning 'a man perspires?'"

The word *transpire* is correctly used for *perspire* and condemned when used for happen.

"C. O. H." Cassopolis, Mich.—"My dictionaries are a little obscure on the definition of 'successor.' I would like its full meaning. For example, is President Wilson 'successor' to President Abraham Lincoln, or only to Roosevelt?"

Successor means one who or that which succeeds or takes the place of a predecessor or preceding thing; especially, one who succeeds to another's rank, office, or property. It is the correlative of *predecessor*.

"H. E. L." New York, N. Y.—"Please inform me whether the following sentence is correct: 'Thanking you in advance for trouble occasioned.' I see this used at times, after a request is made in a letter for information and would like to hear from you whether it is the correct wording to use."

"Thanking you in advance for the trouble which this request may occasion" may be used with perfect propriety.

"K. C." Bartlesville, Okla.—"Kindly tell me if 'sitting' is used correctly in speaking of 'a sitting hen.' Also which of the following forms is correct: (1) 'Our Father who art in Heaven,' or (2) 'Our Father which art in Heaven'; and (3) 'Forgive us our trespasses as we forgive them who trespass against us'; or (4) 'Forgive us our trespasses as we forgive those who trespass against us?'"

(1) According to strict grammatical rule, *sit* when referring to posture is always an active intransitive, and *set* an active transitive. "To sit on eggs" has been characterized as colloquial English, but is sanctioned by the translators of the King James version of the Bible. "As the partridge *sitteth* on eggs and hatcheth them not" (Jer. xvii, 11). Shakespeare wrote "Birds *sit*, brooding in the snow" ("Love's Labour's Lost," act iv, sc. 3). On a poultry-farm the farm-hand *sits* the hen, but the hen *sits*. (2) The English of the Lord's Prayer is the English of the Bible and Prayer-book. You will find "which art in Heaven" in the Bible—Matthew vi, verse 9. "Who art" is a modification found, we think, in the Episcopal and the Lutheran Prayer-books, but not in King Edward VI.'s Book of Common Prayer, nor in the Book of Common Prayer in use by the Church of England. (3, 4) Both forms are correct.

The Gift that Pleases Every Man

is a glass humidor of famous Tuxedo tobacco. Last Christmas thousands of men received this appropriate, delightful, sensible gift—and this year the number will be increased by many thousands. Give *him* a humidor of Tuxedo. It will last him for weeks—in his office or by his fireside—and each cool, mellow, fragrant whiff will recall you to him in pleased and thankful revery.

Tuxedo can be smoked all day long without causing the slightest irritation to the smoker's throat or mouth, as is proved by the endorsement of Tuxedo by men like Caruso, William Faversham, Harry Lauder, and thousands of famous Americans in professional, public and business life.

Tuxedo is made from the finest, mildest leaves of high-grade Burley tobacco, carefully cured and aged so that it burns *slow* and *cool*, with delightful flavor and aroma.

Tuxedo has the advantage—over other tobaccos—of the exclusive *original* "Tuxedo Process," which *absolutely* prevents "tongue-bite." The Humidor Jar keeps it *fresh* and *moist* to the last pipeful.

Tuxedo is endorsed by thousands of distinguished public men as the one perfect tobacco.

TOPICS - OF - THE - DAY

SHOULD WE PREPARE FOR ATTACK?

THE SPREAD of serious thought and talk about Army and Navy needs beyond the circle of war-material purveyors, Congressmen, and Army and Navy officials is evidenced by the recent meeting of more than a hundred of New York's representative citizens to form a "National Security League," and by the efforts of other individuals and groups to arouse the nation to a keener sense of what they believe is a national peril. At the same time, President Wilson, so Congressman Gardner is persuaded, "means to lay the cold hand of death on the movement," and not a few important newspapers think that is just what he ought to do. People are recalling ex-President Roosevelt's Princeton statement that he had "seen the plans of two of the countries now engaged in the European War to invade the United States." But those who would thence deduce the existence of a real danger and proclaim aloud our helplessness are dubbed "jingo" or "alarmists" by the optimists who can easily reduce the invasion menace to a patent absurdity, and by the so-called "sentimentalists" who agree with Dr. David Starr Jordan that "in time of peace prepare for war" is a maxim "forged in hell." Needless to add, the war in Europe points the moral for both sides.

General Wotherspoon's military recommendations were noted in these columns last week. The annual report of Rear-Admiral Blue as Chief of the Bureau of Navigation is no less interesting. He pictures the Navy as undermanned, short of experienced officers in the higher grades, and affected by so slow a promotion of officers that the higher positions are filled with aging men waiting to retire, while the young and active men are kept in unimportant posts. The shortage of personnel and the lack of experienced officers in the places of highest responsibility seem significant to *The Army and Navy Journal*. It is shown, this Service journal notes, that "of the 1,881 line officers, 793 are above the rank of lieutenant (junior grade) and 1,088 of or below that rank. This condition is abnormal and should be remedied." And the matter of promotions is becoming a more serious question every year, adds *The Army and Navy Journal*, referring to Admiral Blue's statements to the effect that

"The junior ensigns of the class of 1915 can not expect to be promoted to lieutenant-commanders, under such conditions, under forty years, or at a time when they will have reached the statutory retirement age of sixty-two.

"In other words, all the officers in the Service fit for duty would be junior lieutenants and ensigns. The lieutenants, lieutenant-commanders, commanders, captains, and rear-ad-

mirals would be officers who have only recently stepped up from having been worn-out junior lieutenants, and would only be waiting to reach the retiring age. It is needless to comment on such a situation. If the matter were not so serious it would be ludicrous."

Congressman Gardner's charge that the Navy is short of torpedoes is disputed by the Secretary of the Navy. But the *New York Sun* finds it even more disquieting to read in Admiral Blue's report that "lack of officers has prevented the training of a satisfactory number of torpedo experts." The conclusion *The Sun* draws from the report is "that the inadequacy of the Navy extends to personnel, training, and complement as well as to ships."

We need an investigation of our naval defenses, agrees the *Chicago Tribune* (Prog.). We want the truth about our Navy and our port defenses, and about our mobile army. For, it continues,

"The task of our Navy is to defend thousands of miles of coast in two oceans with many undefended harbors, to defend the canal and that vital outpost of the Pacific shore, Hawaii. One sharp defeat, one slip of strategy, and an aggressive enemy might land an expeditionary force on our shores to punish us well for our indifference.

"There is but one counter-defense against such an event, an efficient mobile force trained, equipped, and ready to act swiftly.

"What approximation to such land defense have we?"

Americans, concludes *The Tribune*, "need not be 'militarists' or alarmists or jingo" to face these questions, to demand they be answered honestly and fully, and to support a consistent, persistent, and adequate policy of national defense which shall not be prevented or thwarted by the organized vagaries of Utopians, impossibilists, or extremists of any variety." This attitude, it should be noted, is also taken by a host of dailies, among which are found the *Boston Transcript* (Rep.), *Lowell Courier-Citizen* (Ind.), *Albany Knickerbocker Press* (Ind.), *New York Herald* (Ind.), *Times* (Ind. Dem.), *Tribune* (Rep.), *Evening Mail* (Rep.), *American* (Ind.), and *Telegraph* (Dem.), *Newark Star* (Dem.), *Philadelphia Inquirer* (Rep.), and *Public Ledger* (Ind. Rep.), *Baltimore American* (Rep.), *Washington Post* (Ind.), *Star* (Ind.), and *Times* (Prog.), *Nashville Banner* (Dem.), *Detroit Free Press* (Ind.), *St. Louis Star* (Ind.), *Chicago Herald* (Ind.), and *Colorado Springs Gazette* (Prog.).

The appeal for an investigation into the state of our defenses, thus voiced by the press and by men like Senator Lodge and Congressman Gardner, is reinforced by assertions of our defense-

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 45 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label, subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL**, **DISCONTINUANCE** or **CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

lessness against invasion. "The guns in your defense," Mr. Gardner recently told a New York audience, "have one and a half miles less range than the dreadnoughts laid down by Great Britain and Germany. They could stand off, one and a half miles outside the effective range of your New York forts' guns and play machine shots into your city's coast defenses. And you haven't a shoe-string inside those defenses to keep out an invader from the land side." Supposing a successful enemy of England should decide to attack Canada from the American side, said Mr. George Haven Putnam to another New York audience, we might refuse the invaders permission to march up the Hudson Valley. But we could not, under present conditions, stop them. Then if the invader forced his way upon our soil, we might see the towns along the Hudson laid in ruins; and even if not, "it would be a breach of neutrality on our part if we did not succeed in preventing such an expedition." The New York Sun prints published plans for German and Japanese descents upon our coasts, which it believes substantiate Colonel Roosevelt's statement, above mentioned. According to a brochure entitled "Operationen Ueber See," by a Captain von Edelsheim, of the General Staff, the German plan would be to make a quick descent upon the Atlantic coast, landing at some unexpected point, and placing at the mercy of the German guns several of the wealthy and important coastal cities. The complete conquest of the country would not be attempted, he wrote,

"but there is every reason to believe that victorious enterprises on the Atlantic coast and the holding of the most important arteries through which imports and exports pass will create such an unbearable state of affairs in the whole country that the Government will readily offer acceptable conditions in order to obtain peace."

Similarly, Gen. Homer Lea told in his "Valor of Ignorance" of plans matured at the end of the Russo-Japanese War, whereby Japanese forces, aided by Japanese in Hawaii and the coast States, were to land at a convenient point on the Pacific coast, seize the railroads and attack the important cities from the rear. Both plans counted on the United States regular Army as an almost negligible obstacle, altho it should be noted that both were prepared before the completion of the Panama

Canal enabled us quickly to concentrate our whole fleet in either ocean.

Still "another tom-tom beater," as the New York *Commercial* calls those warning against invasion, expects to see millions of men poured into Canada by the Allies "on that day soon to arrive, perhaps, when we go to war with England, France, Russia, or Japan." The *Commercial* answers confidently that

"The topography of Canada and her lines of internal communication are such that we could cut her into sections at Quebec, Montreal, Sault Ste. Marie, Fort William, and Winnipeg, at all of which points her railroads and canals are within a few hours or even a few minutes' march of our boundaries. Millions of men landed by the Allies in Canada would find themselves in a trap."

Other papers are as little disturbed by the prospect of an overseas invasion. Their views are well expressed by an editorial recently appearing in the Springfield *Republican*. The transportation of England's Canadian contingent is used as the basis of the argument. Says *The Republican*:

"Thirty-five transports had to be provided for men, horses, artillery, and equipment, while a large fleet of war-ships was necessary to provide a safe passage over the sea. The expedition was highly favored by the fact that no enemy fleet was to be encountered before it could be landed on the other side. Now, with all the effort made, how many soldiers were thus transported under these exceptionally favorable conditions? Only 32,000 men.

"One does not need to be a military man to see that many times 32,000 soldiers would have to be quickly landed on our coast to make an invasion in the least worth while to an overseas Power. . . . A large hostile army approaching our shores in a large fleet of transports could not possibly be missed on the high seas by our fast scout cruisers, and it would be exposed to deadly attack by swarms of our submarines before it could even sight land. . . . So it seems a sound conclusion that the invasion of the United States on either ocean by a hostile army strong enough to be an appreciable factor in campaigning, difficult as it has been under any conditions, must hereafter become a task more formidable than military science has ever contemplated.

"The military lessons of the present war, so far as they have been developed, do not emphasize the insecurity of the United States. It has been pertinently said that every European Power now at war will be so exhausted when peace arrives that it will not desire more fighting on a costly scale for years to come. And

an invasion of the United States would be one of the most costly of military operations."

As unafraid of invasion as the *Springfield Republican* and as unshakenly devoted to the ideal of peace as Andrew Carnegie, President Jordan, or Secretary Bryan, are a group of newspapers that embrace *The Wall Street Journal*, *New York Evening Post*, *World*, and *Journal of Commerce*, *Cleveland Plain Dealer*, *St. Louis Republic*, and *Salt Lake Tribune*. Some of the demands of men like General Wotherspoon, Admiral Blue, and Congressman Gardner are perfectly logical, *The Republic* agrees. But it

thinks our people are still "willing to take a chance on war for the sake of maintaining their position as a people whose ways are the ways of peace. In the present situation they see how the theory that war is prevented by preparing for it has broken down." Also, we hope "soon to lead the nations of the world in a movement for peace founded upon justice," and the strength of our position would "be impaired by any movement in this country looking to a great increase in our military strength." It is this thought that is generally believed to be behind President Wilson's discouraging attitude toward the national-defense inquiry. The *New York Evening Post* asserts that all the facts are available without any Congressional investigation. And to ask Army and Navy officers to tell what they think should be done is like asking protected manufacturers batten on the Treasury to write their own tariff-schedules." We shall be in for "an inquiry at

which our generals will dispute whether we shall have 205,000 or 500,000 regulars, and our admirals whether we shall have fifty battle-ships or two hundred and fifty submarines." *The Evening Post* takes its stand with the President—

"For he sees how ineffective—how hypocritical—would be our appeal for peace, our offer of good services, our pointing the way to disarmament, if we were to make that appeal fresh from new concessions to the armament ring, fresh from voting more hundreds of millions out of the pockets of the people and into those of ship-contractors and manufacturers of supplies.

"To approach the European combatants thus with new weapons in our own hands would be to fling away our moral position. . . . The menacing growth of our Navy has been cited both in the Reichstag and in Parliament as one excuse for piling more burdens upon British and German taxpayers, by building more and more battle-ships. To our mind this is not only not the time to inquire about our preparedness for war, it is the time to refuse to vote a single additional ship, and to lead the world toward disarmament by beginning to disarm ourselves. The high example to be set by such an action would make a thrilling appeal to the victims of the war—certainly to enlightened consciences in every quarter of the globe. . . .

"We are convinced that the President has only to state the case for the people to rise to him as they have every time he has made a plea for justice and humanity. The American people are thinking about what all this means. Hundreds of thousands have fled to this country to escape the burdens of militarism; they have no desire to shoulder new ones here. . . . The lesson for us of the European struggle is that we should refrain from building more battle ships and weapons of destruction. But it is the hour for all who feel thus to make themselves heard. Every American who desires his country to lead the world back to the paths of peace should determine now to support the President by word and by deed."

MR. WILSON'S HINT TO EUROPEAN BOMB-DROPPERS

HAS A NEW METHOD of dealing with international affairs of extreme delicacy been introduced by President Wilson? This question follows the rumors of the President's "tacit diplomacy" in the matter of bomb-dropping by the aircraft of the warring Powers. On November 27 the *New York World* and *Evening Post* came out with an attractively mysterious story, which stated that early in October the President had sent abroad through devious channels a whisper of

his own displeasure and that of the United States as a whole. That minatory word, we are assured, was sufficient to work a complete change in Prussian aerial tactics. The President had objected, lightly, delicately, and without any specific references, and immediately the bomb-dropping ceased.

The romantic appeal in this startling bit of news is somewhat damaged by Secretary Bryan's statement the following day, as the telegraph report has it, "that no representations had been made, but that in particular instances, as in regard to Antwerp, the United States through its agents on the ground had made inquiries as to the damage suffered," and that "apparently the cases chosen for inquiry were those in which either Americans had been injured or their lives and property imperiled." On the other hand, a Washington report of the same day to the *Boston News Bureau*, mentioning Mr. Bryan's explanations, adds, "but

it is learned from other sources that this Government had thrown its influence against repetitions of the raids" of the air-ships and aeroplanes. And certain facts support this latest theory. As *The World* points out in its news story of the affair:

"From the time the President first conveyed his views to the diplomats there has been no complaint of wanton aerial bombardment of residential cities, indicating the good feeling with which the wish of the American Government was received in the foreign capitals. Since then successive assurances have been coming from the Foreign Offices of Europe, until now all have accepted the protest favorably. It is now believed that all the foreign capitals and other residential cities are immune from aerial attack."

The one paper to take issue most definitely with *The World* and *Evening Post* is the *New York Sun*, which can not believe that the President made any remonstrance based on Hague conventions, since the Hague agreements on such practises are void, through not being ratified by all the Powers involved. Others avow that, tho forced perhaps to believe that the President's quiet inquiries have been the sole basis of the attributed tacit diplomacy, we can yet console ourselves with the indubitable fact that since early October bomb outrages have practically ceased. Also, as the *St. Louis Star* adds:

"However mild it may have been, any sort of intimation on the part of President Wilson, through our ambassadors and ministers, to the warring governments, that the United States and her people do not approve the dropping of bombs into undefended cities, is bound to have a good effect. It shows where we stand, both on the humanities civilization is supposed to observe and the terms of the conventions adopted at The Hague in 1907."

"TO ARMS! TO ARMS!"

—Kirby in the *New York World*.

THE CROWN PRINCE ON THE WAR

THE REMARKABLE INTERVIEW granted by the German Crown Prince to an American journalist "will not in the smallest degree affect the calm judgment of the American public upon the causes of the war," predicts one editor, but it "will unquestionably modify American opinion of the Prince himself." The mental picture of Prince Frederick William hitherto most familiar on this side of the Atlantic has been that of a rather irresponsible and very uncompromising militarist, an agitator for war. Notably different is the picture set before us by Mr. Karl H. von Wiegand, staff correspondent of the United Press, who sends from the Prince's army headquarters in northern France the first interview ever given to a foreign newspaper man by the heir to the German throne. "Undoubtedly this is the most stupid, senseless, and unnecessary war of modern times," declares the Prince, who goes on to say that "it is a war not wanted by Germany. I can assure you, but it was forced on us, and the fact that we were so efficiently prepared to defend ourselves is now being used as an argument to convince the world that we desired conflict." He pictures Germany "surrounded by jealous enemies, fighting for her existence," and expresses surprise "that Americans, to whom we are bound by ties of friendship and blood, should be so totally unable to put themselves in our place." He declares his faith, however, "in the sense of justice of the American people once we can get to them the actual truths about this conflict," and predicts that "when the truth is known, their love of fair play will result in a revulsion of sentiment in our favor." When Mr. von Wiegand apologized for his "Americanized German," the Crown Prince continued the interview in English. To quote his words more at length, as reported in the United Press dispatch:

"I am a soldier, and therefore can not discuss politics, but it seems to me that this whole business, all of this action that you see around here, is senseless, unnecessary, and uncalled for. But Germany was left no choice in the matter. From the lowest to the highest we all know that we are fighting for our existence. I know that soldiers of the other nations probably say, and a great many of them probably think, the same thing. This does not alter the fact, however, that we are actually fighting for our national life.

"Since we knew that the present war was to be forced on us, it became our highest duty to anticipate the struggle by every necessary and possible preparation for the defense of the Fatherland against the iron ring which our enemies have for years been carefully and steadily welding about us.

"The fact that we foresaw and, as far as possible, forestalled the attempt to crush us within this ring, and the fact that we were prepared to defend ourselves, are now being used as an argument in an attempt to convince the world that we not only wanted this conflict, but that we are responsible for it.

"No power on earth will ever be able to convince our people that this war was not engineered solely and wholly with a view to crushing the German people, their Government, their institutions, and all that they hold dear. As a result you will find the German people are one grand unit imbued with a magnificent spirit of self-sacrifice. . . .

"There is no war party in Germany now, and there never has

been. I can not help believing that it will very soon dawn upon the world that so far as Germany is concerned this conflict is not a war waged by some mythical party, but is a fight backed by the unity and solidarity of the German Empire. This unity is the best answer to the charge with which England is endeavoring to terrify the world—that the war is being pushed by an ambitious military clique."

Describing his personal impressions of the Crown Prince, Mr. von Wiegand notes that, "despite the intensity of his con-

victions, he displayed none of the intense hatred and bitterness toward the English which I have observed so constantly among Germans of all walks of life since the outbreak of the war." Mr. von Wiegand also failed to detect in the Crown Prince any evidences of the fire-eater, the uncompromising warrior. Further:

"From my conversation with him I gathered that the Crown Prince is strongly opposed to bureaucracy and everything standing between the people and their ruler. It developed from my conversations with members of his staff that it is almost impossible to get him to sign the death-sentence of a convicted spy or *franc-tireur*."

As the war has now been in progress for more than four months, and all the parties to it have placed their cases more or less completely and officially before the world, our editorial commentators show little inclination to be drawn by the Crown Prince into a discussion of the primary causes of the war. "It is not very important whose militarism started the war," says the *Washington Times*, "but it is important that, when the war is over, all militarism shall be ended." When all is said, remarks the *New York Evening Sun*, the American public is under no compulsion to choose between the British

and the German point of view, because there is also an American point of view. "From the outset, for Americans the case of Belgium has remained the real and the determining factor," says this paper, in which we read further:

"The thing that both our German and our British friends consistently overlook is that there is an American point of view. They would have us pro-German or pro-British, and we are neither. They would have us accept unhesitatingly their whole case, enlist our sympathies and our approval for the complete cause of one side or the other, and that we can not do. . . .

"Above and beyond all else German and British sympathizers in this country would do well to recognize that there is an American point of view, that it is based not upon White Books or Yellow Books, is influenced little by press-agent professors or traveling authors, reaches its conclusions by weighing the evidence in the light of American history and tradition, is not to be stampeded by the attractive frankness of a gallant Prince or by the impressive virtue of a British White Book."

While the German public now apparently agrees with the Crown Prince in holding England responsible for the war, notes the *New York World*, yet at the start of the conflict "German opinion was unanimous in ascribing the war to Russia's policy of Pan-Slavism." As late as September 2, *The World* reminds us, Count von Bernstorff, the German Ambassador to the United States, stated in the course of an article in *The National Sunday Magazine* that—

Copyrighted by the American Press Association

"THIS IS THE MOST STUPID, SENSELESS, AND UNNECESSARY WAR OF MODERN TIMES."

One editor doubts if the views of the German Crown Prince, as expressed in a recent interview, will affect the sober judgment of the American public as to the causes of the war, but admits that they will modify the American impression of the Crown Prince.

THE FUTURE MAJORITY IN EUROPE

—Bradley in the *Chicago News*.

THEIR PLACE IN THE SUN.

—Weed in the *New York Tribune*.

WHY?

"Germany and Great Britain, together with other nations, tried everything in their power to preserve peace, but their steps were made futile by Russia's mobilization at the German border, quickly following that at the Austrian frontier."

AFTER FOUR MONTHS OF WAR

WHILE the fourth month of the European War ended without a decisive success to the credit of either side, many of our editorial observers agree with Mr. Frank H. Simonds, whose illuminating war editorials have been a conspicuous feature of the *New York Evening Sun*, that "the first great German design has failed utterly, irretrievably." This design, as he sees it, was to crush France before Russia would have time to develop her full fighting efficiency. But "the time is past when the issue can be decided by the tiger's leap," declares the *New York Press*, which predicts that the decision will now come "by stupendous attrition rather than by brilliant strokes at arms." Summing up the story of four months' fighting, *The Press* says: "After the first month of whirlwind advance upon Paris by the Germans, the second of retreat, and the third of settling into deadlock, the fourth has continued that deadlock." "Whatever is to happen now," says Mr. Simonds, "it is plain that France is not to be destroyed," and the possibility of a Europe dominated by the Kaiser has faded from the world's imagination. "In a military sense, it is too early to talk of a conquered Germany," he admits, "but it is no longer premature to assert that the vision of a conquering Germany has been laid to rest." Germany still holds, as the fruit of her first victorious offensive, the *New York Tribune* reminds us, nearly all of Belgium and a considerable slice of territory in northeastern France. Nevertheless, thinks *The Tribune*, "for the Allies the crisis is past," and "in the stages of the war still to come they will have ample opportunity to call into play that superiority in resources on which in the long run victory must depend." Turning back to Mr. Simonds's analysis of the situation in *The Evening Sun*, we read:

"Consider the whole problem of German strategy—to hold Russia back with a fraction of its armies while it crushes France by weight of numbers—and it becomes clear that failure in the East and West foreshadows the time when mere numbers will put Germany completely on the defensive.

"Four months of effort have not availed to end the war in the West. If Germany has not reached her maximum strength in the field, she has passed the point where she can hope to retain

numerical superiority on either front. Such superiority as she has had in Flanders and France, too, since the Battle of the Marne has enabled her to do nothing but hold her lines and wear out her strength in terrific assaults upon the entrenched Allies. . . .

"To predict a speedy termination of the war is idle. To set a limit to the time Germany can hold Belgium is futile. It remains wholly possible that political changes may save William II. as the change in Russian Czars rescued Frederick the Great at the gravest hour in his long and perilous career. But on the mere military side, it is hard to perceive now any chance for ultimate German triumph.

"Every shred of evidence that comes to this country directly from Germany demonstrates the depth, intensity, unity of German determination. To conquer such a nation may mean years, as it must mean tremendous sacrifice of life and wastage of capital, but at the close of the fourth month of the war there is almost overwhelming evidence to warrant the assertion that German success seems no longer possible, given the existing political conditions."

SOUTH-AMERICAN AID TO GERMANY

IF IT IS FLATTERING to be asked by Great Britain and France to use our good offices to induce Colombia and Ecuador to stop violating the laws of neutrality, and if the request seems to recognize the primacy of the United States on this continent, remarks one editor, it is also a reminder of "the difficulties and responsibilities of that position." Our State Department is told by London and Bordeaux that Colombia has given aid to the German war-ships in neighboring waters by means of its high-power wireless station, while Ecuador has permitted the use of its Galapagos Islands as a naval base and coaling-station for the German squadron. Colombia and Ecuador deny these charges, but the British Government seems unconvinced by the denial. In laying the facts before the House of Commons the Under-Secretary of the British Colonial Department said that Colombia's wireless station was manned by a staff of Germans; that the censorship exercised over it by the Colombian Government was merely nominal; and that German steamers in ports of Colombia were continuing to use their wireless equipment, altho ostensibly dismantled. Appeals to the Colombian Government proving without avail, the Under-Secretary continued, it was decided to appeal, in cooperation with the French Government, to the good offices of the United States to procure a more strict enforcement of Colombian neutrality. The situation, he went on to say, was virtual

duplicated in the case of Ecuador, which "had failed to comply with the request of Great Britain and France to exercise proper control of wireless apparatus," and had permitted the use of its islands as German naval bases. In the London dispatch summarizing the Under-Secretary's statement we read further:

"The British Government, being of the opinion that further diplomatic protests to Ecuador would be useless, and not being prepared to disregard Ecuador's obligations in respect to neutrality, judged it expedient to communicate with the Government of the United States. The latter had consented to communicate with Colombia and Ecuador."

It was also stated that, in case Colombia and Ecuador maintained their present attitude, "the allied governments might be compelled, in self-defense, to take such measures as they deemed necessary for the protection of their interests." A Washington dispatch to the *New York Times* explains that the United States Government "was not asked to compel Colombia and Ecuador to observe a more strict neutrality, but to use its good offices in inviting their attention to the facts." In response to this request, Secretary Bryan explains, "we simply asked our representatives to ascertain the facts, and there has been no thought of interfering in the remotest way with the Governments of the Latin-American countries."

Our press seem practically unanimous in the view that while the Monroe Doctrine can not be stretched so as to make us responsible for breaches of neutrality on the part of our southern neighbors, neither can we be expected to protect them from the consequences of their acts, so long as the punishment inflicted upon them does not involve the permanent acquisition of American territory by a foreign Power. "If Ecuador and Colombia are violating the rules of neutrality, they should be made to desist—but not by us," declares the *New York American*; and in the *Washington Post* we read:

"Naturally, any breach of neutrality by Colombia which would lead to a dispute between this Government and any European Government would not tend to increase the good feeling between this country and Colombia. The republics of Colombia and Ecuador ought to appreciate the advantage of neutrality and avoidance of differences with any of the European nations now at war. If they do not, but, on the contrary, seek to gain temporary benefits by rendering secret aid to one side or the other, they need not look to the United States to shield them from the consequences."

"It is not our affair," says the *New York Times*, but—

"We may, to be sure, inform the Governments of Colombia and Ecuador that such representations have been made to us; we may say that our interest in their welfare prompts the expression of the hope that no further cause of complaint will be given. That is as far as we can go. It is intimated that Great Britain and France will take whatever measures may be necessary for their own protection, and in doing so they would be fully warranted by the law of nations. For these two South American States to give aid to Germany is to commit an act of hostility against the Allies. They might land an armed force and destroy the Colombia wireless station. They might in a summary way assure themselves against further violations of neutrality by Ecuador. It is intimated that they would communicate to us their intention to take such steps, but there is nothing in the Monroe Doctrine or in our national policy that would call upon us to make any protest. Colombia and Ecuador will have to suffer the consequences of their unlawful acts, if they have been guilty of any. If it can be shown that Great Britain has suffered loss through the unneutral use of their territory they will have to make redress."

"The Government of Chile has promptly and very wisely, and quite of its own accord, determined to put a stop to Germany's high-handed use of her territory in war operations. It is officially charged at Santiago that German war-ships have made free use of the Juan Fernandez Islands as a naval base, seizing coal and provisions there and sinking a French merchant ship within half a mile of the Chilean coast. Accordingly, Chile has dispatched war-ships to these islands to enforce her neutral obligations. She would appear to be in a position to demand redress from Germany for the unlawful invasion and misuse of her territory."

PEACE PROSPECTS IN COLORADO

OUR OWN WAR in Colorado is receiving renewed attention since the election, the *Springfield Republican* observes. What with the change of State Administrations in Colorado next month, the possibility of an early withdrawal of Federal troops, the appointment by President Wilson of a Commission to deal with future controversy, and the hearings being conducted by the Federal Industrial Commission, some editors hope that out of it all Colorado may find an escape from the labor war which has disturbed the State for nearly a year and caused a loss of seventy lives. Yet even the most hopeful do not venture prediction. They remember the labor leaders who insisted that the only solution is Government operation of the Colorado mines, and the declaration of one of the newly elected State officials that they are "bitterly opposed to the treasonable tactics of the United Mine Workers." The State of Colorado, says the *Pueblo Chieftain*, "may expect no permanent solution of her troubles until they are settled right." But what is right, the *New York Globe* wonders, since "it has been plain for some time that one side or the other has been lying concerning a fundamental matter"—

"The operators say they are defending the principle of free labor; that they are merely refusing to discharge, at the demand of the union, those of their employees who are not unionists and who do not desire to become unionists; they assert that the leaders of the unions have lawlessly tried to compel the closing of the mines to those who are not unionists."

"The reply of the unionist miners to these assertions is a flat contradiction. They say all they are seeking is a right to be unionists and not to be discriminated against on this account—something guaranteed to them by the laws of Colorado. They thus accuse the operators not only of lawlessness but of deliberate falsification."

So one of the first duties of the President's Commission, *The Globe* thinks, is to "ascertain and authoritatively declare which side is misrepresenting." The personnel of this committee is pleasing to the newspapers in the East, where the men are best known. All three have had experience in labor troubles; they are: Seth Low, Charles W. Mills, a Pennsylvania coal operator, and Patrick Gilday, a Pennsylvania Mine Workers' official. In his announcement of the appointment of this Commission, President Wilson admits the failure of his attempt at mediation, and shows that he holds the Colorado operators responsible. He says in part:

"The mediation of the Government of the United States was offered early in the struggle, but the operators of the mines were unwilling to avail themselves of it or to act upon the suggestions made in the interest of peace by representatives of the Department of Labor authorized by statute to serve in such cases. It became necessary to send Federal troops to the district affected by the strike in order to preserve the peace; but their presence could of itself accomplish nothing affirmative."

The President has decided, nevertheless, to appoint the Commission contemplated in the plan of temporary settlement. Its members, he says "will place themselves at the service alike of the miners and the operators of the mines in Colorado in case controversy between them in the future should develop circumstances which would render mediation the obvious way of peace and just settlement."

The conviction, in the light of the President's statement, that the operators prevented the success of mediation leads Eastern papers like the *Baltimore Sun*, *New York World*, *Globe*, *Tribune*, *Brooklyn Citizen*, *Newark News*, and *Boston Journal* to consider them chiefly responsible for the continuance of the trouble in Colorado. On the other hand, President J. F. Welborn, of the Colorado Fuel and Iron Company, knows "of no controversy between Colorado coal companies and their employees that rendered mediation the obvious way of settlement." All serious troubles in the Colorado coal-fields, he says,

"have been caused by labor organizations trying to force their

TO WHOM DOES HE BELONG—TO WHOM?

—Bowers in the Newark Star

THE PERISCOPE.

—Tuthill in the St. Louis Star.

DOGS OF WAR.

régime on the business against the wishes of the workmen and their employers. If the commission just appointed by the President can prevent the labor organization responsible for Colorado's present trouble from bringing about another strike solely for 'recognition of the union,' a great service will have been rendered, and strikes of the kind from which we are now suffering will be a thing of the past."

With this point of view such conservative papers as the *New York Sun*, *Times*, and *Journal of Commerce*, *Brooklyn Eagle*, *Philadelphia Public Ledger*, *Buffalo Express*, and *Detroit Free Press* are quite in sympathy. *The Public Ledger* is convinced that the strike has practically ended in failure, that only a handful of miners want unionization, and that, therefore, "the prospects of any useful purpose being served by the President's commission are not of the brightest, and the President's determination to interfere raises the serious question whether he is not adding to the confusion."

Though it does not take the operators' side in the controversy, the *Baltimore News* doubts if the President's commission, two of whose members are really, tho not formally, representatives of the contending factions, can arrive at any conclusion which would have "as much significance in the eyes of the public as the verdict of a wholly lay and non-partizan board would attain." What is needed, in the *News's* opinion, "is less a board of arbitration against one faction's refusal to arbitrate than a board of judgment which will act for the public." For "the issue is peculiarly one which requires thorough probing by the public before the public can afford to force its judgment upon the side it holds wrong." It is just such a probing that the Federal Commission on Industrial Relations began in Denver last week. The result will be awaited with interest. Among the first witnesses heard were Governor Ammons (Dem.) and Governor-elect Carlson (Rep.). That the board will have to reconcile contradictory testimony from responsible and well-informed witnesses is already evident. "To my mind," said ex-Senator T. M. Patterson, "the responsibility for the violence and all the results of the calling out of the militia rests upon the refusal of the operators even to meet the representatives of their men." And Mr. Patterson, according to the press dispatches, flatly contradicted Governor Ammons's earlier statement that the continuation of the strike was due to the miners' demand for recognition of the union, asserting that the union leaders

were willing to waive recognition, but the operators refused to meet them or treat with them.

While awaiting the report of the Federal Commission, the *Springfield Republican* sees special timeliness and significance in one of the most recent special investigations of conditions in Colorado. Rev. Henry A. Atkinson was especially selected by the Commission on Church and Social Service of the Federal Council of the Churches of Christ, and sent to Colorado to make a careful personal investigation of the situation. In his report he comes out squarely for the miners. He concludes that conditions in the coal regions were intolerable, saying:

"The coal companies dominate the politics in those counties where the mines are located. . . . It is impossible to enforce the law, and the courts are practically closed to those who in any way incur the enmity of the coal companies; thus economic justice is denied the men through the manipulation of political affairs. Thirty years of such oppression, industrial, social, and political, have taught the miners that their only hope is in the unions. An individual counts for nothing; if he protests, he loses his job; if he makes too much trouble, he is dealt with by hired gunmen, who are kept at the mines to do the will of the companies and help enforce the law against the workers."

And the acts of the Colorado militia in the early days of the strike meet with similar condemnation:

"Men and women were thrown into jail without any charge being lodged against them and held *incommunicado*.

"The Constitution of the State was set aside. The militia met and escorted strike-breakers who were brought into the State. The militia, instead of aiming to maintain order and secure justice, was used to break the strike. . . .

"In the investigation following the Ludlow battle it was shown that many of the militia who were receiving pay from the State were at the same time in the employ of the coal companies as guards; thus they were receiving double pay. They were really employees of the companies fighting in the name of the State."

And Mr. Atkinson is persuaded that

"The right of workmen to organize has been and is being denied by the un-American and un-Christian attitude of the mine operators, who thus deprive their employees of an essential means of self-defense, the right to bargain collectively for their labor. . . .

"No amount of welfare work, however admirable it may be, will take the place of fair wages and right conditions of labor.

But the churches are opposed to violence, no matter what the provocation. Such tactics reflect upon the workers themselves."

On the other hand, the Pueblo (Colo.) *Star-Journal* lays great stress on the report submitted a few weeks ago by the investigating committee of the Colorado legislature, which "sustains the Governor in his efforts to enforce law," and declares that all is serene in the strike zone. A similar optimism pervades a statement recently issued by the Rev. H. Martyn Hart, Dean of the Protestant Episcopal Cathedral in Denver. This clergyman's conclusions are rather different from those of Mr. Atkinson. He says in part, as quoted in the *Philadelphia Public Ledger*:

"When the strike was called in September, 1913, 12,346 men were at work, but only 10 per cent. of these men belonged to the union. The total number who left the mines as a result of the strike was 4,650, but at least one-third of these moved away to other fields out of the area of disturbance. . . . During the surveillance of the militia the men returned to their work in the mines peaceably; some 800 miners were imported during the month of December from Eastern districts, and in January there were over 10,000 in employ. The actual strikers, therefore, numbered some 2,000.

"Peace having been apparently restored, in the middle of April the militia were recalled, leaving only 35 of their number in the field. It was these men that the strikers, variously estimated at from 300 to 500, attacked on the morning of April 20, and we had what is known as 'the battle of Ludlow,' at which a large number of men were murdered, and two women and eleven children were smothered in a cellar prepared for the

emergency under one of the tents. One boy was accidentally shot as he ran into the line of fire. . . .

"The militia was immediately again dispatched to the scene of disturbance, but not before half a dozen mines were totally destroyed and much indiscriminate damage committed. During the whole disturbance 71 men lost their lives. The Federal troops arrived May 1, and since then men have gradually returned to work, and there are to-day only 900 men fewer than were at work when the strike was called. Practically all of those who responded to the strike call have returned to work, and the mines are producing more coal than the market can consume, and it is known that half of the so-called striking forces have never worked in Colorado coal-mines."

Further statements strengthening the operators' case are being published by them every few days in a series of bulletins entitled "Facts Concerning the Struggle in Colorado for Industrial Freedom." Here have been printed, for instance, General Chase's report justifying his acts as commander of the militia in the strike zone, Congressman Kindel's declaration in favor of the operators, an open letter signed by a group of Colorado's most eminent professional men, Mrs. Grenfell's report denying any "massacre" at Ludlow, and Governor Ammons's letter answering the "gunmen" accusation against the miners.

It might be said for the benefit of those who read comparatively little about Colorado in their daily papers that they can find all the operators' arguments in these bulletins and the miners' case fully presented in such papers as *The United Mine Workers' Journal* (Indianapolis).

FOREIGN - COMMENT

DIFFICULTIES OF AMERICAN NEUTRALITY

AMERICA CAN NOT BE NEUTRAL, is the message sent to England by a well-known American publicist, Mr. James Davenport Whelpley, who sets forth his explanation of this theory at some length in the pages of the *London Portnightly Review*. He considers that the economic interests of this country are so involved that, however much we may strive to preserve the shadow, we actually lose the substance of neutrality. He argues:

"It is a simple matter for a government to issue a proclamation of neutrality. To persuade or compel a nation collectively and individually to observe such a neutrality has always been difficult, and under present conditions the United States Government is finding it an almost impossible task.

"The countries at war are all large importers of food-stuffs, raw materials, and manufactured goods. America has been the source of supply to a large extent, hence the efforts of all belligerents are now concentrated upon America, in an attempt, in one way or another, to secure more especially a continuation of shipment of food, raw materials needed in manufacture, and of gold. In a war like the present practically all supplies are contraband, for the efforts of combatants are directed toward an economic as well as an armed defeat of the enemy. The recent increase of imports reported from the smaller countries of Europe not yet involved in the war is indisputable evidence of increased export in some direction, for the tendency of industry at this time is toward stagnation, and imports would naturally show a decided decrease if the demand was based upon normal home consumption and trade."

In accounting for this increase of trade he thinks that:

"The pressure brought upon the American Government to facilitate, rather than to hamper, commerce is enormous. The country is officially neutral, hence the business man sees no reason why he should not at least be allowed to conduct his ordinary business without hindrance and with all customers seeking his wares. Neutrality for a producing country like America is as costly as war, if it means cessation of trade and business."

When America realizes how deep are the issues involved, he considers that a frank abandonment of neutrality, as an effort to secure peace, is more than a possibility:

"It has not yet fully dawned upon Americans just how deeply they are and will be affected by this struggle-at-arms in Europe, for the political and economic changes now begun are absolutely

international in their full meaning. A stronger realization of these things will come soon; there are already signs that it is on the way, and then these much-discussed questions as to the blame for the beginning of trouble or for subsequent destruction and the sufferings of the civil population will be dismissed from the American mind, for the time at least, and the greater question, one upon which the entire nation will be as a unit—how to aid in bringing about peace—will absorb all thought and energy."

We have not noticed any German appeals to America to draw the sword for Wilhelm II. and Franz-Josef, but an English author, Mr. Harold Begbie, writing from New York to the *London Daily Chronicle*, says that America should "abandon its official pose of neutrality" and plunge into the fray at England's side. He pleads thus:

"What would George Washington have said to the silence of America in full view—daily, hourly view—of devastated, blood-drenched Belgium? Would Abraham Lincoln have preserved friendly relations with Ger-

many after the cry of raped children and butchered women had ascended with the smoke of towns and villages to the heavens of men's ultimate dreams?

"Italy's neutrality we can dimly understand, but not America's. Italy could only break her neutrality by taking up arms; America has only to speak."

After a tribute to the American press which Mr. Begbie considers voices the attitude of the nation with greater certainty than the Government at Washington, he proceeds to excuse our neutrality thus:

"When that day comes, will not America gratefully recollect that, altho its Government had no word but neutrality and sat throughout the struggle with hands carefully folded, the honest newspapers, loving democracy more than the exigencies of politics, made it sufficiently clear to the nation of freedom that America was not upon the side of aggression, militarism, and a despotism of the divine right? I dare to say that the newspapers of America have saved American honor."

In an editorial headed "Our Unneutral Neighbors," the *Montreal Herald* remarks that Great Britain and France have gone in arms to the aid of Bel-

gium, and asks, "Is the United States, which appears with money, food, clothing, and medical supplies, any the less an ally?" It then proceeds to ask the United States, "having violated neutrality as regards Belgium, why it does not go the whole hog?"

BAD FOR THE CAT.

Turkey pulls the German chestnuts out of the fire.

Westminster Gazette (London).

AS GERMANY SEES IT.

The Allies find the Turkish Crescent uncomfortable.

—*Kladderadatsch (Berlin).*

ENGLAND'S LACK OF MEN

ENGLAND'S FAILURE to obtain recruits in satisfactory numbers is seriously exercising the public mind, and many of the papers in Great Britain see the nation confronted with the long-dreaded expedient of conscription. While

"The urgency of the need for more men is being brought before the country in many ways. It was hoped that the reduction in the standard would have led to another 'boom,' but so far the number of recruits has not been appreciably increased by the change, . . . and men are enlisting in tens instead of in the hundreds that are wanted.

"London is adding to the 100,000 extra men she has given to the Army during the last three months at the rate of 4,000 or 5,000 a week, but it is disappointing to find that the reduction in standard has had very little effect in stimulating recruiting."

The Liberal papers in the metropolis are inclined to make light of the situation, as far as they can. Thus the *London Daily Chronicle* says that only a few men are needed, but they should be obtained quickly:

"And tho we need more recruits, it is not millions more that we need; we could not find officers for them if we had them, let alone trained artillery and cavalry. It is not the scale of the need, but the urgency that troubles us; the extra numbers required are only some hundreds of thousands; but they are required now."

Meanwhile in Germany the press are full of caustic comments on the situation, and the general view is that the men England may obtain will be of little value. As the *Kölnische Zeitung* says:

"The noisy clamor of the English press can not dispose of the fact that the whole military force of England is a loose and improvised structure which lacks internal unity. England can produce on land nothing comparable to the defensive organization of Germany, which

is firmly welded, guided by the scientific spirit, and inspired by moral enthusiasm."

THE CARLTON HOTEL, LONDON.

The urgency of the recruiting-problem in England can be gauged by the fact that this hotel, one of the most exclusive and fashionable in London, does not hesitate to cover its front with persuasive and patriotic placards calling the younger men to quick enlistment.

the press are divided as to where the blame for this failure lies, all agree that some radical step must be taken to find a sufficient supply of men for Lord Kitchener's new armies. The *London Daily Mail* thus admits the urgent need:

"The clear lesson of the first three months of the war is that victory can only be won and the British Empire saved from destruction if Great Britain provides armies capable of taking a vigorous offensive against the Germans. We must have more men and we must have them at once. What we have to meet is a desperate attack by a perfectly armed and highly organized nation of sixty-five millions on our very existence."

It is significant that the men in the great industrial centers are not responding to the call to arms, to judge from the appeals in the press in such a city as Manchester, for example. The *Manchester Evening News* says:

"The shadow of conscription, with all its inherent evils and its serious industrial handicap, looms over the country. The ever-widening war is likely to be prolonged. Should this be the case, all the men that the army advisers have asked for will be needed. They are not being obtained, however. When Manchester can send only 100 a day to reinforce our Army, it becomes obvious that something will have to be done to set a better pace."

The *Manchester Chronicle* is equally insistent:

"There are thousands of eligible young men in this city—men with no great responsibilities—who are failing to respond to the call to arms in the face of the fact that recruits are urgently needed, so that they can be trained to act as reinforcements. It has been estimated that we have some 6,000,000 men between the ages of eighteen and thirty-five, and, if Lord Kitchener's call to arms is to be responded to, Manchester has a big number of men to supply yet."

The seriousness of the situation is frankly admitted by the *Manchester Guardian*, which remarks:

BERLIN'S IDEA OF LONDON.

CHORUS—"Your King and your country need you! won't you please join the Army!"
—© U.K. (Berlin).

HOLLAND'S HOSPITALITY

NINE NEWLY BORN BABES snatched from a burning hospital in Antwerp formed, says the Amsterdam *Handelsblad*, a group before which strong men were moved to tears on the arrival at the Amsterdam Stock Exchange of the little party in the arms of the Red Cross nurses that had rescued them. In describing the flight of the Belgian poor toward food and safety in the Netherlands, the correspondent of the *Handelsblad* goes on to say:

"Afterward as I tramped for hours among them, one thing impressed itself strongly upon my memory: the noise of so many little wooden shoes—children's shoes—that click-clacked on the cobblestones in the characteristic short run of frightened people. My memory holds a whole collection of noises, but none quite as pathetic as the quick 'tok-tok-tok' of these hordes of children trying desperately with their tired little legs to keep up with father and mother."

In speaking of the reception these refugees met at the hands of their hospitable neighbors the *London Times* remarks that the Dutch

"have risen with a noble charity to the demands made upon them, and the charity of the poor has been as wide and active as the charity of the rich. Touching stories have reached us of the warmth with which the homeless wanderers have been welcomed in the frontier villages and towns. We hear of families taking in as many as thirty refugees in their houses, and going forth themselves to sleep in the streets. Food and clothing have been freely given by all classes according to their abilities, and the sufferers have been consoled by the kindness and the sympathy of their tender-hearted Dutch hosts. Do most of us realize how immense this charity has been, and how heavy is the glorious burden which it is casting upon the Dutch people? It is credibly affirmed that not less than 700,000 Belgian fugitives have sought and found an asylum in the Netherlands. The entire population of that Kingdom is but 6,000,000 souls. The Dutch are therefore housing and feeding considerably more than one-tenth of their own numbers in fugitives alone."

In the opinion of *The Times* this burden ought to fall, at least in part, upon Great Britain and those other countries that have benefited by "the heroic stand of the Belgian nation," and such also is the view of the *London Daily Mail*, which thinks:

"But the burden that is thereby thrown upon the people of Holland is one that with the utmost good-will in the world they can not sustain unaided. At a time of intense national anxiety and acute commercial depression the influx of nearly three-quarters of a million homeless and destitute refugees places upon them responsibilities that even their noble spirit of charity and pity can not adequately discharge. Nothing can exceed the generous solicitude with which they have received and cared for their hapless guests. But the task is one that is really beyond their resources, and beyond the resources, too, of any combination of charitable agencies."

"We in this country owe to Belgium a debt we must forever despair of repaying. But we can at least show some sense of its immensity by claiming a right to house and feed and find employment for those of her people whom the initial fortunes of the war have driven into a temporary exile."

It is noteworthy, however, that, according to the *London Times* and the American press, the Dutch Government has declined to shift this burden of hospitality and has refused offers

of financial assistance, both from America and Great Britain, as incompatible with the country's honor.

Tho the Dutch press is not blind to the drain upon the resources of the Netherlands that this charity entails, yet the Amsterdam *Nieuws van den Dag* insists that greater military preparations are necessary for the adequate defense of the Dutch people and their guests. The *Nieuws* thinks:

"There is no doubt that Holland's chances of being embroiled in the war diminish with the increasing strength of her Army. Who, having felt and seen the ravages of this war, can contradict us when we say that no sacrifice can be too great to enable us to maintain our honorable neutrality?"

The *Handelsblad* insists that the matter is urgent. It says:

"We, who at any time may expect the arrival of the German guns, must not place our reliance on one ring of forts, important tho they may be, but must depend upon an adequate and efficient field army."

HOLLAND TO BELGIUM—"Come in, neighbor, there is a place for you all now"
—Amsterdammer.

TRADE TROUBLES IN NORTH EUROPE—

The cordial feeling of the Scandinavian countries for the Allies is likely to be disturbed, says the *Manchester Guardian*, by suggestions from England that these friendly countries are dealing in contraband and by the proposal to prohibit the export of grain and other merchandise to Scandina-

via until a "guaranty be forthcoming from the Government of the country of destination that the goods shall not leave that country again for Germany." In dealing with this proposition the *Copenhagen Politiken* says:

"We are not importing grain in order to export it again. We have only two markets in ordinary circumstances—England and Germany. We try to maintain our relations with these two countries also during the war, and we hope that our free trade will not be hindered or disturbed by the belligerents where it serves legitimate purposes, because it is not in the interests of belligerent Powers to do neutral commerce and shipping more injury than the war itself involves."

A further strong protest by the Norwegian Chamber of Commerce in London, issued in *The Times*, runs in part:

"There is no reason for any hysterical fear about the ultimate destination of cargoes on passage to Scandinavian countries. The Chamber here has appealed to all commercial institutions in Norway to abstain from any trading with belligerents likely to cause complications. In doing so the Chamber pointed out that there were far greater things to be considered than any possible, and at the same time limited, pecuniary gain."

The protest concludes with this significant paragraph:

"The export of all foodstuffs and feeding-stuffs from Norway was prohibited, and somewhat similar prohibition was imposed in Denmark, while from Sweden the export of feeding-stuffs was prohibited. In Norway there is generally a stock of grain sufficient for only five or six weeks, so it is easy to see that when imports were interfered with in the early stages of the war the position was one of difficulty. Altho the trade that is going on now has been remarked upon a good deal here, it need really cause no surprise. Nor would there really be cause for surprise were the three countries, under the present abnormal circumstances, to increase their importation, because, while all hope and expect that they will not be drawn into hostilities, it would certainly be a lack of wisdom if no provision were made for the future."

THE BRITISH IDEA OF BERNHARDI.

Bernhardi was a Teuton scribe. One of the Blood-and-Thunder tribe; I cannot tell you all he said on The coming scrap at Armageddon.

—Punch's Almanack for 1915 (London).

THE VOICE OF TURKEY

TAKING A SLAP at England and Russia is a popular pastime just now with the Turkish papers, and two examples of the utterances of the leaders of Turkish opinion may not be amiss. In an article on "England and the War," the Constantinople *Tanin* says:

"The words of English officials and English newspapers have made more noise during this war than all the guns of England's fleet. What position will England take on land during the war? She is bound by her pledge to the Triple Entente to aid France by sea.

"So far, she has sent a small force to help the Belgians and to strengthen the left wing of the French Army. She has shown vigor and obstinate persistency, but has suffered severely in her attempt to resist the persistent advance of the Germans. Now she must call up her territorials. The bravery, endurance, and persistence of her soldiers are acknowledged, but more than that is needed. One officer is required to every hundred men, and it takes years to provide competent officers, and in this Germany is far ahead of England. As to the sea, England has nothing to her credit there, despite great sacrifices."

Another Constantinople paper, the *Ikdam*, pours scorn on Russia's dream of the occupation of Stamboul and of seeing the great mosque of St. Sophia as a Christian temple once more. It remarks:

"This Russian dream is no new thing; it is a plan craftily concocted years ago. While the best way to treat so absurd a hope is to laugh, it is impossible for a Turk not to be irritated by it. Yet we need not worry ourselves about Russia's designs. Turkey, relying on the help of God, on the strength of her Army and Navy, on the devotion and self-sacrifice of all her people, will render impossible the realization of any such dream."

The *Ikdam*, despite its confidence, seems to have some qualms about the attitude of the Armenians and makes a strong bid for their sympathy on the ground that they have, under Turkish rule, far greater opportunities of preserving their national character than would be allowed by Russia, who would seek to absorb and Russianize them:

"Even if Russia were to take our eastern provinces, it would not be to make them autonomous under Armenian rule, but merely to add them to the Russian Empire. They will make the Armenians just a catspaw for their own designs, and for this there is ample evidence."—Translations made for *The Literary Digest*.

GERMANY'S WORLD-WARNING

GENERAL VON BERNHARDI is known in this country chiefly by his book, "Germany and the Next War," a work which, while illuminating as regards Germany's aims, is somewhat technical. This work was followed by a shorter, more popular, and more outspoken book, entitled "Unsere Zukunft, ein Mahnwort an das deutsche Volk" (Our Future, a Word of Warning to the German Nation). This volume has had an enormous circulation in the Fatherland, and has exerted a notable influence upon public opinion. It gives a wonderful insight into the German mind before the war and shows with singular vividness the hopes and fears of the German nation. The more salient passages of the book have been translated into English and published in the *London Academy*. For this country, the most significant statement is the General's assertion that England desired to crush Germany in order that she might be free to engage the United States, whom the General regards as the only rival for political and commercial supremacy really feared by England. General von Bernhardi begins by discussing the isolation of Germany, and says:

"Notwithstanding the existence of the Triple Alliance, Germany is in an almost unbearable position on the European Continent. We are penned up. We are surrounded by England, France, and Russia—three enemies who are closely allied, and whenever we endeavor to increase our power we meet with their united and determined opposition. These three Powers have tied down Italy's forces in the Mediterranean in such a manner that they can be only of little assistance to Germany in case of war. Only Austria-Hungary stands faithfully by our side. The three hostile Great Powers are unceasingly endeavoring to bring about the disintegration and the collapse of Turkey, and to weaken that Power to the utmost. Now, Turkey is a necessary adjunct to the Austro-German alliance. It is of the utmost importance for us to preserve Turkey and to make her powerful and efficient. This is most necessary for us both for war and peace, for military and economic reasons. The destruction or the weakening of Turkey would directly damage our position and our power on the Continent of Europe.

"We can secure Germany's position on the Continent of Europe only if we succeed in smashing the Triple Entente and in humiliating France and giving her that position to which she is entitled, as we can not arrive at an agreement with her for mutual cooperation.

(Continued on page 1196)

SCIENCE - AND - INVENTION

SCIENTIFIC ARMIES IN EUROPE'S WAR

THAT THE SEVERITY of the present conflict has been made possible by the very arts and industries to which it is dealing such a knock-out blow, is a thought which occurs to one London editorial writer, while another is calling English men of science to the aid of the military forces. The devotion and skill of German scientists in the preparation of war-material, and in meeting the exigencies of actual warfare, are acknowledged by their enemies and are shown in many of the dispatches from the front. Taking a purely scientific view of it all, a writer in the *London Times Engineering Supplement* points out the fact that modern science is largely responsible for modern warfare. He says:

"Every advance of engineering, while being directed primarily toward the ends of civilization and prosperity, has facilitated and intensified warfare by extending the means of transport and communication as regards both speed and capacity, by overcoming obstacles such as seas, rivers, and mountains, and by placing enormous physical forces at the disposal of man. To go no further back than the time of the Franco-Prussian War of 1870, the difference in the conditions is very striking. At the earlier date, mechanisms which are playing an important part in the present war, such as air-ships, aeroplanes, motor-cars, submarine craft, torpedoes, the telephone, and wireless telegraphy, were unknown or in their infancy, and the motive which prompted the invention or development of most of them was civilization, not destruction. Again, the discovery of the properties of alloy steels and other composite metals has been utilized in the production of armor-plate, guns, and other munitions of warfare, but the researches which led to the discovery had for their object rather the means of construction of great ships, bridges, and other engineering achievements for the advancement of commerce and the convenience of man. Even the work of the municipal engineer in the improvement of road communication has rendered armies more formidable by affording more rapid means for the passage of troops and the conveyance of the supplies of food and ammunition, without which they are of no avail."

This very prominence of the man of science leads *Nature* (London) to ask if England is making the best disposition of the material at its disposal. Its military forces are doubtless as good as it can muster; large bodies of women have volunteered, as nurses and to provide clothing for the troops. Every one is engaged in some organized effort, with the exception of one class—scientific men. "Why should this be?" it is asked. Is not this war, above all others, fought with all the forces of science? The writer is compelled to conclude that here is a failure in organization which should be remedied. He argues:

"This war, in contradistinction to all previous wars, is a war in which pure and applied science plays a conspicuous part. Has any effort been made to coordinate the efforts of the devotees of physical, chemical, and engineering science, so that they may work together at what for us is the supreme problem of all—how to conquer the Germans? For if we fail, civilization as we know it will disappear. Democratic rule will have to yield to

Copyrighted, 1916, by the Sun Printing and Publishing Association, by special arrangement with "The Illustrated London News."

THE GERMAN SCIENTIFIC METHOD SOLVES A NEW PROBLEM.

In the Battle of Flanders both sides were greatly impeded by the difficult nature of the ground, cut up by dikes and rivulets. This drawing by an English artist shows the German solution of the difficulty. The men are provided with these light "table-tops" which, in a rush under fire, the front rank places for the others to cross.

a military oligarchy. It was pointed out in an article in *Nature* of October 8 how the originality in science of the Germans has decreased during the past generation, in spite of their enormous output of literature; this is to be attributed, no doubt, to the restraining influence of a military despotism, which has pervaded all aspects of their life. But in the design and manufacture of their war-material they have worked incessantly for years in their usual methodical manner, trusting rather to myriads of experiments than to the utilization of original thought, which is for them in a great measure lacking.

"The problems which at the present moment require the help of our scientific men are varied and numerous. Our first efforts must be to aid our military forces in suggesting and supplying them with all kinds of appliances and material of which they can make use in vanquishing the enemy and in defending our shores. We know, of course, that expert advisers have been attached to our ordnance-factories, to our Navy, and to our air-service for years, who have doubtless done much in preparation for the fierce struggle now in progress. But in war, every man who has special knowledge of physical, chemical, and engineering problems which confront the authorities responsible for the conduct of the war should be summoned to do his best. . . .

"It may be contended, however, that bodies of men such as those suggested have not the practical experience necessary for putting those of their ideas which promise useful outcome into a shape required for present emergencies. This contention, if it should be made, has little weight. There is much contact between those who have devoted their lives to the advancement of the domain of pure science and those who have interpreted its results in practise; not so much, perhaps, as might be desired, but enough to make it possible to enlist the services of practical

engineers, electricians, and chemical-manufacturers in bringing to a practical issue any ideas which may commend themselves.

"It would be well, too, that some means should be adopted whereby these committees should come into contact; an engineering problem, for example, often requires cooperation from the physicist or chemist for its successful solution. Such cooperation, however, should not be difficult to arrange for.

"In this hour of national emergency there is no time to be lost. We can not all be soldiers, but we can all help, we men of science, in securing victory for the allied armies. Every day lost means the destruction of a number of our fellow countrymen and of our allies, and the sooner we cooperate for the good of the nation the sooner will the war be over."

THE MERCY OF MODERN WAR SURGERY

IF THE GREAT WAR reveals an advance in the science of killing, it is also notable, according to a writer in the *Paris Journal des Débats*, for great progress in the treatment

of the combatants who have the lesser ill luck to be merely wounded. In proof of this contention he offers us the record of a surgical hospital at Vichy, where, in one month, out of a total of 600 operations—or about twenty per day—less than ten amputations were found necessary. Those that were made, moreover, were minor operations, involving the loss of a finger or toe. The writer admits having seen more serious operations, as, for instance, the amputation of a leg, an arm, a hand; but he assures us that they are very few in comparison with the records of war forty to fifty years ago. The number will remain small, too, he says, because, "happily for our wounded," amputations are no longer the fashion. The reason for this he explains by quoting a Paris medical authority as follows: "Conservation should

be the rule of treatment in cases of bullet fractures. In an immense majority of cases complete healing is sure to follow, no matter which bone is hurt or how badly." A similar doctrine was propounded, the writer tells us, by another medical authority as the result of experience in the Balkan War. He adds:

"With wounds from modern projectiles, especially the bullet, which remains the most effective of all—being the cause of death or injury in 80 cases out of 100 in 1870 and of 81 in the Turco-Russian War—a great and most favorable change is to be noted. The region of the wound is smaller and more localized. As to bone splinters they are small and numerous, while long ones are infrequently found. . . . The first impression is that the case is very serious, that the limb is lost. No other thought occurred to surgeons a hundred years ago, who were responsible also for the former practise of withdrawing all bone splinters from a wound."

The writer then cites authorities as stating that amputation is justifiable only when "the mortification of the extremity is in itself fatal." In fact, "amputation is permissible only in the case of gangrene, or when the patient shows signs of being unable to withstand infection or a lack of resistance against the toxic conditions resulting from the wound."

SNOW-REMOVAL BY HEAT

EVERY ONE KNOWS that the most efficient aid to a city's street-cleaning department, in getting rid of surplus snow, is a bright, sunny day. Under its influence the snow disappears as if by magic, and runs quietly away through the sewers. It is no wonder that engineers have striven to imitate old Sol in this quiet sort of efficiency. We are paying good money to cart away an objectionable solid from our streets, when a slight rise of temperature would turn it into a liquid that would glide off by itself, without compulsion. Unfortunately, no melting process that has hitherto been tried has been commercially successful. Calculation may show that the process is economical, but there is so much waste of heat in one way or another that the economy does not work out in practise. But now comes Mr. S. Whinery, a New York engineer, who gives in *Engineering News* a new set of figures and an extra leaf from nature's book. Even more effective than a bright day is a

warm, soaking rain. This Mr. Whinery would imitate by using hot water, applied with hose directly to the snow as it lies on the street. In this way handling would be altogether avoided, and the heat, the inventor claims, would be applied with a maximum of economy. It is to be hoped that this method may survive the test of actual experience. Writes Mr. Whinery:

"The opinion is quite general among engineers and others that, while theoretically it should be possible to melt snow on the streets by artificial heat at a reasonable cost, the method is impracticable and uneconomical in actual practise. Such experiments as have been made seem to confirm this conclusion. But the thoughtful inquirer is likely to reason that, where a process appears to be practicable and economical in theory, failure to secure satisfactory results in practise may be due to a lack of knowledge or skill in applying it, and that the whole

subject may be worth further investigation. The fact that, in burning, one pound of coal gives off sufficient heat to melt from seventy to ninety pounds of snow, looks attractive at first thought to one who is not familiar with the difficulties of converting heat into useful work.

"Snow-removal in our Northern cities is one of the important municipal problems that has not yet been satisfactorily solved, tho it has attracted much attention and has been the subject of no little unintelligent inventive skill.

"There is not much available literature on the subject, and it may be worth while to review the scientific and practical elements of the problem, which are not so abstruse and complicated as those who have not investigated them are likely to imagine. The purpose of this article is to do this briefly, using for illustration a project for melting snow by the application of water, taken from the fire-hydrants, heated to a temperature just below the boiling-point in an ordinary steam-boiler, and applied to the snow on the street by means of a hose and nozzle."

"It is not necessary to reproduce Mr. Whinery's figures here, but they satisfy him fully of the justice of his contention. They seem, at any rate, he thinks, promising enough to warrant a fair trial of the project under working conditions. He goes on:

"We have, in the above, figured on melting all the snow on the street. It is probable, however, that more or less unmelted

WHERE ENMITY IS FORGOTT.

In the army hospital foes become allies in the greater war against disease and death. Here in this Berlin hospital wounded Frenchmen are cared for as tenderly as are the German soldiers. On the left stands a French military surgeon who has become one of the hospital staff.

or partly melted snow would be carried into the sewers with the current of water, thus tending to reduce the cost.

"Recent experience in New York City seems to favor the method of disposing of snow by collecting and forcing it into the sewer-inlets and manholes by the use of a jet of cold hydrant-water. By the hot-water method, no handling of the snow would be necessary. It would be melted as it lies on the street, and the resulting water would flow into the sewer-inlets. There would probably be no question of the capacity of the sewers to handle all the water produced.

"It is not intended here to discuss the probable merits or demerits of artificial snow-melting, nor the practical difficulties and objections to be encountered. The purpose is only to outline the technical problems involved, for the use of practical men or inventors who may wish to give the matter further consideration.

"The hot-water project was taken for illustration not only because it includes most of the technical elements involved, but because water is a good absorbent and conveyor of heat, and by its rapid penetration into the snow should transmit its heat to the snow with comparatively little loss. The plant used for illustration is crude, for it is to be remembered that in steam-boilers only from 50 to 80 per cent. of the heat yielded by the fuel is actually taken up by the water. It is quite possible that a more efficient type of heater for the purpose could be devised.

"At first thought it would seem that a project for the application of the heat from the coal directly to the snow would be more economical and less complicated, but as this seems to involve the application of the heat to the surface only of the snow the heat losses would be much greater than from the penetrating hot water."

DANGEROUS SAWDUST—Sawdust from certain kinds of wood is annoying and injurious to those who work about sawmills and other plants where the objectionable woods are used. Some of these, and the resulting maladies, are described as follows in *The Hardwood Record*, which says:

"California laurel—which is not laurel but sassafras—is not widely known, and little of it goes to sawmills; but its reputation for annoyance is well established. The odor from the freshly cut wood produces headache, especially sharp pain over the eyes. The sawdust itself may not be directly concerned. The irritation is caused by oil from the wood, floating in the air, like that from a freshly cut onion. No permanent harm results, and the unpleasant malady ceases soon after the cause is removed. Another California and Oregon wood is clearly injurious to persons about sawmills where this wood is cut. Sailors on vessels carrying the lumber are sometimes seriously affected. The wood is the Port Orford cedar, also known as Lawson cypress. It grows in dense forests in the vicinity of Coos Bay, in southwestern Oregon. This wood was the material principally used in building Sir Thomas Lipton's yachts. The crews of mills which saw the logs can not work continuously, but

must have frequent relief or they become incapacitated. The wood is so rank with oil that it resists the attacks of ants in the Philippine Islands, where cargoes are sold for building purposes. Some Oriental woods have had reputations because of injurious effects upon sawmill-workers. Satinwood's odor is pleasant enough when inhaled in small doses; but too much of it works great harm. Walnuts of different species, but chiefly the black walnut of the United States, and eastern walnut, commonly known as Circassian, are accused of serious injury to workmen who cut much of the lumber; but the reputation may not be wholly deserved. Some workers in walnut experience no annoyance. Rosewood produces sneezing and headache among the workers. In this instance it is believed to be the finely pulverized sawdust floating in the air, rather than oil emanating from the wood, which produces the undesirable consequences. It is said that workers in Russian mills where larch is sawed suffer from headache, sore eyes, and blindness. No complaint seems to have been made against American larch or tamarack."

SUBWAYS FOR RIVERS

THE DIVERSION of an objectionable stream into a tunnel or sewer is no new thing in municipal engineering.

That it may serve very different purposes, however, is shown by two noteworthy recent schemes—that for the Genesee River in Rochester, N. Y., and that for Jones Falls in Baltimore, Md. The Genesee was inclined to have too much water in it, and the Rochester subway was planned to get rid of the surplus, so that it would not overflow the city streets. Later, however, the tunnel plan was abandoned and it was decided, instead, to deepen the channel. On the other hand, Jones Falls was apt to have too little water, especially in summer, when it became offensive. Here the subway is to give the stream an underground channel where it will annoy no one. The work at Baltimore, which has now been completed, is thus commented upon in the editorial pages of *The Engineering Record* (New York, November 7), which says, under the heading "A Unique City Improvement":

"On Thursday of last week the Mayor of Baltimore diverted the flow of Jones Falls, a small meandering stream running through the heart of Baltimore, into a tunnel built in conjunction with what is known as the Fallway, thus forever burying an old open sewer, which has been an eyesore to the city. The remarkable feature of the improvement is that, tho it cost two million dollars and is for general public use, and not for a restricted measured service that can be charged for, it will eventually cost the city nothing. The increased taxes derived by the city from the creation over the stream of a new north and south street,

running from the heart of the business district to the railroad depots, affording a traffic artery on easy grades, will pay the interest on bonds necessary for its construction and create a sinking fund to redeem them. The back lots of the properties backing on the old stream have been converted into valuable, desirable lots for business purposes facing this broad new boulevard. The work is a marked tribute to the man who conceived it, Calvin W. Hendrick, and is suggestive of possibilities in other cities. Had the stream been a wide one, with good water depth throughout the year, the improvement of its shores for shipping or for recreational purposes would have been advisable. Jones Falls, however, had a depth of water only in the spring, and for the rest of the year was a series of puddles. Under these conditions its conversion into a highway beneath which are three channels for carrying the flow was a most happy solution for ridding the town of a physical deformity."

MEDDLING WITH NATURE'S BALANCE OF THE SEXES

NATURE, by laws which have hitherto eluded exact definition, has from the beginning maintained her working balance of the sexes. Is this mysterious balance now in danger of being disturbed? The question is prompted by the claim of Dr. Oscar Riddle, of the Carnegie Institution's experimental evolution station at Cold Spring Harbor, Long Island, that he has demonstrated the determination of sex and its experimental control. His conclusions, as set forth in *The Bulletin of the American Academy of Medicine* (Easton, Pa., October), do not seem to agree entirely with those reached by such earlier investigators as Siebold, Giron, and Duxing, whose experiments with bees, ants, wasps, and sheep indicated that an abundance of food tended to produce a preponderance of female offspring, while a poorer diet made for a surplus of males. According to Dr. Riddle's theory, the difference between the sexes is not one of quality, but of quantity. Eggs that produce males, he says, always contain more water than those that produce females, and he cites the experiments of other scientists in support of this statement. Miss King, of the Wistar Institute, Philadelphia, found that dried toads' eggs produced 90 per cent. females, while the normal eggs produced 50 per cent. of each sex. On the other hand, Hertwig and Kuschewitch obtained 100 per cent. of males from frogs' eggs that had been allowed to take up water. Dr. Riddle believes that all reported cases of successful sex-control—of which he accepts a number as authentic—are to be explained in this way. Experiments by the late Professor Whitman, the results of which are now in the hands of the Carnegie Institution for publication, show definitely, we are told, that he was able to control the sex of pigeons by this method.

What Dr. Riddle calls "the flexibility of sex under environment" points to the conclusion that it is an affair of quantity rather than of quality, and in this connection the writer points out the existence of sex phenomena that are presented by groups of individuals. There are whole species, he says, that show characteristics that we are accustomed to describe in the individual as masculine or feminine. He writes:

"Not only may individuals exhibit more or less of masculinity or of femininity; species may do the same.

"The (European) cuckoo is an example of a masculine species. Masculinity is here expressed in the following different ways:

"(1) There are from 5 to 25 male individuals for each female in the species.

"(2) There are practically no maternal instincts, not even in the females.

"(3) The reproductive relation of the sexes is essentially a most loosely bound polygamy.

"(4) The sexes are indistinguishable externally.

"(5) They lay few eggs; these at long intervals (five or six days), and these are extraordinarily small.

The temperament of this species has been described by him in these terms:

"The cuckoo is a discontented, ill-conditioned, passionate, in short, decidedly unamiable bird. . . . The note itself, and the manner in which it is emitted, are typical of the bird's habits and character. The same abruptness, insatiability, eagerness, the same rage are noticeable in its whole conduct."

"There exist also feminine species. I am confident that the white ring-dove is such a bird. It is characterized as follows:

"(1) There are probably more females hatched than males; this is certainly so when forced to their maximum of reproduction.

"(2) They are smaller in size than were the members of the ancestral species.

"(3) They are most devoted, and truly monogamous, in their sex-relations.

"(4) Even the males of this species display maternal instincts often and easily. They readily sit on eggs at night, if the female fails or is removed.

"(6) The sexes are often indistinguishable externally.

"(7) The eggs are relatively large, and are laid in greater number than in any other dove I know.

"Again, the species is predominantly passive, caring to fly but little, is essentially domestic. The young are born more immature and dependent than in any related species. The adults are social, non-migratory forms. The males, at all times, take nearly as much interest in the eggs as do the females. They all fall short in the development of color—being white. The species is weak: the term of life short, this probably being nearly always less than five years; and most birds, even with the best of care, live less than three. They are easy and constant victims of tuberculosis and a multitude of diseases."

Going still further, Dr. Riddle asserts that all fishes are predominantly masculine, whereas the crustacea are feminine in appearance and habits. It is also true that change of environment may cause a "male" group to assume female characteristics and *vice versa*. The writer goes on:

"Much has been said and written concerning an alleged biologic equality of the sexes. However definitely an equality may exist from social, political, or ethical points of view, it is doubtful whether this can be truthfully asserted from any biological standpoint. Sex is clearly a characteristic of the organism as a whole, and pervades its every tissue. It is, however, based upon quantitative rather than upon qualitative metabolic differences; and it would seem that social effort for its preservation and emphasis will one day become apparent. Sex is a racial asset, and its conservation a racial problem.

"Some persons, perhaps, may not be prepared to see that sex-conservation presents a problem. This Academy, the eugenics movement, and other organizations are giving much consideration to the feeble-minded and the criminal. The profession represented here, however, is well aware that even in our country there are probably more masculine women than feeble-minded individuals, and more effeminate men than criminals. At present we look upon the appearance of the inadequately sexed individual as inevitable; just as a generation ago we looked upon the perpetual presence of the feeble-minded as inevitable. But once we realize that sex—its kind and quantity—can be controlled, we are brought face to face with many new possibilities, and some new responsibilities in this direction.

"What new elements do the possibility and actuality of sex-control bring to the new science of eugenics? I wish to invite a brief attention to only one. You well know that eugenics as it is being presented before the public of to-day lays chief stress upon heredity—upon the transmission, intact and unchanged from parent to offspring of weakness or of strength, of fitness or of unfitness, of the manifold characteristics of the organism. And the chief remedy suggested rests upon an elimination of the bearers of weak or unfit germs from the citizenship permitted to leave offspring. We can probably all agree that such a remedy, wherever practicable, is very, very much to be preferred to an unchecked continuation of the present situation. But is there not a lot of fatalistic philosophy in that conception? Shall man—a maker of environments—when confronted with the problem of his own improvement, sadly turn to the crude and original methods of nature itself? At least to those biologists and men of medicine who believe that life-processes are controllable—developmental processes along with the rest—that conception and that remedy will not seem final. To those of us who realize that one characteristic—namely, sex—has already been controlled, showing that in nature all are controllable if our industry will but put light where ignorance now enthrones mystery; to some of us the production of strength from weakness, of more fit from the less fit, and better from the best, will seem

more in keeping with the present general aim of our science, which is to secure control over all life-processes. Probably this sort of work is the really fundamental work for a eugenics of the future, for it will give us a eugenics in which man is creating, not merely sorting and eliminating, a eugenics capable of embracing optimism and democracy and the spirit of modern biological research."

MOVIES AND MORALS

THAT the voluntary censorship of our moving-picture shows, while it has succeeded in eliminating some harmless features, has at the same time left objectionable ones untouched, is the opinion of Dr. Philip Skrainka, writing editorially in *The Interstate Medical Journal* (St. Louis, November). The writer finds especial fault with medical critics of this form of entertainment, particularly when they mourn its lack of "these cultural insignia without which no entertainment is really worth while to-day." The fact is, says Dr. Skrainka, that our atmosphere is getting "sticky with the word 'culture'"; and he hints that in handling the subject medical reformers are making a mess, as people naturally do when they exceed their natural province. He writes:

"Our irrepressible medical reformers are loud in their denunciations of the evil wrought on the morals of an audience that sits spellbound under the influence of moving pictures. To take up only what medical men have written, we glean from their essays that the concentration, the complete absorption in the story as it is unfolded, has a weakening effect on the nerves; and when the various chapters are illustrated in a highly dramatic manner, and, as often happens, in a sensational manner, so weak is human nature that the wrong lessons are learned; in short, many return again and again, the serious side of life is forgotten, a moving-picture habit is formed, and wan faces and overtaxed brains are the outcome. To correct all this, it has been suggested that if the pictures could be made on a higher

taxed and faces have a deadly pallor. To effect this beneficent change, boards of censors have sprung up here and there, and the erstwhile cowboy who brandished his pistol on the slightest provocation, the man who stole some ten thousand dollars to buy his wife enough food to keep her and the one solitary child

"BETTER, INDEED, . . . THE REFORMED GAMBLER AND THIEF," Says a medical writer, than "the unspeakable tortures of ancient history" for the contemplation of the American multitudes.

"THEY ENJOY THE HORRIBLE DEATH OF THE VILLAIN"

moral plane, if the higher intellectual qualities of the audience could be aroused by showing scenes depicting the life of the early Greeks or Romans at home and in the battle-field, a new era would be inaugurated, and no longer would men and women neglect their serious duties, no longer would brains be over-

from starvation until he could get work, which generally happened a few hours later, the distraught maiden who married a banker's son only to find out that he was an ex-convict, the drunken husband who returned home to rob his wife of her savings and incidentally broke up the furniture, are trembling in the balance, so effective has been the work of both lay and medical reformers. Instead of the enervating picture showing the sordidness of life, the criminal tendencies of the unenlightened, and also of the enlightened, we have 'Cabiria,' 'Quo Vadis?' 'Spartacus,' palpitating with Greek and Roman torture-scenes.

"It has often occurred to us that when medical reformers get outside their natural province they make a sad mess of their endeavors. In the first place, the majority of people who frequent picture-shows do not care a rap for early Greek or Roman history, and never will, no matter how often they are compelled to undergo the torture of compulsory culture. What they do care for and do enjoy are the scenes from the daily life they read about in the newspapers or hear about from their friends. They enjoy the triumph of virtue, the horrible death of the villain, the reward that comes from self-sacrifice, the reformation of the drunkard, the gambler, and the thief. Now, to say that because they enjoy this sort of thing, they are going to lose all interest in their vocations and are going to suffer from weakened brains and distraught nerves, is a very wrong conception of the equilibrium which the majority of the people fortunately possess. Enjoyment is to them a boon and a tonic; and just because they take a greater interest in the pictures which they can conceive of as within the bounds of possibility, and which have the crudenesses which go with the lives of the unrefined, than in historical scenes, should not be counted against them or held responsible for the moving-picture habit. Better, indeed, and much more moral are the pictures of the cowboy and the reformed gambler and the reformed thief than those showing the unspeakable tortures of ancient history and the nastiness of such reels as the 'House of Bondage,' 'The Drug Habit,' 'Damaged Goods,' 'Traffic in Souls,' and their many variants."

LETTERS - AND - ART

LUDWIG FULDA ADDRESSES AMERICA

THE LATEST DEFENDER of the German case before the court of American judgment is Ludwig Fulda, the dramatist. He is regarded one of the best-known of modern Germans in this country and has been the guest of our colleges and universities. *The Fatherland* New

therewith should have lost the blind confidence of the impartial in his future assertions. In spite of this, altho the first ridiculous news of German defeats and interior dissent could not withstand the far-sounding echo of facts, there still seems to be no twisting of facts, no defamations, which over there is considered as too thin and too ridiculous by the press and as too shameless by the public."

With this preliminary estimate of the fairness of American judgment, Dr. Fulda proceeds to rehearse the points of Germany's case. They have become tolerably familiar to us by now, but Dr. Fulda's statement of them is perhaps superior to most of his predecessors. To begin with, he asks:

"Should the Germans, who since they fought for and attained their national unity have exclusively devoted themselves to works of peace and culture, suddenly have been transformed into an adventurous, booty-hungry horde which from mere lust challenged a tremendously superior force to do battle? Should they suddenly have sacrificed to their so-called militarism all their other efforts in commerce, industry, art, and science in order to risk their very existence for the love of this Moloch? Do you believe that, Americans?"

Dr. Fulda, who is introduced to us as a critic of the Kaiser, declares that "too many Americans emphasize that they are not making the German people responsible for this war, but only and alone the German Emperor." He replies:

"It is hardly conceivable how serious-minded people can lend themselves to the spreading of a fable so childish. When William II., twenty-nine years old, mounted the throne, the entire world said about him that his aim was the acquirement of the laurels of war. In spite of this, for twenty-six years he has shown that this accusation was absurd, and has proved himself to be the most honest and most dependable protector of European peace—yes, the very circle of enemies which now dares to call him a military despot thirsting for glory has year in and year out ridiculed him as a ruler the provocation to the very blood of whom was an amusement absolutely fraught with no danger. He who has never been misled by the fiery enthusiasm of youth nor by the full strength of ripe manhood to adorn his brow with the bloody halo of glory, now when his hair is turned gray should have suddenly turned into a Caesar, an Attila? Do you believe that, Americans?"

"It is a fact, in times of peace there have been certain differences of opinion between the Emperor and his people. Altho at all times the honesty of his intentions was elevated above every doubt, the one or other impulsive move he took to obtain their realization exposed him to criticism at home. To-day one may safely admit that; to-day, when of these trifling disputes not even a breath, not even a shadow, remains. Never before has his whole people, his whole nation, in every grade of education, in all classes, in all parties, stood behind him so absolutely without reserve as now, after he in the last, the very last, hour, driven by direst need, finally drew the sword to ward off an attack from three sides, long ago prepared.

"Our nation and our Emperor have not wanted this war and are not to be blamed for it. Even the White Book of the German Government, by the very uncontrovertible language of its documents, must convince every impartial being of this fact. And day by day the overwhelming evidence of the plot, systematically hatched and systematically carried out under the guidance

THE CITY HALL AT BRUGES

Bruges promptly yielded and secured bombardment and as it is outside the line of conflict it bids fair to stand intact to enforce by contrast the losses elsewhere.

York, to which he sends his communication, describes him as "a man of marked political ideas and independence," recalling that as "a bold champion of freedom" he has "on more than one occasion disagreed publicly with the Kaiser." One of these acts lost him the Schiller Prize. Dr. Fulda, in *The Fatherland*, asks: "Shall I as a German no longer be permitted to call myself a friend of America because over there they think the worst of us for the reason that we, dastardly attacked by a world of foes, are struggling with unanimous determination for our existence?" Dr. Fulda adds that he "knows very well that public opinion over there has largely been misled by our opponents, and is continuously being misled." He does not so much blame us for being misled at first because through the cutting of the German cable the English were able to "guillotine our German honor without the least interference." But "one should assume that he who has once been unmasked as a liar

of England, which put before us the alternative of cutting our way through or being annihilated, is increasing."

On the Belgian question Dr. Fulda writes:

"How with the aid of this bugaboo the entire neutral world has been stirred up against us, after England made it the hypocritical excuse for her declaration of war! We knew very well that England and France were determined to violate this neutrality; but then we should have been very good and we should have waited until they did so! wait until their armies would break into our country across our unprotected Belgian frontier! In other words, we should commit national suicide. Who even up until now has doubted the German assertion that Belgium, together with England and France, was under one cover and herself had thrown away her neutrality must have his eyes opened by the latest official developments. The documents of the Belgian General Staff which have fallen into our hands contain an agreement according to which the march through Belgium of British troops in the case of a German-French war was provided for in all details. Whosoever in the face of this document repeats the assertion that we have committed a violation of innocent Belgium places himself into the service of a historical forgery."

A few more points that still are troubling neutral nations receive Dr. Fulda's attention:

"Our national Army, permeated with ethical seriousness and iron discipline, wherein the scientist stands alongside of the farmer, the workman, and the artist, should be guilty of unnecessary severity, uncontrollable brutality, brutality against people unable to defend themselves? Do you believe that, Americans?"

"The climax of absurdity, however, is reached when the Germans, who in their love and appreciation of art are not surpassed by any people in the world, are accused of having raged as vandals against works of art. Even now these accusations, which the French Government itself had the pitiful courage to support, have proved totally groundless. The City Hall at Louvain stands uninjured; while the populace fired at them, our soldiers have, risking their own lives, saved it from the flames. An Imperial art commission followed our victorious troops in Belgium on the heel, in order to take charge of the guarding and administration of the treasures of art. The Cathedral at Reims has received but slight damage, and would not have been damaged at all had its tower not been misused by the French as an observation station. I would like to see the commander of an army who, for the sake of the safety of a historical monument, would forget the safety of the troops entrusted into his care!

"Enough of it! What I have stated is sufficient to show what low weapons our enemies are using behind the battle-field to sully Germany's shield of honor. It is enough for those who care to listen at all. But also wherever the weak voice of one rebounds from ears stubbornly closed, the more powerful voice of truth eventually will force a more just verdict.

"Justice—that is all that we expect from America. We respect its neutrality; we do not ask from it an ideal partizanship for our benefit. If it does not have for us the sympathy which we have already extended to it and, after a century and a half of unclouded intercourse between the two nations, have anticipated there, then we can not imbue it with that spirit by reasoning."

One of Dr. Fulda's questions dealt with the point of Germany's supermilitarism, a prepossession that led her in the eyes of her critics to brave the hazard of conflict with any and all foes. While not bearing directly on this, a statement that puts at least part of the responsibility on Germany comes from Prof. Paul Nartop, of the University of Marburg, who examines in the *Kölnische Zeitung* the point "whether Germany went into this conflict with a clear conscience or whether the awful guilt of this catastrophe, in which the whole world must needs share, is

to be laid at her door." In a passage translated for the *New York Evening Post* we read:

"This is the utterance of a German who loves his Fatherland, but who, as a scholar and friend of peace, has sought to maintain an unbiased judgment concerning the politics of his country. This judgment, for that matter, scarcely differs from that which prevails among us, whether in Government circles, the representatives of culture, or the people and Army as a whole."

AT THE STORM-CENTER IN FLANDERS.

Dixmude Church stands a gaunt ruin to mark the spot of some of the severest fighting in the German attempt to reach Calais.

"No doubt our diplomats have committed errors—less within a recent period, but, at any rate, before. In two points, however, even a Bismarck would not have acted differently from our diplomats; he would, as they did, have worked for peace as long as it was possible, but would have held the possibility of a war, even a war with two fronts, steadily in view.

"Never, however, would he have allowed it to come to pass that when the war became inevitable the three greatest Powers outside of Germany and the United States should be allied in opposition against us. And that would probably have sufficed to maintain peace. For no two of the three Powers would, without being sure of the third, have dared to attack the indissolubly united forces of Germany and Austria.

"In this sense I do not hesitate to declare, altho a German, that Germany is not altogether innocent of the outbreak of the war; not that there can be even the slightest doubt of her sincerest love of peace; but her diplomats did not recognize the road upon which alone peace could have been maintained, or did not know how to conquer the towering difficulties which confronted them on that road.

"Of the three opposing Powers, however, England approached nearest, perhaps, for a time, to the intention of maintaining peace; in any case, her attitude was the decisive factor. With England earnestly opposed to it, war could not take place."

ARE YOUR BARRELS OF FLOUR FOR STARVING BELGIUM

TO BE ON THIS SHIP?

S S HUMANITY

The Literary Digest

HUMANITY'S MISSION

THE BELGIUM FLOUR FUND of THE LITERARY DIGEST has grown inspiring. Last week it was reported as 1,217 barrels. This week the report (up to Dec. 2, inclusive) exceeds 3,200 barrels. Digest readers have delighted us with their promptness of response. Their letters have shown how deep is their sympathy, how strong their humanity. To read what some contributors have written quickens the heart-beats and makes the reader's eyes grow "teary 'round the lashes."

An Indiana lady writes: "Husband and I have a beautiful boy, an only child, who was called to higher life six years ago, and enclosed P. O. O. for \$5.00 is sent to you in his name." Says a banker in Minnesota: "Here are two barrels of flour. Hurry it along to the poor starving children." A church in Arkansas took a Thanksgiving offering of \$25.00, which the treasurer sends with warm words of sympathy. An offering of like character from a Pennsylvania church came in the same mail.

A letter from Hartford, Conn., is very touching. "The appeal you made," it says, "struck a responsive chord in the hearts of my four children (eldest, age 12), and they have given me their Christmas savings of months, to help along the good cause. They also asked me to send you the money that ordinarily would go for their Christmas presents. I enclose check for \$20.00, which will buy four barrels of flour. We will have a poor Christmas this year, but will be far happier."

The Clinton Avenue Reformed Church Bible School Board of Newark, N. J., voted that its treasurer send check for \$125.00, for 25 barrels of flour, which he did, with their prayers. A lady from Dayton, O., wrote saying: "Last Saturday I sent woolen garments for the Belgians, thinking warmth more important than food—but a family of five fed for two months! I must send a barrel of flour." And she did.

TESTIMONY TO BELGIUM'S NEED

On Nov. 30 Mr. Brand Whitlock, American Minister to Belgium, sent a telegram to the American Relief Association saying:

"The German Government renews its official declaration that conditions in Belgium are as represented, and views with great gratification the generous efforts of the American people to relieve the starving population."

And Mr. Whitlock added: "Without such assistance there must be famine."

Mr. Irvin S. Cobb, the famous newspaper correspondent, on Dec. 2d testified through the press to what he had seen in Belgium.

"I wish only," he wrote, "I had the power to write lines which would make the American people see the situation as it is now—which would make them understand how infinitely worse that situation must surely become during the next few months."

"In Belgium I saw this," he continued. "Homeless men, women and children by thousands and hundreds of thousands. Many of them had been prosperous. A few had wealth and practically all had been comfortable. Now with scarcely an exception they stood all upon one common plane of misery. They had lost their homes, their farms, their workshops, their livings and their means of making livings."

"I saw them tramping aimlessly along wind-swept, rain-washed roads, fleeing from burning and devastated villages. I saw them sleeping in open fields, upon the miry earth, with no cover and no shelter. I saw them herded together in the towns and cities to which many of them ultimately fled—existing (God alone knows how). I saw them, ragged, furtive, sorrowing, prowling in the

VERSE-MAKING IN THE TRENCHES

THE FERVOR of "lofty song," which has always flamed above the smoke of battle-fields, burns anew, says a writer in the *Paris Figaro*, who calls attention to poems by Rostand, Zamacois, and other notable poets contributed to the columns of that journal. Yet more striking still, we are told, is the fact that a great quantity of verse comes to the *Figaro* day after day from soldiers, nurses, and general workers at various points along the front. It is admitted that in these efforts the expression does not always measure up to the subject. Yet if, as La Bruyère says, "the writing of a book is a trade in itself," so also, according to the present writer, it is a trade in itself "to cry out one's sorrow and one's joy in the language of Apollo, to drape with harmonious phrase and winged phrase one's hate or one's love." The souls of these poets in action, he explains, are overwhelmed with emotion and their minds confronted with such mighty happenings that they are too strained to conceive of them justly. Spontaneously as patriotic songs spring to the lips of soldiers on the march, poetry flows from the pen of every Frenchman who tries to express what he feels in the present circumstances. Simplicity and sincerity, consequently, are the chief characteristics of this verse from the trenches, and it would seem, the writer tells us, that France is "finding its youth again and can understand only two essential passions—great hate and great love." We read then:

"Love is the subject of all these new poets; love for wounded France, for her ruined monuments, for her imperiled traditions, love for her sons that have died and for those who are about to die. And hate, as well—hate for the barbarians who brought these woes upon her. Yet their love is born of this hate. . . . Take this passage, for example, from a poem written by Maurice Lesneur, a sergeant in the 88th Regiment, on the evening of the battle of Islettes:

No the Prussians passed through here?—
What wake of carnage, ruin, and of hate!
Lo, Vandal and the Cimbric live again
And wallow in their ancient gory mire!
Ye savages of gun and shell
Ye curst assassins in a land despoiled—
The blood ye shed shall ever stain your souls!

Less redolent of anathema, but equally informed with martial spirit, is the picture presented by Lieutenant Jacob, of the 141st Infantry, of a troop movement. He writes:

Comes the order to advance, and the squads deploying while
Seek the foe on every side;
Hold but slowly 'gainst the chance of the warning sound that fills
The air with whisper as it kills.

Prince Charles of Bourbon is responsible for a poem to the memory of a private, Voituret, who achieved fame in the battle of the Marne. A selection from it follows:

The River Marne flows red to-day, and will still redder flow,
For see where singly Voituret has stretched six foemen low.
The lion fighting for its prey, the fiercer grows as triumphs show—
A crash of shell—Voituret's day fate turns to night—so brave men go!

Other poems cited by the *Figaro* writer pay homage to the dead on the field of honor, and not a few are tributes to "heroic Belgium." We read, for instance:

"What of your rights or treaties?"—
The haughty German word—
"Stand by or die, as I make my way!"
Calmly, proudly, Belgium heard.
"What of my soul and honor?"—
Stoic her reply—
"On the cross, but not on the scaffold,
Is the Belgian way to die!"

Another Frenchman, Jean de Kerlaecq, apostrophizes King Albert of Belgium as follows:

The cup of very blood you drank
Nor 'fore the agony quailed or shrank.
Think not we reckon slight of this,
Valiant in field and sacrifice!
Our children shall the legend tell
Of Albert, King, whose name shall spell
Wherever read as none other can:
"Great King, Great Soldier, and A Man!"

As an example of the patriotic devotion awakened by the present conflict, these selections from a hymn to France are offered:

Hail France, my native land and home of all that's high and fair!
I bid thee fear no hostile hand nor burden that grind loved acres bare.
For they shall bloom another morn, a smile more radiant and wide—
Enriched with rarer wheat and corn wherever one last foeman died!

—Translations made for THE LITERARY DIGEST.

SPREAD OF PRUSSIAN CULTURE

IT HAS BEEN the practise of many American educators to express gratitude to Germany not only in words, but in practical imitation, for the modern methods she has introduced into the field of pedagogics. How far Germany's example has penetrated may not be widely apprehended; but our attention is now called to these facts by Mr. Ford Madox Hueffer. Mr. Hueffer, tho an English subject, with part English blood, partakes, as his name shows, also of German extraction, and that same circumstance has already plunged him in serious straits in the spy-suspecting country of his citizenship. While making it clear to his British compatriots that he has a most intense dislike for Prussian culture, he shows at the same time how it has been extending its influence throughout Europe and America. Simultaneously, as he pictures it, this culture has been deteriorating, yet spreading its sway, and he is glad that the war affords a prospect of checking it. Prussian culture is to him a machine-made and dehumanized affair whose extension proves fatal to the gentler and higher culture of other nations.

So far as Germany herself is concerned, it is his contention that "under the auspices of Prussia the standard of culture . . . has steadily and swiftly deteriorated." This in turn has "caused a deterioration of culture throughout the whole civilized world." Germany, he insists in *The Outlook* (London), "has produced no art of a really capital kind since 1870, and all German art and learning have been steadily on the down grade since 1848"—the year after which "the Prussian hegemony of Germany began to become a part of international politics." Mr. Hueffer goes to considerable pains to show that these views have not been suddenly forced upon him by the exigencies of the war, and he insists that the present war has in no way increased his long-standing hatred for Prussia, and that for a quarter of a century he has been writing upon this subject. He declares his hatred of the "by-products theory of life," of materialism, and the "reduction of learning to philology." What he most desires to promote is "sympathetic insight between man and man—the quality that is called imagination." "It is these things that Prussia has desired to impose on the civilized world; it is the last quality that Prussia has desired to stamp out of its dominions and the dominions of the unfortunate nations that Prussia has forced to federate with herself." He writes:

"It will, I suppose, be conceded by most people that the effects of the Prussian university system and of Prussian pedagogics upon this country, upon the United States, and upon the British colonies and dependencies have been profound and far-reaching. But I fancy that most people imagine the Latin countries to be fairly immune from that Teutonic influence."

Mr. Hueffer tries to correct this impression by quoting from

two Latin writers; first the Spaniard, Prof. G. Morente, who delivered a lecture at the Athenæum of Madrid last January, from which we translate the following:

"During the nineteenth century, in effect, the German universities have made the most strenuous efforts to attain to the highest type of scientific corporation, in the modern meaning of the term. To this end they put forth at the beginning of the nineteenth century a multitude of exalted principles applied to the theory of education, self-culture, personal and formal education, and pedagogy. The consequences of these titanic efforts have been a great generation of men who have aspired to be encyclopedists in knowledge, in art, in social science. . . . The dilettante among them is no more than a base caricature of those old classic spirits."

To many American educators this praise from such a source would seem, perhaps, to speak well for a new progressive spirit in a supposedly backward land, but Mr. Hueffer finds it "really amazing as well as depressing to see how exactly Professor Morente has absorbed and adopted the Prussian formula and Prussian ideal." This he supplements with a quotation from the *Mercur de France* (Paris), a journal which was, until its extinction owing to the present war, "on the whole the most influential organ of intellectual France." It said:

"At one time Germany was the first nation in the world in the domain of philological and historical research. During the last dozen years our universities have entered that field and, while we were organizing our faculties and our scientific equipment, Germany has beaten us along another line by devoting all her efforts to the creation and organization of technical universities. It is time to follow her example in this new move, for here it is not a mere question of theoretic sciences or of the luxury of knowledge, but it means the material prosperity of the whole nation."

"The great danger will begin for us when those thousands of workers trained by these technical universities can no longer find sufficient employment in their own land. It only needs a standstill in German industries—and certain branches are at this moment paralyzed—and thousands of engineers and millions of workmen will be out. Then some diversion may become necessary. 'Hungry people have no ears.' It is there, in this prospect, more or less distant, that the danger to the immediate neighbors of Germany lies."

That the same thing, Mr. Hueffer goes on to assert, has happened to many professors in England, "and, much more, to professors in the United States, has been lamentably apparent for many years." We read:

"Particularly in the United States, and more particularly of late years, many distinguished occupants of professional chairs have been remarkably drilled by Prussian leaders of thought. They have indeed been so remarkably well drilled that certain of their utterances, particularly in regard to German life and letters, read or sound exactly as if they had been dictated by and reproduce the exact tone of a Prussian Minister of Education."

"This is in itself lamentable, but it is a fairly familiar state of affairs to any one who has studied the matter. And that English scholarship also should be under the spell of German specialism, to the exclusion of more vital issues, is familiar enough too. But I must confess that my heart failed me when I read those Spanish words to the effect that 'the consequences of Prussia's titanic efforts have been the arising of a

great generation of men who aspire to be encyclopedic in learning, in the arts, and in social problems.' For that that should be held before Spain—that great mother-country of learning; and before Spanish South America, that immense Golconda that may very well be regarded as the land of promise of the future—is a vision very horrible indeed. English imitation and absorption of Prussian ideas is a thing of much older growth—a growth typified by the Great Exhibition of 1851 and by monuments like the Albert Memorial. And I dare say that some such cataclysm as that of to-day was absolutely necessary to make the English nation in general, and English thinkers in particular, revise their estimate of Prussian influence upon the world."

Mr. Hueffer proceeds with the vigor that may be accounted for as partizan rancor, but also produces for us an interesting, forgotten document:

"How deep the Prussian influence upon English life and thought became in the last century, and to what indecent and disgusting lengths it could force its advocates, is, I think, very forcibly proved by the following extracts from a letter to *The Times* of November 18, 1870. It should be remembered that at that date the siege of Paris had begun, but had not ended; that France, the age-long benefactress of every human being whose aspirations soar beyond oatmeal-porridge and raw force, was in such an agony as should have moved the most callous of elders to sympathy. And yet a human being of British extraction could be found to write:

"Sir—It is probably an amiable trait of human nature, this cheap pity and newspaper lamentation over fallen and afflicted

France; but it seems to me a very idle, dangerous, and misguided feeling. . . . The question for the Germans, in this crisis, is not one of "magnanimity," of "heroic pity," and forgiveness to a fallen foe, but of solid prudence and practical consideration. . . . In all history there is no insolent, unjust neighbor that ever got so complete, instantaneous, and ignominious a smashing down as France has now got from Germany. . . . [There follows a long, typically Victorian version of the histories of France and Germany—one long glorification of Prussia and the Prussian spirit, bringing in as usual Charles V., Protestantism, liberty, and all the usual paraphernalia of the generation. And this concludes.] . . . That pathetic Niobe of Denmark, reft violently of her children, is also nearly gone; and will go altogether so soon as knowledge of the matter is had. Bismarck, as I read him . . . shows no invincible "lust of territory," nor is tormented with "vulgar ambition," etc.; but has aims very far beyond that sphere, and in fact seems to me to be striving with strong faculty, by patient, grand, and successful steps toward an object beneficial to Germans and to all other men. That noble, patient, deep, pious, and solid Germany should be at length welded into a nation, and become Queen of the Continent, instead of vapor-ing, vainglorious, gesticulating, quarrelsome, restless, and oversensitive France, seems to me the hopefulest (sic) public fact that has occurred in my time—I remain, Sir, yours truly."

"This letter is signed 'Thomas Carlyle.'"

The writer finally justifies his position by assertions of his long-standing opposition to Prussian ideas:

"I have spent longish periods in reflecting on these and kindred matters. I do not mean to say that I have had Prussia perpetually on the brain—the I could almost say that. . . . And I make the claim, simply because it is the most ardent desire of my public life that these articles should be read with tranquillity and an assured belief in their facts by the uninstructed reader. If their gist were affected by the present war I should be less trustworthy; but the present war has in no way increased my hatred for Prussia."

CIVILIZATION LOOKS IN THE MIRROR.

RELIGION-AND-SOCIAL-SERVICE

THE JEWS OF POLAND DURING THE WAR

A VAGUE but general impression has obtained that, through the war, a new day has arisen for the Jew in Eastern Europe, particularly in the Kingdoms of the Czar. So loyally have the Jews been said to be bearing their part of the struggle of the nations where they have been domiciled that their natural reward would seem to be release from the

THE CZAR'S SHIELD—"MY BELOVED JEWS."

—By Meyer in Puck (New York)

hard conditions under which they have lived. It is, however, asserted by Dr. Georg Brandes that at least in Poland "during the war the glow of the bloody hatred of the Jews has blazed out in far stronger flames, and the Russian Government has as yet done nothing to subdue or quench the fire." Dr. Brandes, who writes in *The Day* (New York), a paper issued by Mr. Herman Bernstein, tells us that during his visit to America last spring he was continually attacked in the Jewish papers of this country as "the callous denier of the Jews." He calls it nonsense "as is most of that which appears in print," but he mentions the fact to prove "at least that it is not on behalf of my blood, but on behalf of my mind, that I speak on this occasion." We read:

"During the mobilization several Polish newspapers, for instance, the *Glos Lubelski*, brought the alarming news in heavy type: 'In England great pogroms against the Jews. The English Government does not check them.' The paper was conscious of the lie. But the question was to set an example to follow.

"When the lack of gold and silver began to be felt, the Polish newspapers accused the Jews of hiding the valuable metals. On closer examination it was found that many non-Jewish business people (for instance, Ignaschewski in Lublin, a very rich Pole) were withholding whole bags full of gold and silver coins, for which they were punished rather severely; but this was not proved against a single Jew.

"Furthermore, the Jews were, among other things, accused of having smuggled in a coffin 1,500,000 rubles in gold into Germany, and the protest against the accusation entered by the representatives and ministers of the Jewish congregation of Warsaw was printed in Russian papers, but not in a single Polish one.

"All these things were preparations for pogroms, but many others were made. The anti-Semites printed a proclamation in Yiddish in which the Jews were called upon to revolt against Russia; they took care that this proclamation was put into the pocket of the unsuspecting Jews in the streets of the different towns; those who had distributed the papers denounced the party concerned to the police. Everybody upon whom the proclamation was found was shot.

"At last the Jews were, as in the Middle Ages, both in word and writing, accused of having poisoned the wells. If some Cossacks or other Russian soldiers died the Poles accused the Jews of having caused their death.

"The chief accusation was, however, the accusation of espionage, which obtained credence and was used both when Austrian troops came to some town or village and when Russian troops expelled the Austrians. The result was the same. A suitable number of Jews were conscientiously shot by the Russians as well as by the Austrians.

"There are, however, lists of those who really have been unmasked as spies. A Potocki was among them and had to pay for it with his life; but no Jewish name is found on these lists."

The accusation, declares Dr. Brandes, is always believed, "as the Jew has for about two thousand years been characterized as Judas," and the famous rationalist Jew proceeds to give us his interesting analysis of what he calls the Judas "legend":

"The legend about Judas may without exaggeration be described as one of the most foolish legends of antiquity; that it has been believed is one proof among thousands of the indescribable simplicity of mankind. Few legends carry like it the stamp of lie on their faces, and few legends have millennium after millennium caused so many evils and horrors. It has tortured and murdered by hundred thousands.

"According to the supposition the story is impossible. The supposition is that a man in possession of superhuman attributes, a god or a demigod, day after day goes about and speaks in the open air in a town and its neighborhood. So little does he make a secret of his doings that a short time before he has made his entry at broad daylight, welcomed with exultation by the whole population.

"He is known by each and all, by each woman and each child. So little does he want to hide that he walks about accompanied by his disciples, preaching day and night, sleeping among them. And to think it should be necessary to buy one of his disciples to denounce him and deliver him, to betray him and that—for the sake of the effect—with a kiss! Indeed, if he had hidden in some cellar, then there would be some meaning to it; but as things are, those who seek him need only ask, 'Which of you is Jesus?' He would not have tried to deny his name.

"Judas is then not only quite superfluous, but an absurdity, the origin of which is to be found in the desire to place the black traitor opposite the white hero of light and in the hatred of Jews arising among the first Gentile Christians, who later made the world forget that not only the straw doll, Judas, but also Jesus and all the Apostles, all the disciples, and all the evangelists were Jews.

"Nevertheless in the conception of the rude masses this Judas—as he was called—has become the Jew, the typical Jew, the traitor and the spy.

"Still as late as in the last decennium of the last century Capt. Alfred Dreyfus fell a victim to this old, foolish legend.

"And now it is again rehearsed against the Jews in Russian Poland.

"The pogroms have, by virtue of these Judas accusations and the many other dreadful accusations, spread all over Russian Poland, and there they are spreading more and more, while

Galicia as well as Posen has proved susceptible to the incitations which have not failed. Many hundreds of innocent people have fallen victims to them."

The writer selects what he calls a few instances out of the many:

"In the town of Beehava, conquered by the Austrians, the Polish leaders, among whom was a very well-known estate-owner, applied to the Austrian commandant, accusing the Jews of secret connection with the Russian Army. In consequence of this the Austrians killed a sixty-seven-year-old man called Wallstein, and his seventeen-year-old son.

"When, after a short time, the Austrians were driven away, the same estate-owner accused the Jews of the town to the Russian commandant of being in communication with the Austrians, having delivered to them all provisions for the purpose of depriving the Russians of them. In consequence of his accusation many Jews were shot and their houses burned down.

"In the towns of Janow and Krasnik the Jews were accused of having put out mines to destroy the Russians. The Jews, and among them many children, were hanged on the telegraph-poles and the two towns destroyed.

"The town of Samosch was conquered by the Austrian Sokol troops, those beautiful, slender people whom you do not forget when once you have seen them train in the capital of Galicia. When they were driven away from the Russian Army the Poles accused the Jews of the town of having been the accomplices of the Austrians. Twelve Jews were arrested. When they denied the charge they were sentenced to death.

"Five of them had been already hanged when, in the middle of the execution, a Russian priest, carrying an image of the Virgin in his hand, appeared and with his hand on this image took the oath that the Jews were innocent and that the accusation was all an outcome of Polish hatred of the Jews. He proved that the Poles of the town themselves had supported the Austrians, and that even a telephone connection with Lemberg could be found. The seven Jews were then set free; five had already been hanged.

"In the town of Juscfow the Jews were accused of having poisoned the wells through which hundreds of Cossacks had lost their lives. Seventy-eight Jews were killed, many women were ravished, and houses and shops plundered.

"Similar events happened and still happen daily by hundreds. Greater or smaller pogroms with murder, rape, and plunder have thus taken place in the districts of Warsaw, Ransom, Petrikow, and Keltz.

"Eye-witnesses have told me about Jewish soldiers in the different lazarettos who have turned mad, not through the unavoidable horrors of the war, but because of the pogroms they have witnessed in the towns they have passed. They mistake those they have seen murdered for their own relations; they imagine they see their own mothers, sisters, or beloved ones in that plight. They are always raving about the same thing.

"The pursuit of the Jews by the Russian-Polish anti-Semites is the more invidious under these circumstances, as 300,000 Jewish soldiers, among them many volunteers, are serving in the Russian Army, and as the self-sacrifice of the army of the Red Cross hitherto has been immeasurable. In the congregations are special hospitals for Russian soldiers—regardless of their creed—founded by Jews and with Jewish moneys.

"Not a few Jewish soldiers have already won the highest military distinctions, nay, a few of them have even received them from Mr. Rennenkampf, the commander-in-chief himself, who used to be a zealous anti-Semite, as the Russian court on the whole is passionately anti-Semite. The manifesto from the Czar 'To my dear Jewish subjects,' which has been printed in the French newspapers, has never been anything but a fabrication.

"While the usual accusation against the Jews in Russian Poland was that of sympathizing with the Russians, for which they have no special reason, A. Warinski, who in Russia is classed among the black ones, also called the true Russians in *Politiken*, has made the charge against them that the German attempts of gaining the Poles 'have only had the effect desired on the Russian and Polish Jews, as these elements because of psychological relation with the Prussians feel disposed to place themselves at the side of Germany.'

"This accusation and the arguments for it might express the culmination. The Jew shall and must be Judas. If it can not be accomplished in one way, the opposite way is tried.

"Mr. Warinski does not say one word about how many Jews have gone into the war as volunteers out of pure enthusiasm

for Poland. They have not been able to believe, as I for my part can not believe, that the last outcrop of nationalism in Russian Poland is more than a temporary epidemic."

WAR'S DISRUPTION OF RELIGIOUS WORK

FEARS WERE EXPREST at the beginning of the war that the various missionary enterprises of the world might be seriously affected. These fears have been more than realized, it appears, and the missionary situation becomes more and more acute. One of the most serious spiritual effects, says *The Missionary Review of the World* (New York, December), is the dismemberment of many international Christian organizations. "The Christian Endeavorers of different lands have been obliged to break off friendly correspondence and to become enemies." Over 200,000 members of the Y. M. C. A. are in the

THE TWO CROSSES.

—Henry in *The Daily Chronicle* (London).

various armies of Europe, reports Dr. John R. Mott, and there is scarcely a secretary not under arms. The Geneva association presents the most poignant case. At the outbreak of the war its three secretaries separated, one to fight under the German colors, one under the French, and the third to stand and wait with the Swiss troops. The survey of conditions continues:

"Sunday-school workers have been closely united all over the world and met last year at Zurich. In 1916 they planned to have a convention in Japan, but to-day many of their members are under arms and under oath to kill one another. . . .

"The Continuation Committee of the Edinburgh Missionary Conference is split into British, German, and French factions, and only God by his love and power can weld them together again.

"'What a mockery is war,' writes Bishop Nuelson, of the American Methodist Church, 'that the German Roesch and the Frenchman Campy, two Methodist missionaries, laboring for awhile shoulder to shoulder in our North-African Mission at Algiers, preaching the Gospel of Christ to the Moslems, should be compelled as officers in hostile armies to lead their companies against one another.'

"Dr. Friedrich Roesch was a graduate of the University of

Heidelberg and a Methodist missionary in Algiers. He was fatally wounded in the battle of Verdun, September 10. Dr. Rorsch was one of the best Arabic scholars of North Africa and he put his learning to the Master's use.

"The deadly effect of the war on student work in Europe can be imagined when we realize that it puts an end for some time to such conferences as that held last summer in Austrian Silesia. At that time representatives of some fourteen nations were gathered in harmony at the feet of Christ—Germans, Czechs, Poles, Magyars, Croats, Bulgarians, Roumanians, Russians, Dutch, French, Swiss, English, and Americans. Now political intrigue and national selfishness have brought discord.

"In France it is said that 280 of the 450 pastors of the National Union of Reformed Churches were liable to service when the war broke out. This leaves, therefore, half the churches of Protestant France, for the time being, pastorless.

"Even in neutral lands the deadly conflict has a spiritual as well as a material effect. Dr. Walling Clark, for twenty-five years a Methodist missionary in Italy, reports that in spite of Italy's neutrality, commercial and industrial activities throughout the land are paralyzed. Factories are closed and printing-houses have reduced their corps of workmen by one-half. This means that vast numbers of laborers have been turned out of employment. Multitudes of Italians have also returned to their native land from the countries at war, and they are absolutely without means of support. Dr. Clark continues:

"It is significant that the people in Italy are flocking to the churches everywhere—both Protestant and Roman Catholic. Even men of high social and government positions are turning their attention to spiritual things, and a wave of religious faith is sweeping over all the people. After the war is ended, I believe that one result of the conflict will be the moral and spiritual transformation of the entire Continent."

"As to the effect of the war on the Russian Empire, Mrs. Bertha A. Pancake writes through the Methodist Board of Foreign Missions that words fail to describe the depressing effect upon every one. A large number of Methodist preachers have been called to the colors. Some foreigners, loyal to Russia, and who had lived for many years in Petrograd, were obliged to leave their families and go into exile because they had neglected to take out papers of citizenship."

One of the strange ironies of the war is the situation created for German missionaries, a large proportion of whose work is situated within the limits of the British Empire. As we read:

"In the East and the West an urgent appeal is made to the English public to support German missionary work. 'No matter how hardly we are pressed to maintain our own missions we can not allow fratricidal war which is raging among Christians at home to bring about the starvation of Christian missionaries or the interruption of their work abroad. Any help which we can give to those who are nominally our enemies, but who are our fellow workers in Christ in the mission field, will afford a convincing proof both to them and to their converts that Christian love is a more potent force than the antipathies and prejudices which are begotten of a one-sided and imperfect patriotism. There are no more devoted and self-sacrificing missionaries in the world than those who hail from the Fatherland.'

"Concerning the effect of the war in German colonies the Basel Mission reports to its friends in a circular letter: 'The first effect of the war in Germany, and the mobilization in Switzerland, was the emptying of our mission house. Nearly all the brethren, as far as they were of German or Swiss nationality, were called to arms, including the brethren who were ordained for the foreign field at the last mission feast. When the youngest were called out with the Landsturm, only eight or ten were left of the 121 mission students.

"Another effect of the war is the interruption of intercourse with our mission fields. No one can be sent out or brought back, the many missionaries are greatly in need of rest. Correspondence is greatly hindered. This is the more serious as our brethren have to suffer directly or indirectly from war conditions. Togo already has been torn for the present from the German Empire, and a similar fate is threatened Kamerun. It is very uncertain what conquering England or France will do with our missionaries. The position is also uncertain in the English colonies. Even if our missionaries should not be expelled they will be put under severe control. Money can not be got to them at all. A third effect is financial. Present business conditions make it very hard for the mission to meet all the expenses."

HEALING THE WOUNDS OF BATTLE

THE most complete organization in the war of Europe is not the German Army, says the Rev. Peter McQueen, but a society called *Les Femmes de France*—The Women of France. It has nearly twenty million members, and this includes almost every woman of the Republic. "There is not a hamlet in France with six houses but has a branch of this divinely beneficent society. These women collect money, food, and clothing for the wounded—yes, and tobacco." They meet every train and minister to the sick and those helpless in pain. From The Women of France, Mr. McQueen turns in *The Congregationalist* (Boston) to speak of some American help in the benevolent work of relieving suffering humanity, including a tribute to that particularly American branch of surgery—the dental:

"Words fail me to do justice to the grand work of the American Ambulance Corps, operating in Paris under Dr. Blake, of New York. When the war broke out this was a small hospital in the Faubourg St. Germain. It had accommodation for sixteen patients. It was founded in 1870 and did noble work in the Franco-Prussian War. It was later organized to work for the American colony of Paris. The first thing that Dr. Blake and his Americans did was to get money. Mrs. W. K. Vanderbilt and other Americans gave liberally. They procured from the French Government the magnificent new buildings of the Lycée Pasteur at Neuilly, the well-known suburb of Paris. Here they have at present four hundred beds.

"I had heard about this work up near the lines. A French nobleman was driving me over the battle-field of the Marne. He said: 'Your Americans are almost uncanny in their celerity of movement. After the battle near my château there were many badly shattered soldiers. I did not know what to do. They would die from loss of blood. I filled the château. But I had no doctors. Some one told me to telephone to Paris, thirty miles away. In desperation I telephoned to the American Ambulance, which makes a specialty of the badly wounded. I did not expect them inside of twenty-four hours. Judge of my bewilderment when inside of two hours I was surrounded by a dozen or more American ambulances. 'C'est merveilleuse' (it is wonderful).

"Count Haudidier thus interested me in paying a visit to the American Ambulance Corps. I found the physician of the day and he gave me an hour of his time to go all over the hospital. He said: 'Don't call it a hospital; we want it known as the American Ambulance Corps.' The doctor told me to use as few names as possible, because, he averred, 'We are doing this for humanity, not for pay or praise.' I saw wounded Senegalese, Turcos, Scotchmen, Englishmen, Algerians, Irishmen, Frenchmen, and one German. They seemed all getting well and were evidently enjoying their rest after the hideous trenches. I heard of two or three remarkable things from my mentor.

"In the first place, the Americans began their work of healing by having the free services of the best American dentist in France two whole days a week. Every patient has his teeth looked after. They found that the English have the worst teeth and the Arabs have the best. They found many men suffered more from their teeth than from their wounds. Inflamed gums were very common among the French and English. The Moroccans and Algerians have almost perfect teeth. By attending to the teeth, the American doctors cure the wounded ten days faster than any other corps now working either with the Germans or the Allies. The English hospitals are very practical. They have advised the French to take every German hotel in France for a hospital. This has added greatly to the Red Cross facilities. . . .

"The American Ambulance Corps takes, as far as possible, only the desperate cases. They showed me a poor English soldier whose face had been almost blown off. But the skin and flesh and nose were still held on by just a thread of muscle. So they took him, they plastered him, they put his nose back on, they grafted and sewed. I saw him. The doctor remarked, 'We will make a decent-looking man out of him in a month or so.' Another case came in that looked hopeless. A soldier had his abdomen opened right across. These marvelous Yankee doctors saw that his viscera had not been torn. So they washed him out. They sewed together the most delicate tendons that had been torn by the shell. They treated him with antiseptics. They got him so well that he was able to chat when I passed through the ward."

CURRENT - POETRY

THAT valued friend of American poetry, Mr. William Stanley Braithwaite, has published in the *Boston Evening Transcript* his roll of honor for 1914. In accordance with his annual custom, he has named the most distinctive poems published during the year in eleven leading American magazines, and from these he has compiled a list of fifty-two which deserve, he thinks, especially high praise. Of these fifty-two he reprints, to accompany his article in *The Transcript*, seven of the shortest.

The European War, which, for good or for evil, is strongly influencing contemporary literature, is reflected in but one of the seven poems which Mr. Braithwaite quotes. Nor is it the best of the seven. But the lines are spirited and musical and show genuine feeling. It is not a pleasant picture, but war must be shown as it is, in all its gory ugliness, if we are ever to rid the world of it. The poem originally appeared in *The Smart Set*.

HE WENT FOR A SOLDIER ✓

BY RUTH COMFORT MITCHELL.

He marched away with a little young score of him
With the first volunteers.
Clear-eyed and clean and sound to the core of him,
Blushing under the cheeks
They were fine, new flags that swung a-flying there,
Oh, the pretty girls he glimpsed a-crying there
Feeling him with plinks and with roses
Billy, the Soldier Boy!

Not very clear in the kind young heart of him
What the fuss was about.
But the flowers and the flags seemed part of him
The music drowned his doubt.
It's a fine, brave sight they were a-seeing there
To the gay, bold tune they kept a-drumming there,
While the hoisting flew shrilled jauntily
Billy, the Soldier Boy!

Soon he is one with the blinding smoke of it
Volley and curse and groan
Then he has done with the knightly joke of it
It's rending flesh and bone
There are pain-crazed animals a-shrieking there
And a warm blood stench that is a-reeking there,
He fights like a rat in a corner—
Billy, the Soldier Boy!

There he lies now, like a ghouliah score of him,
Left on the field for dead.
The ground all round is smeared with the gore of him
Even the leaves are red.
The Thing that was Billy lies a-dying there,
Writhing and a-twisting and a-crying there,
A sickening sun grins down on him—
Billy, the Soldier Boy!

Still not quite clear in the poor, wrung heart of him
What the fuss was about.
See where he lies—or a ghastly part of him—
While life is oozing out
There are loathsome things he sees a-crawling there;
There are hoarse-voiced crows he hears a-calling there,
Eager for the foul feast spread for them—
Billy, the Soldier Boy!

How much longer, O Lord, shall we bear it all?
How many more red years?
Story it and glory it and share it all,
In swas of blood and tears?
They are braggart attitudes we've worn so long;
They are tired platitudes we've sworn so long—
We who have turned the Devil's Grindstone,
Borne with the hell called War!

There is the glamour of Celtic magic
about another of the poems which Mr.

Braithwaite has selected. He found it in
The Forum.

PILGRIMAGE

BY LAURA CAMELLE.

I will tread on the golden grass of my bright field,
When the passion-star has paled, when the
night has fled
I will tread on the golden grass of my bright field,
In the glow of the early day when the east is red.
In my bright field a broken beech-tree leans
And a giant boulder stands by a black-burned
wood,
And a rough-built, falling wall and a rotting door
Sear, like a war, the spot where a house once
stood.
My eyes are mute on the white edge of the dawn,
My feet fall swift and bare upon the way,
The long soft hills grow black against the sky,
The great wood moves, unfolds, the high trees
sway

The worn road stretches thin, and the low hedge
sits,
And a strong old bridge looms frail o'er a
ghostly stream;
And a white flower turns and breathes, and turns
again,
Does it live, as I live? Does it wake, as I
waked, from a dream?

How merciless is the dawn! how poignant the
hush of my soul!
How changeless the changing sky! how fearful
that wild bird's call!
I hear the quick suck of his wing, the push of his
breast—he is gone!
How swift is an run of time! how endless,
beginningless, all!

I tread on the golden grass of my bright field,
The sun's on a hundred hills; the night has fled;
I tread on the golden grass of my bright field
In the glow of the early day; and the east is red

We venture to suggest that Miss Wid-
demer has written with greater sincerity
and skill than in the pleasantly romantic
composition of Mr. Braithwaite's choice.
It first appeared in *The Craftsman*.

REMEMBRANCE: GREEK FOLK-SONG

BY MARGARET WIDDEMER

Not unto the forest—not unto the forest, O my
lover!
Why do you lead me to the forest?
Joy is where the temples are, lines of dancers
swinging far,
Drums and lyres and viols in the town
(It is dark in the forest),
And the flapping leaves will blind me and the
clinging vines will bind me
And the thorny rose-boughs tear my saffron
gown
And I fear the forest.

Not unto the forest—not unto the forest, O my
lover!
There was one once who led me to the forest:
Hand in hand we wandered mute, where was
neither lyre nor flute,
Little stars were bright against the dusk
(There was wind in the forest)
And the thicket of wild rose breathed across our
lips locked close
Dizzy perfumings of spikenard and musk,
I am tired of the forest.

Not unto the forest—not unto the forest, O my
lover!
Take me from the silence of the forest!
I will love you by the light and the beat of drums
at night
And echoing of laughter in my ears,
But here in the forest
I am still, remembering a forgotten, useless thing,

And my eyelids are locked down for fear of
tears—
There is memory in the forest.

From *The Bellman*, that storehouse of
good poetry, Mr. Braithwaite quotes five
exquisite stanzas.

TO A PHOEBE-BIRD

BY WITTEN BYSSER

Under the eaves, out of the wet,
You nest within my reach;
You never sing for me, and yet
You have a golden speech.

You sit and quirk a rapid tail,
Wrinkle a ragged crest,
Then pirouette from tree to rail
And vault from rail to nest.

And when in frequent, witty fright
You grayly slip and fade,
And when at hand you realight
Demure and unafraid,

And when you bring your brood its fill
Of iridescent wings
And green legs dewy in your bill,
Your silence is what sings.

Not of a feather that enjoys
To prate or praise or preach,
O Phoebe, with your lack of noise,
What eloquence you teach!

"Evening," which Mr. Braithwaite takes
from *The Yale Review*, is a splendid example
of condensation.

EVENING

BY CHARLOTTE WILSON

Go, little sorrow! From the evening wood
Faint odors rise, that touch the heart like tears
With inarticulate comfort. Lo, she bears
A weary load—small cares that drag the blood,
Small envies, sick desires for lesser good—
All day, till now the evening reappears.
They drop away, and she with wonder roars
Her aching bright from needless servitude.
The tree-tops are all music; light and soft
The brook's small feet go tinkling toward the sea
Bearing the little day's distress afar;
While yonder, in the stillness set aloft,
My one great Grief, still glimmering down on me,
Smiles tremulous as a bereaved Star.

And this, our final quotation from Mr.
Braithwaite's list, is proof that a real poet
can make a work of art out of sociology.
It appeared in *Scribner's Magazine*.

THE REGENTS' EXAMINATION

BY JESSIE WALLACE HUGAN

Muffled sounds of the city climbing to me at the
window,
Here in the summer noontide students busily
writing,
Children of quaint-clad immigrants, fresh from
the hut and the Ghetto,
Writing of pious Kuros and funeral rites of
Anchises,
Old-World credo and custom, alien accents and
features,
Plunged in the free-school hopper, grist for the
Anglo-Saxons—
Old-World sweetness and light, and fiery struggle
of heroes,
Flashed on the blinking peasants, dull with the
grime of their bondage!
Race that are infant in knowledge, ancient in
grief and traditions—
Lore that is tranquil with age and scary with
gleams of the future—
What is the thing that will come from the night
of the elements blending?
Neuter and safe shall it be? Or a flame to burst
us asunder?

REVIEWS - OF - NEW - BOOKS

HOLIDAY BOOKS—THIRTY OF THE YEAR'S BEST

Atherton, Gertrude. California: An Intimate History. With portraits and other illustrations. 8vo, pp. 329. New York: Harper & Brothers. \$2 net.

No one should be more competent than Mrs. Atherton to tell the story of the State with which so many of her works have dealt. The present volume, opening with a chapter on the geological history of California and rapidly sketching the early activities of the Mission Fathers and the periods of Spanish and Mexican rule, is written mainly round the figures of the great California promoters, toward whom Mrs. Atherton's typically Hamiltonian attitude can be seen in this sentence: "One can only admire the ruthlessness of these great imaginations that elevate the beauty and prosperity of their chosen territory above the commonplace needs of the 'plain people' or their own safety." The reader will naturally turn with most interest to her account of recent and contemporary affairs, in which Mrs. Atherton has taken an energetic part. Independent in her view of the corruption, indifference, and bad politics in so much of California society, she makes short work of the agitators who go to the other extreme: "Not one of these agitators since time began has displayed the slightest originality," she says. One regrets that she does not mention the Japanese problem, on which she might be expected to throw some light.

Anderson, Isabel. The Spell of Japan. Illustrated. 8vo, pp. xviii-396. Boston: The Page Company. 1914. \$2.50 net.

No mere prose weaves the spell of old Japan about the reader as does such verse as Alfred Noyes's "Flower of Old Japan," nor can the mere traveler or temporary sojourner venture comparisons with Lafcadio Hearn's interpretation of Japanese life. And Mrs. Anderson—for Isabel Anderson is the wife of Lars Anderson, sometime Ambassador Extraordinary and Minister Plenipotentiary from the United States to Japan—may not be blamed for failing to make us feel all that she herself evidently does. After all, it is the Japan of to-day, with its mixture of new and old, which the writer saw, and which she would help us to understand. Of this we get many attractive glimpses. Mr. Arnell's story of his Ainu bear-hunt is vividly and rather humorously told. Mrs. Anderson's chapters on Japanese literature, religion, art, and flowers are most informing. It is doubtful whether any reader will be moved to make a Japanese tour by reading this book; but if he ever does find himself in Yokohama or Tokyo, he will be glad that he did read it.

Bennett, Arnold. From the Log of the Velsa. With colored cover, colored frontispiece, and 51 illustrations by E. A. Pickards. Royal 8vo, pp. 360. New York: The Century Company. \$1 net.

Mr. Arnold Bennett is the most prolific and versatile of writers, but this book presents even him from a new angle. It is the account of various cruises made by himself and his friend the artist in a cranky, flat-bottomed smack of fifty-one tons, whimsically described and highly colored by its principal passenger. The

son's "Inland Voyage," tho the tone of its humor is scarcely equal to that of its predecessor. The *Velsa* tracked the canals of Holland, visited the Zuider Zee, did not hesitate to explore the Baltic, investigated the Belgian coast, and finally sailed up the estuaries of Norfolk and Suffolk. But Mr. Bennett's mind is busier when the *Velsa* is in port than on the high seas, and he is thus able to fill his pages with fragments of dialog and touch-and-go sketches of Amsterdam, Haarlem, Bruges, Copenhagen (where he found the art museum desolatingly disappointing), and many less known villages by the way. The light and charming pencil-sketches which are interspersed add much to the book, and in the frontispiece the reader may judge of Mr. Bennett's own success in a medium with which he is not usually associated.

Bullard, F. Lauriston. Famous War Correspondents. With sixteen portraits. Crown 8vo, pp. xviii-437. Boston: Little, Brown & Company. \$2 net.

Here is a book that may be called timely without fear of contradiction. Censorship in modern warfare, as every one knows, has revolutionized the rôle of journalism, hitherto very important, and has practically abolished the war correspondent. Hitherto brave journalists at the front, sharing with the fighting men the dangers of battle, have been permitted to send to their papers stirring accounts of what they have actually seen of the conflict, and millions of interested readers knew exactly what was happening in the theater of the war. All this has been changed. Events of stupendous import, sometimes involving the possible fate of nations, can now be kept secret for weeks—a fact illustrated by the sinking of the dreadnought *Audacious*. Instead of the splendidly written reports of battle and strategy which were available almost simultaneously with their occurrence and which were secured at the cost of the correspondent's health and at times his life, we must now be content with the dull, stodgy, official *communiqués* issued with wooden regularity by the opposing camps and categorically contradicting each other. The war correspondents of an olden time whose exploits are chronicled are Sir William Howard Russell, of Crimean fame, Archibald Forbes, Januarius Aloysius MacGahan, Frederick Villiers, Bennett Burleigh, Edmond O'Donovan, the Five Vizetellys, Edward Frederick Knight, George Warrington Stevens, Winston Spencer Churchill, James Creelman, George Wilkins Kendall.

Cable, George W. The Amateur Garden. Illustrated. Pp. 199. New York: Charles Scribner's Sons. \$1.50.

Nothing could be more unlike the Cable-ese stories than this garden rhapsody, and yet the fluent style of this fascinating writer, his well-known choice of pertinent words, and convincing power are still prominently in evidence. When Mr. Cable left the South and settled in Northampton, Massachusetts, he identified himself heart and soul with its activities and ambitions. This book tells eloquently of his interest and achievements in the

locality, in enhancing its natural beauties, and describing the ways and means, available to all, of beautifying home acres even against great odds, and by description, precept, and criticism shows the reader the best methods of cooperative gardening in the interest of an entire community. There are all sorts of artistic allusions to places and people, and we become much interested in the "People's Institute," which, by offering prizes for the best unaided efforts in home-beautifying, has done much to stimulate popular interest in the city's appearance. Mr. Cable makes his discussion of trees, shrubs, and flowers entertaining, and especially his consideration of "where to plant what." "A garden is a house's garments, its fig-leaves, as we may say, and the garden's concealments, like its revelations, ought always to be in the interest of comfort, dignity, and charm."

Carruthers, D. Unknown Mongolia. A record of travel and exploration on Russo-Chinese borderlands. With three chapters on sport by J. H. Miller, and an introduction by the Rt. Hon. Earl Curzon. 2 vols., 8vo, pp. xviii-659. Philadelphia: J. B. Lippincott Company. \$7 net.

These volumes are of unusual interest and value to the geographer and cartographer, the ethnologist, and the student of Chinese-Russian affairs as well as to the hunter of such rare game as the wild sheep of central Asia. They tell the story of explorations, in a region almost entirely new to white men, by the author and two companions, who were unusually well equipped, both with full knowledge of all that had been done in the surrounding region, and with scientific and surveying-instruments which they employed in exploring and mapping regions which have hitherto been the subject of mere guesswork by cartographers. The topographic, ethnological, botanical, and zoological results of the journey, the light gained on economic and political relations of the very considerable area investigated, and the possibilities of developments between the contiguous empires are well set forth. Incidentally, the history and ethnography of the entire region are detailed, and we are reminded vividly of Genghis Khan and Prester John.

Cohen, Israel. Jewish Life in Modern Times. Illustrated. 8vo, pp. xiii-374. New York: Dodd, Mead & Company. \$3 net.

Readers of Renan's "History of the People of Israel" and of the Jewish Encyclopedia will find in Mr. Cohen's comprehensive study supplementary matter in a fascinating story. The task which the author set out to accomplish was a formidable one. He attempted to present for the first time in English an account of the life and achievements of the Jewish people in all parts of the world at the present day. In order to accomplish this object he found it necessary not only to undertake exhaustive researches of actual conditions, but to present an adequate perspective of the past. He has done his work well, and we venture to bespeak for his book a creditable place in the contemporary literature of Israel. Despite the vastness of his subject, the illimitable vistas of

events whose beginnings are lost in the night of time, and the chaotic and heterogeneous conditions occasioned by the dispersion of the Jews throughout the world, the author has attained some sort of unity and order in the plan and presentation of his difficult subject. His aim has been primarily to depict the highly variegated life of the Jewish people in its intimacy and intensity.

Crawford, Mary Caroline. *Social Life in Old New England.* Pp. 504. Boston: Little, Brown & Company. 1914. \$2.50.

This is one of those beautifully bound and illustrated social books which usually appear about holiday time, only, in this case, the exterior is an outward promise fulfilled by subject-matter full of information and interesting details of New England life from the seventeenth century to nearly the present day. The author begins with the days of "the little red schoolhouse" and traces the gradual evolution of college and university life as exemplified by Harvard, Yale, Brown, and other well-known institutions. Interesting accounts are given of the social relaxations of the colonies, the prevalent style of dress, the expense of the luxuries and necessities of daily life, and the religious beliefs and restrictions of the New-Englanders. The courting and marriage customs, the remuneration for all kinds of service, and a thousand and one of the details which filled the lives of our forefathers are described vividly and carefully. Such a book, naturally, abounds in detail, but it is full of information valuable in itself, and will make an attractive gift-book.

Ditchfield, P. H. *London Murmurs.* With colored frontispiece and 114 maps, plans, and illustrations. 4to, pp. 312. New York: F. A. Stokes Company. \$3.50 net.

Every year sees the destruction of old London landmarks, and for this reason, too many books have been written about them, the whole treatment of this subject has to be revised almost as often as the treatment of a rapidly developing science. The present work, written by an old London-lover and amply supplemented with quotations from Lamb, Stow, and other antiquarians, is a very pleasant record of the remaining points of interest in the City proper, together with their literary and historical associations. There are chapters on the Roman Remains, the Tower, the pre-Reformation churches (of which eight are still extant), the churches of Wren, the Charterhouse, and other monastic remains, the Inns of Court and Chancery, the Guildhall, the Halls of the City Companies, and the few ancient houses that have not been destroyed. More interesting still, because less familiar, is the record of old tablets, inn-signs, carved stones, ancient pipe-heads, and other sculptural and architectural details which are to be found in out-of-the-way nooks and courtyards. A word should be said for the attractive line-drawings of E. L. Wratten which illustrate many of these little-known points of interest.

Embury H., Aymer. *Early American Churches.* With 102 illustrations from photographs. 4to, pp. 139. Garden City, New York: Doubleday, Page & Company. \$2.50.

At a time when American architects are so generally turning back for their inspiration to the genuine national style of the colonial epoch, it is useful to have gathered together in complete form an illustrated record of all the best surviving

colonial churches. Mr. Embury, himself an architect, has compiled, largely out of old parish archives, a systematically grouped account of more than a hundred of these churches, many of them centers of historical interest as well as fine examples of American building during the period 1638-1830; and to this he has prefixed a brief description of church government in early America and added a chapter on the evolution of church architecture. The main characteristic of these churches he finds to be a "dependence on line and mass rather than ornament," and in an interesting passage he shows how, classical in general design, they exhibit a remarkable individualistic tendency away from the tradition of classical "correctness," freely combining Gothic and classical details. In most cases photographs are given of the interiors as well as of the exteriors.

Ferrero, Guglielmo. *Between the Old World and the New.* Crown 8vo, pp. 353. New York: G. P. Putnam's Sons. \$2.50 net.

This new work by the celebrated Italian historian treats in an entirely fresh way a problem which has formed the core of so many of his writings: the relation between the past and the future. In form it is a kind of symposium, which takes place on an ocean voyage between Rio de Janeiro and Genoa, and in which the chief characters are Ferrero himself, a Brazilian admiral, an Argentine landowner, and certain other South-Americans and Italians. Nominally the discussion centers in a contrast between Europe and America; at bottom it contrasts the Old World of restricted beliefs and a point of view based upon the acceptance of limits with the New World of quantitative rather than qualitative values, which does not admit limits and in which consequently there is as yet no crystallization of human ideals and aims. The whole discussion is symbolized in one of the passengers, Mrs. Feldmann, the French wife of a New York banker, whose life suggests both of the contrasted standards and whose presence in the book gives it some of the interest of a novel. The book touches in a very suggestive way upon a hundred phases of contemporary life, and should appeal to any one who is interested in the play of the mind.

Hammond, John Martin. *Colonial Mansions of Maryland and Delaware.* Illustrated. Pp. 294. Philadelphia: J. B. Lippincott Company. \$5 net.

The charm of this book is enhanced by sixty-five illustrations which help to attain the end for which the book was planned. The author describes the mansions, one by one, the location and the architectural scheme, and gives the history of different families who have planned, owned, inherited, or enjoyed such homes. Incidentally we get many interesting bits of colonial history and many suggestions which would increase the beauty and comfort of any houses over which we had any influence. Delaware shows decided evidence of Dutch influence, Maryland the English adaptation of classic models; Maryland shows more the influence of wealth than Delaware, but no more of charm or historical interest. Brick was the favorite material, and most of the mansions face the water. The period of fine building extends from 1735 to the end of the eighteenth century. Some of the traditions that hang about these homes savor of romance, but many of these can not be verified.

Hutton, W. H. *Highways and Byways in Shakespeare's Country.* Pp. 441. London: The Macmillan Company. \$2.

The series of books known as "Highways and Byways" receives a welcome addition in this volume by Mr. Hutton, who, after forty years' acquaintance of the country, has spent four years in condensing this knowledge into a book so that he might "hand on to others something of the pleasure which has been his for so many years." Mr. Edmund New has profusely illustrated it. There is a map to follow, with chapters on every little town and hamlet, every road and lane, every famous place and person associated with Warwickshire. All famous people whose lives are identified with the country find a place.

Hunt, Gallard. *Life in America One Hundred Years Ago.* Pp. 278. New York and London: Harper & Brothers. \$1.50.

This is a sketch of life and manners in the United States in the year when peace was made with Great Britain. When a country celebrates it is well to know what it is celebrating, and the committee of one hundred having this anniversary in charge have asked Mr. Hunt to contribute to this celebration a volume giving the atmosphere of the time "one hundred years ago," and a description of this country's development into one of the great nations of the world. The subject sounds prosy, but the author makes it anything but that for his manner of telling the facts. He studies, with his reader, the country and the people as they were, their customs, habits, virtues, and vices. He discusses the limitations of the traveler and the changes made by invention and progress. He relates the activities of men and women and the reasons why American women played no part in the country's politics. Then comes an entertaining account of the American sense of humor, the religion, education, amusements, and the business of the day. In each case, conditions in 1814 and conditions in 1914 are carefully compared and investigated, with the result that we appreciate the present much more when we read of the great strides this country has made forward in the hundred years of peace.

James, George Wharton. *Indian Blankets and Their Makers.* With numerous illustrations and colored plates. 8to, pp. xvi-213. Chicago: A. C. McClurg & Company. \$5 net.

With a production, according to Government figures, of nearly a million dollars' worth of Navaho blankets in 1913, including hundreds "that would be the pride of any trained and expert collector, or grace the hall, den, library, or bedroom of the most fastidious, exacting, and artistic housewife in the land," it is time for an authoritative work on these blankets. And Mr. James would seem to have furnished it. Nothing is left untold: we learn the history of Navaho blanket-making, the origin and symbolism of the designs, the methods of weaving, and the business of buying and selling. Even a reader who picks up the book without any previous enthusiasm for Indian blankets will be fascinated by the brilliantly colored plates picturing some of the elaborate patterns. He will also find himself interested in the information regarding Navaho life and history, partly contained in the final chapter and partly scattered through the book.

Jarintzoff, Madame N. *Russia, the Country of Extremes.* 8vo, pp. 372. New York: Henry Holt & Company. \$4.

The great misfortune of Russia has been an unjust system of officialdom, by which

those who detect, or pretend to detect, crime in another are rewarded and the victim not uncommonly is shipped to prison or Siberia. The Russian lady who is author of the work before us dwells particularly on the intrigues of *agents provocateurs* which torment the life of the peasant and workingman, as well as of professional men and members of the Army, Navy—even of the police force, and render their pursuit of a livelihood so full of dangerous pitfalls. Her aim is thus to create a strong feeling of sympathy with Russians in their struggle toward freedom. As she speaks with full knowledge of her country and her countrymen, she is enabled to write with directness, force, and often with striking effectiveness. This sympathy, she thinks, will give a new impetus to the modern tendency toward international understanding. She deals in terms which show her historic knowledge with the Russian Monarchy. A better account of the Cossacks' past and present we have never read. Her chapter on Russian piety and the clergy of the Greek Church in Russia is as interesting as it is informing. Education and student life and the recent development of schools and colleges receive full consideration, for it is in these nurseries of knowledge that the seeds of revolutionary nihilism are sown and fostered.

Lehmann, Lili. My Path Through Life. Translated from the German by Alice Henschel Seligman. With 50 illustrations. Crown 8vo, pp. 510. New York: G. P. Putnam's Sons. \$3.50 net.

An autobiography of unusual interest is that of the great German singer who originated so many parts in the Wagnerian opera and subsequently became known the world over both in opera and concert. Born in 1848, the year of revolutions, she passed her childhood in Prague, wandering thence through the towns of Germany with her father and mother, both famous singers before her, and made her debut at Dantzig in 1868. Most interesting, perhaps, are her reminiscences of Wagner, who wanted to adopt her but was too young, in her mother's opinion, to be the father of such a big girl. She gives many of Wagner's letters, has much to say of the early days at Baireuth, and describes her experiences at court, her friendship with Rubenstein, Liszt, Carmen Sylva, Theodore Thomas, and other famous people, and her life in London, Stockholm, Berlin, and America, where she made her debut in "Carmen." Her book is remarkable not only as a record of the musical world during the last two generations, but as the expression of a richly emotional life.

MacDonnell, John de Courcy. Belgium, Her Kings, Kingdom, and People. Illustrated. Pp. 344. Boston: Little, Brown & Company. \$4.50.

It is the irony of fate that just as Belgium has become a prey to war, and is in danger of losing her identity as an independent kingdom, there should appear this history of Belgian kings, Kingdom, and people. For this reason, the book will, however, have a greater attraction for the general reader. Mr. MacDonnell, after twelve years' residence in Brussels under favorable circumstances, was qualified to give an authoritative account of the growth of that country. The choice of Leopold I., prince of Saxe-Coburg, as King of Belgium is described with intimate details, showing how he began to mold the Belgians into the people they are to-day, and how his son, Leopold II., finished the

task. "Working on the same lines, they made modern Belgium great." Leopold II. is known, best of all, as founder of the Kongo State, which was originally a humanitarian enterprise, into which he poured his private funds. The King is not to blame for what it ultimately became. The rubber scandals of the Kongo are familiar to every newspaper reader, but the author thinks that King Leopold was much maligned and misunderstood. The death of the Prince put the present King Albert in line of succession, and he immediately prepared himself conscientiously for the position of ruler. He is well known as a patron of art and literature.

Marquand, Allan. Princeton Monographs in Art and Archaeology. III. Luca della Robbia. With 186 illustrations from photographs and index. 4to, pp. 286. Princeton University Press. \$7.50 net.

In his monograph on Luca della Robbia, the well-known professor of art at Princeton has arranged in chronological sequence the sixty-two works known to be Luca's, with a final chapter on works in the manner of Luca, 127 in number, attributed to but not known to be by him. In each case a history and brief criticism of the work are given, based upon related documents in the Florentine archives, which are also printed in full, many of them for the first time, and followed by a bibliography. The whole is prefaced by an adequate and severely impersonal introduction, giving the chief facts of Luca's life, style, and method of work in marble, bronze, and terra-cotta, and briefly tracing the development of his chosen medium, usually substituted by him for marble, out of the medieval Italian majolica. The present volume is to be followed by similar monographs on Andrea della Robbia, Giovanni della Robbia, and the Robbia school.

Moqué, Alice Lee. Delightful Dalmatia. Fust & Wagnall Company, New York and London. 1914. Pp. 374. Illustrated. \$2 net.

The sunny shore and island-studded coast of Dalmatia has within a very few years become one of the most visited tourist fields in Europe. With its sister lands, Bosnia and Herzegovina, one of the centers of conflict in the terrible war raging in Europe, Dalmatia forms one of the most picturesque portions of the Balkan peninsula. Mrs. Moqué's book is a chatty, personal account of a summer cruise along the coast of this beautiful province. The personal note in the book is strong, and one gets a deal of gossip of fellow tourists, particularly of "John." The work is built on the guide-book plan, with little or no attention to definite and matter-of-fact information concerning ethnic types, social forces, and economic conditions. The accounts of the coast-towns—and notably of Ragusa, that dream-city of the Adriatic—are well written. The book has forty-five good illustrations and an excellent map.

Northend, Mary E. Colonial Homes and Their Furnishings. With numerous illustrations. 4to, pp. xvi, 274. Boston: Little, Brown & Company. 1914. \$5 net.

Miss Northend chooses twenty-two old New-England homesteads with historic associations, tells the story of each, and shows us pictures of exterior and interior. First of all are the House of the Seven Gables, the Olives house, and the Pickering house at Salem. There are the pretentious Rogers house in Peabody, Mass., the

severely outlined Colonel Jeremiah Lee house in Marblehead, the simple Adams homestead in Newbury, Franklin Pierce's commonplace house in Hillsboro, N. H., the Quincy mansion in Quincy, "Hey Bonnie Hall," Bristol, R. I., and that house every American knows—the Longfellow home in Cambridge. Our book naturally is full of graceful doorways, colonial furniture, china-closets, and fireplaces. There are interesting stories a plenty, one of the best of which tells how Martha Hilton became Madam Wentworth. The book is handsomely bound, and in every way pleasing to the eye.

Oleott, Charles M. *The Lure of the Camera.* Illustrated from photographs by the author. Crown 8vo, pp. xv+301. Boston and New York: Houghton Mifflin Company. \$1 net.

This book has the same kind of charm and attractiveness as have the author's two former volumes, "George Eliot" and "The Country of Sir Walter Scott." Artistic photography and literary quality are brought to bear upon a range of subjects which have unusual interest in America and England. Mr. Oleott, the author, is not a writer by profession. He is a business man whose life has been active and practical and who has yet found time and opportunity to cultivate a natural love for letters—a trait which imparts to his volumes that charm and intimacy found in the amateur, in the fine sense of the word. During recent years he has spent his summers adventuring among the homes and haunts of his favorite authors, among whom are numbered Wordsworth, Burns, Carlyle, De Quincey, George Eliot, Drummond, Dr. Arnold, of Rugby, and Mrs. Humphry Ward in England; and Emerson, Hawthorne, Thoreau, Aldrich, Colia Thaxter, and John Burroughs in America. Mr. Oleott has succeeded in bringing the reader in close contact with these cherished authors. He introduces us to them personally, as it were.

Powell, E. Alexander, F.R.G.S. *The End of the Trail: The Far West from New Mexico to British Columbia.* With 48 full-page illustrations and a map. 8vo, pp. xiv+462. New York: Charles Scribner's Sons. \$3 net.

This imaginative, original writer, author of "The Last Frontier," has succeeded at this late day in producing a book which reclothes our own country with some of the primitive charm, the glow, and fascination which enveloped the New World at the time of its discovery. The principal motive of the book, with its forty-eight striking illustrations, is to set forth the unrevealed wonders of the "Lost West," the region comprised by New Mexico, Arizona, California, Oregon, Washington, and British Columbia. Here is the story of the American pioneers in their onward march from the Hudson to the Ohio, thence to the Mississippi, across the plains to the Rockies, "until athwart the line of their advance they found another ocean. They could go no farther, for beyond that ocean lay the overpopulated countries of the yellow race. The white man had completed his age-long migration toward the beckoning West; his march was finished; in the golden lands which look upon the Pacific he had come to the End of the Trail." Mr. Powell's book is full of surprises. It reveals to us how little we really know of the world, and how vain it is to boast that the globe has at last been ransacked of its wonders.

"Sure! Mother always used it."

And he might add that "Mother" is a sensible and thoroughly practical housewife. She has the best of reasons for favoring

Campbell's Tomato Soup

Not only because it saves time and avoids needless labor and care, but because it is so entirely wholesome and satisfying.

Nourishing in itself, an aid to digestion, a sharpener of appetite—this perfect soup is, in fact, a regular promoter of good-nature and sturdy health.

Buy it by the dozen. Enjoy it regularly and often. You will find it always acceptable, always good.

Your money back if not satisfied.

Pratt, Helen Marshall. *Westminster Abbey Its Architecture, History, and Monuments*. 2 vols., 8vo. New York: Duffield & Company 1914. \$4.50 net.

With London threatened by Zeppelins, and St. Paul's, the Parliament Buildings, and Westminster Abbey presenting such shining marks for German bombs, one instinctively thinks that we can not have too many trustworthy descriptions of so important historic structures. On the other hand, with "Neale's," Dart's, Ackerman's, and Stanley's treatises on Westminster Abbey (to mention only these), each instructive in its own way, one is tempted to ask—why this new essay? But when one examines the present portly work of over 800 pages, with its wealth of architectural discussion and illustration, of historical investigation and narrative, and of biographical detail, he is satisfied that here are combined elements that are worthily brought together. The author's intent was evidently to stress the founding of the Abbey, the work of Edward the Confessor, of Henry III., and Henry VII., and the influence of the English school of Gothic as against that of the French school, these being the foci of critical discussion. Her interest is also very vitally felt in the biography of those who either contributed architecturally or directly in the construction of this pile of buildings, or have been honored therein by burial or monument. In her work great faithfulness and patience in investigation of documents somewhat unused in this connection and of historical treatises are shown, and an amount of reading that would easily qualify for a chair in the history of England. And the result is so lit up with anecdote, allusion, and incident that the effect is pleasing and enticing.

Rihbany, Abraham Mitrie. *A Far Journey*. Pp. 351. Boston and New York: Houghton Mifflin Company. \$1.75.

Abraham Rihbany is a Syrian who had to borrow the money with which to come to this country. He reached here with only nine cents in his pocket. He has since become pastor of the famous church once occupied by James Freeman Clarke. The story of his childhood in Syria is illuminating, with its revelations of primitive conditions into which he was born. His father was a stone-mason of the province of Mount Lebanon. Mr. Rihbany describes most graphically their mode of living, the strange customs attending birth and marriage, and the tenacious enmity that existed among different clans. The Syrian episodes reveal Biblical background, and altho our author was originally a member of the Greek Orthodox Church, his admission to the American mission school marks a new era in his development and a stirring of the elements within which caused him to become Protestant and to have an absorbing desire for education. After trying stone-masonry and school-teaching without satisfaction, Mr. Rihbany joined some friends who were willing to pay his passage to America and reached New York about twenty years ago, penniless, but ambitious. His tribute to America as a land of opportunities is without reservation.

Stevenson, Burton E. *The Charm of Ireland*. Illustrated. Pp. 541. New York: Dodd, Mead & Company. \$2.50.

"The Charm of Ireland" is the charm of the author in being able to visualize for

The Macey Co.

GRAND RAPIDS, MICHIGAN

us famous ruins, wild mountain passes, island-dotted lakes, green fields, and rock-bound coast. No one who reads Mr. Stevenson's "Spell of Holland" would doubt his ability to make his subject alluring. When we take into consideration Ireland's legendary wealth, its political struggles, and the late developments in the English Home-Rule movement, Ireland's real and traditional saints, and its famous points of interest, we realize that it is an exceptional opportunity for an exceptional writer. The book is a decidedly human and intimate account of a trip made by the author and his wife through every part of Ireland, and his sympathy and appreciation of the Irish character, with its virtues and its failings and its lovable limitations, make the account edifying and interesting. Historical facts are not neglected, but history is so woven in with beautiful descriptions and chatty stories that we absorb it unconsciously. We find, as we should expect, excellent descriptions of Dublin, Belfast, Limerick, and Cork, the banks of the Shannon, the land of Tipperary, and the Lakes of Killarney; but, more than that, we enjoy the account of the cashels and raths, the tumuli of the kings, to which one has to crawl on hands and knees, the grave of Ossian, the glens of Antrim, the cross of Monasterboice, and other points of great interest. The author loses no opportunity to get the Irish point of view on the problems of the day.

Stuck, Hudson. *Ten Thousand Miles with a Dog sled.* 8vo, pp. 420. Charles Scribner's Sons. \$3.50 net.

The Archdeacon of the Yukon believes in muscular Christianity, and as a missionary in Alaska has had his creed put to the test. While a great deal has been written about Alaska and the Klondike, we have never yet found a book which leaves upon the mind so vivid an impression of the life and scenery of the place "where winter barricades the realms of frost" as this startlingly brilliant volume. Mr. Stuck is a master of English descriptive style, and his absorbing story is illustrated with numerous half-tone illustrations and equipped with an excellent index.

Taft, Mrs. William H. *Recollections of Four Years.* Pp. 395. New York: Dodd, Mead & Company. \$3.50 net.

If Mrs. Taft's recollections were of only the four years when she was the first lady of the land, they would be interesting because they deal with events, problems, and people familiar to every living American, restating as they do experiences with which the daily press kept us familiar. In addition to that, however, Mrs. Taft has had experiences which outweigh in importance even her days in Washington. Her account of the Philippines, as they were when Mr. Taft headed the second Philippine Commission, and the gradual changes for the better accomplished under his direction as governor, is of much attraction for all who realize the gravity of the problem that faces the country now. Altho her view-point is American and democratic, she still upheld and advocated a certain amount of formal dignity in connection with the White House and the social life of the President. The life of the Tafts has covered many countries, and in every case Mrs. Taft's account of places and description of people, notably the Japanese and Chinese, is fascinating and comprehensive. In her allusions to Mr. Roosevelt,

A STRIKING proof of Elgin watchmaking skill is furnished through the acceptance by the United States Government of a number of Elgin Watches for use by the torpedo boat flotilla of the U. S. Navy. *These are the first and only American watches ever accepted for this strenuous service.* Only after six months' gruelling tests at the U. S. Naval Observatory was the governmental O. K. put upon them. This precision of

ELGIN Watches

assures their worthiness as life companions. They are also beautiful—and they are strong. In fact, Elgin Watches combine the qualities which make them eminently fitted

For Christmas Giving

Besides being practical gifts—everyday necessities—they inspire pride of possession. Elgin owners know they are carrying timekeepers famous for a half-century—the standard watches of the world.

There are models for business and professional men and women, for railroad men and for young folks. You can get exactly the right model for the person you have in mind—at the price you have in mind.

Here are four fine Elgin Watches, all suitable for gifts:

LORD ELGIN

The Masterwatch. \$155 to \$25.

LADY ELGIN

A dainty Timekeeper—pendant and bracelet. A wide range of prices.

B. W. RAYMOND

The Railroad Man's Watch. \$80 to \$125.50.

G. M. WHEELER

The Foreman Medium Priced Watch. \$30 to \$45.

Ask your Engineer—your local jeweler—for further proof of the high efficiency of every Elgin Watch. And see the various models, which he will gladly display to you.

Write us for booklet.

ELGIN NATIONAL WATCH CO.
Elgin, Illinois

WHEN the United States Government makes exhaustive and comparative tests of automatic pistols, you surely cannot do better than be guided by its selection.

"The Colt was adopted by the Army and Navy because of its marked superiority to any other pistol."

Could anything be more convincing? And for the protection of your home and family what are the two chief essentials required in a fire-arm? Safety plus quickness. In the Colt you have the positive kind of safety—automatic safety. The famous Grip Safety of the Colt not only protects you, but

Enables You to Fire the First Shot First

to "get there" before the other fellow in time of imminent danger. There is absolutely no danger to you, but certain danger to the intruder of your home if you own a Colt Automatic Pistol.

Write for free booklet, "How to Shoot," and Catalog 26. If you want a copy of the famous war picture, "Colts to the Front" (miniature shown here), size 20x22 inches, done in full colors, ready for framing, enclose 10c for postage, etc.

COLT'S PATENT FIRE ARMS MFG. CO., Hartford, Conn.

Colt AUTOMATIC PISTOL

"You can't forget to make a Colt safe."

**"First in War
First in Peace."**

Mrs. Taft is most tactful and diplomatic. She writes of the deep friendship between him and Mr. Taft, and the days when Mr. Roosevelt, Mr. Root, and Mr. Taft were aptly caricatured as the "Three Musketeers"; they "worked together in such harmony, and with such high mutual regard, as one remembers now with singular satisfaction." Later there is a hint that Mrs. Taft did not share her husband's complete faith in Mr. Roosevelt's attitude, but she says nothing disagreeable and only indicates her suspicions. The whole book is delightful in its subject-matter and its treatment. The period described is still so fresh in our memories that it is all the more vivid and entertaining, especially the chapters describing the Philippines.

Whiting, Lillian. The Lure of London. Illustrated. Pp. 356. Boston: Little, Brown & Company, 1914. \$3 net.

Every traveler has experienced the lure of London, but here is an opportunity for even stay-at-homes to enjoy the fascinations of London's historic landmarks, customs, and strange spell. It is a glorified guide-book. We see London, through Miss Whiting's graphic descriptions, as a city alive, its public buildings, its art galleries, its clubs and social activity, its daily life and routine, its sports and amusements, its religious principles, its well-known writers, artists, and political potentates. No phase of life is omitted. The author has the power of making her descriptions and discussions vitally interesting, especially the spell of Westminster Abbey and the spiritual work done by Archdeacon Wilberforce.

Woodberry, George E. North Africa and the Desert, Scenes, and Woods. Cloth, pp. 361. New York: Charles Scribner's Sons. \$2 net.

In this volume a well-known critic, poet, and traveler has given his impressions of North Africa and the desert beyond. Tunis and Tripoli and the less familiar towns of Tlemcen, Tougoust, Djerba, and Figuig form the centers for descriptive chapters filled with scenes of life in the villages and of silence on the rolling sands. Mr. Woodberry comes to new experiences in a sympathetic frame of mind and is always ready to look deeply into what there is to see. Indeed, one sometimes thinks that he sees more than is before the eye, and that the outer reality is treated a bit more symbolically than it deserves. It is again the age-old conflict between the reproductive and the representative in art, and yet even if one is a little shy toward some of Mr. Woodberry's results, one must recognize in him a skilful artist of unusual powers of description. The mystery and charms of the borders of the garden of Allah seem the more charmingly mysterious in these pages. A chapter of particular interest is "On the Mat," in which the subtle ties between North-African life and its Moslem faith are appreciatively delineated.

Uncertain.—Uncle Sol throw aside the letter he was reading and uttered an exclamation of impatience.

"Doggone!" he cried. "Why can't people be more explicit?"

"What's the matter, pa?" asked Aunt Sue.

"This letter from home," Uncle Sol answered, "says father fell out of the old apple-tree and broke a limb."—*Youngstown Telegram.*

PERSONAL GLIMPSES

THE FATHER OF THE WORLD'S NAVIES

THAT a genius in any line is never the private property of any one nation but is claimed by the world as a whole is emphasized in some of the British comment upon the death of Rear-Admiral Alfred Thayer Mahan, who, at the age of seventy-four, passed away suddenly in Washington, December 1. "The greatest among naval historians" and "the naval philosopher" are the terms which the London *Post* employs to describe this American citizen of world-wide reputation. And the same paper goes even further, practically calling him the Von Moltke of the British Navy, in saying that Great Britain

Owes to the great American a debt which can never be repaid, for he was the first elaborately and comprehensively to formulate the philosophy of British sea-power, and from time to time, as occasions of difficulty arose, he published an essay or an article which indicated the right course for Great Britain to follow.

To which the London *Chronicle* adds:

Admiral Mahan's death will come to the British people with a sense of acute personal loss. His name will rank with those of the greater naval historians, and the influence of the lessons he deduced from naval history has helped to shape the naval policy of not a few Powers.

This is high praise, yet it needs only a glance backward a score of years or so to find Germany making fully as eulogistic statements, and indeed acknowledging quite as readily the debt that the German Navy owes to Admiral Mahan's teachings. We are told by the New York *Times* that Mahan's first book of international importance, "The Influence of Sea Power upon History," published in Boston in 1890, is "really responsible for the German Navy as it is to-day." As soon as the book appeared,

It was immediately translated into German. Emperor William was so impressed with the book that he ordered a copy placed in the library of every German warship, and ordered all German naval officers to read and study it. Emperor William praised it as the greatest modern work on naval affairs, and the greatest work on sea-power. This book taught the Germans the importance of gaining sea-power.

That such recognition of the attainments of Admiral Mahan was not unjustified is clearly seen in the accounts of his career that have been published since his death. Terming him "America's foremost naval strategist," *The Times* adds:

Admiral Mahan was as familiar with Europe, her history and armaments, as he was with American history, and knew many of the men actively identified with the war in high places in England, Germany, and France. Some of his intimate

GUITERMAN BROS.

Dept. J.

ST. PAUL, MINN.

friends among the military and naval men
in Europe had lost their lives in the war, and
this shocked him. Some of these officers he
met in his travels, and when he received
honorary degrees at Oxford and Cambridge
and many more when he went to The Hague
in 1899 as American naval delegate to the
First Peace Conference.

There were distinct reasons why the
American people congratulated themselves
upon the presence of Admiral Mahan, then
Captain Mahan, in the First Hague
Conference. He was not only a naval
strategist and scholar, but was even then
regarded as the most eminent living ex-
pert in naval strategy. Then he had
always consistently advocated strong navies
and preparedness for war, with special
reference to naval influence in making for
peace. Added to his equipment as a
diplomatist in the delicate and complex
task before The Hague Conference was his
experience as a public man who had been
hailed as the first great exponent of the
philosophy of sea-power.

Admiral Mahan has himself told how it
came about that his great naval history was
written. The inspiration came through a
reading of the historian Mommsen. He
was suddenly struck with a realization of
that writer's failure to recognize the all-
important influence of "sea-power" upon
the career of Hannibal. In the same mo-
ment the need became apparent to him
of an exhaustive definition of the part that
this arm of a nation's fighting strength
must play in all international history. The
outline of the subsequent analysis of naval
strategy and strength was submitted to
Admiral Luce, and was discussed at length by
the two men. When the whole work came
to be written it was the result of the thought
and experience of a lifetime and of the most
painstaking method and analytical criti-
cism. In seeking to define in brief what he
felt was embraced in any philosophy of
naval strategy, Admiral Mahan coined the
phrase "sea-power," which has been since
accepted so universally in common speech
that its origin has been nearly forgotten.
Of this choice of terminology the Admiral
has written:

Purists, I said to myself, may criticize
me for marrying a Teutonic word to one of
Latin origin, but I deliberately discarded
the adjective, "maritime" being too smooth
to arrest men's attention. I do not know
how far this is usually the case with
phrases that obtain currency. My im-
pression is that the originator is himself
generally surprised at their taking hold.
I was not surprised in that sense. The
effect produced was that which I fully
proposed, but I was surprised at the extent
of my success. "Sea-power," in English
at least, seems to have come to stay, in the
sense I used it. The "sea-powers" were
often spoken of before, but in an entirely
different manner—not to express, as I
meant to, at once an abstract conception
and a concrete fact.

Tho a man generally of little profit to the
professional interviewer, and much too
modest to permit himself to incur often the
publicity of a radical opinion publicly.

expressed, yet as early as August 3, while the European War was still to the mass of people in this country an event incredible, Admiral Mahan did grant one interview, in which he stated plainly his view of the situation in Europe. The New York Sun quotes from his remarks, as follows:

The aggressive insolence of Austria's ultimatum to Serbia, taken with the concession by the latter of all the demands except those too humiliating for self-respect, indicates that the real cause of the war is other than set forth by the ultimatum.

Knowing from past experience how the matter must be regarded by Russia, it is incredible that Austria would have ventured on the ultimatum unless assured beforehand of the consent of Germany to it. The inference is irresistible that the substance of the ultimatum was the pretext for a war already determined on as soon as plausible occasion offered.

If Germany succeeds in downing both France and Russia she gains a respite by land which may enable her to build up her sea force equal or superior to that of Great Britain. Germany's procedure is to overwhelm at once by concentrated preparation and impetuous momentum. If she fail in this she is less able to sustain prolonged aggression, as was indicated in the Franco-Prussian War during and after the siege of Paris.

Mentioning the innate modesty of the celebrated Admiral, *The Times* says:

Altho by no means a militarist, in the sense that he applauded war and its purposes and effects, Admiral Mahan was a firm believer in the doctrine of preparing for the utmost eventualities. He was also modest. It has been told of him that, when he was returning from Europe to take his place on the Board of Strategy, at the opening of the Spanish War, he traveled under an assumed name, so that he would not be interviewed upon his arrival in New York.

He was on the passenger-list of the *Etruria* as "A. T. Maitland," and upon her arrival at the pier in New York the reporters spied him out. There was another captain on board—Captain Paget, of the British Navy. Him they interviewed, failing to capture their man. Had he seen Captain Mahan? "Why, yes; I met him on the boat. A very pleasant man—very. Traveling incog., tho, very much incog. Doesn't want to be interviewed. Said he wouldn't be interviewed on any account. God bless my soul, perhaps I shouldn't have said even so much!" As to his fame, he once wrote in a letter to a friend: "It may seem odd to you, but I do not to this day understand my success. I had done what I intended to do. I recognize that people have attributed to me a great success, and have given me abundant recognition. I enjoy it, and am grateful; but for the most part I do not myself appreciate the work up to the measure expressed by others."

"Made in U. S. A."—We excel other countries in the very thing for which they are noted. Italy, old as she is, can boast of but one Rome, while the United States has fifteen. Greece can show on her map but one Athens, while we have nineteen.—*New York Evening Post*.

Gillette the Great Quality Gift for Men

MOST attractive gift for a man! New Gillette "Aristocrat," cased in *French Ivory*, right in line with the latest ideas in men's toilet articles. In appearance and service the *quality gift*, matching handsomely with the glass, enamel and white tile of modern bathroom fittings.

Of all the articles for men, the Gillette is about the most universal. Practical for every man personally.

To the man who already owns one Gillette—give another of a *different style*, a Combination or Travelers' Set, an "Aristocrat" or a "Bulldog" Gillette.

To the young man—take this occasion to give a more elaborate Gillette Set than he could afford to buy for himself.

Look at the Gillette displays in the stores. See the "Bulldog," the new *stocky-handled* Gillette—the Razor designed for the Chief of the Company. Dozens of other sets in Metal and Leather cases, with Silver and Gold Razors—a variety to please every taste and a range of prices to suit your purse.

You can choose a Gillette at anywhere from \$5 to \$50—and for a small gift at 50c. or \$1 there is nothing that appeals so much to the Gillette user as a packet of the *double-edged* Gillette Blades.

GILLETTE SAFETY RAZOR COMPANY, BOSTON

"The lens is the most important part of your glasses.

How expert papermen test Bond Papers

Convinced as you may be of the importance of using *Quality* bond papers for your correspondence and for your office stationery, it is none the less a difficult task at times to tell the difference between two makes of bond paper and to decide upon the grade that best represents you. So you will find this little book helpful. For

—this FREE book tells how

you can judge the quality of bond papers. They are not theoretical tests, but "experience" tests—based on the practical knowledge of expert papermen. And you will find it makes your paper-buying much easier and much surer. Write for it—and use the series of tests.

With the book we enclose samples of Parsons Old Hampden Bond. This is one of the oldest established brands of the Parsons Paper Company who have been making fine writing papers since 1853.

It is a high grade, plate-finished paper, typical of the quality papers that have led the trade to rank Parsons as one of the three leading paper makers in the country. And you will not only find it ideal for personal use as well as for office stationery, but when you apply the tests illustrated in this little book, you will understand why Parsons Old Hampden Bond has a country-wide sale.

Comes in 10 colors—stock envelopes to match can be had from any printer or lithographer.

Madam, Serve Yourself by Giving Him This for Xmas

Your husband will be tickled foolish with this strikingly novel

Aladdin Ash Bowl

because it will enable him at once to put his ashes out of sight, is rotary in action, can't tip over, and has an ingenious lighter that burns five hours with one filling. And in giving him this, it will be one for him and two for you, because the ALADDIN kills at once the odor of smoking and stale tobacco, and does

away with all risk of fire and burnt table covers. The regular price of the ALADDIN is \$5, but to introduce it among the influential people who read Literary Digest, it will be sent

By Parcel Post Prepaid for \$3 During the Next 10 Days. (Without Lighter, \$2.50)

Remember this offer will appear only in this week's Literary Digest, and is good only for period named. Your money back at once if you say so. Please specify whether you want bronze-copper, verde-antique, old-brass, brass, or nickel.

Tcharic, Smith & Co., 116 East 28th St., New York (Suite 407)

GERMANY'S WORLD-WARNING

(Continued from page 1170)

"We can enlarge our political power by joining to Germany those middle European States which are at present independent, by forming a central European union, which should be concluded not merely for the purpose of defense, but which should have the purpose of defense and offense, for promoting the interests of all its members. This object can, in all probability, be realized only after a victorious war which establishes for all time confidence in Germany's power, and makes it impossible for Germany's enemies to oppose our aims by force.

"It can really not reasonably be expected that Germany, with her 65,000,000 inhabitants and her world-wide trade, should allow herself to be treated on a footing of equality with France with her 40,000,000 inhabitants. It can really not be expected that Germany should allow 45,000,000 inhabitants of Great Britain (Celtic Scotchmen, Welshmen, and Irishmen) to act as arbiters to the States of the Old World, and to exercise an absolute supremacy on the sea. It can really not be expected that Germany, with her constantly growing population, should renounce her claims to become a great Colonial Power and to acquire territories suitable for a settlement, while States with a decreasing or an insufficient population, such as France and England, share the possession of the Old World with Russia, which in the main is an Asiatic Power.

"It became England's task to spread European civilization over the other continents. That country accomplished a truly world-historic mission on the one hand, by founding new and essentially Germanic States in North America, by subjecting India and Australia to European influence, and by effecting settlements on the coasts of East Asia; and on the other hand, by creating the framework of the modern State, by organizing the world's commerce, and by giving an enormous impetus to the manufacturing industries. By this activity England has created civilizing factors which promise to be of permanent value. At the present moment it is difficult to say whether England has arrived at the zenith of her greatness. It is certain that she makes colossal exertions to maintain her predominance, and even to increase it, and she will obviously not allow herself to be deprived of her great position without a struggle.

"History teaches us that the great civilized nations have always gradually declined when they had fulfilled their civilizing mission, when they had reached their zenith. This is a law of nature, and there is no reason to believe that that law will be invalid in the future.

"The white population of the entire British Empire, with its colossal territories, is smaller than that of the comparatively small German Empire. It is worth noting that in the year 1911 alone 200,000 English people emigrated on balance from the United Kingdom. For 1912 the number of emigrants will probably be higher. At the same time, the excess of births over deaths in Great Britain is declining, and the female population exceeds by 1,400,000 the male. In view of these circumstances, it is clear that the number of

British people does not suffice to people and exploit the enormous British possessions.

"Thus the English are virtually compelled to employ foreigners. Besides, German business men are generally considered to be more reliable and painstaking than Englishmen, and German technical workers of every kind are by many more highly esteemed than their British competitors. Even in Manchester, one of the most important centers of British industry, many Germans act as technical managers, and many English business firms are directed by Germans. We Germans have no reason to thank England for being allowed to trade in her colonies. On the contrary, the English are indebted to us, for without us Germans they would not be able to maintain their enormous commerce.

"The recent political and economic progress of Germany has caused England to become our most determined enemy, for she has begun to fear that she will lose her naval supremacy and her predominance in foreign trade. England opposes Germany as an enemy in all parts of the world, and prevents her colonial expansion, which for Germany is a question of life or death.

"When England decided to ally herself with Russia and France, she did not only consider the necessity of keeping down Germany and preventing her further political development, but had also to consider means for destroying the German fleet. We can not deceive ourselves on this point. The ultimate consideration of British policy has, since the mighty development of the United States, been the question of Anglo-American relations. England sees in the United States her only real rival for the domination of the world. As the danger of an Anglo-American war is immeasurably great, she seeks to be on friendly terms with the great Republic as long as possible. The differences between the two countries are so great that England must constantly calculate with the possibility of an Anglo-American war. The relations of England and America toward Canada, and the problem of the Panama Canal, furnish sufficient inflammable matter; they may lead to the most serious differences between them. In case of an Anglo-American war, England would naturally desire not to have a powerful fleet, such as the German fleet, in her rear, for it would tie the English Navy to England's shores. Therefore the German fleet must be destroyed—that is the Alpha and the Omega of British policy; that is the necessary and logical consequence of the Triple Entente; that is the thread which leads us through the labyrinth of English diplomatic actions and relations. It would be folly if we allowed ourselves to be deceived on this point. The maintenance of English naval supremacy, at least in the Old World, is, in England's view, indeed possible only if the German fleet is destroyed. Germans must calculate with the fact that England strives to destroy their fleet.

"We must try to make the best of things as they are. The tension between England and Germany will remain either until their differences are decided by war, or until one of the two States voluntarily abandons its policy and pretensions. As such an abandonment to the claims and pretensions of England would mean for Germany a complete sacrifice of her political and national future, we must make up our

The Howard Watch

YOU who have the privilege of choosing the gift of all gifts for the Boy—let it be a Howard.

If you are a Howard owner, you know what it means to a young man to get a Howard.

The pleasure he takes in it goes deeper than the mere pleasure of possession.

The young man who is alert, on tiptoe with the instinct for putting the thing across, finds inspiration in the companionship of a Howard.

The Howard Watch is associated with success—carried by a long line of famous men, industrial experts, professional men, and leaders of the business and commercial world.

The very time standards are at bottom Howard time—for it was Edward Howard who invented the Modern Watch, and put a higher meaning into punctuality and precision.

Gift, investment, possession—a Howard Watch is always worth what you pay for it.

The price of each watch is fixed at the factory and a printed ticket attached—from the 17-jewel (double roller) in a Crescent Extra or Boss Extra gold-filled case at \$40, to the 23-jewel in 18K gold case at \$170—and the EDWARD HOWARD model at \$350.

Not every jeweler can sell you a HOWARD Watch. Find the HOWARD jeweler in your town and talk to him. He is a good man to know.

Admiral Sigbee has written a little book, "The Log of the HOWARD WATCH," giving the record of his own HOWARD in the U. S. Navy. You'll enjoy it. Drop us a post card, Dept. O, and we'll send you a copy.

SPICE OF LIFE

College Wisdom.—"What are the bonds of matrimony?"

"Baby ribbons!"—*Cornell Widow.*

Naturally.—"Do you know where little boys go who don't go to Sunday-school?"

"Yes, ma'am; dey go fishin'."—*Michigan Gargoyle.*

Still Doubtful.—**BASHFUL YOUTH**—"I want a present for a young lady."

SALENWOMAN—"Sister or fiancée?"

BASHFUL YOUTH—"Well—er—she hasn't said which she would be yet."—*Judge.*

Hard Times.—"Just tired of him, eh?" asked the lawyer. The actress nodded.

"Well, I wouldn't advise you to sue at this time. The war is crowding everything else off the front pages."—*Philadelphia Public Ledger.*

Higher Economy.—"But your fiancé has such a small salary, how are you going to live?"

"Oh, we're going to economize. We're going to do without such a lot of things that Jack needs."—*Brooklyn Citizen.*

Her Choice.—**THE MISTRESS**—"I shall take one of the children to church with me this morning, Mary."

THE GENERAL—"Yes'm; which?"

THE MISTRESS—"Oh, whichever will go best with my new mauve dress."—*London Sketch.*

Not His Profession.—**THE COP**—"The driver of a hearse asked me just now which was the way to the cemetery, and I told him."

THE CAPTAIN—"Don't do it again. You're being paid as a policeman, not as a funeral director."—*Brooklyn Citizen.*

Bomb-proof.—**TESTY OLD WOMAN**—"There now! I guess you won't go around poking your nose into other people's business after the raking I just gave you."

REPORTER—"Well, don't get proud about it, madam; you didn't hurt my feelings much. I've been insulted by experts."—*Life.*

Interested.—**GOSSIP**—"That was Tom Jenkins, th' rich old bachelor up on th' west hill. They tell me he's goin' to build a new house."

MILLINER (aged fifty)—"Is he?"

GOSSIP—"Yes. He has asked for proposals."

MILLINER—"Wh-what's his address?"

—*Cleveland Plain Dealer.*

Not Treating.—Jock MacTavish and two English friends went out on the loch on a fishing-trip, and it was agreed that the first man to catch a fish should later stand treat at the inn. As MacTavish was known to be the best fisherman thereabouts, his friends took considerable delight in assuring him that he had as good as lost already.

"An', d'ye ken," said Jock, in speaking of it afterward, "baith o' them had a guid bite, an' wis sae mean they wadna' pu' in."

"Then you lost?" asked the listener.

"Oh, no. I didna' pit ony bait on my hook."—*Argonaut.*

A Happy Home is one Undisturbed by fire or any fear of fire —the Natco Home

No matter how perfect your home, your enjoyment of it can never be complete, if threatened by the thought that some time fire may take it from you and all that it contains.

When you build of Natco Hollow Tile, you build not only a home but a future free from the dread of fire disaster. You exempt your home from deterioration, your income from repair expenses. Natco Hollow Tile's endurance defies both time and the elements, and because of it your home is warmer in winter, cooler in summer, dry every day of the year.

Large or small, expensive or inexpensive, your home can have Natco construction—and you, a feeling of security too valuable to be over-estimated or overlooked.

More information will be found in the new 32-page Handbook, "Fireproof Houses of Natco Hollow Tile," containing illustrations of typical NATCO residences and an invaluable guide to the prospective builder. Mailed to any address upon receipt of 10c (in stamps or coin).

How Many Hides Has a Cow?

Sole leather is not adapted to soft, tufted upholstery of automobiles and furniture.

Hides must be split into thin sheets to produce upholstery leather.

What happens to the lower, fleshy, grainless portion? It is split in two and each sheet is coated, embossed, and sold as "genuine leather." What you have believed was leather is, on practically all low and medium priced autos, furniture and buggies, nothing but "coated splits." That is why so much "leather" upholstery cracks, rots and peels so quickly.

REG. U. S. PAT. OFF.

Is Guaranteed Superior to Coated Splits

MOTOR QUALITY

For Automobiles

CRAFTSMAN QUALITY

For Furniture

It is intended for upholstery receiving hard usage. It averages twice the tensile strength of coated splits, is water-proof, and perfectly parallels the appearance and "feel" of the best quality of grain leather.

For two years several leading makers of automobiles have been upholstering their cars with it, and are entirely satisfied. Many other makers await public knowledge and consent to discard coated splits for superior Fabrikoid.

CRAFTSMAN QUALITY FABRIKOID on Sale by John Wanamaker, Philadelphia; McCreary & Co., Pittsburg; J. & H. Phillips, Pittsburg; John Shillito Co., Cincinnati; Stix-Barr-Fuller Co., St. Louis; Du Pont Fabrikoid Co., 421 Broadway, New York.

THE NATURE OF THE COMING PROSPERITY

From many quarters indications have been discovered by *The Journal of Commerce* that "what is called prosperity is rapidly returning to the business world," the chief causes for the change being politics and a suspension of foreign competition. The real influences in the improvement are the resumption of trade with Europe, due to the needs of Europe for our supplies, and our own ability, owing to great crops, to meet the European demand. These are potent factors, and no reason is discoverable yet why they should not bring about "an immediate return of better business in trading conditions."

But the writer inquires how far these conditions "really stand for prosperity in the true sense of the word." Undoubtedly there has been a marked rise in the price of many staples, and general conditions probably will continue to make for higher prices, but while this will be advantageous to many producers, it will be equally or more disadvantageous to those who consume the goods. No fallacy has been better exploited than the one which rests on an assumption that a rise in prices is beneficial to the masses. A rise in prices that is certain to come as a consequence of the European War is a rise in the price of money, that is, in the interest cost of getting it and using it. The writer says further on this and other points effecting the outlook for more prosperous times:

"Let it be remembered that the industrial investments with which business is now being done and profits made—the

H. G. McFADDIN & CO., 36 Warren St., New York

BE KIND TO YOUR EYES

buildings, machinery, equipment, railways, and other necessary means of production are the result of past labor and have been financed on the basis of past conditions in the world of capital and banking. When they require replacement, as they speedily and continuously will, they can be so replaced only on the new basis of cost. That this higher cost will greatly cut into the profits arising from higher prices can not be questioned, and to that extent the advantage supposedly derived from the great economic transformation to follow the war will disappear. It may perhaps be entirely neutralized thereby.

In the same class of business factors must likewise be placed the withdrawal of capital from the United States inevitably to follow the destruction of fixed machinery of production in Europe. Such withdrawals are absolutely inevitable, and will be effected by sales of foreign-held securities, the results being taken in money or commodities, and in either case constituting a net reduction in the available means of production in the United States. If to these disturbing influences be added the readjustments of the labor-supply likely, if not certain, to follow the war, and the fact that access to accustomed sources of European supplies of goods will be materially lessened, with the corresponding reduction of consuming and purchasing power, a résumé of some of the larger factors to be considered in estimating the probable business prosperity of the United States has been furnished.

The conclusion must be accepted that the advantages supposedly accruing from the war to this and to other countries now at peace are largely illusory and temporary. Whatever they may be, they will show themselves early in the shape of orders for goods, resulting demand for labor, higher prices and correspondingly high returns to owners of existing capital. The long-range results, tending to offset these and to go far beyond them, in upsetting existing conditions, changing the drift of present capital relationships, altering the buying power of the community, and generally producing readjustments of a deep-seated and far-reaching economic nature will be slower but the more powerful in their effects.

The war may result in temporarily transferring to the United States a larger proportionate title to the fluid wealth of the world—indeed, will probably do so. This will be of no advantage if it results in reducing the power of other countries to buy American products either now or in the future or to supply American consumers with the goods they want to buy with the profits they have technically succeeded in making through the business activity induced by war. The whole situation involves an issue far larger than improvement in trade for a period of a few weeks or months. It emphasizes from every angle of the analysis the fact that war, with its destruction of human life and material capital, can never be of genuine advantage to any nation, class, or industrial group. This has been universal human experience in the past; it will be equally undeniable experience in the future.

A Courteous Apology.—An interested visitor who was making a call in the tenement district, rising, said:

"Well, my good woman, I must go now. Is there anything I can do for you?"

"No, thank ye, mem," replied the submerged one. "Ye mustn't mind it if I don't return the call, will ye? I haven't any time to go slummin' myself."

Argument.

CURRENT EVENTS

EUROPEAN WAR

IN THE EAST

November 25.—Petrograd reports that large bodies of Russian troops are making a second entry into Hungary across the Carpathians, capturing several groups of the enemy in the mountain passes.

Berlin announces officially that General von Mackensen has taken 40,000 uninjured prisoners as a result of the fighting about Lodz and Lowicz.

November 26.—The second Battle of the Vistula centers in the region south of the Bzura and east of the Warthe. It is divided into three fairly distinct engagements, one about Zgierz, one south of Głowno on the Mroga River, and one further to the south, which involves the German right wing and German reinforcements from Wielun.

November 27.—It is reported that the Russians have separated the Austrian and German forces in south Poland, leaving the Austrians to hold Bochnia and Krakow without support. Petrograd announces a severe attack on the Austrians at the Raba River near Bochnia.

November 29.—Petrograd reports the Austrians as leaving hastily the fortifications of Bukovina, the extreme eastern province of Austria. Russians occupy Czernowitz, its capital. Austrian troops storm and take Suvotor, Serbia, between Valjevo and Cacak, overcoming an obstinate defense, Vienna announces.

November 30.—A Russian surprise attack on the German fortifications east of Darkehmen, in East Prussia, is reported to have failed with heavy Russian losses. Petrograd reports the fighting about Lodz as still indecisive, with slight Russian advantage in the north. There are indications of a strong German concentration about Kalisz tending to descend upon the Warthe near Sieradz.

Austria reports that the Russian Army of invasion crossing the Carpathians is in part surrounded at the battle of Homonna, in Hungary, near Ungvar, and defeated.

In an official Russian statement it is claimed that during the first half of November 50,000 Austro-Hungarians were taken prisoners, with 600 officers.

IN THE WEST

November 29.—Little change marks the western campaign, tho France reports the repulse of the combined attacks of three regiments of Germans who attempt again to drive through north of Arras.

December 1.—France reports slight successes south of Bixschote and in the neighborhood of Bethune.

December 2.—Activity all along the battle line in France and Belgium indicates an apparent attempt on the Allies' part to test the German front for weakness resulting from the possible sending of reinforcements to the East. Only slight results have been gained near Craonne and in the neighborhood of Thann, on the Alsatian border. In the Argonne and west of Dixmude, Allied attacks have revealed a strengthening of the German line.

GENERAL WAR NEWS

November 26.—The British dreadnought *Bulwark* is destroyed by an explosion while at anchor in the Thames River, off Sheerness Dockyard. Eight hundred lives are lost.

November 30.—Reports from Montevideo

Honesty is the best fire insurance policy

FIRE

insurance means more than honest intentions. Six out of every seven fire insurance companies organized in this country have failed or abandoned the business. To live and furnish real indemnity a company must have resources to back up its honest intentions.

The Hartford Fire Insurance Company has lived through every great disaster that has visited this country in the past 104 years. It has met its obligations cheerfully and faithfully. It does the largest fire insurance business in America.

The Hartford Agent in your town is a good man to know. He can be relied upon to secure for you the manifest protection of the policies of the Hartford Fire Insurance Company.

Nobody wants a fire. We have a booklet that tells how to prevent it. Send for a free copy. Use the coupon.

The Hartford Fire Insurance Co. Hartford, Conn.

Gentlemen:— Send me "Fire Insurance and Fire Prevention," your booklet suggesting ways of preventing fires.

If the Burglar Came To-night

DEAD of night. Dark solitude.

Yowl of dogs; creak of doors; crack of floors; fear "haunts the curtained sleeper."

Your children slumber peacefully—with their beautiful innocent faces. Mother is alone in the big house.

What's that? A noise down stairs. She raises on her elbow; listens in terror. It's no false alarm this time—the long-dreaded burglar has come.

What can she do? Nothing! Absolutely nothing. She and those little children are helpless—at the mercy of a hardened, black-hearted criminal.

Any father who has any sense of pity, indeed any sense of duty, will get a Savage 10 shot Automatic this morning; get his family and himself accustomed to shooting it in a vacant lot this afternoon and forever banish burglar fear and gun fear from his home.

But don't buy a 6 or 8 shot automatic when you can get the 10 shot Savage at the same price. Don't buy a hard-to-aim automatic when you can get the Savage which "aims easy as pointing your finger" at the same price. And be sure to get a Savage because it is the only automatic that tells by a touch or a look whether loaded or empty. Therefore harmless as an old cat around the house.

Send for free booklet.

Shirley President Suspenders

50¢

For Christmas

A pair for every suit makes a man's whole year happy. Try it and see! In beautiful gift boxes—12 different patterns. At stores or post-paid, 50¢.

Manufactured by Shirley Suspenders Co., New York, N. Y.

and Buenos Aires indicate the presence of a German squadron in the South Atlantic, with an engagement with a powerful British fleet daily imminent.

December 1.—It is reported that most of the German Fleet at Kiel is steaming out into the North Sea. Great activity is noted in the Kiel shipyards upon undersea and aircraft, while the work upon five dreadnoughts in preparation slackens.

General De Wet, leader of the rebellion in the Union of South Africa, is captured by Colonel Brits in British Bechuanaland, near Mafeking.

December 2.—German official statements number the Allied prisoners interned in prisoners' camps or hospitals on the 1st of November as follows: *Officers*—French 3,138, Russians 3,121, Belgians 537, English 417; *Privates*—French 188,618, Russians 186,779, Belgians 34,907, English 15,740.

GENERAL FOREIGN

November 28.—Ambassador Herriek and family leave Paris for this country, receiving many tokens of appreciation from French and British subjects, and attended by Military Governor Gallieni and other officials of Paris.

November 29.—An earthquake, felt disastrously through western Greece, tears away and crumbles into the sea a large part of the Ionian island of Santa Maura.

In an official statement General Villa says that he desires only the enfranchisement of his people, and that he feels his own unfitness for the Presidency and does not seek that office.

December 1.—In Mexico, Carranza announced that the differences between his and other parties can only be settled by arms. Villa enters and occupies Mexico City without opposition.

December 2.—The Prussian Reichstag votes a new war credit of 5,000,000,000 marks (about \$1,250,000,000) and adjourns till March 2.

DOMESTIC

November 29.—The President appoints as a commission to settle all future differences between operators and miners: Seth Low, President of the National Civic Federation; Charles W. Mills, a Pennsylvania mine operator; and Patrick Gilday, an official of the Miners' Union.

November 30.—Parcel-post service is resumed between this country and Germany and Austria-Hungary. The only districts now prohibited are the war zone of northern France and Belgium, and Turkey.

December 1.—The National Security League is formed in New York for the purpose of arousing public opinion in the United States to an understanding of the need for preparedness in our Army and coast defenses.

Rear-Admiral Alfred Thayer Mahan, U. S. N., retired, naval strategist and authority on sea-power, dies suddenly at the United States Naval Hospital, in Washington, D. C.

December 2.—As a result of a conference of the National Executive Committee of the Progressive party it is announced that that party is to remain in the political field permanently, and will take a prominent part in the election of 1916.

Word is received that only through the prompt and courageous action of United States Ambassador Morgenthau was it possible for the British colony in Constantinople to escape unharmed from Turkey on November 2.

Every Day—1,400 Quarts Of Holstein Cows' Milk

are delivered to the National Home for Disabled Volunteer Soldiers at Savelle, Cal. The Wisconsin School for the Deaf at Delavan, Wis., provides no other milk but that from Holstein cows for its inmates. The Western Insane Hospital at Westboro, Mass., produces 1,000 quarts of Holstein milk per day in its own dairies for the use of its patients. In the Woodcraft School for Feeble-minded Children at Pueblo, Colo., Holstein Milk is the only kind that is used. The City Hospital and the home for Friendless Children in Wilkes-Barre, Pa., are both supplied with Holstein milk exclusively.

The Walker Gordon Milk Laboratories are recognized by the medical profession as the leading source from which to secure reliable milk for the scientific feeding of infants and invalids. They are strong endorsers of the value of Holstein milk for infants and children.

This general recognition of a special value in Holstein cows' milk carries its own convincing message. Investigate the milk of the black and white cows.

Send for our book, "The Story of Holstein Milk," for further information.

TOPICS - OF - THE - DAY

OUR GOVERNMENT'S ATTITUDE TOWARD NATIONAL DEFENSE

A PACIFIST HYSTERIA and a militarist hysteria, as one editor remarks, have been evoked in this country by the shadow of the European War, and it is not surprising if both make themselves heard in the growing discussion of the state of our national defenses. But neither extreme seems to find a voice in President Wilson's words to Congress on this subject, nor in the straightforward tho somewhat conflicting testimony and opinions laid before the public last week by such authorities as Secretary of War Garrison, Secretary of the Navy Daniels, Generals Crozier and Scott, Rear-Admirals Fletcher and Badger, ex-President Taft, and Secretary of State Bryan. Some idea of how the newspapers are lining up on the question may be gathered from articles in our issues of December 5 and December 12. In the latter was mentioned the new National Security League, which would rouse the country to an intelligent interest in national defense. Since then another citizens' organization, the National Antiarmament Association, has sprung into being with the purpose of opposing "the exploitation at this time of the so-called military unpreparedness of the United States and the comparison of our national defenses and military and naval establishments with those of European nations."

"We have not been negligent of national defense," nor "unmindful of the great responsibility resting upon us," declares the President in his address to Congress at the opening of the short session. While admitting that we are not ready upon brief notice to put in the field a nation of men trained to arms, he says that we have always found means to defend ourselves and "shall find them whenever it is necessary," but "we shall not turn America into a military camp." We have always regarded a powerful navy, he reminds us, as "our natural and proper means of defense," and this he would supplement, not by a great standing army, but by "a citizenry trained and accustomed to arms." He sees no "reason to fear that from any quarter our independence or the integrity of our territory is threatened," and therefore warns us against letting imaginary dangers move us to any course that will impair our national reputation as "champions of peace and concord," especially when "it is our dearest present hope that this character and reputation may presently, in God's providence, bring us . . . the opportunity to counsel and obtain peace in the world." But to form an adequate idea of the President's position in this matter we must turn to

more extensive quotations from his message—a message commended by the *New York Evening Post* for "laying the cold hand of reason" on the fevered brow of the alarmist, and deplored by Representative Gardner as voicing a "lullaby policy" calculated to soothe the country into a false sense of security:

"It is said in some quarters that we are not prepared for war. What is meant by being prepared? Is it meant that we are not ready upon brief notice to put a nation in the field, a nation of men trained to arms? Of course we are not ready to do that; and we shall never be in time of peace so long as we retain our present political principles and institutions. . . . We shall not turn America into a military camp. We will not ask our young men to spend the best years of their lives making soldiers of themselves. There is another sort of energy in us. It will know how to declare itself and make itself effective should occasion arise. And especially when half the world is on fire we shall be careful to make our moral insurance against the spread of the conflagration very definite and certain and adequate indeed."

He admits, however, that there is one constructive reform desirable for the increase of our security, and he outlines a plan for "a citizenry trained to arms," which the *Boston Transcript* calls "a modification of the Swiss system of military training." This, exclaims the *New York Globe*, in approving tones, would mean a truly democratic army. But the *New York Tribune* objects that it would provide only a third line of defense, whereas what the country wants to know is whether the first and second line, the Navy and the regular Army, are efficient. Says the President:

"We must depend in every time of national peril, in the future as in the past, not upon a standing army, nor yet upon a reserve army, but upon a citizenry trained and accustomed to arms. It will be right enough—right American policy, based upon our accustomed principles and practices—to provide a system by which every citizen who will volunteer for the training may be made familiar with the use of modern arms, the rudiments of drill and maneuver, and the maintenance and sanitation of camps. We should encourage such training and make it a means of discipline which our young men will learn to value. It is right that we should provide it not only, but that we should make it as attractive as possible, and so induce our young men to undergo it at such times as they can command a little freedom and can seek the physical development they need, for mere health's sake, if for nothing more. Every means by which such things can be stimulated is legitimate, and such a method smacks of true American ideas. It is right, too, that the

"COME, UNCLE, GET INTO THEIR CLASS."

—De Mar in the *Philadelphia Record*.

National Guard of the States should be developed and strengthened by every means which is not inconsistent with our obligations to our own people or with the established policy of our Government. And this, also, not because the time or occasion specially calls for such measures, but because it should be our constant policy to make these provisions for our national peace and safety.

"More than this carries with it a reversal of the whole history and character of our polity. More than this, proposed at this time, permit me to say, would mean merely that we had lost our self-possession, that we had been thrown off our balance by a war with which we have nothing to do, whose causes can not touch us, whose very existence affords us opportunities of friendship and disinterested service which should make us ashamed of any thought of hostility or fearful preparation for trouble."

In regard to the Navy, he says:

"A powerful Navy we have always regarded as our proper and natural means of defense; and it has always been of defense that we have thought, never of aggression or of conquest. But who shall tell us now what sort of navy to build? We shall take leave to be strong upon the seas, in the future as in the past; and there will be no thought of offense or of provocation in that. Our ships are our natural bulwarks. When will the experts tell us just what kind we should construct—and when will they be right for ten years together, if the relative efficiency of craft of different kinds and uses continues to change as we have seen it change under our very eyes in these last few months?"

Somewhat less optimistic is the note sounded by Secretary of War Lindley M. Garrison in his annual report, in which he urges the immediate addition of 25,000 men to the regular Army and the training of 1,000 more officers, and emphasizes the need for legislation by which an adequate reserve can be built up. This necessity for an adequate reserve, he says, exists in the militia as well as in the regular Army. "We have nothing like sufficient artillery and artillery ammunition," he adds, and he sees in the tactics developed in the European War evidence of the need of keeping our Army abreast of the times in aviation and motor transportation. He reports that at the end of June, 1914, there were only 1,485 officers and 29,405 men in the mobile Army within the continental United States, and that we have a reserve of sixteen men. War may some day be superseded by arbitration, but that day has not yet come, and, he believes,

"Merely to enfeeble ourselves in the meantime would, in my view, be unthinkable folly. By neglecting and refusing to provide ourselves with the necessary means of self-protection and self-defense we could not hasten or in any way favorably influence the ultimate results we desire in these respects."

Then he outlines a new plan for the development of a reserve:

"I am firmly convinced that if we can use the standing Army as a school [through which to pass men who come into it, with the knowledge that if they are proficient they can be discharged at any time after a year or eighteen months, we will begin at once to build up the necessary reserve, and will for the first time in the military history of this country have something approximating a balanced organization. . . . It is furthermore true that by intensive military training any young man of good health and average mentality can be made a serviceable soldier in twelve months, and, in fact, has been so made. . . . It is just as essential that the organized militia should have a proper reserve to fill up its ranks as it is that the regular Army should."

Our supply of guns is of no less moment. Testifying on this

LET US HAVE PEACE—AS SOME WOULD HAVE IT

—Westerman in the *Ohio State Journal*

point before the House Committee on Military Affairs, Brigadier General Crozier, Chief of Ordnance of the United States Army, said that in the matter of ordnance this country "has no need to feel uncomfortable." Asked if we had anything to learn from "the new 16-inch field-guns which the Germans are reported to be using in Europe," General Crozier replied:

"We do not contemplate experimenting with those big guns. No one knows what they may come to, but we must consider the purpose for which these guns were used in Europe. The French-Belgian border was defended by armored forts, mounting 3-inch and 6-inch guns, to meet such artillery as ordinarily accompanied mobile armies. The Germans brought up these special guns to demolish them. From what I understand, it is an engineering feat to move those 16-inch field-guns, and they can be transported only by rail. Now, we are not going up against anything like that, and I can see no reason why we should need any such guns as that."

The same committee was assured by General Hugh L. Scott, Chief of Staff, that we have on hand for 12-inch mortars 50 per cent. of the ammunition needed; for 16-inch guns, 33 per cent.; for 14-inch guns, 48 per cent.; for 12-inch guns, 48 per cent.; and for 10-inch guns, 100 per cent. At the present rate of appropriation, he said, it would take about four years to complete the supply of ammunition. Asked "What is our condition as to national defense as compared with two, four, or six years ago?" he replied, "It is constantly improving."

Turning to the Navy, we gather some interesting information from the testimony of Secretary of the Navy Daniels and Admirals Fletcher and Badger before the House Naval Committee. Secretary Daniels sees no reason to depart from our regular, orderly upbuilding of the Navy, but advocates the creation of a naval reserve of 25,000 men, and admits that he would

approve the authorization of four first-class battle-ships this year instead of two "if the revenues were abundant." We have now forty battle-ships built or building, and the Naval Board would like to bring the number up to forty-eight by 1919. All the commissioned vessels in the Navy, says Secretary Daniels, now total 122, and the personnel numbers 50,500. His plan for a naval reserve he outlines as follows:

"Every year, between 3,000 and 4,000 men drop out of the Navy. These men would form a splendid reserve. When we sent the fleet to Vera Cruz my office was deluged with letters and telegrams from men of this class, men who had been in the service and who desired to return. I think there were fully 25,000 such men. We keep their names and addresses, and we could very easily, as they passed out of the service, ask each man if he wished to be enrolled in the reserve. The cost of organizing such a reserve would be small, comparatively. At the next session of Congress I shall ask for authority to proceed with the organization of such a reserve. All retired officers are now being registered with that purpose in mind."

The settled policy of the United States, according to Secretary Daniels, is to have a powerful Navy, and to strengthen it all the time. But he assures the Committee that "we are not building against anybody." To quote him further:

"Whether there ought to be four battle-ships authorized this year, as the General Board of the Navy recommends, or two battle-ships, as I recommend, men's opinions differ. If the revenues of the country were sufficient to provide it, I should say four battle-ships. But as the revenues are not sufficient, I say two battle-ships is the minimum for this year to insure the development of a strong navy. We should have a strong, steady development. You will never have either for the Army

"GOME! S'POSEN' WE SHOULD MEET A REGULAR DOG."
—Donnell in the St. Louis Globe Democrat.

or Navy a defense—arms and ships—to meet the most powerful navy, but you will have a strong navy.

"We are doing all the American people desire us to do, and we are in a strong position. I think the war in Europe is going to exhaust the resources of the countries engaged, and that there is less likelihood of our having any trouble at any time in the future with those nations than there was before. You are not going to have a perfect war defense on our American policy. We do not wish, nor would the people have, a great standing army or military or naval strength that would impoverish this country. We should not go in competition with nations that are military nations."

"Ship for ship," declares Rear-Admiral Badger, "the American Navy is as good as the navy of any other nation." His testimony is thus summarized in a Washington dispatch:

"He contended that for adequate naval defense there should be forty-eight battle-ships, with four torpedo-boat destroyers to each ship of the first line; whereas there are now, including those being built or under construction, forty battle-ships and sixty-eight torpedo-boat destroyers."

Rear-Admiral Fletcher told the Committee that our Navy is virtually a match for any other except England's, because any foreign Power that attacked us would have to keep part of its fleet in home waters, and only England has ships enough to do this while sending an overwhelming naval force against us. He advised against any program calling for extensive building of submarines. In the report of his testimony we read:

"I do not see how we can do better than to develop on the same lines as heretofore."

"As yet no lesson can be drawn from the European War to show that the value of the battle-ship is any less than before or that it is not the main weapon to decide the conflict in any naval war."

"The use of the submarine in warfare may be designated as a weapon of opportunity. If the opportunity occurs it is formidable and destructive, but a skilful enemy need not allow the opportunity to occur."

Ex-President Taft, speaking before the Heptorean Club in Somerville, Mass., said that he welcomed the focusing of public opinion on the state of our defenses, and dissented from the view of "those sincere gentlemen who oppose military and naval defenses for this country on the ground that they will make for war." He sees need of increase in the personnel of our coast artillery, our mobile Army, and our Navy, but he sees "no need of great excitement." Secretary of State Bryan, speaking before the Baltimore Bar Association, explained that the President's aim is to make the people so grateful to their country that they would willingly die for it. Unlike Mr. Taft, Mr. Bryan believes that "you can not prepare for war unless you intend to make war." To quote further:

"The President knows that if this country needed a million men and needed them in a day, the call could go out at sunrise and the sun would go down on a million men in arms."

"They say we are not prepared for war. He believes that the best prevention for war is to so lift the burdens from the people in time of peace that every citizen will be so grateful to his country that he will be willing to die for it when the necessities arise."

"They tell me that preparedness is a means of preventing war. If that were so there would be no war in Europe to-day."

A POSSIBILITY.

"Just a moment! We aren't quite prepared."

—Weed in the New York Tribune.

OUR RIGHT TO ARM THE WARRING NATIONS

THE CELERITY with which Mr. Charles M. Schwab decided to cancel the Fore River Shipbuilding Company's \$50,000,000 order for submarines, destined for some foreign Power unknown, indicates to some his inner conviction that, while "eminent international lawyers" had assured him that the transaction was legal, there was more than a little doubt on his part of its ultimate righteousness. "Of the wisdom of the Administration's attitude," in persuading the cancellation of the submarine order, avers the *Philadelphia Public Ledger*, "there can be no possible doubt in the circumstances." And this view of the matter is upheld unreservedly by a number of other writers. Lest there be difficulty in looking at the matter impartially, the *New York World* brings it home by recalling a parallel case in our own Civil War. The *Alabama*, we are reminded, "was notoriously built in England for the Confederates." This was felt to be a sinister blow at the Union cause, tho delivered by a "neutral" nation, but —

"In spite of our complaints and warnings, it was permitted to put to sea, and for twenty-two months it made war upon our commerce. The damage that it did was assessed against Great Britain by the tribunal of arbitration. A submarine is as much a ship of war as a cruiser, and the President was clearly in the right when he notified Mr. Schwab that the work must not be undertaken."

As to the actual legality or illegality of the building and selling of such warcraft there is considerable confusion. *The World*, with some asperity, desires to "know the names of the eminent lawyers who advised Mr. Charles M. Schwab" that there would be no violation of neutrality in a case where "almost any layman could have told Mr. Schwab that in making such a contract he was certain to come into conflict with the United States Government." From this unbending view others dissent. But the *New York Globe* very plausibly argues that the law covering other warcraft also applies to submarines. It remarks:

"Ships of war, for use above the water, may not be built at our yards for any of the belligerents. This is now well settled. The same prohibition would seem to apply to ships for use under the water. The fact that they went abroad in parts and were to be reassembled should not make a difference. Great Britain and the United States are under agreement to use 'diligence to prevent the departure from its jurisdiction of any vessel intended to cruise or to carry on war against a country with which it is at peace, such vessel having been specially adapted, in whole or in part, within such jurisdiction to warlike use.' It would not only be against international practise to build war-vessels for belligerents, but it would be dangerous. A precedent would be set permitting like sales to our enemy should we be at war."

But it is the President's personal interpretation of the law that sticks in the crop of several of the newspapers, particularly in the case of Manhattan's anti-Administration dailies. Added to this, the thought that, while Mr. Schwab "has not given up anything belonging to him," the workers in the steel trades, and through them the whole country, have given up a fat and profitable contract, brings forth a scathing arraignment of Mr. Wilson's policy in the affair. *The Sun*, for example, refers to the many articles that are being knitted in this country for use by the soldiers in the trenches. These will unquestionably "comfort and sustain the fighting men who receive them," and therefore form "a direct contribution to their nation's belligerent resources." What of these? "Does the fact that they produce no trade benefit to this country exempt them?" This attempt at a distinction between articles of use, food, clothing, and so on, and actual munitions of war, which is emphasized in the bill introduced by Senator Hitchcock, is one that many editors feel to be unjustified. The idea generally held is that we are not our brother's keeper. We can make and sell what any nation

wishes to order. It is shipped as contraband, at the buyer's risk. If it happens that only certain nations control the Atlantic, and consequently are the only ones who can trade profitably with us, we are assured that that is not our fault or concern. Both the United States and the Atlantic Ocean have been here for a considerable time, and if any nation has not taken them sufficiently into account, it is obviously that nation's fault. This is the view of the *Brooklyn Eagle* editors, who accuse Mr. Wilson of "leaning backward" in his attempt to "stand straight" on this issue. The effect on the country's welfare which they see in this policy urges them to insist that "the law is the law."

"It should be and will be enforced. The well-defined principles of international law should govern, and will govern, the interpretation and the enforcement of our statutes. But the highest morality as well as the highest consideration of expediency demands that within these limitations we should increase our trade, stimulate our industry, keep our factories busy, in order that depression here may not make it impossible for us to help the rest of the world in emergency conditions, of which the starving condition of Belgium is only a single forecast for thinking minds."

More than half of Schwab's estimated \$50,000,000 new business would have been spent in wages. Twenty-five thousand families might have got \$1,000 a year out of it. But the incidental meaning of such a policy of restriction is far more disastrous than the specific case now affected. Our factories are already busy on 1,000,000 uniforms for belligerents, on 2,000,000 pairs of shoes for belligerents. Cartridge-making concerns are working night and day. Tens of thousands of horses are being bought for cavalry use. Tremendous orders for barbed wire, for machine guns, for engine machinery, for structural steel used in fortifications, are supplementing the demand for our food-stuffs. The logic that bans the order for submarines would ban the selling of even conditional contraband. It appears to us bad logic, tho a great logician stands for it.

"As for the proposed new legislation prohibiting the export of munitions of war, fair-minded Americans must regard it as thoroughly pernicious. It would make us the ally of Germany in a very vital sense. It would accomplish through Washington law-making what Germany would have had to spend at least \$500,000,000 to accomplish herself through a navy controlling the seas as England controls them to-day. It is a great advantage to neutral nations that one side does control the seas. Great Britain is reaping the advantage of her expenditures. Why on earth should we attempt to play into the hands of Germany at immense cost to our home interests?"

"President Wilson should reconsider his general policy. We have been hard hit by Europe's outbreak of medievalism, by the world-tragedy for which we have no responsibility. Let us at least not take the food from our own children's mouths, keep our factories idle, create social unrest here by tenuous argumentative exploitation of 'the spirit of neutrality.' We can not save others unless we first save ourselves."

In similar vein the *New York Press* summarizes what, it is conceived by many, must be our attitude in the future toward the nations at war:

"If we ought to starve them out of war and into peace by keeping them from getting arms and ammunitions, then we ought to starve them out financially. We ought to starve them out economically. We ought to starve them out literally. But of course nobody maintains that this is necessary, and nobody thinks it would be right. Indeed, there are men abhorring war as deeply as President Wilson and Senator Hitchcock abhor it, with convictions that the way to end war, the way to have the least possible evil and the least possible suffering inflicted by war, is to make it so overpowering and so terrible that it must, by the inability of one side or the other to drag it on, be soon over."

"Nobody need take that side of the argument to prove the error of Senator Hitchcock's stand. It is clear enough and it is convincing enough that, whether it be arms and ammunition or money, or food and clothing, what we must do as neutrals is not to interfere but stand prepared to supply alike to all belligerents under the same conditions."

"The real principle—the fundamental principle—involved in neutrality is not to give any help to one Power that would be refused to another Power; not to hinder any Power in ways that would not be used to hinder another Power."

THE THREE ADMIRALS.

GERMANY'S ROVERS SUNK

WITH THE DESTRUCTION of the *Scharnhorst*, *Gneisenau*, *Leipzig*, and *Nürnberg* in the running fight in the South Atlantic off the Falkland Islands, German naval power on the high seas is practically at an end, as our press view it. The two or three cruisers and armed liners still at large may do some damage to British shipping, but our editors expect to see them soon interned or sent to the fate of the *Emden*. Admiral Cradock has been avenged, to the delight of the London papers, which are as much pleased at the moral effect as at the practical result of so clean-cut a victory. In a neutral nation the gallantry and efficiency of both combatants are gladly acknowledged. As the *New York Herald* says:

"Bound in the end to be picked up, always facing desperate conditions that demanded desperate remedies, seamen the world over must unite in praising the intrepidity and skill with which the German rovers carried out the duties intrusted to them. On the other hand, with the wide expanse of sea that had to be covered and the will-o'-the-wisp conditions that had to be resolved, no less praise is the mood of the squadron which, under the command of Vice-Admiral Sir Frederick Sturdee, has added, in a good, old-fashioned gun way, new luster to British arms."

The British victory of December 8 was the "last act in a great sea drama," which the *New York World* proceeds to recapitulate. To summarize the *World's* story:

Just before the war opened, Admiral von Spee, with the *Scharnhorst* and the *Gneisenau*, was lying in the British harbor of Singapore, in the Strait of Malakka; the *Nürnberg* was at Honolulu, the *Leipzig* probably at Tsing-tao, and the *Dresden* in the Caribbean. The shortest distance between any two of these scattered units is at least 2,000 miles by any steaming course. About the 1st of August these ships slipped out of their respective harbors.

The other side in the great game that was beginning was represented by the entire Japanese Navy and a number of British, Australian, and French cruisers. Admiral von Spee's scattered squadron was facing heavy odds, but his chance lay in the fact that his foes were as widely dispersed. The first action resulted in two ships, presumably the *Lancaster* and the *Hampshire*, limping into Hongkong Harbor to be beached. Certain units of the German fleet appeared, or were reported, at various places. Then two of them bombarded Papeete, in French Tahiti. But by this time the chase was on in grim earnest. Admiral Cradock's squadron sought the Germans in

the South Atlantic. But Admiral von Spee, in the *World's* opinion, knew all about his pursuers' whereabouts and strength. So on November 1, when Admiral Cradock met the enemy, he lost two ships and his own life, and did the enemy no damage. But his success advertised his whereabouts in a manner certain to bring all the pursuers closer than ever upon his trail. And when a more powerful British squadron came up, Admiral von Spee met his fate at last, with about 1,800 of his men.

It is known that the officer commanding the British squadron was Vice-Admiral Sir Frederick Sturdee, chief of the British War Staff, but, as the *London Daily Chronicle* judiciously phrases it, "the Admiralty exercises wise reticence as to the names and number of ships in his command. As our casualties are reported to be few, we may conclude that this time it was we, not the Germans, whose strategy succeeded in bringing a superior force to bear." The moral effect of the victory, says the *London Daily News*, "will carry even to the least understanding or most skeptical mind the conviction that British sea-power is as sure as ever and maintained by men as skilful and valorous as those who created it."

The immediate result of the battle of December 8 is, as several New York editors remark, to clear the waters of the New World of the sea-power of Germany and to make the shipping of Britain and her allies practically safe. The more lasting result, says the *New York Press*, "carries in the unanswerable lesson that the ship that can carry the mightiest guns holds dominion of the oceans and the shores they wash." Here the battle-ship, in the opinion of *The Press*, scores over the submarine. Other New York dailies have come to the conclusion that in modern naval warfare if one side gets the upper hand or has a superiority of metal, it means practically complete destruction for the defeated. *The Globe* recalls the one-sided victories in the Spanish-American and Russo-Japanese wars as further proof that nowadays "it is all or nothing in naval warfare."

"A 10 per cent. margin of inferiority seems as fatal as a 50 per cent. margin of inferiority. The combatant having the superior machine suffers practically no losses and annihilates his opponent as he pleases."

A table of naval losses published by the *New York Times* shows that Germany has up to date lost 30 ships, aggregating 104,410 tons and the British 20 ships, aggregating 156,345 tons.

END OF THE COLORADO COAL STRIKE

THE COLORADO coal-miners have voted to go back to work, and with the expected withdrawal of the Federal troops and "the apparent realization at last by the Colorado authorities of their responsibility for the preservation of order and the enforcement of the laws," the *New York Evening Post* finds "reason to hope that this most unfortunate episode in our industrial history has really come to an end." Altho the conditions which brought about the miners' revolt, the *New York Tribune* warns us, "are not yet ended," there is the consolation that we are likely to know more about these conditions. The Federal Industrial Commission is extracting much interesting information from those testifying at its hearings in Colorado, the Rockefeller Foundation intends to do some investigating in Colorado, and the President's mediation commission is ready to do all it can to insure permanent peace in the State. "We recognize no surrender and shall continue to propagate the principles of our humanitarian movement throughout the coal-fields of Colorado," declared the executive board of the United Mine Workers of America in recommending the end of the strike. In view of the President's request that both parties to the Colorado controversy make use of the mediation commission he appointed, the board "deem it the part of wisdom to accept his suggestion and terminate the strike," for "in our opinion, to wage the strike further would not mean additional gain to our members." If the operators should reject the good offices of the Commission, then, says this report, "upon their shoulders will rest the responsibility of any future trouble in the mining-fields of Colorado." The Denver convention of union miners voted unanimously to call off the strike in accordance with the executive board's wishes.

This solution, say several Eastern papers, is a moral victory for the miners. The *New York Tribune* comments:

"The men have agreed to go back to work on terms by which they will receive the scale of wages paid at non-union mines—10 per cent. below the scale in effect at unionized mines. Nevertheless, their decision to end the strike, as the international executive board of the United Mine Workers pointed out, is not a surrender—at least not a complete surrender. They have gained about all that any such protest can be expected to gain at present. They now have a fair investigation under way by a Federal body, and there exists a commission appointed by the President himself to handle future differences. They have also

the good will of most of the public, won by their manifest hardships and the fact that they had confidence enough in their case to be willing to submit it to arbitration, when the mine-owners were afraid to take a similar stand. They have a right to expect State enforcement of laws which now exist and the enactment of further laws to end the un-American serfdom of corporation-owned miners' towns. Public pressure on the State authorities and, if necessary, on the Federal authorities, is the only thing which can counteract the money and political power of the mine-operators. To obtain this public pressure—public sympathy—really this strike has been worth while, even tho it cost the miners the loss of about \$6,000,000 in wages, untold sufferings and the lives of women and children needlessly sacrificed to a 'economic principle' rooted in greed."

On the other hand, some observers think the strike has ended in a complete fiasco, and that, in the *Philadelphia Public Ledger's* words, the United Mine Workers of America "chose a very unfortunate incident upon which to test their case in the court of public opinion." To quote *The Public Ledger* further:

"If the Colorado miners had been working for a scale of wages below the normal, or if their conditions of labor had involved unnecessary hardship, they would have had a good chance to win. The strike was called for the purpose of forcing the operating companies to recognize the union and to close the mines to all unorganized labor. At first there was a certain degree of enthusiasm among the strikers themselves; but this passed away; many of the original complainants returned to work and others left the State for other fields of labor; and the strike was then kept up by artifice—outside idlers being imported by the United Mine Workers of America and kept there as a ruse. The pageant cost the United Mine Workers a colossal sum, and the result has been nil."

"There is no doubt that the outcome of the Colorado strike will have a salutary influence both upon the American Federation of Labor and the United Mine Workers of America. They will realize that they must not stake their existence upon an artificial case, that they can not win public opinion for a cause in which the issue is unreal, and that they can not hold their component locals together by reverting to the violent methods in vogue several decades ago."

Speaking for the operators, President J. F. Welborn, of the Colorado Fuel and Iron Company, says the calling off of the strike "is naturally a cause for general satisfaction." But he adds significantly: "The general trade conditions make it impossible for the mining companies to give immediate or early employment to all of the strikers who have not been connected with any violence, tho we will reemploy such men as fast as

IN BELGIUM.

JEAN—"Do you think St. Nicholas will find us, now that we haven't a chimney?" —Marcus in the *New York Times*.

DOING THEIR CHRISTMAS SHOPPING.

—McCutcheon in the *Chicago Tribune*.

vacancies occur or improved trade conditions make possible." Mr. Welborn is apprehensive of the "lawless element" still in possession of hidden arms and remaining in the tent colonies at strategic points. So he thinks that, "for a time at least, the large army of workmen—to say nothing of the mining properties—must have the protection of military forces, either of the State or nation."

Somewhat in the nature of a reply is the remark of John R. Lawson, Colorado member of the Mine Workers' executive board, that "the calling off of the strike leaves us in a position to demand the enforcement of the statute permitting miners to belong to the union." The tent colonies, he explains, will be continued for the present, since they are the only homes the men have. Strike benefits will be continued, the men who refuse to try to get employment will not be supported indefinitely, according to Mr. Lawson.

In the hearings before the Industrial Commission in Denver Mr. J. F. Welborn, according to the press dispatches, admitted that the operators had paid Colorado militiamen, that certain companies of militia were made up of mine employees, and that John D. Rockefeller, Jr., had personally directed some of the operators' movements during the strike. Many questions were asked concerning the pamphlet, "Facts on Colorado's Struggle for Industrial Freedom." Mr. Welborn admitted his inability to guarantee that some of the assertions really were "facts."

He denied the allegations of political control in the coal counties, but other witnesses described this control in considerable detail. So whatever evidence favorable to either side is still forthcoming, the Newark *News* believes that

"The simple recital of these unquestioned facts furnishes sufficient basis for the judgment that the coal companies of Colorado, whatever principle may have guided their actions in this controversy, have been remiss, that the miners have shown the better spirit, and that the conditions surrounding this prolonged conflict were such as neither public opinion nor governmental authority should permit to be repeated."

The coal strike now called off began in the northern fields on April 4, 1910. The State-wide strike, which assumed most importance in the southern fields, was called on September 23, 1913, and, as the New York *Times* recalls,

"Virtually paralyzed the industry in Colorado, threw the commonwealth into turmoil, and finally led to the calling out of the State militia and later to the importation of Federal troops. Sixty-six persons are known to have been killed and about fifty injured as a result of disorders incident to the strike. The battle between strikers, mine-guards, and State troops at Ludlow on April 20 last ended in the destruction of the strikers' tent colony. Twelve children and two women were found dead in the ruins. Subsequent warfare included attacks upon various mining-camps in Las Animas, Huerfano, Fremont, and Boulder counties. The arrival of Federal troops on April 30, 1914, restored peace."

Later came President Wilson's vain offers of mediation, his appointment, on November 29, of a commission to settle future controversy, the questionings and reports of several investigating bodies, and the miners' decision to end the strike on December 10.

PROGRESSIVE DEMISE DENIED

OBITUARIES of the Progressive party, freely given by its editorial critics, appear to arouse a resentment from the subject of the notices which is at least unusual in such sketches. After the November election a number of Republican and Democratic editors, evidently thinking that a drop from 4,119,507 votes in 1912 to 1,746,125 in 1914 was sufficient evidence of dissolution, proceeded to write more or less sympathetic obituary notices for the Progressive party. As if in reply to these, the Progressive chiefs met in Chicago, and have issued a statement declaring their intention to keep

up the organization and campaign of education with the view of being a serious factor in 1916. To the Kansas *City Journal* (Rep.) this only "means that the Progressive party, altho dead, will be embalmed and kept on exhibition a while longer," and the sentiment is repeated by the Brooklyn *Eagle* (Dem.), Albany *Journal* (Rep.), Philadelphia *Inquirer* (Rep.), Pittsburgh *Gazette-Times* (Rep.), and San (Dem.), Nashville *Tennessean* (Dem.), and Savannah *News* (Dem.). But in Chicago, where the conference was held, *The Tribune* (Prog.), *Post* (Prog.), and *Herald* (Ind.) are hopeful of better days, while the usually unappreciative New York *Times* ventures the assertion that the party will "become a more real one than before."

At the Chicago conference, according to the official statement, there were ninety-one representatives from thirty-four States. These included George W. Perkins, Gifford Pinchot, William Flinn, William Allen White, Medill McCormick, and Miss Jane Addams. Colonel Roosevelt did not attend. Some speakers, we read in the press accounts, urged that the Roosevelt-Johnson ticket be put forward again in 1916. Delegates from the South, the Philadelphia *North American* (Prog.) notes, "reported how the Progressives had elected the first non-Democratic Congressman from Louisiana, had carried thirty-one counties in Georgia, as against seven in 1912, and without organization had polled 25,000 votes in Alabama." Other talk is thus reported by *The Progressive Herald* (Kalamazoo):

"It was almost unanimous that there can be no reconciliation with the Republican party under any circumstances. Almost everybody was for a renewal of the fight with Progressive principles all along the line. If it had come to a show-down that the party quit and line up with either a Republican candidate, Borah, Whitman, or anybody else, or President Wilson, the decision would have gone to the President."

It was the unanimous judgment of the executive committee, according to the statement issued after the meeting, "that the Progressive organization and campaign of education should be continued on the lines heretofore followed," for,

"Progressive principles are permanent, and it is now more than ever evident that the Progressive party to-day is the necessary organ for their realization."

The friendly attitude toward President Wilson seems significant to Republican and Democratic papers alike. Thus we find in William Barnes's Albany *Journal* (Rep.) the prediction that "when only the irreconcilables of the late Progressive party are

PATCHING IT UP.

—Kitty in the New York World.

left outside the Republican ranks, the disappearance of the party will be completed through absorption of the irreconcilables by the Democratic party." Such a movement the *Nashville Tennessean* (Dem.) is glad to welcome, saying that the Progressive break-up "should result in wholesale accessions to the Democracy, which has shown itself capable of preserving the best of the past and providing liberally and wisely for present and future public needs." An opposite view, however, is taken by the *Newark News* (Ind.), which calls attention to the Progressive attack on the Democratic tariff and declares that "as between that element of the Progressive party represented at the Chicago conference and the Republican party, the distance is but a step, but between the former and the Democratic party they have dug a chasm."

Perhaps it is but a step, yet the step must be taken by the Republicans, in the opinion of several papers prominent in the Progressive movement, including the *Chicago Tribune* (Prog.) and the *Detroit Times* (Ind.). Says *The Tribune*:

"If the Republican leaders in Congress and throughout the States show a superiority of integrity and intelligence over the Democrats, and if a candidate representative of the best spirit of the nation is nominated for President, he may expect the votes of the bulk of the Progressives."

HOW THE ALLIES CAN STOP THE GERMANS.

—McCutcheon in the *Chicago Tribune*

FOREIGN - COMMENT

SCANDINAVIAN TREMORS

THE FEAR of Russian aggression has led Sweden of late years to look to Germany for protection, we have been told, so that it comes as a little of a surprise to hear that all three of the Scandinavian lands are with the Allies in sympathy. As in America, strong efforts are being made by Germany to swing public opinion to the opposite side, and these efforts, combined with the English attitude on contraband, are reported to be causing the Scandinavian Governments considerable uneasiness, while the Norwegians, it is stated, find it hard to believe that Germany may not force Sweden into the fight after all. This view finds expression in a long and interesting article, from the pen of Edwin Bjorkman, in the *London Morning Post*, where the Norwegian attitude is thus summarized:

"In spite of the North Cape excursions of the German Emperor, in spite of the glowing Pan-Germanism of the late Björnstjerne Björnson, and in spite of the employment of Bjorn Björnson as the Emperor's principal Scandinavian press agent, the Norwegians do not trust the Germans very much. . . . The Norwegians do not want to fight anybody, and they would be particularly chagrined at having to fight for Germany against the English. Their sympathies are beyond all doubt with the Allies. And with England Norway has probably more in common than with any other non-Scandinavian nation. To England and to its fleet, Norway, like Denmark, would instinctively look for support in a moment of dire need."

Sweden is inclined, the writer says, to look to Germany for defense against possible Russian aggression, but claims that Swedish opinion has been unfavorably influenced by the treatment of Belgium. Denmark's position is thus described:

"Denmark fears Germany, of course, and fears it more than any other Power. But that fear is mixed with hatred, too—a

hatred that has lost very little of its intensity by the passing of fifty years since the Duchies of Schleswig and Holstein were taken by Germany. . . . Tho culturally Denmark has always been close to Germany, and tho the economical community of interest between the two countries has been steadily increasing, the prevailing Danish attitude toward its powerful southern neighbor remains distrustful to the verge of open hostility. . . . Denmark has been drawn more and more toward England, not only because here it has found one of its best markets, but because of its keen realization that England more than any other Great Power has an interest in protecting a country which may be said to hold the only key to the Baltic."

Writing in the *London Reynolds's Newspaper*, Mr. Eric Nilsen expresses entirely similar views and comments on the German publicity campaign:

"Ever since the war started the German Press Bureau has made tremendous efforts to influence public opinion in Scandinavia in favor of Germany and against the Allies, Britain in particular. It is not generally known, for instance, that at least one leading paper in Christiania was offered a substantial subsidy if it would adopt a pro-German attitude."

While the bulk of popular sentiment is with the Allies, the German sympathizers have enrolled upon their side some of the most distinguished men in the three kingdoms, thus, for example, the great Norwegian scholar, Hans Aal, in an article in the *Christiania Dagbladet*, writes:

"In the last forty-four years no country has had such an aversion to war with other civilized nations as Germany has had. She has clearly felt that her conquests should be those of culture effected by intellectual weapons, and not territorial ones to be gained by the sword, and she has realized, as no other nation has, her responsibility in the domain of politics."

THREE ROYAL PRINCES AND OTHER GERMAN GENERALS LEADING THE FIGHT AGAINST FRANCE.

GERMANY'S SHOWING IN THE WAR

GERMANY IS SATISFIED with her showing in the war, according to a lengthy analysis of the campaign on both fronts published in the *Frankfurter Zeitung*. The writer admits that the great German rush on Paris is finally checked, but thinks that this was inevitable. While regretting that the first four months of the war have not brought things to a decisive issue, he claims that events have proved the German forces stronger than all the combinations the Allies could, or can, bring against them. He goes on to say:

"Our enemies did not doubt a moment that Russia would crush us, while France, through a bold offensive in the Rhine Valley, would draw our troops upon itself, leaving England to

throttle us in our desperation by depriving us of breath and sustenance. But of all this nothing has happened. But what have we ourselves achieved instead?

"We breathe freely and fully as ever. Our provision warehouses are filled and in our coffers lie billions of good money which all of us have given and which is only a small part of what our people are prepared to give and will give if the first is spent. Our entire national life in our besieged land has become one single great organization—an organization of battle, an organization of sustenance, of credit, of peaceful work, and of providence."

With conditions at home thus satisfactory, the achievements of the armies abroad are considered equally encouraging:

"The military harvest of the last quarter of a year has been great. Come what may, the mighty advantage which we have won in Belgium and France can not be taken away from us. The State that has become the center of our campaign in the West, Belgium, is almost completely in our hands. Through it lead our lines of support, and its rich resources are a source of supply for a great part of our war needs. Our troops stand almost entirely on hostile soil. Behind the sheltering wall of our armies we lead a scarcely disturbed life. That saves the forces of our people and affords a mighty saving in food-supplies. Belgium, for the immediate future, is a German possession, and it will have to contribute its share in supporting the burden of the war."

While the military situation both within and without the territories of the Dual Alliance is thus hopeful, the writer finds that the Allies are in bad straits:

"But our enemies? The great beast in the East stamps and pants under the lashes of the knout. The people itself, stupid and driven, has been forced into the war. Can that last? France is worn out, almost devoid of effective organization, and in large part unwilling, lacking the open purse of our citizens. Tremendous lists of losses in dead and wounded are carefully suppressed, until the revelation of the truth will prove doubly crushing. Lies and jingoism drive the citizens to the front; a war newspaper on the field tries to inject courage into the Army. The true situation is fearfully concealed from the troops. How long can this forced condition be kept up?

"England sends her heaviest guns to the Continent, and to protect them a force of troops which, measured by German standards, can be accounted but of little value for decisive fighting and for the storm of battle. That is all that the rash Government of that people can do."

The military critic of the *Berliner Tageblatt*, the famous Major Morah, thinks that Russia has failed as a serious menace to German success. He reasons:

"The plan of campaign, originally made in Paris in the interests of France and England, was that Russia should throw her chief strength against Germany. . . . Russia, however, threw

her main forces against Austria, believing that she would be able to crush that country effectually in a short time, but after four months' fighting this has not been accomplished.

"Russia has now been compelled to change her whole plan of campaign—a step which often enough decides final victory in favor of the opponent."

WHO'S WHO IN THE GERMAN ARMY

FRANCE CALLS THE GERMAN BLUFF, as she terms it, in a note appended to the daily official bulletin detailing the movements of the troops. According to this statement, Germany is claiming an army of impossible dimensions, and, while it may exist upon paper, the French War Office states that the number of men actually in the field falls far short of the number the Germans have announced. This official statement runs in part as follows:

"The German announcement that there are a hundred German army corps in the field is pure bluff. The truth is that there are fifty-eight and a half corps, of which twenty-five and a half were active at the declaration of war, and thirty-three reserve corps formed since the opening of the war. The total force operating in the western theater of war has been fifty-two corps, made up of twenty-one and a half active, twenty-two and a half reserve corps, and eight territorial, or *Landwehr*. Against Russia are four active, ten and a half reserve, and seven *Landwehr* corps, in addition to the Austro-Hungarian forces."

After discussing the number of men employed under Field-Marshal von Hindenburg against the Russians, and the reserves in Silesia, the French estimate amounts to four active army corps, eleven reserve corps, and seven corps of *Landwehr*, or second line of reserves, amounting in all to some 880,000 men in the Eastern theater of war. On the West:

"Against France are the fourth, sixth, second, first, seventh, third, and fifth armies, in addition to four detachments of an army. In Belgium is the fourth army, under the Duke of Württemberg, which contains a division of marines. Five corps of reserves also are in Belgium, extending as far as Bapaume.

"The sixth army, under the Crown Prince of Bavaria, has five active corps and two and a half corps of reserves.

"The second army, under General von Bülow, to the south of the preceding, comprises four active corps and one and one-half corps of reserves.

"The first army, under General von Kluck, comprises on the left of the army of General von Bülow three active corps and two and one-half reserve corps.

"The seventh army, under General von Heeringen, between

Laon and Reims, is made up of five active corps and two and one-half reserve corps and a brigade of *Landwehr*.

"The third army, under General von Einem, has a strength of two active corps, three and one-half corps of reserves, three brigades of *Landwehr*, and two other corps.

"The fifth army, commanded by the Crown Prince, includes two active corps, two and one-half reserve corps, and three brigades of *Landwehr* on the heights of the Meuse.

"The army of General von Strantz is composed of two active corps and about one and a half corps of reserves.

"From the Moselle to the frontier of Switzerland there is the strength of one reserve corps and ten brigades of *Landwehr*."

The total strength of the German Army, according to this estimate, actually at the front, is 2,340,000, taking 40,000 men as the usual strength of a German army corps.

THE EAGLE COMIQUE.

THE KAISER (reviving an old music-hall refrain)—"Has anybody here seen Calais?"
—Punch (London).

IRELAND'S STAND

GERMAN GOLD IN IRELAND to buy Erin's sympathy, enthusiastic pledges of Irish support of England in the struggle, the burial of the Ulster hatchet forever—such are some of the conflicting reports from Ireland appearing in the daily press, making it a little difficult to know just where Ireland stands. We are told by Mr. William Redmond, in the columns of *The Westminster Gazette*, that the passing of the Home Rule Bill has worked a wonderful change in the attitude of Ireland toward her ancient enemy, and that Erin will support England to the last drop of her blood:

"Ireland enters wholeheartedly into the struggle, and England has every reason to feel that in conferring Home Rule she has already been rewarded with the inestimable boon of the genuine and hearty friendship of Ireland.

"In this war, on its merits, Ireland is frankly on the side of the Allies, and if she is taking, as she is, a strong and active part in the war on the side of England and the other Allies, she is doing so with a spirit which she never felt before—the spirit of freedom; she feels that in this war she has her interests in full harmony with her sentiments and sympathies."

Very similar in tone are the utterances of representative Irish papers such as *The Freeman*, *Independent*, *Herald*, and *Evening Telegraph*, in Dublin, and numbers of the provincial papers, as, for example, the *Tuam Herald*, which says:

"We, in Ireland, shall, to a man, back up England in the struggle, and lend every help and aid. We shall do so out of loyalty to the Empire and from a consciousness that it is our duty and our interest so to act in this critical and serious stage in our country's history and fortunes when such far-extending issues rest on the result."

While this may be the attitude of the majority of the Irish press, it cannot be denied that there is a section of Irish opinion which is strongly anti-English and even pro-German in feeling. This we learn from the *Toronto Daily News*, which comments on the situation as follows:

"It is curious that many Irish-Americans in the United States are as hostile to Great Britain as the German population. It was said that the concession of Home Rule would reconcile Nationalist Irishmen the world over to the British Empire. But Home Rule has been passed, and the extreme Irish element in the States maintains its old attitude of sullen and bitter hatred of England. So it appears that recruiting in Nationalist Ireland is restrained by treasonable publications subsidized by German agents."

This allegation of German activity finds an echo in no less an august sanctuary than the Dublin City Council, for the *Manchester Guardian*, in reporting one of its meetings, states:

"The Lord Mayor said circulars from America were going through the post that contained some of the vilest things ever

uttered in the name of Ireland. Some had reached him that morning. German money had been sent to Ireland, but the gentlemen who sent it found they were not getting value, and were cautious about sending more. . . . There was a small section in Ireland at present which was endeavoring to convey to the people of America that Mr. Redmond did not represent Irish public opinion."

Meanwhile the German papers volunteer interesting information. Thus the *Berliner Tageblatt* publishes a lengthy communication from Dr. Julius Pokorny, lecturer in Celtic philology in the University of Vienna. He writes:

"As the English suppress all news which would give us information as to their desperate condition, it is interesting to note that leaflets sent us from Ireland assert that a single German army corps could easily seize Ireland, in consequence of the total lack of fortifications, arsenals, and trained soldiers. The Irish could not desire a better lot than to be administered like Alsace-Lorraine by the German Empire, and would be delighted if they were as 'ill-treated' as the Prussian Poles. . . . The recently published news that Mr. Redmond, while attempting to raise Irish recruits for the British Army, was beaten by his hearers, proves to us that these leaflets have not failed to effect their purpose."

The Berlin Socialist organ, the *Vorwärts*, makes light of Mr. Redmond's recruiting efforts:

"News from Irish quarters shows us that Redmond himself is not wholeheartedly in this recruiting campaign, and we hear that the Nationalist leaders have undertaken it not in the least seriously, but only because they must, if they are going to deprive the Ulstermen of their weapons against the Nationalists. The Ulstermen are watching the movements of the Nationalists with Argus-eyes, in the hope that they will take some false step which will have the effect of reducing the Home Rule Act to waste paper at the end of the war."

The *Echo de Paris* publishes a letter from Lord Ashbourne, a leader in the Gaelic League, who states that the riots in Dublin at the end of July were in a great measure responsible for the war, as the Kaiser was led to believe that they were the beginning of civil war in Ireland. He goes on to say that Ireland is now the friend of England and that recruiting is proceeding with great enthusiasm. This is due to a gradual change in Irish public opinion since the war began and is the result, he claims, of the efforts of Nationalist leaders:

"It is scarcely necessary to say that we had to work earnestly among our people. Mr. Redmond, with the instinct of a statesman, devoted himself solely to this work, but only a week before blood had flowed in the streets of Dublin, and our task was step by step to bring the people of Ireland to see that the moment had come to stretch out the hand of friendship to England.

"We have succeeded to the full, and I am bound to say that our friendship toward France has materially aided us in the struggle. As in South Africa, there are always malcontents, but their numbers are so small that they do not count."—*Translations made for THE LITERARY DIGEST.*

IRISH NATIONALISTS PARTICIPATE IN THE WAR.

Mr. William Redmond, M. P., who is now an officer with the British Army at the front, presenting the new colors to the junior subaltern of the Cork Battalion of the Irish National Volunteers, after which he reviewed the regiment.

SCIENCE - AND - INVENTION

LAKE MIRAFLORES—INVADED BY THE PACIFIC.

THE FIFTY-FIVE FEET ABOVE SEA-LEVEL AND EIGHT MILES INLAND, SALT WATER FROM THE PACIFIC OCEAN IS GRADUALLY FLOWING INTO IT.

HOW THE PACIFIC OCEAN RISES TO INVADE A LAKE

CAN WATER, without pressure exerted upon it, flow up hill? It certainly can, if the conditions are right. It does in Miraflores Lake, Panama, and Colonel Goethals's annual report tells just how. It is only fair to say that purists might, with some justice, object to the word "flow," in this connection, but there is no other, in ordinary colloquial English, that could be substituted for it. The facts are that salt water from the Pacific goes through the canal into Miraflores Lake, eight miles away and fifty-five feet above sea-level, in such quantities that the plan to use the lake for water-supply had to be given up. The expert engineers on the spot seem to have been surprised by this peculiar instance of water climbing a hill, especially as the salt water, which performed the feat, is heavier than the fresh. But its weight, it appears, facilitated its ascent. Says a writer in *Engineering News* (New York, November 26), in substance:

"A year and a half ago, the question of a source of water-supply for the towns at the western end of the Canal, including the terminal at Balboa, was under consideration. Various projects were considered, but the one involving the least cost of any was to take the supply from Miraflores Lake. A further advantage of this supply was that its quantity was sufficient for every requirement of the future.

"Miraflores Lake is a basin a little less than a mile long, extending from the foot of the Pedro Miguel locks (which are at the Pacific end of the Culebra Cut) westward to the head of the Miraflores locks. The water-supply of Miraflores Lake comes from Gatun Lake through the Culebra Cut. Every time a vessel passes through the Pedro Miguel locks, a lockful of water is discharged into Miraflores Lake, and a similar amount is, of course, abstracted from Miraflores Lake as the vessel passes through the Miraflores locks. There are also some small streams draining into the lake, and it is, of course, possible at any time to supplement the flow into the lake from Culebra Cut through the Pedro Miguel locks.

"The surface of Miraflores Lake is fifty-five feet higher than mean tide in the Pacific. Besides this, it is to be noted that the Miraflores locks are about eight miles inland from the Bay of Panama. Further, the bottom of Miraflores Lake is at a higher elevation than high tide in the sea-level section below the locks.

"We have recited all these conditions to show that the engineers who made the decision to use Miraflores Lake for a water-supply had no reason to suspect, so far as we can see, that salt water from the Pacific would invade Miraflores Lake in any material quantity.

"To the great surprise of all parties concerned, however, salt water from the ocean invaded Miraflores Lake at an astonishing rate, even tho there was very little operation of the locks at that time. Chlorin-sampling stations were established at the lake in January, and by February it became apparent that a constant diffusion of salt water was taking place throughout the whole area of the lake, extending back into its arms. The proportion went as high as 15 per cent. of salt water."

How does this salt water from the Pacific gain access in such quantities and with such rapidity to this elevated, distant lake? The only explanation possible, the writer asserts, is the diffusion of the water in the process of lockage. He thus explains how it can take place:

"Suppose a vessel is to ascend the Miraflores locks. She enters the lower lock and the gates are closed behind her. She is then floating in a mixture containing perhaps 75 per cent. of salt water from the ocean. The valves are then opened, and fresh water from the lake above is admitted into the lock through the openings in the bottom until the level of the water in the lock is raised to the level of the water in the upper lock. In this process of filling the lock, the salt water and fresh water are thoroughly mixed. The water in the upper and lower locks being now on the same level, the gates between the two are opened and the vessel is moved into the upper lock. While this movement is taking place, however, the heavier salt or brackish water in the lower lock flows into the lower part of the upper lock by reason of its greater specific gravity, while the lighter fresh water in the upper lock flows rapidly over the heavier water in the lower lock. In this manner, while the vessel is being transferred from one lock to the other, a considerable quantity of brackish water enters the upper lock.

"The gates are then closed behind the vessel, and fresh water from the lake is admitted through the bottom of the upper lock until it is filled to the same level as the lake. By this time, certainly, the percentage of salt water in the upper lock should be reduced to a very small amount. Yet there is evidently enough there so that, when the gates are opened and the vessel passes out into the lake, a considerable amount of the water in the upper lock-chamber flows out with it, and is replaced by entirely fresh water from the lake.

"A question of some interest is whether increased traffic will cause an increased amount of salt water in the lake. While it will cause frequent repetitions of the process above described, it will, on the other hand, bring a larger quantity of fresh water down from Gatun Lake to Miraflores, and will also discharge a larger quantity from Miraflores Lake into the channel below."

THE MYSTERIOUS DUMDUM

THE NATIONAL ARSENALS do not make dum-dum bullets. They do not have to. Any soldier can "dum-dum" his own bullets, and many of them do so. Hence, very largely, the charges and countercharges that we have heard during the present war. This statement is from an article contributed to *The Technical World Magazine* (Chicago, November) by a writer signing himself "A. L.," who hides behind these initials, we are told in an editorial note, the personality of "an American who has devoted many years to the study of ballistics and military organization." His conclusions are that many wounds attributed to dum-dums are due to ordinary bullets striking sidewise or "keyholing"; and that such real dum-dums as there are are made by the combatants themselves, on both sides. He writes:

"Every jacketed rifle-bullet ever designed is potentially a dum-dum bullet. Every jacketed bullet may become one of the dum-dum variety either by reason of nature's forces working on it or by the design of the man who dispatched it.

"And this much more is true: There never has been any army—German, French, Belgian, English, Austrian, Russian, Servian, Japanese, Boer, or American—that has not used jacketed bullets that deliberately were made to dum-dum. . . .

"Permit me to make a momentary digression. I want to speak of the arrant nonsense so often printed in newspapers and magazines about 'steel-jacketed' bullets. There is no such thing. The modern small-arms bullet consists of a core of lead and tin composition, surrounded by a jacket of cupronickel or cuprozinc alloy. Were pure steel jacketings to be used they would rip the lands right out of a rifle-barrel.

"The cupronickel- or cuprozinc-alloy jacket is just soft enough to take the rifling. And yet it is so hard—it has to be made so for almost obvious reasons—that after a hundred or so rounds have been fired there is barrel erosion not attributable only to the high-pressure, slow-burning powders used. This erosion increases in battle, because on the firing-line a soldier has few opportunities to clean his rifle often enough.

"The modern jacketed bullet, whether it is of the round-nose or pointed-nose type, swings beautifully true through its trajectory—up to a certain (perhaps I should say uncertain) point. After that it begins to keyhole.

"Instead of continuing on its long axis alone through rotary motion given it by rifling—it is this rotation which keeps the bullet on its course—the base of the bullet swings in a circle larger than its own circumference. When it does this the missile goes through the air with much the movement of a spinning top after it has been free a minute or two of the rotation-giving cord. This exaggerated rotation of the base is called keyholing.

"Keyholing may be due to one of many causes: it may result from an imperfection in the bullet itself (i.e., in shape, balance, weight in ratio to the powder charge, etc.), from erosion or rust in the rifle-barrel, from atmospheric conditions, from decreasing velocity, etc. There is no way to gage it. But the very fact that it is keyholing makes a bullet a splendid instrument to stop, abruptly and permanently, any living thing it hits.

"And if a pointed bullet is not keyholing from the causes enumerated above, it is very likely to keyhole the minute it hits anything that provides real resistance to its easy penetration and continued flight, such as a belt-buckle or a bone. There are instances, even, where the bullet commenced to keyhole when it entered soft flesh; but, in the main, such instances occurred after the bullet had lost much of its velocity.

"This keyholing of a bullet upon contact occurs because the point is checked, albeit for only an infinitesimal fraction of a second, before the base of the bullet is checked. For, with the point engaged and checked, the base starts to catch up with the point.

"What happens next depends upon how fast the bullet was traveling when it hit. If it still retains considerable velocity (or, rather, energy), the bullet will spiral its way in fairly clean fashion through the object hit. But if it is moving with greatly impaired velocity—due to head wind or long flight or some similar cause—the keyholing bullet is very likely to imbed its point in a bone and then, unable cleanly to penetrate the bone, use its remaining energy to push the whole bone ahead of it.

"In other words, enough energy has been lost to prevent clean penetration, but sufficient has been retained to push impediments to its continued flight out of its path. The sharper

the point of the bullet, the more likely it is to keyhole upon impact. This is 'stopping-power' with a vengeance. The German bullet is sharp-pointed. The United States bullet is the sharpest-pointed of all.

"This keyholing naturally causes terrible wounds which, in turn, often bring forth the charge that dum-dum (or explosive) bullets have been used."

That much of the talk about dum-dum bullets is the result of this "keyholing" action of the ordinary projectile, is the writer's belief. There is, however, he tells us, another side of the picture: the deliberate dum-dumming of the bullets by the men in the ranks. The arsenals, he assures us, do not have to turn out dum-dum bullets. Any soldier desiring to accomplish the result can make the most "civilized" bullet a dum-dum by using his knife or bayonet to cut the jacket at the point, so that, when the missile strikes, the lead core will pour through. And Americans who are horrified at the reports of such "uncivilized" doings in Europe may pause when they read that our own Army has not been entirely stainless in this particular. Says this military expert:

"As a matter of fact this was done so often in the Philippines that the commanding officer of every company examined every individual cartridge on every individual soldier at morning inspection, to see that none had been tampered with. And a few hours later you could see many an enlisted man patiently 'sandpapering' his cartridges so that the jacket-point would be worn to such thinness as would effect 'mushrooming' upon impact.

"Prof. William Möllendorf, a German who has not lost his head and who thinks that the soldiers of the countries at war with his own are ethically the equals of his countrymen, said: 'The enforcement in war of international law or Hague covenants depends, in the last resort, upon the moral sense of the individual soldier.'"

When we have reached this point in the exposition, it is not difficult to see that a soldier in the trenches who sees an enemy rushing at him, and who knows from experience that a clean bullet-hole will not stop him, is very apt to attach more importance to saving his own skin than to obeying the behests of The Hague Convention.

WAR AND FOREIGN SCIENCE—Our readers may have noticed that translations from foreign scientific journals are not numerous in our columns of late. The reason is well stated in *The Scientific American* (New York), as follows, under the heading, "A Dearth of Foreign Scientific Journals":

"While the precise effects of the present European conflict upon America's supply of meats, groceries, and the like have been a matter of such uncertainty as to call for Government investigation, the abrupt curtailment of mental pabulum in the shape of scientific literature from the countries engaged in the struggle has been only too evident. The librarian of a large scientific library informs us that not a scrap of literature of a date later than August 1 has come to hand from Germany, and only a solitary scientific journal, viz., the *Oesterreichische Flug-Zeitschrift*, of August 10, from Austria. The Austrian publication opens with the announcement that many of its staff have been called to the colors, and craves the indulgence of its readers for the results of this untoward situation upon the contents of the journal and for possible future delays in publication. Several French scientific periodicals have continued to arrive with little or no delay; others, including the well-known popular weekly *La Nature*, have been definitely suspended until the war is over. The *Comptes Rendus* of the French Academy of Sciences has, in accordance with its official character, been strongly colored with expressions of patriotism since the war began. The number corresponding to the session of August 3 contains a declaration by the president of the Academy that all academicians not already mobilized in the public service hold themselves ready to aid the national defense according to their several specialties. The number of August 10 pays tribute to the Belgian nation and Army, and contains a memoir address to French military surgeons giving practical advice as to the treatment of wounds. The English journals are still arriving regularly."

PORTO RICO'S TELEPHONE-PLANTS

THE TELEPHONE-PLANTS of Porto Rico are of two distinct kinds, it appears, and both provocative of trouble at times. One is the peculiar growth shown in the accompanying photographs; the other is a curious ganglion of telephone-wires owned by two private corporations and the insular Government, which, through an ill-balanced system of cooperation and competition, attempts to serve adequately this none too thickly populated island of less than 30,000 square miles. The two private companies, under the direction of American managers, says a writer in *Telephony* (Chicago), are succeeding fairly well through an even partition of the island. The government line is the troublesome factor. Fortunately it is a plant of languishing growth; for only when its service is broken down entirely do the islanders have anything like adequate service. This paradox the writer explains:

"The Government operates both telegraph and telephone systems and controls the toll-lines. It might be interesting to note, in connection with the question of government ownership, the following conversation between the writer, who wished to telephone from Ponce to San Juan, and a resident of Ponce:

"RESIDENT: 'If the government lines are down, it will be all right, but you can not talk over their lines when they are working and understand what the other fellow says.'

"WRITER: 'How will it help if they are down?'

"RESIDENT: 'When government lines are working, the telephone company has to make all toll-calls over those lines; but when they are down, the telephone company is privileged to use its own lines, and you are then able to talk with the party you are calling.'

"This incident will probably give a fair idea of the general telephone conditions in Porto Rico at the present time. It is also interesting to note that while several of our representatives

Telephone Co. control not only of the holdings of the South Porto Rico company, but also the lines and equipment of the Government. The Porto-Ricans are heartily in favor of this movement, as the service rendered by the independent telephone companies is much better than the service given by the government system at the present time."

The other "telephone-plant," tho more literally plantlike

PLANTS THAT PERCH ON TELEPHONE-WIRES

They have no roots and derive their nourishment from the air.

than just described, is not so easy to explain, nor to uproot. It is, as may be seen, a growth of most peculiar habits, preferring electric wires to the nourishing earth. It is briefly described:

"It is an air-plant something like an orchid. It has no roots, but derives its nourishment from the air, the seeds evidently being carried by the wind or birds and insects to some substance where they lodge and sprout.

"This growth is found most frequently on insulated wire, altho it has been observed on bare iron wire that has rusted. It has never been seen on new bare iron, copper wire, or cable, and causes little trouble as the mass is seldom large enough to cross two wires."

PATENT HUMBUGS—Those who make the most noise about the exclusive use of their right to particular inventions and improvements upon which patents have been granted, says a writer in *Railway and Locomotive Engineering* (New York, November), often have the most unsubstantial claims to rest upon. Says this journal:

"Not infrequently a great noise is started and kept up by those perfectly conscious of the weakness of their boasted rights in order to scare away competitors in the same kind of business without testing the strength of the claim. Sometimes it is downright ignorance of the real value of patented claims that gives the greatest assurance and leads to foolish aggression. A new manufacturer of a particular kind of machine or mechanical object, on which patents have been granted, coming into competition with old and well-established manufacturers of a like article, needs to have a good supply of pluck, energy, and penetration, or he may be driven from the field by threats or suits for infringement without having trespassed upon anybody's actual rights or valid patent claims.

"Threats of prosecution often accomplish more than the prosecution itself, for purchasers are generally deterred from investing in anything they may be called upon to pay a royalty for using so long as they can procure something of the same kind without any prospects of a demand for royalty. Injustice has been done by taking advantage of this fact. There is too much inclination among business men to accept as established facts many things, simply because they have been so often and so positively asserted without anybody taking pains to

in Washington are introducing bills and recommendations to break up monopolies and make telephone and telegraph service government-owned in the United States, an appraisal is being made in Porto Rico of all telephone equipment on the island for the purpose, as reported, of giving the Porto Rico General

deny them. Occasionally some one pulls away this mask, and men wonder why they have been so foolish as to accept a sham for a reality so long without investigating it. Patent rights furnish the material for numerous humbug pretensions."

ASHES AS A COMMODITY

IT HAS BEEN SUGGESTED that the shortage of potash, due to the stoppage of imports from Germany, may be made good, at any rate in part, by going back to the old source of potash that was so long sufficient for our fathers, namely, the ashes of burned wood. Wood-ash used to be an important article of commerce; little of it is bought and sold to-day, yet its content of potash has diminished neither in amount nor in value. An editorial writer in *The Hardwood Record* (Chicago, November 10) thinks that a million and a half tons of ash would make good the loss of 250,000 tons of potash, which is what we have been getting yearly from Germany. Our waste sawdust alone, if burned, would yield about one-third of this. Is it possible that the European War may do us good by making us a little less wasteful? Explaining the nature of the wood-ash, and its history as an article of commerce, the writer in *The Record* says:

"When wood is burned, the remaining ash represents what the growing tree extracted from the soil, while the smoke that goes into the air represents what the tree derived from the atmosphere. The charcoal, if sufficiently burned, disappears. A small portion of a tree comes from the soil and much from the air. Some trees do not take one pound from the soil to one thousand pounds from the atmosphere, while others may take one from the soil for fifteen or twenty from the air.

"When English colonists settled on the Atlantic coast from New England to North Carolina, the abundance of wood suggested to them that there might be profit in the sale of ashes. In 1621, less than fifteen years after the founding of Jamestown, the Virginians were selling ashes at from thirty to forty dollars a ton for export to England. The burning of ashes was a favorite business undertaken by negroes who had run away from slavery in the South and had settled in Canada. No capital was required, as wood was free; and, tho the income was small, the work was easy and served to attract a good many people. As late as 1898 Canada exported annually 1,323 barrels of potash and pearlash, the equivalent of more than 20,000 barrels of ashes."

We are told that the domestic wood-ash was depended on both in soap-making and, originally, in the preserving of meats. In agriculture, however, is its great and permanent value. As we are told:

"The fertilizing value of wood-ashes is due principally to the potash and other ingredients they give the soil. The soil on which a wood grows is influential in determining the proportionate amounts of fertilizing elements incorporated with the ground. Trees occupying salt marshes do not yield ashes satisfactory as fertilizers, because of the presence of salt in the ashes. . . .

"The potash in wood-ashes is taken up by the soil more readily than in most other forms, because the grains are generally extremely fine and the minute particles are easily distributed through the soil in convenient form for assimilation by plants. When tanbark is burned, the ash is poorer in potash and phosphoric acid than wood-ash, but may be richer in lime."

What we waste now in wood-ash is incalculable, for the waste occurs everywhere that wood is burned. Of some specific wastes, we read:

"Slabs and edgings now thrown away may be sufficient to produce 50,000 tons of ashes annually, calculated on figures given in Louis Margolin's 'Waste in Milling.' Figured on the same basis, ashes from sawdust would total 500,000 tons a year. Cord-wood now burned as fuel would be good for 500,000 tons, making a total of more than one million tons of ashes annually, little of which is now saved. . . .

"It has been suggested that this country can produce its own potash to make good that cut off by the closing of the German trade. We have been getting about 250,000 tons a year from

there. If an attempt is made to convert ashes into potash, we might figure that six pounds of ashes will make one pound of potash. A million tons of ashes would be good for 150,000 tons of potash, or rather more. At recent market prices it would be worth \$12,000,000. It would be worth twice that at present quotations, but the usual price is about four cents a pound."

HOW ONE MAY FEAST AND STARVE

IT HAS LONG BEEN RECOGNIZED that we are nourished not by what we eat, but by what we assimilate, and that it is possible to die of starvation while feasting, simply because the processes of assimilation have somehow failed. Hence there is a group of so-called deficiency-diseases or diseases of malnutrition, whose causes have for years been very imperfectly understood. It is now asserted that they are all due to lack, in the food, of a newly isolated group of nitrogenous compounds to which the name "vitamines" has been given. Such obscure diseases as beriberi and scurvy, and probably also pellagra, rickets, and other similar maladies, are caused, we are told, by lack of vitamins, and may be termed "avitaminoses." We quote from a recent article in the *Bibliothèque Universelle* (Lausanne, September) by Dr. Edward Combe. From this we learn that Dr. Casimir Funk, who made this discovery, was led to it by a prolonged study of beriberi, the serious malady which has been especially fatal in Japan. Dr. Eykmann, now professor of hygiene at Utrecht, but then located in Java, made the discovery that beriberi was not found among populations using rice from which the outer covering had not been removed, but did exist where the covering was removed. Other cereals prepared by such decortication may produce similar maladies. We read:

"In Europe, where a varied diet is usual, beriberi has not been epidemic. . . . but it has been observed in exceptional circumstances, among others during the siege of Paris—and when a too uniform diet was adopted in institutions."

Where nursing mothers lack vitamins in their food their infants may be attacked by a severe and rapid form of beriberi, whose symptoms disappear when they are fed by a healthy mother. Eykmann produced experimental beriberi in pigeons and chickens by giving them a uniform diet of polished rice, white wheat flour, starch, or sugar. Little by little it became evident that beriberi could be explained only as due to prolonged and exclusive use of foods deprived of substances indispensable to the normal chemical changes of nutrition. Many scientists at once address themselves to the task of discovering this indispensable element in rice-bran. The result was the isolation of the vitamins. To quote further:

"Experiments on hundreds of pigeons suffering from experimental beriberi through an exclusive diet of polished rice, and apparently about to succumb, demonstrated without exception the remarkable activity of the crystallized vitamins. Four or five milligrams injected under the skin of a dying pigeon cured it in two or three hours with miraculous rapidity, proving at once the importance of the vitamine and the phenomenal avidity with which the body absorbs and utilizes it."

As for scurvy, another disease of malnutrition, it is cured, as has long been known, by fresh vegetables or their juices. These, however, Dr. Combe tells us, often rapidly lose their activity. He writes:

"Moderate cooking diminishes it, and cooking at a temperature above 100° C. destroys it when even moderately prolonged. On the other hand, a *purée* of potatoes or a bouillon of carrots retain their activity in spite of cooking. . . . Foods differ in this respect. Dried dandelion is inactive, while dried cabbage is still active, tho much less so than fresh cabbage. Lemon-juice retains complete activity even when cooked and sterilized. Hence the juice of lemons and oranges is best. Cooked milk loses a part of its activity, and sterilized milk nearly all."

A STREET-TRAFFIC SEMAPHORE SYSTEM THAT EXPEDITES TRAFFIC 20 PER CENT.

One policeman, in his observation station, seen at the left, may direct single-handed all the traffic at this busy Cleveland street-crossing. In case of a fire he may, with a turn of the hand, stop all traffic, and clear the way for the fire-apparatus.

The conclusion is that the vitamins which cure scurvy are much less stable than those that cure beriberi, altho the former may be transformed into the latter by chemical action. Another conclusion, perhaps more interesting to Americans than either of those recorded above, is that which classes pellagra among these diseases of malnutrition. Dr. Combe declares it to be increasing in America, where the form it assumes is both more acute and more fatal than elsewhere. This, we are told, is due to the superior machinery here, which more effectually decorticates the grain. Students of the disease have ascribed it variously to mold or fungous growth in the grain, to infectious bacilli, and to the effect of light on the skin, but Funk unhesitatingly classes it as a deficiency-disease due to the lack of vitamins. We read:

"Numerous examinations of the food of its victims and of their blood have always shown a complete absence of microbes. What renders research extremely difficult is that as yet no animal is known to react to pellagra. Funk, however, does not hesitate to give as its cause the disappearance of the vitamins in corn either too much 'polished,' too much cooked, or too much dried."

Vitamins are found chiefly in vegetable foods, we are told, but the proportions vary greatly. Cereals contain them in notable proportions, but chiefly in the pericarp or husks, barley, oats, wheat, and buckwheat being particularly rich in them; while fresh fruits, notably the juice of oranges and lemons, contain notable proportions of vitamins. Fresh vegetables, especially green peas, and above all potatoes, contain large proportions, and this is why soups of vegetables are so useful. Raw milk contains a quantity beneficial to the young, but cooking or sterilization completely destroys the vitamins. Cow's milk contains more in summer than in winter, and more when the animals are given fresh instead of dried fodder. In eggs the vitamins are found only in the yolk, and the effect of cooking is not known. In raw meat of all sorts, especially uncooked sweetbreads and liver, they are found plentifully, but are lacking in boiled meat, where they pass into the broth, but they are retained in roasts. In conclusion, Dr. Combe calls attention to the fact that the great epidemics of scurvy common in Europe in the Middle Ages vanished after the introduction of the potato, and he ascribes this to the fact that the potato is rich in vitamins which are not destroyed by cooking. He emphasizes the fact that children in their second year are frequently pale, weak, anemic, and without appetite because they are fed exclusively on such foods as flour soups, white rice, white bread-

puddings, zwieback, and sterilized milk. Such a diet should always be supplemented and corrected by free use of potatoes, fresh vegetables, cooked fruits, and raw ones if possible. He declares finally that a restricted diet is useful only to cure abnormal gastric conditions, and that as soon as is safe, even in fevers, the diet should be as varied as possible, since this is the surest way of securing the needed amount of vitamins.—*Translation made for THE LITERARY DIGEST.*

AN ELECTRIC TRAFFIC SQUAD

THE PROBLEM of traffic control appears to be demanding more and more attention of municipal authorities each year. In the days of horse-drawn vehicles the pedestrians and the street traffic were fairly capable of untangling themselves, save on the most extraordinary occasions. But this the motor has been changing, so gradually in some places that the authorities are only just becoming aware of the inadequacy of existing traffic regulations. New York stations policemen on foot at busy corners, who wave their arms about like trainmen in a railroad-yard. One city, however, to judge from an article in *Engineering News* for December 3, is striving to cope with the traffic demands in the most modern and thorough manner. This is Cleveland, Ohio, where, some months ago, an electric traffic-control system was installed at the street intersection shown in the above photograph. Says *The News*:

"The system is operated practically the same as a railway-crossing, altho there are modifications in the apparatus itself to suit street conditions. It is estimated that traffic can be handled 20 per cent. faster than by a policeman in the street.

"Electric signal-lights are placed on the right-hand side of each street, facing oncoming vehicles. A red light signifies stop, and green proceed. The switch controlling the lights is operated by a traffic officer in the booth to the left, in the accompanying illustration. The switch is so interlocked that it is impossible to give conflicting signals. The sides of the booth are glass, so that the officer may see out on all sides. The red-light signal is shown on the near corner of the crossing street and the green light on the far corner, instead of having both lights on the same pole as in railway practise.

"A fire-alarm signaling instrument, connected to the fire-department headquarters, is installed in the officer's booth, so that he is informed when it is necessary to clear the crossing for the passage of fire apparatus. On these occasions the officer closes an emergency-control switch, which sounds an alarm-bell and shows red lights on all signals. He is then free to leave his booth and give his attention to the street."

GERMAN FEAR OF SLAV BARBARISM

IN THE VARIOUS REASONINGS about the causes of the war, especially those emanating from German sources, the responsibility is laid by one on Russia, by another on England. Whatever Chancellor von Bethmann-Hollweg may say about England, Dr. Dernburg, Germany's spokesman in

They helped to organize bureaucracy and to build up the military system, which was founded on German models. As time went on Russia depended less on foreigners, but Germans belonging to the Russian lands of Esthonia, Livonia, and Kurland were, in the early years of Nicholas I., still preponderant in the higher commands in the Army and in important State offices.

It was Benckendorff who organized the Political Secret Police (Third Section), perhaps the most unpopular institution introduced by Nicholas.

"And the influence of Germans at court and in public administration has continued till the present time. A high authority [Professor Pares in 'Cambridge Modern History'] on Russia writes, referring to the reign of Nicholas II.:

"Englishmen and Germans who had lived long in Russia almost invariably maintained that it was the German who was disliked. There were reasons why this should be so. Russians at large were more nearly touched by their own system of government than by questions of foreign policy, and here the Germans were constantly presented to them as the agents of power. Baltic Germans were strong at the court; they held many of the highest administrative posts and were in every chancellery; they had, for instance, a disproportionate share in the work of the court martial. German stewards with scrupulous exactness collected the revenues of their absent masters. German firms captured the strategic posts of trade, and German managers ruled Russian workmen. Owing to a strong contrast of character between

the two races their use of their power was often contemptuous and rarely sympathetic."

"It is certain that, whatever judgment may be found of Russian civilization in its political aspect, men of the German race have largely participated in its development."

Up to the last decade of the nineteenth century, Professor Bury asserts, the relations of Prussia and Russia were "almost invariably relations of friendship and cooperation." Indeed,

"Neither Prussia nor Germany ever betrayed the slightest symptom of a desire to stand forth as champions against 'Muscovite barbarism.' That the two Powers should hold together in the interest of monarchism was the policy of Bismarck, as of Nicholas I. The one thing which Prussia feared was that if her neighbor adopted a liberal policy in Russian Poland trouble might be created in her own Polish provinces. Her object, therefore, was to confirm what she now stigmatizes as 'Czarism' in its autocratic principles, and to hinder any liberal concessions that might be entertained at Petrograd."

"Till the end of the Bismarckian period the danger of Slavism lay, so far as Germany was concerned, in the possibility of the adoption of the philo-Polish policy by the Russian Government, and she was comparatively indifferent to Russian relations with the South Slavonic States. This indifference ceased when she began, in the reign of William II., an ambitious policy in the sphere of the Turkish Empire. The direct interest of Austria-

The church at Barry, one of the most unfortunate victims of shells.

America, lays the blame on Russia, and in the early days of fighting we heard much about Germany's fighting the battle of Western civilization against Asiatic barbarism. Tho the phrase is vague, it seemed to mean the fight against Russian autocracy. Now it is pointed out by the Regius Professor of Modern History at Cambridge, England, Dr. John B. Bury, that Germany's discovery of Russian barbarism is a very recent one. "An unfriendly critic might observe," he says in the *New York Times*, "that while Russian autocracy lasted in an unmitigated form, Prussia was hand in glove with Russia." The Professor backs up this statement by a careful survey of their political relations since 1772, supported by citations mainly from German historical sources. Prussia, he declares, has waited till the Russian Government "has inaugurated a liberal policy by the creation of a parliament to go to war and denounce the Power which was her traditional friend as 'barbarous' and 'Asiatic.'" He goes on to sketch the part that Germany has taken in building up the bureaucratic system which has been the great obstacle to reform in Russia:

"In the process of Europeanizing the Muscovite Empire, which began with Peter the Great and progressed steadily throughout the nineteenth century, Germans played a leading part and filled most important positions in the State's service.

Hungary in the Balkan countries now became the indirect interest of Germany.

"Here we have the only tangible meaning that can be discovered in the cry of Teutonic versus Slavonic civilization. The sole actuality behind the claim that the present war is a struggle of Teutonic enlightenment against Slavonic 'barbarism' lies in the fact that German and Austrian interests in the Balkan Peninsula are embarrassed by the sympathy of Russia with the small Slavonic States, which oppose an obstacle to those interests, and that Germany is afraid of the Russian philo-Polish policy."

In tracing these relations Professor Bury avers that his purpose has not been to criticize Germany so much as to point out that she is the last Power in the world that has the right to reproach another Power for cooperating with Russia:

"Her policy has been legitimately determined by her conception of her own interests. In 1907, Great Britain concluded a convention with Russia. The understanding thus initiated between the two countries has ripened into friendly cooperation. This policy, on our part, has been dictated by the consideration of our own interests. If there were anything exceptional in it we might well offer the defense that we have simply followed Germany's example. We may, indeed, also urge that, as a people to whom political liberty has for centuries been the first principle of social life, we naturally sympathize with Russia in the process of transformation which has recently begun, and think we may reasonably hope that her intimacy with France and England will help her in her path away from the autocratic system in which Germany always sought to confirm her toward the political ideals of Western civilization.

"Muscovite barbarism." "Asiatic Russia." These are phrases which were fully applicable two hundred years ago, but which since then have been steadily becoming less and less appropriate as descriptions of Russian civilization. To-day they are so glaringly far from the truth that they are no more than terms of abuse.

"On the history of the Europeanizing of Russia in the eighteenth century we owe the best book to a German [A. Bruckner], whose concluding observation is that 'Russia is continually winning new forces, which bind her indissolubly with the Western *Kulturwelt* and will ultimately merge her completely in Europe.' Just thirty years ago Rambaud remarked: 'Russia is too European to continue to live outside the conditions of European political life.' [*Histoire de la Russie*.] There is, indeed, no question that, according to the general consent of opinion, Russia and the Slavs, tho their development has been late, have taken their place in the sphere of European civilization. I may refer to a writer, with most of whose views I disagree, but whose work, '*Die Grundlagen des Neunzehnten Jahrhunderts*,' has enjoyed a wide popularity in Germany. [An English translation of Houston Chamberlain appeared in 1911.] His subject is the *Kultur* of the 'Germanic' peoples, and among the Germanic peoples he includes the Slavs. Translating this into terms which do not imply his unacceptable Germanic theory, he means that the Slavs are one of the races which are bearers of what is commonly called 'Western civilization.' And in this he is right.

"The supreme value of the work done by Russia in physical, historical, and philological science is recognized by all competent people. Is it necessary to speak of Russian musicians? Every educated European knows how Russia has enriched European literature. The German historian of Russian literature [Brueker, '*Geschichte der Russischen Litteratur*'] wrote: 'The tenacity and the soaring flight of the Russian spirit have created a world literature. May it remain in the future true to the humane and ascetic conditions of its glorious past'

"No judges are more capable of recognizing merit than the Germans in the fields of literature and art, science, and learning, in which they had themselves done such magnificent work. In these domains there can be no question of an antipathy between Teutonic and Slavonic civilization. The alleged antipathy must therefore be sought in the political and social institutions and ideals. Here there are specific differences between Russia and Germany; and there are specific differences between Russia and France, between Russia and Great Britain. But if the institutions and ideals of Great Britain and France differ profoundly from those of Russian autocracy, they also differ from those of Germany. If, therefore, differences in civilization have anything to do with the matter, it is difficult to see why France and Great Britain should be expected simply on this ground to cooperate with Germany against Russia rather than with Russia against Germany.

"The two great Western republics, France and the United States; the two great constitutional monarchies, Great Britain and Italy, and most of the smaller States of Europe, as well as the self-governing States of the British Empire, have in common responsible government, democratic institutions, and a similar ideal of political liberty. From this point of view, the Western Powers stand, as Bismarck clearly recognized in his explanation of his philo-Russian policy, on a different side of the fence from Germany and Austria.

"We have watched with respectful interest Germany's development on her own lines with monarchism, paternal government, the divine right of kings, the preponderant influence of a military caste (who seem to believe with Von Moltke that 'war is an essential element in God's scheme of the universe'), and a form of constitutionalism which we regard as spurious. This system may lead to greater efficiency, and it seems, as Prince von Bülow has explained, to suit the Germans. They feel free under it.

"But we—and we can answer for France, Italy, and America—should not feel free under it. It is not our ideal of political liberty. Paternal government, 'paternal favor,' is repugnant to us. We will not submit to any authority except an authority appointed and controlled by ourselves. The irresponsibility of the German executive is, in principle, no less opposed to our ideas than Russian autocracy. The Imperial Chancellor is responsible only to the Emperor, who appoints him, and the Emperor is responsible only to God."

BERGSON ON GERMANY'S MORAL FORCE

GERMAN DEFEAT is figured out by Prof. Henri Bergson, the French philosopher and academician, in the *Bulletin des Armées* (Paris). He bases his statement on the fact that she is destined to exhaust her stores not only of material but also of moral forces. Quite contrary is the condition of France, as he sees it, whose power, both moral and material, "does not exhaust itself," but "renews itself unceasingly." Professor Bergson's argument is that Germany's spirit is animated by false ideals, which will fade when she begins to want for material resources. After canvassing the resources of both sides, in foodstuffs, munitions, and men, and striking a balance in favor of the Allies, he asks:

"What of moral forces, which are invisible, tho of the greater importance, because they can supplement the others, and because without them material forces are worth nothing?

"The moral energy of races, as of individuals, subsists only through an ideal that is superior to them and stronger than they. When courage wanes, they hold fast to this ideal. Now what is the ideal of Germany of to-day? The time is past when her philosophers proclaimed the inviolability of right, the eminent dignity of the person, the obligation of one people to respect another. Germany, militarized by Prussia, has cast aside these noble ideas, which for the most part she imbibed from France of the eighteenth century and of the Revolution. She has created a new soul for herself, or rather she has meekly accepted the one that Bismarck gave her. The famous line—'Might makes Right'—has been attributed to this statesman. In truth, Bismarck never said it, for he knew the distinction between right and might. Right, in his eyes, was simply the will of the strongest, which is embodied in the law that the conqueror imposes on the conquered. In this consisted his morality; and Germany of to-day knows no other."

Furthermore, Professor Bergson says, Germany makes a cult of "brute force," and, believing herself the most powerful among the nations of the earth, "she is wholly absorbed in self-adoration." We read then that—

"From this pride proceeds her energy. Her moral force is only the confidence that her material force inspires. That is to say, here again she is living on her reserves, and has no means of replenishment. Long before England began to blockade her coast, she had blockaded herself morally by isolating herself from all ideals capable of revivifying her.

"Consequently she is going to see her forces and her courage used up simultaneously. . . . Against this force, which is nourished on its own brutality, we oppose that which seeks, outside of itself, above itself, a principle of life and of renewal. While the former exhausts itself little by little, the latter renews itself unceasingly."—Translation made for THE LITERARY DIGEST

GERMANY'S EXALTATION IN WAR

SOMETHING REMARKABLE is taking place in Germany under the stress of her war with five nations. She has been turned from a nation of peace to one which discovers that her highest spiritual realization is to be achieved through war. During her forty-four years of peace, says Prof. Theodor Elsenhans in the *Illustrirte Zeitung* (Leipzig), war was always presented to the German people as "the awful destroyer, the mightiest of terrors, the annihilator of all the cultural achievements brought about by much painful labor." Their constant study had been "how best to keep this awful catastrophe far away from our own country and from Europe." Consequently they see "no calumny of our enemies so laughable to any one who understands our people as the statement that Germany began the war for the purpose of conquest." But now that

HATE WHILE YOU WAIT

"The production of odes of hate of England is now quite an important branch of Prussian military machinery."
—E. R. in *The Bystander* (London).

war stands before them as an awful fact, "now that the torch has been thrown out to spread flames where it may, now that the loyal, peace-loving German nation has to face one mighty foe after the other . . . we feel deeply the terrible facts of the times, we mourn the sacrifice of young lives which the war has made necessary; but all weeping and sorrow, all regret are swallowed up by the mighty stream of a new national life which has gushed forth over our German Fatherland." As remarked in another article on the revival in France, such spiritual effects are probably taking place in all the warring lands, so that the words below, with a change of names, might apply to any one of them. The *New York Sun*, which translates this article, presents these further remarkable words:

"Even if the impossible were to be made possible, even if we could turn the wheel of time backward, no real German would dare to wish for the return of the dull, uneventful, disagreeable times. The new impulses are too valuable, too deep-reaching, and too full of promise for an inner change and uplift of the German people. No conscientious and well-meaning work for peace, no talking and teaching of inspired minds, no self-sacrificing activity of the friends of the people could have produced that which the war has brought about or is about to arouse. Among all the educative forces at work upon a people the most powerful are the fortunes through which it passes historically as a whole, and among these the deepest and most tenacious are when the existence or non-existence of the people is at stake.

"Just here lies the secret. The expression 'inspiration for the Fatherland' is not sufficiently clear to make it understood by others how we can associate war and the education of a people so closely. Is not war a destroyer? Many blood-stained pages of history, especially of the history of Germany, whose soil has often been the fighting-ground for hordes of warriors for ten years at a time, tell us how frightful its destructive power is. How can the destroyer do any good? In what sense can we understand those words which Schiller put into the mouth of Max Piccolomini: 'War is fearful as heaven's plague; yet is it good, it is destiny.' How can it be the well-spring especially of the deep and fine activities of the inner life which we include under word education?

"Just the fact that it is the greatest of destructive powers hides the secret from us. It drives us to destroy what is valuable to us, to shatter what we love, and just in this way does its value come into our consciousness.

"Let us begin in the small circle of family life. The husband, father, son, brother, goes forth to the battle-field, perhaps never to return. The farewell is a sad, hard trial. Even here the solemnity of that hour of companionship, taken as a matter of course before, is now different in depth and power.

"The daily pursuits are followed, but there is something missing. Thought of those who have gone forth to battle fills every day, every hour. What he really meant to his own, what was taken for granted, is now recognized at its full value. Every indication of life is greeted with jubilation, and the bond, which held all together, is ennobled by a common care in which each forgets self. And those who lie out there under the stars, who in camp or battle can not but think of their homes, they have become dearer than they ever could have been in times of peace, something for which to long, a source of inspiration.

"This raising of values through danger and the desire to meet again rises to an even higher level in that great family formed by the German people. All of those warriors facing death out there in the field with such incomparable bravery, fighting so hard and long for the Fatherland, are members of this one family. Their privations and sufferings, their battles and victories are felt, too, by those at home.

"It is the people as a whole whose entire existence is in danger, and now more than ever does it feel deeply the value of this unity. Differences based upon party lines, ideals or religious allegiance, which have played so great a rôle during the last few years in separating those of the Fatherland, which threatened to split the German people into any number of different camps, disappear as if by magic in the face of the knowledge that their common home is in peril."

The Professor also sees "an alteration in the kind of perfection," to which is to be attached "special value brought about by the influence of war." Here is the transformation:

"Whoever wishes to know in what the people are interested need only listen to them talk. What, indeed, was it that made up the conversation of business men three months ago! What trifles and foolishness were talked over at length! At a stroke all is different.

"The matter in which the people are interested is altogether changed and more elevated. One subject rules all of them. The talk is no longer about themselves or their neighbors, but of the entire community, of the Fatherland oppressed by its enemies. More than one hundred years ago Fichte declared, in his flaming 'Talks to the German Nation,' that the way toward the reinvigorating of the German people lay along the line of obliteration of selfishness; and this has been accomplished by the world-war, which has snatched the individual from the narrow circle of selfish interests and shown him that his own fate is closely connected with that of the entire nation.

"And this national fate is, at the same time, the test of values which will outlast all time. They must prepare for the sacrifice required by a contest of life or death. The superficial, petty, weak, and frivolous has no excuse for being. The soldier who looks death in the face finds it impossible to concern himself with trifles. In the same way those who remain at home, who feel themselves bound up with him in the same spirit of love for the Fatherland and willingness to make sacrifices, must devote themselves to the same battle as the Army and the Fleet. Whatever they do, whatever they say, must be sanctified by the thoughts that the furtherance of the national purposes is purchased by the wounds and the deaths of many brave men. . . .

"With this 'revaluing of all values' which has come about as a result of the war in the depths of the German spirit there is coupled an appeal to the will-power, to the bravery and endurance of the German people such as has hardly ever been demanded in all the long course of its history. It is worth while to defend all these virtues against a world in arms, and to compel from the ruthless disturbers of the peace such a peace as will make it impossible for them to wage war with Germany for a long time to come."

THE RESTAURANT BAND BEFORE THE WAR

HARDEN DISDAINS APOLOGY

ANOTHER VOICE in Germany's behalf is raised by Maximilian Harden, the famous journalist who has served a prison term in the Fatherland for the crime of *lèse-majesté*. He voices not so much a plea directed to outsiders as an exhortation to those who, he thinks, have been wasting words in that direction. "Cease the pitiful attempts to excuse Germany's action," he cries. "No longer wail to strangers, who do not care to hear you, telling them how dear to us were the smiles of peace we had smeared like rouge upon our lips, and how deeply we regret in our hearts that the treachery of conspirators dragged us, unwilling, into war." "Because our statesmen failed to discover and foil shrewd plans of deception is no reason why we may hoist the flag of most pious morality," he declares in an article translated by the *New York Times* from the German *New Yorker Review*. It is not as "weak-willed plunderers," he asserts, that Germany undertook the fearful risks of this war. On the other hand: "We wanted it. Because we had to wish it and could wish it"; and he consigns to "the Teuton devil" those "whiners whose pleas for excuses make us ludicrous in these hours of lofty experience." He voices the feeling of Germany not as one appealing to the court of Europe. "Our power shall create new law in Europe. Germany strikes. If it conquers new realms for its genius, the priesthood of all the gods will sing songs of praise to the good war." With the same frankness that sent him to prison for criticizing the Emperor, and involved him in a libel suit in 1907, when he attacked the members of the Kaiser's "Round Table," he now speaks out for Germany herself:

"We are waging this war not in order to punish those who have sinned, nor in order to free enslaved peoples and thereafter to comfort ourselves with the unselfish and useless consciousness of our own righteousness. We wage it from the lofty point of view and with the conviction that Germany, as a result of her achievements and in proportion to them, is justified in asking, and must obtain, wider room on earth for development and for working out the possibilities that are in her. The Powers from whom she forced her ascendancy, in spite of themselves, still live, and some of them have recovered from the weakening she gave them. Spain and the Netherlands, Rome and Hapsburg, France and England possess and settled and ruled great stretches of the most fruitful soil. Now strikes the hour for Germany's rising power. The terms of a peace treaty that does not insure this would leave the great effort unrewarded. Even if it brought dozens of shining billions into the national treasury, the fate of Europe would be dependent upon the United States of America.

"We are waging war for ourselves alone; and still we are convinced that all who desire the good would soon be able to rejoice in the result. For with this war there must also end the politics that have frightened away all the upright from entering into intimate relations with the most powerful Continental Empire. We need land, free roads into the ocean, and for the

spirit and language and wares and trade of Germany we need the same values that are accorded such goods anywhere else.

"Only four persons not residents of Essen knew about the new mortar which the firm of Friedrich Krupp manufactured at its own expense and which later, because its shell rapidly smashed the strongest fortifications of reinforced concrete, our military authorities promptly acquired. Must we be ashamed of this instrument of destruction and take from the lips of the 'cultured world' the wry reproach that from 'Faust' and the Ninth Symphony we have sunk our national pride to the 42-centimeter guns? No! Only firm will and determination to achieve, that is to say, German power, distinguishes the host of warriors now embattled on the five huge fields of blood from the race of the poets and thinkers. Their brains, too, yearn back, throbbing for the realm of the muses. Before the remains of the Netherlands Gothic, before the wonders of Flemish painting, their eyes light up in pious adoration. . . . Out of all the trenches joyous cheers of thanks rise for the fearless music-master who, amid the raging fire, through horns and trumpets, wrapt in earth-colored gray, leads his band in blowing marches and battle-songs and songs of dancing into the ears of the Frenchmen, harkening with pleasure.

"Not only for the territories that are to feed their children and grandchildren is this warrior host battling, but also for the conquering triumph of the German genius, for the forces of sentiment that rise from Goethe and Beethoven and Bismarck and Schiller and Kant and Kleist, working on throughout time and eternity."

It is not a land-thirst that impels the Germans, so this writer points out. Neither France nor Russia could vacate for them any stretch "useful in the real sense of the word." To desire such would be courting unworthy ideals:

"No! To hoist the storm-flag of the Empire on the narrow channel that opens and locks the road into the ocean. I could imagine Germany's war-lord, if, after Ostend, Calais too is captured, sending the armies and fleets back home from the east and from the west, and quietly saying to our enemies:

"You now have felt what Germany's strength and determination can do, and hereafter you will probably weigh the matter well before you venture to attack us. Of you Germany demands nothing further. Not even reimbursement for its expenses in this war—for those it is reimbursed by the wholesome terror which it evoked all around in the autumn battles. Do you want anything of us? We shall never refuse a challenge to a quarrel. We shall remain in the Belgian netherland, to which we shall add the thin strip of coast up to the rear of Calais (you Frenchmen have enough better harbors, anyway); we terminate, of our own accord, this war which, now that we have safeguarded our honor, can bring us no other gains; we now return to the joy of fruitful work, and will grasp the sword again only if you attempt to crowd us out of that which we have won with our blood. Of a solemn peace conference, with haggling over terms, parchment, and seal, we have no need. The prisoners are to be freed. You can keep your fortresses if they do not seem to you to be worthless, if the rebuilding of them still seems worth while to you. To-morrow is again a common day."

RELIGION-AND-SOCIAL-SERVICE

AMERICA ALONE CAN SAVE

SIR GILBERT PARKER reports to America, at the request of the American Committee for the Relief of Belgium, upon the conditions he observed as near the frontier as a British subject was permitted to approach. He says he knew beforehand what most of us know who read the daily papers, but the repetition of words results in blunted effects. For even

A BELGIAN SANTA CLAUS

—Carter in the New York Evening Sun.

to one whose trade is the manipulation of words, the horror of what he saw, he declares, almost paralyzes expression. At Maastricht he met Belgian municipal authorities who said they had food only for a fortnight longer. But the food they had was not meat or vegetables. It was "one-third of a soldier's rations of bread for each person per day." On the day of his writing, December 5, Liège, which stemmed the tide of invasion long enough to save France and Paris, had "food for only three days." These cities hold out their hands for bread and salt. "They do not ask for meat; they can not get it. They have no fires for cooking, and they do not beg for petrol. Money is of little use to them, because there is no food to be bought with money." He proceeds:

"Belgium under ordinary circumstances imports five-sixths of the food she eats. The ordinary channels of sale and purchase are closed. They can not buy and sell if they would. Representatives of Belgian communities told me at Maastricht yesterday that the crops were taken from their fields—the wheat and potatoes—and were sent into Germany.

There is no work. The factories are closed, because they have no material, coal, or petrol, because they have no

taxes are falling with hideous pressure upon a

people whose hands are empty, whose workshops are closed, whose fields are idle, whose cattle have been taken or compulsorily purchased without value received.

"In Belgium itself the misery of the populace is greater than the misery of the Belgian fugitives in other countries, such as Holland, where there have come since the fall of Liège one and a half million of fugitives. To gage what that misery in Belgium is, think of what even the fugitives suffer. I have seen in a room without fire, the walls damp, the floor without covering, not even straw, a family of nine women and eight children, one on an improvised bunk seriously ill. Their home in Belgium was leveled with the ground, the father killed in battle.

"Their food is coffee and bread for breakfast, potatoes for dinner, with salt—and in having the salt they were lucky—bread and coffee for supper. Insufficiently clothed, there by the North Sea, they watched the bleak hours pass, with nothing to do except cling together in a vain attempt to keep warm.

"Multiply this case by hundreds of thousands, and you will have some hint of the people's sufferings.

"In a lighter on the River Maas at Rotterdam, without windows, without doors, with only an open hatchway from which a ladder descends, several hundred fugitives spend their nights and the best parts of their days in the iron hold, forever covered with moisture, leaky when rain comes, with the floor never dry, and pervasive with a perpetual smell like the smell of a cave which never gets the light of day. Here men, women, and children were huddled together in a promiscuous communion of misery, made infinitely more pathetic and heartrending because none complained.

"At Rosendaal, at Scheveningen, Eysden, and Flushing, at a dozen other places, these ghastly things are repeated in one form or another. Holland has sheltered hundreds of thousands, but she could not in a moment organize even adequate shelter, much less comforts.

"In Bergen-op-Zoom, where I write these words, there have come since the fall of Antwerp 300,000 hungry marchers, with no resources except what they carry with them. This little town of 15,000 people did its best to meet the terrible press, and its citizens went without bread themselves to feed the refugees. How can a small municipality suddenly deal with so vast a catastrophe? Yet slowly some sort of order was organized out of chaos, and when the Government was able to establish refugee camps through the military the worst conditions were moderated, and now, in tents and in vans on a fortunately situated piece of land, over 3,000 people live, so far as comfort are concerned, like Kaffirs in karoo or aborigines in a camp in the back blocks of Australia. The tents are crammed with people, and life is reduced to its barest elements. Straw, boards, and a few blankets, and dishes for rations—that constitutes the *ménage*.

"Children are born in the hugger-mugger of such conditions but the good Holland citizens see that the children are cared for and that the babies have milk. Devoted priests teach the children, and the value of military organization illuminates the whole panoply of misery. Yet the best of the refugee camps would seem to American citizens like the dark and dreary life of an underworld, in which is neither work, purpose, or opportunity. It is a sight repugnant to civilization."

The most heartrending thing this novelist reports having seen is "the patience of every Belgian whatever his state." "No man, no woman railed or declaimed against the horror of the situation. The pathos of lonely, staring, apathetic endurance is tragic beyond words." Further:

"None begs, none asks for money, and yet on the face of these frontier refugees I saw stark hunger, the weakness of long weeks of famine. One man, one fortunate man in Verviers, told me he could purchase as much as two shillings' worth of food for himself, his wife, and child for a week.

"Think of it, American citizens! Sixty-six cents' worth of food for a man, his wife, and child for a whole week. It is not permitted to purchase that much! Sixty-six cents! That is

what an average American citizen pays for his dinner in his own home. He can not get breakfast, he can only get half a breakfast, for that at the Waldorf or the Plaza in New York.

"This man was only allowed to purchase that much food if he could, because if he purchased more he would be taking from some one else, and they were living on rations for the week which would represent the food of an ordinary man for a day. A rich man can have no more than a poor man. It is a democracy of famine.

"There is enough food wasted in the average American household in one day to keep a Belgian for a fortnight in health and strength. They want in Belgium 300,000 tons of food a month. That is their normal requirement. The American Relief Committee is asking for 8,000 tons a month, one-quarter of the normal requirements, one-half of a soldier's rations for each Belgian. The American Committee needs \$5,000,000 a month until next harvest. It is a huge sum, but it must be forthcoming.

"Of all the great Powers of the world the United States is the only one not at war or in peril of war. Of all the foremost nations of the world the United States is the only one that can save Belgium from starvation if she will. She was the only nation that Germany would allow a foothold for humanity's and for Christ's sake in Belgium. Such an opportunity, such responsibility, no nation ever had before in the history of the world. Spain and Italy join with her, but the initiative and resources and organization are here.

"Around Belgium is a ring of steel. Within that ring of steel are a disappearing and forever disappearing population. Towns, like Dendermonde, that were of 10,000 people, have now 4,000, and in Dendermonde 1,200 houses have fallen under the iron and fire of war. Into that vast graveyard and camp of the desolate only the United States enters with an adequate and responsible organization upon the mission of humanity.

"No such opportunity was ever given to a people, no such test ever came to a Christian people in all the records of time. Will the American nation rise to the chance given to it to prove that its civilization is a real thing and that its acts measure up with its inherent and professed Christianity?

"I am a profound believer in the great-heartedness of the United States, and there is not an American of German origin who ought not gladly and freely to give to the relief of people who, unless the world feeds them, must be the remnant of a nation, and the world in this case is the United States. She can give most.

"The price of one good meal a week for a family in an American home will keep a Belgian alive for a fortnight.

"Probably the United States has 18,000,000 homes. How many of them will deny themselves a meal for martyred Belgium? The mass of the American people do not need to deny themselves anything to give to Belgium. The whole standard of living on the American continent, in the United States and Canada, is so much higher than the European standard that if they lowered the scale by one-tenth just for one six months the Belgian problem would be solved.

"I say to the American people that they can not conceive what this strain upon the populations of Europe is at this moment, and, in the cruel grip of winter, hundreds of thousands will agonize till death or relief comes. In Australia in drought times vast flocks of sheep go traveling with shepherds looking for food and water, and no flock ever comes back as it went forth. Not in flocks guided by shepherds, but lonely, hopeless units, the Belgian people take flight, looking for food and shelter, or remain paralyzed by the tragedy fallen upon them in their own land.

"Their sufferings are majestic in simple heroism and uncomplaining endurance. So majestic in proportion ought the relief to be. The Belgian people are wards of the world. In the circumstances the Belgian people are special wards of the one great country that is secure in its peace and that by its natural instincts of human sympathy and love of freedom is best suited to do the work that should be done for Belgium. If every millionaire would give a million, if every man with \$100 a month would give \$10, the American Committee for the Relief of Belgium, with its splendid organization, its unrivaled efficiency, through which flows a tide of human sympathy, would be able to report at the end of the war that a small nation in misfortune

had been saved from famine and despair by a great people far away, who had responded to the call, 'Come over and help us.'

FRANCE'S SPIRITUAL REVIVAL

SERMONS are not confined to churches and pulpits in these days of stress. Some that are effective for faith are being preached outside the Church's boundaries, and Mr. Lloyd-George has supplied a text both for his own and for others' exhortation. "It is not what happens to you in life that matters—it's the way in which you face it." Mr. Vance Thompson applies this text to the state of France, developed during its

THERE WILL BE A—CHRISTMAS IN EUROPE, TOO.

—Cecile in the New York Sun.

hours of crisis, and shows a regenerated nation. "France has found unity," he declares, "and has learned—in the darkness—to call upon God." These, he points out in the *New York Evening Sun*, are "two new things." And "in them there is a hint of what the new Europe may be." He speaks especially of France, because we know more about her. "What is happening in Germany and Austria and Turkey few of us know, but as men do not differ much world-over (that is the chief thing one learns from travel) one may take it for granted they are facing the war with high courage and exultation. . . . I have no doubt momentous things are happening in Germany and Austria; that the people, notably, are learning lessons that will change the entire national structure—when the fighting is done and the day of reckoning comes for the rulers." What is happening in France and England he lays claim to knowing:

"Extraordinary things—things that had seemed impossible to the wildest prophet or dream-reader last July. There is no exaggeration (for I have no need of it) in saying that a new France has been born—as in war-pains unspeakable. For fifteen years France has been in the hands of the politicians whereof you know.

"When you looked out your window what you saw was moral, political, social anarchy.

"Came the war.

"France had done brave things in every sphere of human activity. Her musicians were in the front of all nations; she was at the head of science and scholarship; from painting to flying she led; but it seemed that her high spiritual destiny was

to end in the gutter and the mud, and that her political destiny was to die in the appetites and greeds of the politicians.

"In a day—in an hour—war knit together the old energies of the race. (And it was a strange thing to see laughter die in France. After the first horror of unexpectedness was conquered, the faces of men and women were wiped clean of fear and, also, of laughter—as soap-suds is wiped from a plate. It was strange to see the new faces—grave and steady, awed but courageous. Faces of Gaulish men and women.)

"The old energy came back; and the old unity. Priest and Socialist, cleric and *révolutionnaire*, were merely Frenchmen. And the old high idealism came back. It was a strange thing—unfamiliar and uncomfortable—to the middle-aged generation.

"Some day the history of the war will give a page to that strange scene when Paris—the shrill, derisive Paris you know—swarmed and jammed its way into Notre Dame. And they filled the vast cathedral from wall to wall. They hung like bunches of grapes on the ancient pillars. And outside the parvis and the square were black with humanity—kneeling. Streets to right and left were filled, and the bridge and the quays; and all who could kneel knelt; and they sang the ancient canticles, and the old Archbishop came out and blessed them.

"That was as miraculous a thing as has happened in the twentieth century—Paris on its knees, praying."

In July you would have said this was an impossible thing, observes Mr. Thompson. "It was as tho there had come back to France the old fierce spirit of faith that sent the Crusaders over sea and desert, crying their *Dieu le veut*." Further:

"No matter what happens to France, she is facing things in a new way—to use the Welshman's thought once more.

"If this war were merely a dirty squabble of greeds—trade-grabbers jostling for places in the sun—there would be small hope for civilization. But the men who have watched it—as I have—coming slowly to an issue, since 1907, know it is the inevitable struggle between the old forces of democracy and armed aristocracy. And it is already bearing fruit in all the nations. I know more about that in England and France, but I am sure it is true of the others. Humanity is knit pretty close in these days. . . .

"In the first anger and surprize of war lots of foolish, bad things were said and written in England, as elsewhere. What you hear now is different—and what you read. I think Lloyd-George voiced it first; and his words are worth knowing. He said the nations were 'shedding themselves of selfishness,' and making a new Europe—a new world. That view is worth while. And the newspapers are dropping the tone of brag and anathema. The London Times in a fine way denounces those who exult over the enemy—or envy them. This article in *The Times*—and if you know that essentially English newspaper you will agree with me—shows definitely how new and splendid an ideal has risen up in the public mind of England. A new ideal has risen where there were sloth, obscurity, and fatted insolence. You can see it in this: 'The comparison we have to make is with our own ideal, not with other existing men or nations. It does not matter whether we are inferior or superior to them in any respect; it matters only whether we are doing our best to reach our own ideal. In that effort men and nations alike would neither hate themselves nor others, but only forget themselves and all comparisons with others; and when comparisons were forced upon them by the struggle for life they would not suffer them to trouble the peace of their souls with pride or hate or envy. So a nation would be able to make even war without hate. We hope and believe we are making war so; but we must be on our guard lest we think of victory as a heaven beyond which we need not aspire. Victory is glorious in proportion to the value of the cause that triumphs in it.'"

OF HATREDS

WORSE THAN WAR is the extreme race hatred that sometimes permeates and possesses the souls of warring peoples. So *The Congregationalist* (Boston) regrets to find evidence that a mutual recognition of one another's good qualities that once characterized a large portion of the citizenship of the belligerent nations "is rather breaking down under the strain of continued anxiety and losses." And in the mind of the editor of *The Catholic Standard and Times* (Philadelphia), amazement is joined with regret, for "when a German newspaper of to-day calls upon the people of England's mother

country—as Germany may not altogether erroneously be described—to vow eternal hatred to England, the world gazes at a spectacle unparalleled in ethnic history." In neutral America we wish to think equally well of all the peoples now at war. Hence *The Congregationalist* believes it a mistake "when American public opinion is appealed to by partisans of either side in the present war by contemptuous depreciation of manhood in their enemies." And it remarks:

"We have the highest respect for the good qualities of Germans, Japanese, and British, drawing no distinction among them excepting such as is compelled by their ideals and behavior. The too-familiar and regrettable characterization by some Germans of their Japanese

enemies as 'yellow apes' strikes us as an impeachment both of the German sense of humor and of proportion. If Germany had not despised so large a proportion of the world's population in Europe and Asia, she would not now be at war, nor have alienated so large a proportion of neutral public opinion. . . . We have difficult questions of adjustment to settle with Japan, questions involving national feeling and the practical rights of Japanese in America and of Americans in Japan; but the best opinion of America more and more is determined that they shall be settled without calling in race hatred or contempt.

"The hatred of the Belgians for their conquerors is one of the most sinister and portentous facts of the hour. A correspondent of the *New York Times* relates the words of a Belgian officer convalescing in England. 'His one idea was to get back "to kill, to kill the Germans," and his greatest wish was to "see the palace at Potsdam in flames." His eyes simply glittered, and he looked more like a savage beast than an educated and cultivated officer.' Time brings some mitigation of these national hates, but, whether Belgium is incorporated with the German Empire or set free, it will take more than a generation to extinguish the Belgian hate.

"We regret to note some signs that public feeling in Great Britain is becoming embittered, not only toward German militarism, but also toward Germans as Germans. In the first stages of the war there were few traces of such contempt and hatred in the British newspapers. . . .

"A nation may fight a defensive war or a war for the succor of the weak, such as the British believe they are now fighting, and not sacrifice the justice and dignity which become Christians. England and Germany and France have got to live together peaceably in a future which we hope may not be long delayed."

These manifestations of hate seem to the editor of *The Catholic Standard and Times* only some of "war's false hatreds." For he does not believe, despite Ernst Lissauer's "Chant of Hate Against England," and other similar utterances to the contrary, "that the great mass of the German people entertain such unlovely sentiments toward the people who are so largely of their own blood and bone as the Anglo-Saxons."

THE MIDWINTER TRAVELER

PANORAMIC VIEW OF THE PANAMA-PACIFIC EXPOSITION, BORDERING THE MOUNTAIN-WALLED BAY OF SAN FRANCISCO.

AN OPPORTUNE TIME TO DISCOVER AMERICA

NINETEEN HUNDRED FIFTEEN bids fair to become famed as the year when a good many Americans discovered America. Several things are going to tend toward that end. For instance, there is the great war, which, to say the least, is going to do nothing to increase the volume of traffic from New York, Boston, and other ports to northern Europe; and for two other instances—there are the two great expositions out upon the Pacific coast which are just about to open their doors for what is to be practically the entire twelve months of 1915. As to the European traffic, an editorial from a recent issue of the *New York Times* is informing, it shows that the war has established a moratorium in immigration as well as in finance. Figures taken in early November showed that there were 15,223 fewer first-class passengers west-bound and 16,557 fewer east-bound than up to the same time in 1913. And this was despite the fact that the great proportion of those Americans who count upon an annual trip to the Continent were already there, trapt at the very unexpected outbreak of the war.

As to the expositions, if they only accomplish the Herculean feat of getting the people of the much-peopled Eastern States to plan and make the trek all the way across the United States, they will be worth every cent that they have cost. That object was probably in the minds of the men who

built them. As practical incentives to the much-heralded campaign of "Seeing America First," they are factors hardly to be underrated. But, as a matter of fact, they are so much more than this that this excuse for their existence is rather apt to be overlooked.

TWO MILESTONES OF NATIONAL PROGRESS

On the very day that the fatal shot was fired that ended his life, President William McKinley at the Pan-American Exposition at Buffalo pronounced expositions as "mile-stones of progress." That epigram became classic. Every great "world's fair" held in the United States has been, in truth, a mile-stone of its progress. The great fair which is to open at San Francisco on the 20th of February, as well as its slightly smaller brother which opens at San Diego on New-year's day and continues throughout the year, shows the progress of America up to the beginning of the year of grace 1915. There will be some showing of the progress of other nations as well, but you may be quite sure that there will be no showing of the development of the engines of destruction that just now are wreaking such havoc on the far side of the Atlantic.

All the progress evidenced at San Francisco—to take up the Panama-Pacific Exposition first—is not to be within the exhibit buildings, large and small. The architecture of the buildings themselves

is to be a record of development in a land which has tried nearly every sort of architectural fad or whim and seems at last to be settling down to a dignified building-plan of its own. If you do not believe that, stop off at almost any one of the many enterprising cities between the East Coast and the West and see what it has done within the past ten years in public buildings and in private—in churches, hotels, theaters; most particularly of all, in the designing and decoration of homes.

The Panama-Pacific Exposition is a reflection of this development. In the ingenious use of color on its giant buildings, the delicate tintings of their side walls, and the flamboyant but entirely harmonious colorings of their roofs, domes, and minarets, it represents the answers of the American architect and decorator to those folk from across the sea who laughed in scorn at the construction efforts of the Centennial Exposition. But it is nearly forty years since that memorably hot summer at Philadelphia. Those forty years have needed several mile-stones to record the progress of our land.

Architecturally, as well as in the placing of its group of buildings, the Panama-California Exposition at San Diego is radically different from the San Francisco show. While the buildings of the San Francisco fair are almost washed by the waters of the Golden Gate, the concrete "palaces" of San Diego crown a gentle

Excess Value In Abundance

THE only ordinary thing about the 1915 Overland is the price.

In every other respect it is an extraordinary value.

The stream-line body design has exceptional and exclusive beauty and grace.

The tonneau is spacious and has more than ordinary comfort.

The car rides with almost complete freedom from shocks and jolts. The new rear springs are responsible for this. They are underslung, very long, and have swivel axle supports of a new design.

Frank X. Leyendecker —

Such large tires, 34"x 4", are unusual on a car at this price.

See how convenient are the electric control buttons. The switches are on the steering column—right where you want them.

The highest priced cars all have high tension magneto ignition. So has the Overland. Many cars have only the cheaper and ordinary battery system.

To be sure, other cars probably have some of these features—but *most of these cars sell for very much more money.*

CURRENT POETRY

DURING the year now drawing to a close, many hitherto unpublished poems by great writers have been discovered. In these columns were reprinted several by John Keats and one by Elizabeth Barrett Browning. *The Yale Review* contains a sonnet by Robert Browning which was recently found among some papers of the late Mr. George Smith, of London.

The sonnet was not this great poet's favorite form of expression; his talent was not especially suited to its strict limitations. But these lines, lacking as they are in grace and smoothness, have their author's characteristic strength. Only Browning could have written the majestic final sentence.

THE "MOSES" OF MICHELANGELO

Copyright, 1914, by The Macmillan Company.

BY ROBERT BROWNING

And who is He that, sculptured in huge stone,
Sitteth a giant, where no works arrive
Of straining Art, and hath so prompt and live
The lips, I listen to their very tone?
Moses is He—Ay, that, makes clearly known
The chin's thick beard, and brow's prerogative
Of double ray; so did the mountain give
Back to the world that visage. God was grown
Great part off! Such was he when he suspended
Round him the sounding and vast waters; such
When he shut sea on sea o'er Mizraim.
And ye, his horses, a vile calf raised, and bended
The knee? This Image had ye raised, not much
Had been your error in adoring Him.

Here is a war-poem which can offend no one, whatever his sympathies may be; a stirring song in praise of valorous men. It appeared in the *New York Times*.

THE MEN OF THE "EMDEN"

BY THOMAS R. YBARRA

What matter if you
Be staunch and true
To the British blood in the veins of you,
When it's "hip hurrah!" for a deed well done,
For a fight well fought and a race well run—
What matter if you be true?
Hats off to the *Emden's* crew.

There's was the life of the storm-god's folk,
Unrouted miles from the Fatherland,
With a foe beneath every wisp of smoke,
And a menace in every strip of strand.
Up, glasses! Paul Jones was but one of these,
Hull, Bainbridge, Decatur, their brothers, too!
(Ha! those pirate nights
In a ring of foes,
When you downed your lights
And drove home your blows!)
Hats off to the *Emden's* crew!

Ere on the wave-washed decks stood they
And heard with a viking's grim delight
The whirr of the wings of death by day
And the voice of death in their dreams by night!
Under the sweep of the wings of death,
By the blazing gun in the tempest's breath,
While a world of enemies strove and fumed,
Remote, unaided, undaunted, doomed,
They stood—Is there any, friend or foe,
Who will choke a cheer?—who can still but
scuff!
No, no, by the gods of valor, no!
To the *Emden's* crew—
Hats off!

The war is great, but not so great as
Christmas. And already the light of an
unfading Star to pierce through the

angry clouds of smoke. Here is a Christmas poem which we take from the December issue of *Harper's Magazine*. There is beauty in it, and the true spirit of devotion.

THE GLORY OF THE GRASS

BY CLAIRE WALLACE FLYNN

"And she brought forth her first-born son, and wrapt him in swaddling clothes and laid him in a manger. . . ."
Luke ii, 7.

In what far, green Judæan field
Did those upgrowing grasses yield
Their promises of gentle strength
When they should cradle Him at length?

What secret grace did earth produce,
That made those grasses for his use?
What glory from the sun they drew,
And what of pity from the dew?

What lad with sudden singing heart,
From all the other lads apart,
Cut them and bound them in the sun
And went his way—his work all done?

What tender girl, dark-haired and brown,
Carried the sheaves into the town;
Nor felt the weight of all that load
Along the narrow, hilly road?

And then the night, when Mary's face
Grew pallid in that lowly place,
Who filled the manger, made the bed,
Where only dumb beasts long had fed?

The humblest thing that grows on earth—
You gave Him comfort at his birth,
And kept Him warm, and made a nest
Wherein His tiny limbs might rest!

Still with strange blindness have we trod
Among the common fields of God,
Seeing but dimly as we pass
The ancient glory of the grass!

Mr. John Masfield is at his best when he sings of the sea. One of his "Salt-Water Ballads" is worth a dozen poems like "The Widow in the Bye Street." To *Harper's Magazine* he contributes these sonorous and picturesque lines. Only a poet who really has "gone down to the sea in ships" could write of them so intimately and convincingly.

SHIPS

BY JOHN MASFIELD

THE ORE

Before Man's laboring wisdom gave me birth
I had not even seen the light of day;
Down in the central darkness of the earth
Crushed by the weight of continents I lay,
Ground by the weight to heat, not knowing then
The air, the light, the noise, the world of men.

THE TREES

We grew on mountains where the glaciers cry,
Infinite somber armies of us stood
Below the snow-peaks which defy the sky;
A song like the gods' moaning filled our wood;
We knew no men—our life was to stand stanch,
Singing our song, against the avalanche.

THE HEMP AND FLAX

We were a million grasses on the hill,
A million herbs which bowed as the wind blew,
Trembling in every fiber, never still;
Out of the summer earth sweet life we drew,
Little blue-flowered grasses up the glen,
Glad of the sun, what did we know of men?

THE WORKERS

We tore the iron from the mountain's hold,
By blasting blew we smithied it to steel,
Out of the shapeless stone we learned to mold
The sweeping bow, the rectilinear keel,
We hewed the pine to plank, we split the fir,
We pulled the myriad flax to fashion her.

The Comforts of Home

can be fully enjoyed only by those who are mentally and physically well—

Health first, pleasure follows.

Health of body and brain calls for proper food to repair the daily waste from work or play.

The everyday diet is often deficient in some of the essentials needed for balanced upkeep—such as phosphates for the brain, iron for the blood and lime for the bones.

Grape-Nuts
FOOD

—made of prime wheat and malted barley—contains in easily digestible form, all the nutriment of the grains, including the vital mineral salts.

That, along with delicious flavour, is why Grape-Nuts has become a favorite breakfast dish the world over.

For brain workers, growing children, and those who would make their lives tend toward the best possible health and happiness.

"There's a Reason"
for

Grape-Nuts

Sold by Grocers

—Everywhere!

Out of a million lives our knowledge came.
A million subtle craftsmen forged the means.
Steam was our handmaid and our servant flame.
Water our strength—all bowed to our machines.
Out of the rock, the tree, the springing herb
We built this wandering beauty so superb.

THE SAILORS

We, who were born on earth and live by air,
Make this thing pass across the fatal floor.
The speechless sea; alone we commune there
Jesting with death, that ever-open door.
Sun, moon, and stars are signs by which we drive
This wind-blown iron like a thing alive.

THE SHIP

I march across great waters like a queen,
I whom so many wisdoms helped to make;
Over the uncrumpled billows of seas green
I blanch the huddled highway of my wake
By me my wandering tenants clasp the hands
And know the thoughts of men in other lands.

Always there was charm in Corinne
Roosevelt Robinson's verse, but charm
alone never insured a poem's place in
literature. Recently, her work has gained
noticeably in sincerity and power. Her
latest book, "One Woman to Another, and
Other Poems" (Charles Scribner's Sons),
contains poems that are characteristically
graceful, but also genuinely passionate. It
is the poet's deep sincerity, not merely her
deftness, that makes this poem so strong in
its appeal.

HOSTAGE

BY CORINNE ROOSEVELT ROBINSON

Life, wilt thou wait awhile
And let me smile?
Before the stress and turmoil have begun.
Grant me one hour,
One hour of golden dalliance in the sun,
The fair, sole dower
To hold forever close against my breast,
And so forever rest
In happy knowledge that joy has been mine,
That in my veins like wine
Has run the glamour of the sunlight's glow;
That winds so soft and low
Have brought me fragrance of the distant brine,
Or honey-sweet amid the spring-touched trees
Have swept the scent of these
Upon my eager senses, till I seem
A part of my own dream,
My dream of youth
And nature's flowering.
Life, let me sing!
Wilt thou not stand aside
Until with all the fair world's gifts allied
I shall have armor of delight to bring
Against the fierce hot sting
Of thine assault when that dread day shall come?
I promise thee, O Life, I shall be dumb,
Nor utter one reproach if only now
I may go forth with gay uplifted brow
And meet my golden hour of happy fate—
Life, wilt thou wait?

I am no coward—when the trumpet calls,
Valiant, my feet shall climb the crumbling walls,
My breast be bared to hail of shot and shell,
But now, while all is well,
Let me hold fast
To this sweet hour that it shall ever last,
A hostage to the future and the fight.
Thus when the darkness comes and clash of arms
And my soul is sick with fierce alarms,
The healing light,
The peace of what has been,
Shall guide me through the din,
And pledge me promise of what is to be:
Thus may I see
My happy hour once more restored to me,
Transfigured, dim, perchance, yet glorified
Altho with death allied!
So be it, then—if now,
Stern Life, if thou
Wilt wait a little while
And let me smile.

Globe-Wernicke

Sectional Bookcases

*'Twas the day after Christmas, and all 'round about
The scattered new volumes put Order to rout.
In the home that's ideal, how different the case!
A place for each volume and each in its place.*

(With apologies to Clement C. Moore)

BEFORE the Globe-Wernicke period in bookcases, either books over-
crowded limited shelf space or empty shelves yawned and waited for
books. When one bookcase over-flowed, an entire new one was purchased
and its gaping shelves gradually filled. Now, books and their shelves come
together—you add section to section as the need arises.

PERSONAL GLIMPSES

ADOPTING BELGIUM

IT is rarely that an expert at any trade finds himself utterly destitute and an outcast, no matter how badly fortune may treat him. In this fact there is comfort for Belgium in her present straits. Tho the immediate condition of her people is one, for the most part, of utter destitution, yet hope for them persists in the fact that a people so expert as are the Belgian small farmers are bound to be in demand in any country that is attentive to its own welfare. In this country we have not been slow to recognize the opportunity for us. Some mention was made in these columns recently of the plans that are being perfected in Louisiana to secure Belgian immigrants. The New York Sun calls our attention to the endeavors of two departments of the Federal Government to arrange for many more for our Western lands. The first step was taken by the Reclamation Service of the Department of the Interior, in its attempt to secure thrifty farm-folk for the newly reclaimed areas west of the Missouri. Inquiry was made of the Department of Labor, where the Bureau of Immigration is administered, with the result that the subject of possible Belgian immigration was looked into. Of the subsequent steps taken we read:

The Department of Labor reported that Belgians were coming in greater numbers than any other class of farmers that were equally desirable. Those refugees who had fled to England and Holland were looking for a chance to make a new start. There was even the shadow of a permanent German domination of their native land, which was anything but pleasing to them. They were looking to America. Many were coming.

The Reclamation Service made a study of these Belgians. It was interested only in those from the farms, but they were in the majority. It found, in the first place, that the Belgian farmer was intelligent and skilful as an intensive cultivator of the soil. The small farms of Belgium are the best worked in the world. Particularly is the Belgian an experienced cultivator of sugar-beets.

Here was exactly the thing for which the Reclamation Service was looking. The European countries that produce the greater part of the best sugar of the world were at war and their production is practically shut off. The United States saw the great chance of prosperity that awaited those regions over here that are particularly fitted to the production of this crop. Those regions were the irrigated lands of the West. This new reclaimed land grows such sugar-beets as Germany dreams not of. The sugar-beet industry of the West could take care of every Belgian sugar-beet farmer it could get hold of. But this was not all. It was found that another section of Belgium, along the Dutch border, was inhabited by a people given over almost entirely to dairying. Here is another industry that leads to prosperity on the reclaimed lands. A

little farm laid down in alfalfa will furnish food for a dairy herd that will bring sure and abundant returns to the man who knows how to run it.

On these projects a creamery is usually one of the first industries established and so is a market created for the yield of the dairy farms. The climate is so mild in many places that no housing is required. The hay of the alfalfa is an ideal winter food. All that is needed to go into the dairy business is a few cows.

The Reclamation Service wanted to know more about the adaptability of the Belgian to such conditions as existed in the West, and therefore took the matter up with the Belgian Consuls in New York, Philadelphia, and Baltimore. It asked if they thought that the refugees would fit into the American scheme of things.

The Consuls said, in the first place, that certain considerations should be kept in mind in settling these Europeans in the West. It should be remembered that the Belgians were accustomed to living in densely settled communities, closely in contact with their fellows. For generations they had never stirred from one community. They were provincial and unaccustomed even to the manners of fellow citizens who lived a hundred miles away. They stuck very closely to their own kind.

They could probably not tolerate life on the open plains. A Belgian family settled among Americans would be very unhappy. They should be handled in groups and settled close together.

This exactly fitted in with the scheme of the Reclamation Service. Of these irrigated lands ten acres is sufficient for an intensive farmer. With a settler on each ten acres a community becomes almost a continuing village. It makes the sort of community to which the Belgian farmers are accustomed. The Consuls suggested also that it was advisable to establish community centers and that the Belgians were accustomed to a community leader, often the priest. It might be advisable to offer certain inducements to this leader, such as establishing a church and parsonage.

This fitted in with the plan which the Reclamation Service had followed since its inception. It was found that reclaimed lands offered the ideal opportunity for laying down model community centers. On many of the projects towns have been laid out with roads radiating in all directions and with the division of the tract so arranged that the farms all about would fit into the scheme of an ideal community center where everybody got the advantage of village life while engaged in farming.

Schoolhouses, churches, post-office, and stores were grouped about the center of the model village. Its streets were laid out with the idea of ultimate possibilities in mind. The farms, the road scheme of the community, all were so arranged as to make the best possible community when it had grown to its utmost. The Belgians seemed to fit ideally into the reclamation scheme of things.

There are several reasons, in fact, why it would not be possible to settle Belgians on unreclaimed Government land. In the first place, being aliens, they must have taken out their first papers before they can file claims; again, the scrambling method of grabbing up new tracts prevents any

"I DID SHOP EARLY"

SAYS NANCY GAY

Q "And it didn't take me long to pick out just the most delightful gifts for everyone.

Q "I decided long ago that the things I like best would be the most likely to please all my friends.

Q "I really adore pretty lamps—the cozy, cheerful kind that give no trouble and are so comfortable to read by. So I simply bought gas portable table lamps for Mrs. Jones, Aunt Mary and the Smiths.

Q "As for the rest of my list, there was no trouble about finding suitable gifts of the handy gas sort. A gas iron for mother, a gas hot-water heater for George's folks, a gas heating stove for grandma—indeed, it would surprise you to know all the lovely, useful Christmas gifts that can be purchased at the gas office. A visit there will certainly repay you."

"The Story of Nancy Gay"

is a snappy, thoroughly delightful little book that will be mailed you on request, absolutely free. After you read it get in touch with your local gas company and learn what good gas service can do for you.

adequate attempt to group the applicants in the allotment. More important still is the impossibility that would face the new arrival in developing and fertilizing his tract, were he given one in the unimproved regions. How the Reclamation Act obviates these difficulties is explained:

The Reclamation Act provides that water may be furnished to individuals for only given amounts of land, forty or eighty acres in most cases. The idea is to make it impossible for individuals to possess themselves of large tracts. It is the most effective scheme so far for getting the land into the hands of the many instead of the few.

On practically all of the projects there were individuals who held title to large tracts of land before the water was brought on them. As these men can get water for only a small tract, it becomes advisable for them to subdivide and sell their holdings. Such men are looking for opportunities to colonize good farmers on their lands and let them work out their ownership. These men will hire such settlers, paying them wages for the first year to clear up and prepare the land for crops. The second year the hired man may assume title and plant crops on his savings. He may pay for the land out of the crops he subsequently raises.

A man on the Uncompagne project in Colorado had 640 acres, which was much more than he would be allowed water for. He subdivided it into small farms and settled fifty families upon them. These settlers be advised in the right way of farming under the local conditions, as to crops that should be planted, and helped them in their marketing. The settlers turned half of their crops toward paying for their lands.

In three years they had paid for and owned their homes. Also they had converted a barren desert into a garden-spot thickly studded with prosperous homes.

A part of the scheme of the Reclamation Service of placing Belgians on its Western lands lies in gathering information as to where there are privately owned lands that may be improved by such settlers. It is getting in touch with such owners throughout the West. It is working out with these people the methods by which groups of immigrants may be placed on these lands.

Local bankers in various communities are figuring out schemes for financing such groups of settlers. In many of the Western States there are great tracts of land that are owned by the railroads. Many of these roads are anxious to settle their lands with immigrant farmers. They are ready to make many concessions to prospective productive farmers, for they will get freight to haul after they have got their money out of the land.

The best-growers of the West also offer opportunities to the farmer who knows best-culture. Such a grower may turn over a forty-acre patch of beets to an immigrant family which contracts to take care of it until it is mature. The family may be paid a flat price for this, something like \$25 an acre. It may be advanced the necessities of life in the meantime. Men, women, and children will work early and late in the fields and accomplish such amounts of toil as the American family can hardly appreciate. When the season is over the

family has earned \$1,000, of which \$500 has been saved.

This is enough to start a Belgian family on a farm of its own. So may a start be gained in a new land from almost nothing. So may America profit by gaining the best sort of blood engaged in the most productive and beneficial of callings.

THE PLAYFUL RUSS

The *muzhik* is a playful animal apparently. Those who invaded East Prussia and returned to Moscow to tell of their adventures described with enthusiasm the joys of rollicking through a deserted German village, and had many tales of the excellent playthings found in the villagers' homes. How the villagers liked it is not stated. The *Philadelphia Ledger* is responsible for the story:

"Germany is a fine country," said one Cossack. "No comparison with our villages. They have stone houses, brick houses, fine carpets, chairs, and talking-machines. Every house has a phonograph, and we learned to set them going. One day I had just started one when an officer put his head through a window and ordered the music stop. I didn't know how to stop it, so I just hit it, biff! in the middle, and the wheels flew all over the room."

"They also have fiddles and a big black box with a lid. When you open the lid and bang it it goes 'bir, bir, bo, bo.'"

It was explained to the Cossack that this was a piano. An officer said the streets of all German villages were strewn with books, phonographs, vases, silver plate, and piano keys, but pictures and statues were not touched by the Russian troops. Asked if they had plenty to eat in Germany, another wounded man said:

"Yes, plenty of pigs. We had roast German pork every day. There were thousands of pigs, and we carried them off to camp."

INFANTILE ATROCITIES

Naming babies after great men and events is a practice that no amount of civilization seems able to stamp out. While waiting for the arrival of pink, gurgling, and helpless Przemyśl Smith, let us consider past and present offenses, quoted by the *Philadelphia Ledger* from British correspondence:

Scores of babies born during the present war will bear for life names inflicted upon them by parents carried away with patriotism or wishing to keep fresh events in history by the children whose names will recall the events. Among the child insurance registrations recently were: "Alsace Lorraine Jones" and "Louvain Nicholls."

A similar epidemic prevailed during the South-African War. This prompted a song which became popular and a chorus of which went:

"The baby's name was Kitchener, Carrington, Kekewich, Methuen, White, Cronje, Kruger, Powell, Majuba, Gatacre, Warren, Colenso, Bright, Cape Town, Mafeking, French, Kimberley, Ladysmith, Dobbs, The Union Jack, Fighting Mack, Buller, Pretoria, Bobs."

The Cost of a Telephone Call

DID you ever think how much it costs to give you the telephone right-of-way anywhere, at all times?

Your telephone instrument, which consists of 130 different parts, is only the entrance way to your share of the vast equipment necessary in making a call.

Your line is connected with the great Bell highways, reaching every state in the union—with its poles, copper wire, cross arms and insulators in the country; its underground conduits, manholes, cable vaults and cables in the cities.

You have the use of switchboards costing upwards of \$100,000,000. You enjoy the benefits of countless inventions which make possible universal telephone talk.

Your service is safeguarded by large forces of men building, testing and repairing lines. You command at all times the prompt attention of one or more operators.

How can such a costly service be provided at rates so low that all can afford it?

Only by its use upon a share-and-share-alike basis by millions of subscribers, and by the most careful economy in construction and operation. A plant so vast gives opportunity for ruinous extravagance; and judicious economy is as essential to its success as is the co-operative use of the facilities provided.

That the Bell System combines the maximum of usefulness and economy is proved by the fact that in no other land and under no other management has the telephone become such a servant of the masses.

Is There a HELL?

It is an old question. In the book just published with this title there are New Answers by Sixteen of the Ablest Writers and Preachers known to England, one of whom, Rev. Dr. A. C. Dixon, is also well known in America.

You Should Know

what their answers are. They represent as many sects—including Catholic and Jew—and one is a Socialist. They concern every man.

"I have smoked all the old Patterson brands, but 'Whip' whips them all,"

—wrote S. M. E., of Duluth, Minn.

Thousands of other delighted smokers of "Whip" have written us voluntarily to the same effect. These letters are pleasing to us. They prove that smokers, *real smokers*, join with us in proclaiming "Whip" the finest smoking tobacco of the many famous brands we Pattersons have originated.

All that I have learned from my father, who devoted his life to the making of fine smoking tobaccos, and all I have learned in my own 30 years' experience, is embodied in "Whip" tobacco. You probably have smoked many of our tobaccos and have found them good. They have been but stepping stones to "Whip."

J. H. R., of Springfield, Ill., writes: "Whip" is quite the most delightful blend I have ever smoked—cool, sweet, and without the hint of a sting to it."

"Whip" owes its absolute freedom from "bite" to the pure, natural, mild tobaccos used in its blending. Strong tobaccos bite, and when you try to isolate the "bite" you are bound to take out other properties that make the tobacco fragrant and enjoyable.

Ounce Tin Free

"Whip" sells at 5c for an ounce tin, 10c for a 2 oz. tin, and in pat. pound humidor at \$1. Let me send you an ounce can free. You'll like it so well you would pay double the price if you had to. Write today, please mention dealer's name.

McPatterson

Patterson Bros. Tobacco Co., Inc.
Richmond, Va.

Also makers of "Queen"—the big 2½-oz. 10c tin—a little stronger than "Whip" and better than other brands of 2-oz. 10c tobacco.

See United Pat. Sharing Coupon sheet for valuable premiums. Packed in all sizes of "Whip" and "Queen."

Child Training

As An Exact Science

Just
Published

The Parent
The Physician
The Teacher
The Nurse
will find
this Book
of Immense
Usefulness.
Its Authority
and
Reliability
are
Unquestioned

By
GEORGE W. JACOBY, M.D.

Based upon Modern Psychology,
Medicine and Hygiene

Heretofore there has been no one book which stood out high above others as a standard, scientific, and reliable popular work on the subject of Child Training in its mental, moral, and physical aspects.

Dr. Jacoby, a man of high attainments, has written this book for the teacher, the parent, and the physician. With sound logic, he sets forth the reasons why it is necessary that all those of these cooperate in the child's development.

CURRENT EVENTS

EUROPEAN WAR

IN THE EAST

December 5.—Reinforced from the West, the Germans gain Lodz, entering the city without great opposition. South and east of the city violent encounters continue.

December 6.—A Russian force numbering 270,000 is before Krakow, the suburbs of which, to the southeast, are reported under bombardment.

December 7.—It is claimed from Petrograd that the German capture of Lodz, which imperils Russian communications with Warsaw, and the advance from Warsaw of large Russian reinforcements, begin a new phase of the Poland campaign.

IN THE WEST

December 3.—Heavy artillery engagements between Altkirch and Damerkirch, in Alsace, are heard at Basel and elsewhere on the Swiss frontier.

December 4.—Hot fighting is reported north of the Lys and in the Argonne region. Reims is again under bombardment.

December 8.—All day heavy artillery firing is kept up from the Channel to the Lys.

December 9.—Germany claims successes north of Arras. The French report recent advances in the Departments of Pas de Calais and the Somme. German and French claims as to successes in the Argonne region continue contradictory.

GENERAL WAR NEWS

December 2.—Petrograd reports Russian successes on the northern Turkish-Persian border.

Allied transports reach Antivari, the port of Montenegro, but the troops can not disembark owing to the activities of Austrian aviators.

December 3.—Berlin quotes the Russian official military paper as announcing 33,000 Russian officers killed, wounded, or taken prisoner, up to December 1.

Nish, Serbia, reports the blowing up of a great tunnel near the Servian border, thus cutting rail communication with Roumania. The Serbs retire before the Austrians, but cover their retreat.

December 5.—There are persistent reports of Servian aggression, including a pursuit of the Austrian right wing as far as the river Kolubara.

December 7.—An authoritative tho unofficial estimate from Paris places the French loss in dead up to November 10 at 100,000, the wounded at 400,000, and prisoners in German territory at 90,000.

December 8.—A British squadron, under Rear-Admiral Sturdee, defeats Admiral von Spee's squadron in the South Atlantic, at the Falkland Islands, sinking the *Scharnhorst*, *Gneisenau*, and *Leipzig*. Nearly 2,000 are reported lost.

Kragujevatz reports a Servian victory over the Austrians in which many prisoners and arms are taken.

The British Indian expeditionary force at the head of the Persian Gulf gain Kurna, giving them control of the valuable territory from the junction of the Tigris and Euphrates to the sea.

GENERAL FOREIGN

December 4.—Villa and Zapata announce that they will work together and retire

to private life when their joint ends are gained.

December 5.—Generals Salazar and Campa, former Huerta leaders, begin a new revolutionary movement in Mexico.

December 7.—A battle is reported as taking place in the streets of Mexico City between Villa and Zapata forces when the representatives of the two leaders quarrel. A constitutionalist victory is reported near San Martin.

Holland loans to the Belgian Relief Committee 10,000 tons of wheat, enough to prevent starvation in Belgium for two weeks, thus enabling the Commission to carry on its work successfully pending the arrival of American ships.

DOMESTIC

December 4.—The Italian Ambassador lodges a complaint with the State Department against the Arizona law prohibiting more than 20 per cent. of alien workers in certain industries.

Miners and operators of the Ohio coalfields, in conference in Cleveland, adjourn *sine die*, leaving the strike, which has persisted since April 1, unsettled.

December 8.—In his message to Congress the President urges, among other things, legislation to facilitate the development of the nation's water-power and to unlock the resources of the national domain; to give a larger measure of self-government to the Filipinos; and to increase our merchant marine by the addition of Government-owned ships. He says that his party's program of business legislation is "practically completed," and, turning to the subject of our military preparedness, he declares that "we have not been negligent of national defense," but that we must depend, not upon a large standing army, but upon "a powerful navy" and "a citizenry trained to arms."

The Secretary of War orders the guard at Naco, Arizona, reinforced by three batteries of the Eighth Army Brigade.

The governing board of the Pan-American Union in Washington adopts unanimously Argentina's project to create a commission for the especial consideration of new problems affecting the western hemisphere, which may grow out of the present war.

The convention of District No. 15 of the United Mine Workers of America votes to end the Colorado coal strike on December 10.

December 10.—The *New York Times* gives the comparative naval losses, to date, in tonnage, as 100,960 for the Germans and 156,345 for the British.

WARNING!

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even tho they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonus. THE LITERARY DIGEST mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

THE SPICE OF LIFE

Complete.—"Was your Christmas present in the nature of a surprise?"

"I should say so. It was just what I wanted."—*Judge*.

Crossed Wires.—"Now they've got a new contrivance for reducing adiposity."

"Dear me! There won't be a city in Europe when this awful war is over."—*Buffalo Express*.

Proof.—"And are the divorce laws so very liberal in your section?"

"Liberal? Say! They are so liberal that nobody ever heard of a woman crying at a wedding out there."—*Detroit Journal*.

Very Like.—"Pa, what is a retainer?"

"What you pay a lawyer before he does any work for you, my son."

"Oh, I see. It's like the quarter you put in the gas-meter before you get any gas."—*Boston Transcript*.

A New Horror.—**SHOW GIRL.**—"Has your feller felt the effects of Cupid's shafts yet, Queenie?"

CHORUS LADY.—"Honest to goodness, Rosemary, I'm afraid Cupid will have to use dumdums on that guy."—*Puck*.

Suggested.—"What do the suffragettes want, anyhow?"

"We want to sweep the country, dad."

"Well, do not despise small beginnings. Suppose you make a start with the dining-room, my dear."—*Louisville Courier-Journal*.

Their Advantage.—"Yes," said the world traveler, "the Chinese make it an invariable rule to settle all their debts on New-year's day."

"So I understand," said the American host, "but, then, the Chinese don't have a Christmas the week before."—*Ladies' Home Journal*.

Disappointed.—"Do you find that set of books you bought interesting?"

"Not very," confessed the man who tries to improve himself. "But I'd feel better about it if the man who comes around to collect were as good an entertainer as the one who sold me the books."—*Washington Star*.

Willing to Please.—**OLD LADY** (irritably)—"Here, boy, I've been waiting some time to be waited on."

DRUGGIST BOY.—"Yes, ma'am. What can I do for you?"

OLD LADY.—"I want a stamp."

DRUGGIST BOY.—"Yes, ma'am. Will you have it licked or unlicked?"—*Los Angeles Express*.

High Praise.—Kate Douglas Wiggin's choicest possession, she says, is a letter which she once received from the superintendent of a home for the feeble-minded. He spoke in glowing terms of the pleasure with which the "inmates" had read her little book, "Marm Lisa," and ended thus superbly:

"In fact, madam, I think I may safely say that you are the favorite author of the feeble-minded!"—*Woman's Home Companion*.

Closed Car Comfort at Open Car Cost

There has never been a demountable winter top like the Hupmobile coupe and sedan.

Such others as you have seen have been built on a general plan, in local shops, for all cars.

This Hupmobile sedan is a thing of beauty as well as utility; designed and built in the Hupp factory.

The others destroy the lines of the car; this retains the graceful beauty of the new Hupmobile.

\$1365 Hupmobile Touring Car with Sedan Top, complete, \$1400 f. o. b. Detroit; \$1400 f. o. b. Windsor. Without top, \$1325 f. o. b. Detroit; \$1400 f. o. b. Windsor.

The others have rattled and shaken loose; this is as firmly attached as any other part of the car.

The others, at best, are simply protection against wind and cold; this, in spite of economy of cost, actually has limousine luxury in its exterior and interior finish.

Business and professional men—doctors and the like—are turning to the coupe-roadster.

Women find it endowed with delightful ease of handling, a motor that can't stall, a big parcel compartment, and plenty of head-room for hats and feathers.

Families, with one accord, favor the sedan-touring car, which brings them winter pleasures and conveniences and comfort they have never known.

Special sedan top booklet on request.

Half A Century Of NAVAL SERVICE AND SPORT In Many Parts Of The World

"From Naval Cadet to Admiral"

By Admiral Sir ROBERT H. HARRIS of the British Navy

An intimate narrative by one of the old sea dogs who have helped to make the British Navy what it is to-day. It is full of the spice of adventure. As the Admiral's penchant for danger frequently placed him in hazardous situations, he has many halfbreath escapes to relate. Moreover, there are many illuminating chapters on the great events in recent history in which the Admiral had a part. It is interesting, entertaining and informative, the anecdotal style giving it a charm peculiarly its own. As the Admiral's experience ranges from the days of wooden walls to the iron sides of to-day, it is of exceptional value to naval men interested in the progress of their profession.

A large octavo volume. Bound, Illustrated. Bound in cloth. \$2.50 net; by mail 25 cents extra.

The New Reo The Fifth—The "Four"

WHAT NEED WE ADD to that you already know of this great car? For of course you do know. If you have not owned one, you have many friends who do. And they have doubtless told you in more extravagant terms than we would care to use.

MORE THAN 10,000 of them are today in hands of users. 12,000 were sold last season.

AND AS PROVING the popularity of this model we need only say that on November 10th the last Touring car left the Reo factory. And that for thirty days at least there has not been, so far as we know, a Reo the Fifth on any Dealer's sales floor anywhere.

THE PROOF OF QUALITY in any product is "will it sell in the off-season?" Autumn is supposed to be the off-season for motor cars. Not for Reo cars though—we have never known a time when, even with our splendid factory facilities, we were able to make enough Reos to supply the demand.

WE HAVE JUST INCREASED our plant, nearly 50 per cent—necessary to produce the new "Six." And we hope to be able to more nearly supply our dealers this year than formerly.

AS WE HAVE NO AMBITION, however, to be maker of the most automobiles, but of the best. We do not expect, ever, to supply all the demand for Reo cars. That would be a strain of—well, the reverse of success.

TO MAKE THEM EVER BETTER—an much better that, all ways, the demand will beckon the supply—that is our aim.

FOUR YEARS AGO we announced that, after more than 25 years of experimenting—testing—proving—we had produced a chassis that we believed was finally in all essentials of design. And we said so.

SOME FRIENDLY RIVALS laughed at that statement—said that changes would continue to come with the seasons—as they always had.

NEVERTHELESS WE WERE CERTAIN in our own minds that, in the three-unit power plant and in other features that have become known as peculiarly Reo, we had established principles that would not change—so long at least as the principles of gas engines remained as they were.

IMPROVEMENTS? Refinements? Of course—but only in minor details. The world moves and of course we expect to move with it.

BUT IN THE FUNDAMENTALS of a self-propelled pleasure car, we were convinced we were right. Events have only served to confirm us in that belief.

FROM SEASON TO SEASON we have made such improvements as the progress of the science has made possible. And as our facilities have increased and our purchasing ability become greater, we have from time to time reduced the price of Reo cars at the same time that we have increased the quality and the size.

IN THE CASE OF THIS FOUR we have been able to do two things we had considered impossible—we have made a bigger and at the same time we have made a still better car.

HOW WAS THAT POSSIBLE?

you ask. Tell you—THE MOTOR PROVED to have more power than was necessary—more than was really desirable for the weight of the car. Refinements, recently made, increased that power still more.

SO WE FOUND we could add three and one-half very desirable inches to the length of the car, give the buyer a more luxurious equipage, and yet have a car of ample power.

THAT DIFFERENCE in length—and we made it wider at the same time—makes all the difference in the world in the capacity and the comfort of the car.

OTHER NOTICEABLE improvements—in a car which formerly seemed almost perfect—are:

IMPROVED UPHOLSTERING—higher backs to seats.

IMPROVED WINDSHIELD support—with braces running from cowl to body sill.

POCKETS in all doors.

INSTRUMENTS mounted flush on instrument board.

HOOD FASTENERS—new and improved type. Stay put—and unfasten readily when you want them to.

ENTIRELY NEW TOP—a real One-man top. Can actually be put up or down by one man—after long use as well as when new.

WINDSHIELD—Oval moulding and pressed steel construction throughout.

RADIATOR—New method of securing to frame—more flexible—prevents strains on roughest roads. More cooling capacity.

WHEEL BASE—increased 3"—now 115".

NOBBY TREAD TIRES on rear wheels and extra wide, oversize, demountable rims.

SPRINGS—Improved method of lubrication for spring shackles.

STREAMLINE HUB-CAPS—an exclusive Reo feature.

ANTI-RATTLER on brake, and anti-rattling support.

IMPROVED STARTING mechanism—no sliding contacts and resistance.

NEW HEADLIGHTS with hingeless anti-rattling doors and outside for use attachment.

NEW DESIGN FENDERS—crown type, closer fitting under pan.

NEW METHOD of supporting ignition coil. New design universal joint for generator.

NEW CYLINDER DESIGN—Independent exhaust ports. Injector type exhaust manifold. New low-pressure muffler.

NEW THREE-PIECE piston rings, giving greater power and acceleration.

IMPROVED VALVE operation mechanism—larger surfaces, ball joints, self-lubricating.

NEW ONE-PIECE cam shaft—larger bearings—and hardened and ground.

ADDED FRICTION SURFACE to clutch. New operating mechanism calling for less foot pressure. Improved thrust bearings.

EQUIPMENT—One-man top. Finish instruments; highest priced d'Arsonval type ammeter and usual tools and accessories.

DELIVERIES BEGIN. Deliveries begin. Your local dealer will be able to show you and to take your order for this matchless car on or about that date.

Reo Purchasing Power Made

A Condition That Was An Insurmountable Obstacle To Some, Proved To Be Reo's Golden Opportunity

WE PROMPTLY TOOK and are giving you—full advantage of it.

READ CAREFULLY—It's the Silver Lining to the War-Cloud.

YOU ARE OF COURSE AWARE that the Reo Motor Car Company is financially the second strongest Automobile concern in the world.

OR WEREN'T YOU?—We had supposed that knowledge was common property. Anyway, you can easily ascertain the truth of the assertion.

WE WOULDN'T MENTION IT HERE, never have before—but it is necessary to state the fact in order to explain something that is otherwise unexplainable—the wonderful values we are able to give in the two Reo models shown and priced above.

FOR "WONDERFUL VALUES" is the only term that expresses it. Think of it! The New Reo the Fifth—that incomparable four, improved at many points and a larger car than its immediate predecessor—and at \$125.00 less than last season.

AND THE SENSATIONAL REO SIX—a Six designed and made the Reo way and with the Reo guarantee, at the amazing price of \$1385!

THAT CALLS FOR EXPLANATION—for you nor anybody else dreamed it would ever be possible to produce such cars at such prices.

SOSURE WERE WE OURSELVES of that, we went so far as to state in an advertisement a year ago "no maker ever can—not even Reo ever can—give greater value than this"—speaking then of Reo the Fifth at \$1375.

YOU RECALL THE STATEMENT doubtless—so when you saw the price, \$1050, quoted above—and realized also that this latest Reo the Fifth is a larger and an improved car, you wondered.

WELL, HERE'S THE ANSWER—and it's mighty interesting.

THE GREAT EUROPEAN WAR has created two sets of conditions—contradictory in some aspects.

FOR EXAMPLE, while we know that Six Hundred Millions of dollars go into American banks every thirty days—a guarantee of prosperity and of a market for automobiles in the coming months—at the same time you know that the banks are most conservative about loaning it out. And that is as it should be. Safety First.

AND SO YOU KNOW—if you stop to think about it—that many manufacturers, of automobiles and of other commodities, who were financially sound but who lacked a large surplus of cash, found it impossible to borrow during the past few months. These were necessarily limited in their buying and production capacity to the scope of their own funds.

AND THAT WAS WHERE REO, with its enviable financial position—having the money, and in cash, and controlled, not by absentee shareholders but by the men who daily direct the Reo destinies—was able to avail itself of the condition that then existed.

TO BUY WHEN OTHERS WERE EAGER TO SELL—and when there was practically no competition in the buying market.

TO MAKE MORE CARS at a time when most makers must perforce curtail—and to have them ready for our dealers, and customers when the demand will be heaviest.

NO ONE COULD HAVE FORESEEN the condition that had arisen. The best authorities on world affairs did not anticipate the war. At the time when we said, "this is the best value it will ever be possible for us to give," we had in mind, of course, the normal conditions that then existed. Those conditions changed over night.

The REO SIX *The Six of Sixty Superiorities*

\$1385.

These Wonderful Values Possible

WHY, A FEW MONTHS AGO, if a manufacturer wanted a few thousand tons of steel, of a special kind, he had to go to the mills, say please— and wait his turn.

THEN THE WAR—The doubt, the uncertainty—stagnation for a time.

THEN IF IT BECAME KNOWN there was an order for steel in sight we found, figuratively speaking, representatives of twenty steel mills camping on the steps of a morning, waiting to say please to the purchasing agent!

THAT CONDITION was of the moment only—but it existed. And only because we were alert and able to take instant advantage of it are we now able to give you the unprecedented—the unexpected—the un-hoped-for values we announce in this ad.

WE HAD THE CASH—our own, to use on the instant without let or hindrance from anyone. We could declare another dividend—or invest it to vastly greater advantage in the future of Reo. We chose the latter course.

SO WE BOUGHT, and, paying the cash when cash was at a premium, bought right. Bought better than we had ever hoped—secured quality at prices theretofore impossible. From tires to electric starters—steel to leather—and hair—and paint.

THE WAR IS BENEFICIAL to those American manufacturers who, like Reo, are alert to take advantage of it.

AND SO WE HAVE NO APOLOGIES to make even to those friends to whom we sold 12,000 Reos last season. Not for a statement that we made in the best of faith—and must now contradict in the same good faith.

FOR IN GIVING OUR CUSTOMERS the full benefit of the Reo purchasing power—instead of retaining the former price and taking the additional profit ourselves—we are only carrying out our policy which, adhered to from the first, has placed the Reo Motor Car Company in the splendid position it occupies today.

SPEAKING OF POLICY—let us correct an impression that we know is abroad.

OUR FRIENDS CRITICIZE US at times for what they call our "ultra-conservatism."

ABOUT THE ONLY COMPLAINT we ever hear from Reo dealers is that we are too modest in setting forth the merits of the Reo product.

WELL, PERHAPS THAT IS TRUE—if adherence to the strict truth in our ads; if a determination not to be carried away by the mania for mere quantities; if we prefer to be second in numbers of cars produced that we may be first in quality—if these be indications of "ultra-conservatism"—why then we plead guilty.

BUT OUR FRIENDLY CRITICS must concede that that Conservative Reo policy has produced tremendous results. Note the statement in the third paragraph of this ad.

WE DON'T CALL IT that, however. We call it conservatism militant. Aggressive conservatism. Alert conservatism. Being sure—absolutely sure—we are right, then going ahead unfalteringly—irresistibly.

DOESN'T THE VERY FACT that we were financially able to and did take advantage of a condition that we knew was transitory; and the further fact that, having bought better, we instantly offered the better values to Reo buyers—doesn't that look like "militant" rather than "ultra" conservatism?

WE THINK SO—and we leave the case in your hands.

REO MOTOR CAR COMPANY
LANSING, MICHIGAN

The Six of "Sixty Superiorities"

THIS SIX IS SENSATIONAL not because it is a six—but because it is a Reo Six.

FOR REO WAS NOT one of the first to embrace the "Six" idea. Reo is one of the last.

REO WILL NEVER BE one of the first to adopt any new innovation. For our policy has ever been, to sell not ideas but automobiles. Dependable automobiles.

AND YOU WILL ALWAYS find Reo "trailing" to just that extent. We will never be one of those to "take a chance"—with our customer's money.

NOT UNTIL EVERY uncertain or unknown quantity has become a certainty will any new type of car or motor or axle or part be offered with the Reo name plate.

SO YOU CAN ALWAYS BE sure—as you have in the past—that in buying a Reo you are investing in no experiment.

THIS SIX IS THE RIGHT RESULT of Reo engineering experience. The very fact that we make and offer it to you is evidence that the "Six" idea has now passed the realm of uncertainty.

THE "SIXTY"—

(1) **FLAT TUBE RADIATOR**—won't leak through freezing. Flat tubes expand—don't fracture under pressure of frost.

(2) **RADIATOR DESIGN**—the sloping, curved vision and graceful contour give class to the entire car.

(3) **STREAMLINE HUB CAPS**—original with Reo. Will be widely copied.

(4) **EXTRA HEAVY**, one piece, forged front axle—50 per cent more size.

(5) **TIMKEN BEARINGS**—(1) in front hubs.

(6) **REO CYLINDER DESIGN**—300 strokes straight cylinders, uniformity of water jackets, no distorted cylinders—no scored pistons.

(7) **SAFETY FIRST**—and sure—safety system.

(8) **THREE PIECE** piston rings—more power, quicker acceleration.

(9) **FIFTY PERCENT** over-size crank shaft.

(10) **EXTRA HEAVY** cam shaft—extra large cams, the reason for silence and uniformity of power in this Reo.

(11) **ECCENTRIC FAN** belt adjustment.

(12) **SPIRAL HALF-TIME** gears.

(13) **VALVE ACTION** roller lifters.

(14) **OVERHEAD INTAKE VALVE**—not exhaust. Another reason for greater power and silence.

(15) **FIBRE ROLLER** tappets on intake—another "silence" feature.

(16) **VALVE ENCLOSURE**—silences, and keeps them silent—see next paragraph.

(17) **BREATHER TUBE** exhausts in valve enclosure—keeps parts bathed in oil spray, and—

(18) **NO OIL SPRAYED** on outside of motor by breather tube.

(19) **TWO FLEXIBLE JOINTS** between motor drive and generator.

(20) **ADJUSTABLE** main crank-shaft bearings.

(21) **DUAL**—injector type—exhaust manifold.

(22) **WATER-HEATED INTAKE** manifold.

(23) **REO STEERING** gear. Not a "taking point," but a driving convenience much prized by Reo owners.

(24) **DRY DISC CLUTCH**—no tendency to drag.

(25) **THREE UNIT** power plant.

(26) **FOUR** universal joints.

(27) **BRAKE AND CLUTCH** control system—only one hand-lever.

(28) **REO one-rod** control—simplest ever devised.

(29) **REO GEAR-shift**—direct connected lever you feel the gears as if your fingers touched them.

(30) **REO patented** locking device—impossible for two gears to mesh at once.

(31) **HYATT** bearings in transmission.

(32) **"INDEX" PLATE** surrounding control rail.

(33) **FULL FLOATING** rear axle.

(34) **TIMKEN** bearings in rear axle.

(35) **NEW TYPE** torque-arm. See the Book.

(36) **WORM BEVEL** driving gears.

(37) **CANTILEVER** rear springs.

(38) **RIGID** attachment of cantilever springs to axle.

(39) **REMY** electric starter and lighting.

(40) **STARTER** hook-up—exclusively Reo. Worm drive. No shifting gears—no over-running clutches.

(41) **STARTER LEVER**—handy but unobtrusive.

(42) **TIRE PUMP** attached to main driving shaft.

(43) **DIMMING** attachment to headlights.

(44) **PILOT** light and tail light connected in series.

(45) **SPECIAL** tail-light switch.

(46) **PRACTICALLY** one-piece pressed steel cowl.

(47) **6 1/2-INCH** wider ton-bron, 12 1/2" wheelbase.

(48) **50 PERCENT** OVER-SIZE in all vital parts.

(49) **REO ACCURACY**—REO CAR—Reo inspection everywhere. Path ground to absolute exactness.

(50) **100-ODD** STEEL FORGING.

(51) **REAL LEATHER** upholstery—we've never found any substitute that was "just as good."

(52) **REAL HAIR**—retains its spring.

(53) **REAL RUBBER** and Sea Island cotton in tires.

(54) **VENTILATING**, rain-vision, clear-vision windshield.

(55) **WINDSHIELD** and top support—have to study in detail to fully appreciate.

(56) **GENUINE** one-man top.

(57) **LIGHTER** weight in proportion to power.

(58) **EVERY PART**—radiator-cap to tail light—Reo made and Reo guaranteed.

(59) **MOST ACCESSIBLE** car in the world. We will prove it to you.

(60) **FINALLY**—and most important to you—the Reo name plate signifies that the Reo guarantee, with all it stands for in integrity and financial stability, goes with the car.

DELIVERIES Will begin about January 1st. Only way to be sure of getting yours early is to order now. See your local dealer.

A Christmas Present For 1000 Readers of Literary Digest

A Beautiful Portfolio of
"THE THREE GRACES," by Stanlaws
Let Santa Claus Bring It to You!

Accept this charming Portfolio with the compliments of the METROPOLITAN Magazine. It contains three of Penrhyn Stanlaws' piquant girl studies. (Mr. Stanlaws paints in full colors only for METROPOLITAN.) Each picture is **12 inches by 17 inches**, separately **mounted** on imported, cream-colored, French Brittany, deckle-edged mounts. The pictures are reproduced by the new rubber-offset color process, in **6 colors**, which transfers all of the softness and charming delicacy of coloring in Mr. Stanlaws' original paintings. It is this process which has made METROPOLITAN covers the art sensation of the magazine world. No other popular magazine has this rubber-offset process.

The pictures—framed—cannot be told from the original paintings. They will make ideal gifts for three of your friends.

1000 of these portfolios are waiting for readers of this magazine who send the coupon below. The Portfolio could not be duplicated in any art store for \$1.50 (as a matter of fact it is not for sale anywhere).

METROPOLITAN

"The Livest Magazine in America"

We do not ask you to send any money—

Just fill out the coupon and send it to us. We will at once mail the Portfolio, carefully packed, carriage charges prepaid, and a copy of the January number, entering your subscription to the METROPOLITAN for one year. When you receive the Portfolio and first copy of METROPOLITAN, send us \$1.50, the regular subscription price, for the magazine, if you like them.

If you are not entirely satisfied, return the Portfolio to us.

We make this generous offer to introduce the METROPOLITAN to the readers of this publication who may not be familiar with the splendid magazine we are publishing. We are fully assured that you have only to glance at one issue of METROPOLITAN to appreciate what a wholly desirable, unusual and fascinating magazine it is.

The METROPOLITAN for 1915 will contain the biggest and most costly editorial features ever announced by any magazine. Here are some of the good things you will enjoy: A new serial novel by HENRY SYDNOR HARRISON, who wrote "Queed" and "V.V.'s Eyes." "The Story of a Pioneer," which is the autobiography of DR. ANNA HOWARD SHAW. All of the short stories of RICHARD HARDING DAVIS, JOSEPH CONRAD, W. W. JACOBS, and more short stories by RUDYARD KIPLING than will appear in any other magazine. A new series of humorous and tender Irish stories by RUPERT HUGHES. A new boy series, more enjoyable than his "Penrod" stories, by BOOTH TARKINGTON. JOHN REED'S vivid word-pictures of the great War. Other contributions by LARRY EVANS, GEORGE BERNARD SHAW, FANNIE HURST, INEZ HAYNES GILL, MORE, ARNOLD BENNETT, F. TENNYSON JESSE, WILL PAYNE, CONINGSBY DAWSON, HENRY KITCHELL WEBSTER, A. E. W. MASON, LEROY SCOTT, W. B. MAXWELL.

Pictures reproduced in 6 colors by new Rubber-Offset Process and mounted

Each Picture is
12" by 17"

"Mail the coupon now and I will come down your chimney"

THE NEW CANADA

By PAUL HORN AND CAROL THORNTON
UNDEVELOPED NEW BRITISH COLUMBIA

By F. A. Tollett

"The author traveled 120 miles of this unbroken wilderness. He was particularly interested in its agricultural resources, its adaptation for stock and fruit raising, its mining and lumbering possibilities, and the opportunities it presents for investments."—*The Boston Herald*.

"Exceedingly interesting," says the *Brooklyn Daily Eagle*. "Here can be found statements as to the immense crops actually raised, also bear hunting stories, and as for the various experiences met with while on the long journey, they are legion."

Large crown octavo, profusely illustrated with full page half-tones. Bound in cloth, \$2.50 net; by mail, \$2.75. FUNK & WAGNALLS CO., 354-360 Fourth Ave., N.Y.

Advice to a Wife

on the Management of Her Own Health and the Treatment of Some of the Complaints Incident to Her Sex. By Dr. F. H. CHAMBERLAIN, F.R.C.S. Covers a wide variety of subjects that have an intimate relationship with the married state. Every woman, old or young, can profit by the wise counsel and advice given in this volume.

128th bound. By mail, postpaid, \$1.00

Funk & Wagnalls Company, 354-360 Fourth Ave., New York, N.Y.

beginning in 1901, amounts being given with six figures omitted:

Fiscal Year	Total		Indebtedness*		48 States	
	Amount	Per Cap.	Amount	Per Cap.	Amount	Per Cap.
1913	\$1,374	\$14.15	\$1,028	\$10.59	\$345	\$3.57
1912	1,327	13.89	1,027	10.75	299	3.15
1911	1,291	13.75	1,015	10.91	275	2.93
1910	1,302	14.11	1,046	11.34	256	2.78
1909	1,263	13.95	1,023	11.39	241	2.67
1908	1,177	13.22	938	10.53	239	2.70
1907	1,113	12.74	878	10.05	235	2.70

1901	1,273	16.38	1,044	13.44	228	2.95

* Less sinking-fund assets or fund available for payment of debt.

From this table it appears that there has been "a slight falling off in national indebtedness during the period in question, but this is much more than offset by the increases in State debts, the total of the latter at the end of the period having increased over the beginning of the series of years by about 50 per cent." Meanwhile "great advances in population have kept this growth from showing so markedly when stated in per-capita terms, altho even when so stated an advance of some 17 or 18 per cent. is indicated, the per capita being \$3.57 for all State governments, against \$2.95 in 1901."

For national and State governments combined the final figure was \$14.15 at the end of the series of years (1913), against \$16.38 in 1901, "a technical decline due to the fact that national indebtedness remained about stable while population increased." The great advances in debts was made in States, "which are thus keeping pace to a somewhat greater extent with conditions in the cities." Another table analyzes conditions as to States. It presents the amount of debt and the per capita of debt as follows:

State	Amount	Per Cap.
Alabama	\$13,132,375	\$5.95
Arizona	3,008,818	13.28
Arkansas	1,230,090	0.76

Dignified Serious
BOOKS ON MARRIAGE
Which Everyone Should Read

per capita. Thus Massachusetts has a debt of \$22.78, New York of \$9.05, Connecticut of \$6.12, Rhode Island of \$9.02, and Virginia of \$10.46. The lowest reported indebtedness is that of Oregon, which is only 4 cents per capita. New Jersey stands as an exception among the northeastern States, as she has only 24 cents per capita outstanding; Louisiana and Tennessee among the Southern States, with \$7.80 and \$5.32, respectively, and Arizona among the Western, with \$13.25, are exceptions, but generally the rule holds good that, whereas the Eastern States are accumulating large debts, the Western and Southern have not done so. This is in part due to the superior credit of the Eastern States, which enables them to borrow at low figures, but is largely due, it would seem, to the fact that they are carrying very heavy taxes and so are not able to borrow for new outlays, while the Western get their funds directly from taxes.

Taken as a whole, the returns show that the gross debt of the States and the nation, while increasing rapidly in the total and readily in the per-capita figures, is not yet large or overburdensome when compared with that of other nations. Heavy taxes are supplying the resources for the current expenditures of all classes in the main, but the fact that these taxes are reaching their limit in some States is illustrated in the disproportionate growth of the debt in certain sections as compared with others. The figures given are net—after the deduction of sinking-fund assets. A study of the return for such assets shows, moreover, that provision is in many States being made from taxation for the liquidation of the indebtedness. The facts in the case demonstrate in a cumulative way one important reason for the burdensome character of government expense, inasmuch as the bulk of it in most parts of the country is still being supplied to meet current requirements from current incomes."

An Urgent Case.—A girl, reading in a paper that fish was excellent brain-food, wrote to the editor:

"Dear Sir—Seeing as you say how fish is good for the brains, what kind of fish shall I eat?"

To this the editor replied:

"Dear Miss—Judging from the composition of your letter, I should advise you to eat a whale."—*Tit-Bits*.

A Spontaneous Affair.—One day Miss Maria Thompson Daviess, the author, walked down a street in Nashville. The street was crowded with negroes, who were forming in a line for a parade.

"What's the occasion for the parade, Tom?" she asked of a boy.

The boy looked at her with a grin. "La, Miss Daviess," he replied, "don't you-all know colored folks well 'nough to know dat dey don' need no 'casion foh a parade?"—*New York Sun*.

Withdrawn.—Among the Monday morning culprits baled before a Baltimore police magistrate was a darky with no visible means of support.

"What occupation have you here in Baltimore?" asked his Honor.

"Well, jedge," said the darky, "I ain't doin' much at present—jest circulatin' round, suh."

His Honor turned to the clerk of the court and said:

"Please enter the fact that this gentleman has been retired from circulation for sixty days."—*Green Bag*.

**"The AETNA will take care of them
if anything should happen to me"**

THAT'S the thought that will make your mind at ease when you are at your office desk hereafter, if you send this coupon right now.

Every year more men are hurt, more men are killed by accidents. Today the startling toll is one man in seven—one man in seven killed or injured by accident. And no human being can tell when, where or how accident is going to happen to him. In train or street car, on a boat, in an elevator, falling down stairs, the smallest slip, and it may be too late. Now, while you can,

AETNA-IZE

Send the coupon and let us tell you about the wonderful Aetna Accumulative Accident policy; the policy that increases every year you own it—annually for five years—so that if you start at \$5,000, the sixth year it is worth at least \$7,500 and your premium remains the same.

Let us tell you how this policy will pay as much as \$15,000 if you lose your life, or two limbs or both eyes; how it will pay half as much if you lose one hand, foot or eye; how it will pay hospital bills, operation fees, surgeons' fees; how it will pay you \$50 each week as long as you live if you are totally

disabled; how it will pay you \$25 each week if you are just partially disabled.

Aetna-ize—and no matter what accident may come, you will at least know that your wife and children are taken care of.

It is not in your power to prevent accidents, but it is in your power to make those accidents bear as lightly as possible on yourself and those who depend on you. Send this coupon today.

For the sake of your family—don't neglect this chance.

Mothers—Your Boys' and Girls'

progress in school will cause you no anxiety if you place before them a clear knowledge of what the world is thinking and doing weekly—it will help form their characters. Provide them with **THE LITERARY DIGEST**.

17 Reasons Why Your Child Should Study It In School

(1) He should learn to know the world in which he lives.

"The Literary Digest gives the important news-events of the week with a splendid idea to news value."—Columbia University, Department of Journalism, *Albert Frederick Wilson*.

(2) It is at least as important that the pupils should know about living men as about dead men—about the living present as about the dead past.

"We are using The Literary Digest in our classes. We find that young people are eager to know and think upon the progress of the times."—Teacher in the Washington Irving High School, New York City.

(3) The study of current events will tend to fix the habits and tastes of the child in the line of constructive thought and of good clean reading. The Literary Digest omits divorce news, murder news, and other news of a purely sensational character. It will form a valuable corrective for magazine trash, cheap movies and sensational newspapers.

"The study of The Literary Digest has made a difference in the taste of our pupils already. Heretofore, I have had to struggle to prevent the surreptitious reading of trashy magazines, but have no such difficulty now."—Principal, Garret, Ind.

(4) Squeers, the brutal schoolmaster of "Nicholas Nickleby," applied education externally with a birch. The modern educators reverse this method and really "educate" or "lead out" the thought—develop the character like a plant—from within out.

"I am certain that this magazine work is in line with the trend of present-day pedagogy."—Assistant Principal, Wayneville High School, Ohio.

(5) A child never speaks of his algebra at home, nor does he discuss the ablative absolute. He will speak of his Literary Digest work. It will give him something worth while to talk about—something interesting to think about.

"I should like to see The Literary Digest in every school in the land."—Principal, Canton High School, Ky.

(6) In thirty years the world will be managed by our children. Our problems will be their problems. The Literary Digest class in the High School is the place to begin to train the children to consider and meet these problems.

"I believe that the study of a good periodical like The Literary Digest will do more to make an intelligent citizen of a boy or girl than any other work they can do."—Superintendent, Ridgeway Schools, Ohio.

(7) A discussion of topics of our country, of foreign comment, of science and invention, of letters and art, of religion and social service, with a magazine as carefully edited as The Literary Digest for a text, will not only broaden the pupil's mind—it will also enrich his vocabulary and strengthen his powers of expression.

"By studying The Literary Digest my pupils are getting more varied and a more useful vocabulary than the regular class-texts were giving them."—Teacher in a New York City High School.

(8) The Literary Digest will lighten the burden of the history course. Subjects which seem dry and uninteresting in the ordinary text-book become very much alive when found in a current periodical.

"I use 250 copies of The Literary Digest each week. Last term my classes were more successful than ever before in the Regents' Examination. Not a failure was recorded."—Prof. G. L. Boswell, Erasmus Hall High School, New York City.

(9) The Literary Digest will not displace the regular text-book in civics or history. The text-book will become the place where the pupil will find principles and causes, and The Digest a supplement of results.

"The coordination between The Literary Digest and our text book has become a fact and the articulation of the two is almost perfect."—Principal, Lawton High School, Oklahoma.

(10) Some of the greatest lessons in current history can be taught through cartoons and other pictures. The best illustrations are gathered each week in The Digest.

"I begin my current-topics recitation by reading the cartoons in The Digest. Everybody likes to look at pictures, and immediately the interest of every pupil is aroused in an effort to interpret these illustrations."—Head of History Department, New York City High School.

(11) The best teacher is a student of children. The routine courses with their cut-and-dried questions and standardized answers give very little opportunity for pupils and teachers to come into personal touch. In The Literary Digest classes the rigidity of the school course is broken, and the teachers can become acquainted with the children's needs and thoughts.

"Nothing that the teachers have done in school has tended so well to give them an insight into the lives and tastes and characters of the children."—From a report of a canvass of teachers in New York City High Schools made by Jennie Davidson, Washington Irving High School.

(12) Many educators claim that the use of The Literary Digest as a text develops initiative and trains children to be leaders of thought. In this magazine study the consideration of unsettled problems encourages the pupils to do original thinking and to form independent judgments.

"We prefer The Literary Digest also because the opinions of many newspapers and periodicals are quoted without editorial comment, thus allowing the student to form her own opinions."—The Misses Shipley's School, Bryn Mawr, Pa.

(13) In the average class-room questions are asked by the teacher for the purpose of finding out what a pupil does not know. In The Literary Digest class this process is reversed and the children ask the questions. This is as it should be, for in life most queries are put by one who does not know and wants to find out.

"In selecting a periodical for class use, we found nothing so good as The Literary Digest."—C. H. Carson, Superintendent, Marengo, Iowa.

(14) The greatest drain on the teacher is the apathy—the inertia—of the class. She has to spend her vital power in galvanizing complete indifference into a resemblance of interest. Magazine study helps to save the energy of the teacher for other things by enlisting the keen interest of the pupils.

"My class has not found civics the dry, uninteresting subject it is often said to be, for The Literary Digest has brought political problems home to them in a logical, fair-minded, authentic manner which has clarified the text-book explanations."—High School Teacher, El Paso, Illinois.

(15) That study has supreme value which contributes towards training a pupil to think clearly and intelligently on his feet. The Literary Digest class furnishes the occasion and the subject-matter.

"The interest of the students has been stimulated and the patrons of the school are all commenting on the work. We follow the lecture method, i. e., ask the student to stand facing the class and give a full and intelligent discussion of the topic which he has reviewed."—Principal, Allen High School, Kansas.

(16) Literary Digest study will start the children on the road to the study-habit. The unfamiliar and puzzling words and topics they meet will drive them to reference works—will make the dictionary and the encyclopedia live books.

"Teachers and students are deeply interested in the new course, and we are confident that great benefit will result therefrom. The Literary Digest is indispensable to liberal culture."—G. H. Felanger, Lewisburg, Tenn.

(17) Now is the time for your children to study current events. The world is turning a critical corner. A great war is being waged. Issues of tremendous import in the education of your children will arise. And in the sensational news-welter of the periodical press, in the confusion of issues and counter-issues, in the distortion of political bias, The Literary Digest will come to your children as a clear, cool mind, sifting the essential from the non-essential, emphasizing where emphasis should be placed, and reflecting for them every side of every important current event with the perfect impartiality of a mirror.

Write to us for further information and give us the name of the principal of the school your children attend, or the name of the teacher of history, civics or English, that we may write to them.

FUNK & WAGNALLS COMPANY, 354-360 Fourth Avenue, New York

Christmas Sets of Standard Authors at About Half Their Value!

A BIG Publisher Fails

The publisher of these books failed and we bought the few remaining sets for almost nothing compared with their actual value. This is a real opportunity for you to obtain beautiful, Christmas sets of standard literature at a price absurdly small. Remember that these are not second-hand or shop-worn books; every volume is warranted to be absolutely new and perfect—but *there are only a few sets left.*

The Complete Works of THACKERAY

Regular Price **\$22.50**
Our Price **\$12.50**
You Save **\$10.00**

It is with supreme confidence that we offer this set of Thackeray as a REAL BARGAIN at the price. And we urge "Digest" readers to take advantage of an offer which would place in their hands at so small an amount as \$12.50 the complete writings of Thackeray, than whom few writers are more brilliantly entertaining. And this edition is really SUBSTANTIAL—bound in fine Interlaken book cloth, with elaborate gold back designs, gilt tops and prize illustrations including a hand-colored frontispiece in each volume. The paper is of the finest book paper made, the type new, clean cut, and the page margins wide and easy on the eye.

Size of Volumes
5 3/4 x 8 3/4 x 1 1/4 inches

De Luxe Set Ten Volumes

Author of many novels and miscellany of very high quality, a great humorist, an artist in letters of the first rank; a man greatly loved and honored. Thackeray was the representative English man of letters of his time; of whom Carlyle said, "Nobody in our day wrote with such perfection of style."

Thackeray's Picture of Society

is the most vivid, as it is uncontestedly the most real, in prose fiction. His books not only tell the story but draw the moral as well.

Letters have never known such a combination in one personality of the artist and moralist, the satirist and poet, essayist and critic. He was notably a man of heart and exercised his great powers in the service of the affections.

In Thackeray's Company

we never lack entertainment; he introduces us to characters whose acquaintance is a liberal education—the unscrupulous and clever Becky Sharp, the noble and simple-hearted Colonel Newcome, Harry Esmond, and that whole-hearted villain, Barry Lyndon. Books offering such keen enjoyment and sound instruction in life are the best furniture for a home; they should be owned (not borrowed),

so that they may be read (and read again).

He was the keenest of observers and eminently a man of the world and the greatest English novelist of character and of manners, commonly called "The great English artist in fiction."

This edition of Thackeray

contains all of the novels and miscellanies contained in the best standard edition issued in England with the author's approval. It is printed from good type and contains 207 etchings; photographs and line drawings and a full set of illustrations from designs by the author, Frederick Barnard, Cruikshank, Pailthorpe, and others.

Of the many editions hitherto issued in Europe and America, it is believed that none will be found more attractive to those persons who really appreciate the masterpieces of one of the foremost novelists of the century, and wish to own his complete writings in elegant form.

The Illustrations

which are a distinguishing feature of the edition, include a greater variety than has ever appeared in any edition of his writings. A hand-painted frontispiece illustration appears in each volume.

For a further best quality Interlaken bound cloth, gilt top, gold back stamp, untrimmed side and bottom edges.

On this page are pictured two sets of books which you could not buy anywhere else at anything like the price for which we offer them.

The Works of SIR WALTER SCOTT

It is a pleasure to be able to offer our patrons these excellent sets secured because of the close surveillance which we always try to maintain over the book market. It is our purpose to be ever on the watch, and with our large book-buying facilities to be FIRST on the ground when valuable books must be sacrificed by the original publisher, as is often the case when ready cash is needed. In this set of Scott at \$14.50 you are confronted with a REAL BARGAIN, and if you read at all, and more especially if you ever read fiction, this is one time when you really must buy or actually lose one of the best bargains we have been able to offer in recent years.

Regular Price **\$27.50**
Our Price **\$14.50**
You Save **\$13.00**

De Luxe Set Twelve Volumes

Scott was the first literary man of a great riding, sporting fighting clan. Although not a great, he was a sound lawyer.

"It is the breadth of sympathy which more than anything else makes Scott still the greatest novelist in the English, and perhaps in any language."

In variety and depth of interest and weight and a curacy of historical substance, Scott is still the unsurpassed

fascination than that exercised by Scott's wonderful portrayal of human nature and keen comprehension of human frailties.

Scott Knew Intimately All Ranks of Society

before he published a line. Duchesses, gypsies, thieves, highlanders, lowlanders, students, attorneys, clerks, actors, game-keepers, farmers, tramps—he was at home with all of them. He does not deal in moral or social problems. Scott is known as a "friendly author." To read and know familiarly all his works is to have a friend, an invisible playmate of the mind as it were.

An Acquaintance with the "Waverley Novels"

is a necessity to every reader, and no library should be without a set of these books.

No other writer has so charmingly blended poetry, history and romance, nor given us more faithful descriptions of the most picturesque country and sturdy people as this great historical novelist. He is accredited to be the most universally known of all modern writers of novels which were never surpassed in their hold upon popular interest, he again is called the most attractive and satisfying master of romance in all literature.

This edition includes all of the "Waverley," with full explanatory notes, glossary and index to each novel, printed from good, large type.

In addition to the twelve hand-painted photograph illustrations, three books contain 124 fine and striking full-page

master of the great events and minute incidents of history and of the manners of the times he celebrated. The characters of Shakespeare are not more exclusively human, not more perfectly men and women, as they live and move.

Picture shows books GREATLY reduced. They are 5 3/4 x 8 3/4 x 1 1/4 inches.

Scott's Peculiar Fascination for All Ages

is such that the youth or maiden of fifteen takes no greater an interest in these captivating romances than does the old man of seventy. The true lover of literature never gets very far away from Scott—he reads Scott at the age of adolescence to learn the stirring ways of the outdoor "grown up" world and to follow breathlessly the adventurous lives of such characters as Ivanhoe and Quentin Durward—arrived at the prime of life he reads Scott still, to admire his wonderful literary power—and finally, at the ripe old age of seventy, he still knows no greater

etchings and reproductions—each by an artist of ability.

Bound in dark blue English ribbed cloth, gilt top, silk headbands, and gold back stamp. Each volume contains a hand-colored frontispiece illustration.

THE MIDWINTER TRAVELER

(Continued from page 1229)

foot-hill whose crest also looks out toward the sea. They are of concrete and are soft gray in color—yet they are neither dull nor somber, for their architect—Bertram G. Goodhue, of New York—has laid here and there mosaic patterns of colored tiles that give accent to the flat tints of the walls. Mr. Goodhue has shown no less ingenuity than charm in the modeling of his surfaces and in the composition of his roofs and towers. Given age with a few picturesque legends and traditions, and the group of buildings on the hillside back of San

Copyright, 1914, Panama-California Exposition

PATIO—SOUTHERN CALIFORNIA COUNTIES BUILDING, SAN DIEGO PANAMA-CALIFORNIA EXPOSITION

Diego might pass as one of the brilliantly beautiful small cities of old Spain.

The winter traveler of 1915 will be fortunate in seeing these two great expositions at the thresholds of their existence—while they are still bright, fresh, and new, and before the great midsummer trek to the far side of the Rockies and the Sierras has begun. Altho new, they will be in no sense incomplete. In the strict time-rules which they have formulated, the managements of both the shows have seen to it that all exhibitors are to be ready with their entire showings before the doors swing ajar upon the opening days. They have put their own houses in order. By the first of November persons who were on the West coast noticed that the fairs were complete—not practically complete, but entirely complete—complete as to buildings and decorations, as to pavements and lawns, trees and shrubs, complete in their intensely interesting and varied exhibit-booths. They have profited by some of the failures of other expositions to be ready upon their opening days—or for some time afterward. Both San Francisco and San Diego planned well enough in advance and carefully enough in detail to prevent such fiascos.

The winter traveler will find much at San Francisco to interest him—even outside the exposition walls. The charms of that city as a winter resort have never been sung. Yet its climate in January or February is hardly different from that of August, when the largest throngs are expected to visit the exposition. Its

own accommodations and hospitality

—express in more than nine hundred hotels and almost innumerable restaurants, of inconceivable charm and variety—will be more than ample for the midwinter visitor.

If the midwinter visitor has not before visited the wonder-city by the Golden Gate, he should be envied. The most metropolitan city in the Americas—with the possible exception of New York—it has a certain life, gaiety, and brilliancy exceeding that of New York and reminiscent of the old Paris—the Paris of a decade ago. The Panama-Pacific Exposition is immense, yet so much greater is the charm of San Francisco that it becomes but an incident to the city, the largest of her many lions. To see San Francisco as she really is, one must not be content merely to stay closely by his hotel, to take an occasional airing in a motor-car, or to make repeated visits to the Fair grounds. He must be prepared to awake with the rising of the sun, to tramp up the big hills and slip down off them again to find himself at daybreak at North Beach with the fishing-boats coming in—they still use the lateen-sail craft, altho the motor-boats are fast beginning to crowd these out—to drift through Portsmouth Square as Stevenson did and see with his eyes the strange folk from the seven seas who still gather there, to wander in the new Chinatown, which perches ghostlike upon the ruins of its unspeakable predecessor.

Those folk who know the old San Francisco, the San Francisco before the fire, will be glad to know that its personality lives in the new. And those persons who are hurrying to the Exposition to see the latest triumphs of American architecture will find the architecture of the new San Francisco hardly less interesting. Solid blocks of substantial buildings, not one of them more than eight years old, to-day give the city by the Golden Gate the most beautiful and distinctive business center of any city in the land, if not, indeed, in the world.

From San Francisco as a center a variety of routes over land and water stretches in a bewildering and fascinating profusion. There are steamer routes to the Orient—of which more in a moment—railroad-lines north and east and south, some of which we are going to follow in a little time. There are flat-bottomed, stern-wheeled steamboats leisurely poking their way up broad rivers, whose low and fertile shores are more than a little reminiscent of Holland. Even the white ferry-boats of San Francisco Bay lead to delights that are close

at hand and may be seen between sunrise and sunset. Of all these one-day journeys—the trip to Mount Tamalpais and the Muir Woods is perhaps the most satisfactory. A ferry-boat, leaving the foot of Market Street after breakfast, takes one in a half hour across the mouth of the bay, giving vistas of the Golden Gate, to Sausalito, a fascinating residence suburb perched high upon a clifflike bank, its villas and terraces gleaming out through the perpetual foliage like the little Italian towns near the Riviera. But Sausalito should be reserved for a separate trip. The train is in waiting at the ferry-landing and in a short time it gives way to another train—made up of an open car or two pushed by a short but tremendously powerful mountain-climbing locomotive.

The longest straight stretch of track on the ten or a dozen miles of line by which this railroad gains the summit of Tamalpais is a tangent of some 400 feet. The climb is a hard one, but the view from the summit—some 2,600 feet above the sea—most entrancing. There are few mountain peaks from which one can look far out at sea on the one hand and over a widely diversified panorama of bays and rivers and woodlands upon the other. And when one tires of the exquisite view from the sharp peak of Tamalpais, if ever one can tire of it, there is a coast downhill in a gravity car that ends in the deep silences of the Muir Woods, filling a deep ravine for many hundred acres. There is time for a stroll among the giant redwoods before the train leaves which brings one into San Francisco before dusk and dinner.

THE AMERICAN MEDITERRANEAN

To the tourist with an automobile—either rented and brought to California for the especial purpose—the great motor-road stretching south from the Golden Gate offers a supreme enticement. It is a historic trail, once known as *El Camino Real*, and built to give access between the missions which the Spaniards built many years ago all the way from San Francisco down to San Diego. California to-day is preparing to make it a paved roadway for the entire five hundred miles or more between the two cities. Already a large amount of this pavement is completed and to-day a car can sweep out from San Francisco, past the Mission Dolores, originally the north terminal of the old road, through crowded suburbs not unlike those of Eastern cities and finally through the show suburbs of San Francisco

ONE OF THE ROMANTIC WALKS UNDER THE PALMS AT PALM BEACH, FLORIDA.

Burlingame, San Mateo, Redwood City, environs decidedly different from anything in the East and rarely beautiful into the bargain—through Santa Clara and San José, surrounded by many miles of the most exquisite orchards one can possibly imagine, then through rugged, barren mountainous country once again, until one comes to Monterey, a little more than a hundred miles south of San Francisco.

The Bay of Monterey has been likened to the Bay of Naples. So has Carmel Bay, hardly five miles distant across a narrow neck of land. Between them is a bit of bold headland, rough shore whose only gentleness is the presence of the "cedars of Lebanon," the strange green and gray cypress-trees which defy the rough winds off the Pacific and are to-day the oldest living things upon this continent. Back of these bays are mountains. It is these bays and the exquisite blue of their waters under cloudless skies that make the likeness to the Mediterranean coast.

There is a splendid hotel at Monterey—the Hotel del Monte—set in gardens so elaborate and so immaculate that they seem more like stage-settings than reality, and back of it is a golf-course so good and so sporty that the great championship contests of the West Coast are held there each year. And the man or woman interested in the history of California will find the Carmel Mission only a little way distant, while Monterey itself is filled with the lore of the earliest days of Alta California and the more recent tales of its most distinguished resident—Robert Louis Stevenson.

Before we leave San Francisco consider a moment the possibilities which some of its far-reaching water-routes offer to the winter traveler. Suppose that he is not pressed for time and is duly mindful of the fact that European travel is to be a fairly difficult thing in 1915. If he has become so addicted to long ocean voyages that they have already become part of his yearly routine, why not a trip across the Pacific? A journey to Japan, China, and the Philippines—even to the ever-joyous Hawaiian Islands—would not be a bad side-trip from the exposition. The great steamers of the Pacific Mail have a well-won reputation. There are several other lines, one of them Japanese, of equal merit.

PASSENGER LANES LEADING THROUGH PANAMA

But the man who must have that long sea voyage and can not spare the time for a journey across the Pacific to the other side of the world can still have his fill. The Panama Canal, which has just begun to rearrange the passenger lanes of the oceans, offers this year an unusual and most attractive water-path all the way from New York to San Francisco. The Red Star line, even before the war began, was preparing to place two of its modern ships flying the American flag in regular service between these two cities.

The Great Northern Pacific Steamship Company, controlled, as its name may indicate, by James J. Hill's two trans-continental railroads, is preparing to place two handsome new vessels in coastwise service between San Francisco and Portland, Ore. They will bring the two Hill roads in a direct touch with the Golden Gate. These ships have been just completed at Philadelphia. In order to bring them into their territory, the journey through the Panama Canal is a necessity.

ATLANTIC COAST LINE

The Standard Railroad of the South

Are You Going to See Your Own Land In This the Greatest Year of American Travel?

Never before will so many Americans travel in America as during the coming year.

Never before have conditions abroad made it necessary to arrange all winter vacations in our own land, the West Indies, Panama or South America.

Two of America's biggest and most picturesque expositions are ready to open on the Pacific coast.

They and their exhibits typify the nation's progress. Every merchant, every manufacturer, every professional man and woman, should visit them.

In going and returning to these California fairs, the visitor can see vitally interesting portions of his country, its cities, industries and scenic wonders. American travel was never so rich in opportunity.

A very considerable portion of Digest readers are inveterate travelers (transportation men recognize the Digest as America's leading travel magazine). And yet many of our readers have spent most of their travel time abroad. To suggest trips in their home land, we publish the second series of our Winter Travel articles in this issue (the first series appeared in our October 24th number).

If any of our readers desire further suggestions or information, we invite them to write us and we shall be glad to put them in touch with those transportation authorities who can supply all necessary data.

TRAVEL BUREAU

The Literary Digest

The management has planned to make each of these journeys a full-fledged passenger-trip. One of the steamers will leave Philadelphia in January, the other in February, and each will sail direct to San Francisco.

Other water-routes from New York to the Golden Gate are being announced. The running time for all of these will be anywhere from fifteen to twenty days, a full day being allowed for the passage through the locks and levels of the canal. By special train arrangements at the Isthmus it will be possible for such passengers as may so wish to alight there and see something of the important ports at either terminal.

Santa Barbara is the first important coast-town south of Monterey, altho upon the line of the railroad that connects them are the important health resort and springs of Paso del Robles. Like Monterey, Santa Barbara has played a distinguished part in the making of California. Her mission, standing on a natural terrace at the rear of the town and commanding a sweep of the Pacific, is a lion well worth seeing. She has narrow streets and quaint houses, splendid hotels and cottages of a sort that would make even Newport or Bar Harbor envious.

When you arrive at Santa Barbara from the north you are at last in Southern California. For nearly two hundred miles south along the shore stretches a variety of fascinating resorts. Many of them group around the bustling city of Los Angeles, which, while offering few tourist attractions in itself, is nevertheless a great focal point for many places appealing to the winter traveler. The nearest of these is Pasadena, which is a sort of inland Santa Barbara set upon high hills at the foot of snow-capped mountains and possessing superb hotels and private homes. A little farther distant and in the opposite direction is a group of ocean beaches—Santa Monica, Long Beach, and Venice most distinguished among them. Beyond these beaches is a world-famed ocean resort, Santa Catalina Island. It is easily and quickly reached by a daily steamer from the mainland, which connects with both the steam and electric trains from Los Angeles. The delights of Santa Catalina are not easily forgotten. Perhaps the most distinctive of all is the riding along shore in a glass-bottomed boat, which gives an exceptional view of the elaborate life under the waters of the clear Pacific.

It is hardly sixty miles inland from Los Angeles to those joyous winter resorts, Redlands and Riverside. The last of these is distinguished by what is beyond a doubt the most satisfactory and wonderful hotel in America. Designed after the fashion of the mission architects, this tavern at once has a charm and atmosphere such as one can not find in the average hostelry.

Indeed, all of Southern California has charm and atmosphere. It is Italy in America, Italy scrubbed and cleaned and with the folk speaking a familiar tongue, the dash of Spanish in the air giving character to the whole. The charm and atmosphere increase as you go south until finally you come to San Diego, just above the international boundary—San Diego which, three years ago, decided that she, too, would have an exposition. Despite her comparatively isolated location down in the southwest corner of the United States, despite that fact that at that time she had hardly more than 35,000 residents,

she has built and completed her Panama-California Exposition—at a cost of tremendous effort—and some five million dollars.

But San Diego, like San Francisco, offers winter tourists far more than an exposition. For one thing, there is Coronado Beach, that wonderful sand-spit reaching out from northernmost Mexico and making the haven of San Diego, holding a great hotel, a bathing-establishment, and hundreds of cottages large and small. For another there is Point Loma, with Mrs. Tingley's interesting school colony and Greek theater. For still another, there is La Jolla, with strange caves and tropical gardens. In front of all these there is the sea, soft and blue like all southern seas, and behind them the majesty of the mountains. Here is a playground for the winter traveler!

PLANNING THE TRANSCONTINENTAL TRIP

In making the trip to the Pacific Coast you should plan to see as many as possible of the wonders and attractions of your own land. In so doing it will be necessary to go by one route and return by another. In mapping the itinerary you have choice of a great diversity of routes. As already pointed out, you may swing around the Great Arc which traverses the ocean line between New York and San Francisco, intersecting the Panama Canal. You may journey part way by water and part way by rail, or you may select one of the many all-rail routes.

Most southerly of all transcontinental routes is that of the Southern Pacific System with three gateways to California and the coast, the first via New Orleans, the second via Ogden, and the third via Portland and the northwest. Connection between New York and New Orleans is made by the company's own steamers leaving either port Wednesdays and Saturdays, or by all rail via Southern Railway and connections. The "Sunset Limited" is the Southern Pacific's famous train between New Orleans, Los Angeles, and San Francisco. In conjunction with the Chicago & Northwestern and the Union Pacific it carries over its rails the "Overland Limited" and "San Francisco Limited" between Chicago and San Francisco, via Ogden, and in conjunction with the Union Pacific and St. Paul systems, the "Pacific Limited" via Omaha and Ogden. In connection with the Rock Island-El Paso Southwestern lines the Southern Pacific also operates the "Golden State Limited" via Kansas City, El Paso, and Tucson to Los Angeles and San Francisco. Tourists from San Francisco northward may journey through a land of scenic charm by the Southern Pacific's Shasta route to Portland, Tacoma, and Seattle.

From Chicago, from St. Louis, and from Memphis stretch westward the well-equipped Rock Island Lines, affording excellent service to the coast, the Colorado mountain region, and the northwest. Three routes to California are afforded by the Rock Island System via Denver or Colorado Springs and Denver and Rio Grande and Southern Pacific or Denver and Rio Grande-Western Pacific, the latter traversing the Feather River Cañon, also the low-altitude route via El Paso and Southwestern and Southern Pacific, over which steam the Rock Island's crack California trains, "The Golden State Limited" and the

Write Bahamas Government Agent,
Suite 29, 303 Fifth Avenue,
New York City, for booklet.

"Californian." Tourists desiring to stop over at the Colorado mountain region are given excellent service by the Rock Island's "Rocky Mountain Limited" between Chicago and Denver or Colorado Springs.

The Santa Fé, with its own direct line between Chicago, Kansas City, San Diego, and San Francisco, is famous for giving tourists an opportunity to view the Grand Cañon of Arizona. Four through trains are available by this road, including among others the "California Limited" and the "Santa Fé de Luxe" (from Chicago every Tuesday).

The Union Pacific offers the shortest route from Chicago to San Francisco, enjoying also the facilities of direct connecting lines from Ogden southwest to Los Angeles and northwestward to Portland, Tacoma, and Seattle. Five through trains, the "Overland Limited," "San Francisco Limited," "California Mail," and "Los Angeles Limited" (via Chicago & Northwestern), "Pacific Limited" (via Chicago, Milwaukee & St. Paul), also the "California Mail" are carried over the Union Pacific main line, while excellent through-train service is given by the Union Pacific between Chicago, Portland, and Seattle in conjunction with the Oregon Short Line and Oregon-Washington Railroad and Navigation Company. Through service is also handled by the Union Pacific between Chicago, Omaha, and Los Angeles, via Chicago & Northwestern, and San Pedro, Los Angeles & Salt Lake Railroad.

The Northern Pacific's main stem between St. Paul and Portland has as its eastern feeders the Burlington, St. Paul, Great Northern, and Rock Island, and as its western connections between Portland and San Francisco the Southern Pacific. The leading through trains from Chicago to the coast over this route are the "North Coast Limited" (via Chicago & Northwestern), the "Northern Pacific Express" (via the Burlington), and the "Puget Sound Limited," from St. Louis via Kansas City and Billings, and thence by Northern Pacific.

Another of the attractive northern transcontinental routes between Lake Michigan and the Pacific Coast is that of the Chicago, Milwaukee & St. Paul, whose through line connects Chicago, Seattle, and Tacoma. The premier trains of this system are "The Olympian" and "The Columbian." As already stated, over the rails of this

same system between Chicago and Omaha are operated, in conjunction with the Union Pacific, Salt Lake Route, and Southern Pacific, the "Pacific Limited," and "California Mail" to Los Angeles and San Francisco. The St. Paul's route intersects Spokane.

Still another transcontinental trip from Chicago to the coast may be taken over the Great Northern, the eastern termini of which are at Duluth and St. Paul, the western at Vancouver and Portland. The "Oriental Limited" and "Great Northern Express," and other through trains leave from Chicago over the Burlington line.

From Chicago the Burlington System affords the California tourist the choice of several routes. Over its rails to St. Paul and Minneapolis travel, as above stated, the "Oriental Limited" and, via Billings, the "Great Northern Express," continuing westward by the Great Northern. Another route is by the "Northern Pacific Express," via St. Paul and Minneapolis and Northern Pacific Railway. By still another you may go via Billings and Northern Pacific Railway. Through-car service is given over the Burlington to San Francisco, via Denver, Rio Grande-Western Pacific, Southern Pacific, and via Denver, Rio Grande, and Salt Lake Route to Los Angeles.

Over the Chicago & Northwestern depart several notable through trains bound for California. Among the most important of these are the "Overland Limited," "San Francisco Limited," and "California Mail," via Union Pacific and Southern Pacific to San Francisco and Los Angeles, the "Oregon Washington Limited" to Portland, via Union Pacific, Oregon Short Line, and Oregon & Washington R.R. and Navigation System, the "Los Angeles Limited," running via Union Pacific, and San Pedro, Los Angeles & Salt Lake Line, etc.

Traversing what has been described as the grandest mountain scenery of North America, the Canadian Pacific's vast system stretches a steel band from coast to coast. To the north of the Canadian Pacific is the newest of all the transcontinentals, the now practically completed Grand Trunk Pacific, while in the same direction runs the Canadian Northern. Each of these three systems has numerous connections with rail lines reaching south of the border.

23rd Year U. of C. (Div. R.) Chicago, Ill.

Colorado Springs and the Pikes Peak Region

Where bright, sparkling days, full of sunshine, beckon you out-doors to recover health, in this mile-high region. The air is a-tingle with all the vital forces of nature at her best.

A splendid place to visit the year 'round—a better place to live cannot be found . . .

Ninety-three per cent sunshine in November, 1914.

What phase of climate, health or living interests you? Write today for specific information to THE CHAMBER OF COMMERCE, 400 Burns Building, Colorado Springs, Colorado.

STOP OVER ON YOUR EXPOSITION TRIP IN 1915

TROPICAL LUXURY AT ONE OF THE HOTEL PALACES ON THE EAST COAST OF FLORIDA.

chased in any of the big cities east of Chicago, giving the passenger the privilege of going by one route and returning by another, with stop-overs at all points of interest. Unusually low round-trip all-expense tours to both Expositions will be on sale after January 1 by leading railways.

THE WINTER PLAYGROUNDS OF FLORIDA

Florida is another such playground. Dotted between Florida and Southern California are many other playgrounds, most of them closely following the southern boundaries of the United States. Among these are Pass Christian and Biloxi, on the coast of the Mississippi. New Orleans, with all-winter fascinations for tourists as well as its great season of overwhelming joyousness at Mardi Gras, is near by. A little farther to the west is Galveston, which, in addition to being a very great commercial port, possesses one of the finest hotels and beaches in the South. A short way farther west again is San Antonio—on land, and almost a thousand feet above the sea, with a warm, dry, invigorating climate as well as historic associations that have led it to be called the "Cairo of America."

To the north and east Florida long since proved itself an ideal playground. To slip out of New York or Boston in a winter snow-storm and to find yourself two days later among roses and tall, trembling palms, with overcoat forgotten and pongees a luxury, is a transformation scene that seems more like a theater than reality. Yet that is what Florida can do for you. There may be snow and ice in Broadway or in Tremont Street; down at Miami or Palm Beach you will be seeking the shade at midday and the cooling comfort of a long drink with ice in it. Bathing, driving, motoring, golf, and real fishing in both salt and fresh water are some of the recreations in this land of midwinter warmth and flowers.

Jacksonville, like Galveston, is a brisk commercial port, which nevertheless maintains itself as a tourist resort into the bargain. From Jacksonville all the way south to Key West—now reached by as wonderful an overseas railroad as the genius of men has ever essayed to construct—the Atlantic shore is dotted with winter resorts. The names of many come quickly to mind—St. Augustine, Daytona, Ormond, Palm Beach, Miami; there are others where one also may choose between lazy comfort and brilliancy. Of these East Coast resorts St. Augustine is the one possessing historic charm. It is the only walled city within the United States; and its ancient fortress has stood sentinel for more than three hundred years.

It must not be imagined that all of Florida's attractions lie along her coast lines. The interior country is dotted with lakes and towns provided with comfortable hotels. Ocala, Sanford, Orlando, Winter Park, and Lakeland are growing in favor with tourists each year.

The Gulf coast of Florida has more shore resorts—Tampa and Pensacola are the names that come most quickly to mind—while the steel highways from the north that lead to Florida are lines with stopping-points that can not fail to appeal to the winter traveler. Charleston and Savannah are lovable old towns upon the sea; Camden and Pinehurst, Aiken and

Along The Beautiful Adriatic Just Before the War Began

ONE of the most refreshing volumes written in years—a live, snappy, rollicking tale of experiences aboard and ashore in the most delightful piece of Southern Europe—along the Adriatic.

Its pages breathe the very spirit of everything that goes to make Dalmatia delightful. Story, anecdote, ancient legendary, beautiful cities, old churches, countless architectural and other ancient treasures, etc., etc., criss-cross through its pages in entertaining variety.

You'll Never Forget It Once You Read It

DELIGHTFUL DALMATIA

By ALICE LEE MOQUE

The book is timely for its descriptions of places already in the wake of war; among these is Cattaro, the recently bombarded fortification on the Adriatic. Unusually attractive is the great scenic and historic interest attaching to Pola, Sebenico, Gravosa, Spalato, Ragusa, etc.

Cloth bound, 362 pages. Profusely illustrated in color and half-tone. \$2.00 net; by mail, \$2.16.

Augusta stand among the pines on higher land; Asheville clings to the mountain-sides of North Carolina and proclaims herself "the land of the sky." These points are visited by many thousands of winter travelers. They have already been described in an earlier issue of THE LITERARY DIGEST.

These great arteries of travel lead from the North to the Florida resorts, either directly or through connecting lines—the Southern Railway, the Atlantic Coast Line, and the Seaboard Air Line. Travelers from Chicago, Indianapolis, Cincinnati, and Chattanooga may journey to Florida by a solid steel train operated over the Big Four, Queen and Crescent, and Southern Railway systems. Inland and West Coast points are reached directly by Seaboard Air Line and Atlantic Coast Line. East Coast resorts are served by the Florida East Coast system, extending from Jacksonville to Key West.

JOURNEYS TO THE ANTILLES AND SOUTH AMERICA

Already we have spoken of the steamers that sail this winter for the first time direct from New York to San Francisco. Their route from the North Atlantic to Colon, the Atlantic entrance to the canal, runs down against the Gulf Stream and threads its way through the tropical West Indies. In fact, some of these vessels will stop at the larger of the island ports. But the average winter traveler who is anxious to see these points will take one of the vessels, which, starting from Boston, New York, Philadelphia, or even more southerly ports, loops past Cuba, stopping either at Havana or Santiago, or both, certainly reaching the strange, old-fashioned port of Kingston in British Jamaica, and possibly stopping at San Juan, Porto Rico, before reaching Colon and the great engineering achievement which the United States has given to the world. Some ships, notably the great white fleet of the United Fruit Company, make landings at several ports on the northerly edge of South America. Indeed, a variety of attractive trips to the tropics is afforded by this great steamship system, including service from New York, Boston, New Orleans, Philadelphia, Baltimore, Mobile, and Galveston to Cuba, Jamaica, Panama, Colombia, Costa Rica, Guatemala, Honduras, Nicaragua, and Pacific coast connections. Attractive cruises occupying from eight to twenty-four days are available with ample stops at interesting ports. Colombia and Venezuela are fascinating lands, little known or little understood by many residents of the United States.

South America spells fascination for the winter traveler from the more northerly of the sister continents. One ultimate effect of the great war will undoubtedly be the multiplication of accommodations from New York and Boston to such great harbor cities as Rio de Janeiro and Buenos Aires. But there are ships of the Lamport & Holt and the Royal Mail Steam Packet Company which already reach from the United States direct to these cities and afford a comfortable passage from the one side of the equator to the other. In times of peace the ubiquitous and progressive German lines add to this service, as well as helping reach the many, many ports of the West Indies.

To attempt to describe such cities as Rio de Janeiro or Buenos Aires in a single paragraph of this brief guide to the winter

traveler is quite out of the question. It is enough to hint at the marvelous beauties of the far-famed harbor of Rio or of the commercial preeminence of the metropolis of the Argentine Republic—to draw faint pictures of the great cities as fair to look upon and as comfortable to dwell within as Paris or Vienna, to whisper the little-known and less understood hinterland behind each as it is to attempt to paint in detail lands which, to most Americans, are unfortunately hardly more than mere names.

In reaching the West Indies it is, of course, not necessary to sail from New York out into the North Atlantic and around Hatteras. There are excellent steamer services from New Orleans and Mobile, from Miami and from Key West. The charming old town of Nassau, in the Bahamas, is only a short sail from Miami, while from Key West a stout ferry-steamer reaches Havana in something less than eight hours. In Havana you dip into the atmosphere of a southern European city. History and romance give this ancient city a peculiar charm to the visitor from the North. During February and March boulevards and parks of the Cuban

capital are gay with the celebration of the annual carnival. Most interesting railway trips radiate from Havana. Access to the interior of Cuba is afforded by the lines of the United Railways of Havana and allied lines, these lines, supplemented by the Cuba Railroad from Santa Clara, forming a rail line all the way through the center of the island to Santiago. Bermuda, of course, is best reached from New York. There are several steamer lines, including the Quebec Steamship Co., Royal Mail Steam Packet, and Bermuda-American Steamship Co., that make the trip, and as a short winter ocean journey there is hardly one to compare with it in popular favor. In no other way can one turn from Broadway quite as quickly to a foreign land, foreign currency, foreign flavors of every sort as by taking steamer from a North River pier to Hamilton, the chief of the island ports. The varied attractions of Bermuda were described in detail in a preceding issue of THE LITERARY DIGEST.

Each year the Bahamas, nearest of all the tropic islands to our shores, attract increasing numbers of winter tourists, and

Dollar Christmas Gift for Men Who Smoke

(—not much to pay for a gift, but *this* gift will make a hit with any smoker.)

(—your friend, brother, husband—it's a safe gift, sure to please.)

It is Edgeworth Ready-Rubbed in a pound humidor tin. It is choice tobacco. It is the tobacco that induced Mr. H. J. Kline, 1050 Leader-News Building, Cleveland, Ohio, to write the producers of Edgeworth as follows:

"Three years ago my dentist heard me complaining because I could get no pipe tobacco that was worth a cent a carload. He immediately introduced Edgeworth. If I had a million dollars I would be almost willing to give half the sum for what he did for me. Since that time I have smoked Edgeworth and nothing else. And it has the same flavor today that it had the first time I smoked it. I have told a thousand friends about it and they are now all Edgeworth devotees. Pipe smokers who come to my house go 'Jaffy' over my Edgeworth."

Very truly yours,
H. J. KLINE,
Secretary, Forest City Live Stock & Fair Co.
General Manager, The Forest City Fair.
Secretary, The Grand Circuit.

If you can't get Edgeworth in one-pound humidor tins (price \$1.00) at your retail tobacco store, Larus & Brother Co. will ship you direct on receipt of \$1.00, all charges prepaid. If you want to make one or more of your friends Christmas gifts of these Edgeworth packages, give your instructions to your dealer, or, if he will not supply you, send us names and addresses of friends with your cards and check to cover your order at \$1.00 per package and we will gladly attend to the shipping.

If you have smoked Edgeworth through some long, quiet evening, this is all you need to know. If you have never smoked Edgeworth, we will cheerfully give to you a sample of the tobacco we suggest that you give your friends.

A sample of Edgeworth Ready-Rubbed is something easy to obtain. All you have to do is to make up your mind to ask for it and send a post card request to Larus & Brother Co., 5 South 21st Street, Richmond, Virginia, who will be glad if you will also mention your dealer's name. You are invited to send for the sample.

Edgeworth Ready-Rubbed is easy to roll into a tight, round cigarette. In a cigarette it is slightly milder than in a pipe, and the flavor of an Edgeworth cigarette is refreshingly different from "tailor-made" cigarettes.

The original Edgeworth is a Plug Slice, wrapped in gold foil and sold in a blue tin. Edgeworth Ready-Rubbed may be bought in 10c and 50c tins everywhere and in the handsome \$1.00 humidor package which is so suitable as a Christmas gift. Edgeworth Plug Slice, 15c, 25c, 50c and \$1.00. Sold by practically all dealers or mailed prepaid if yours has none.

To the Retail Tobacco Merchant:—If your jobber cannot supply Edgeworth in dollar humidor packages, Larus & Brother Co. will gladly ship you direct at the price you would pay the jobber.

justly. For here we find all the delightful attractions of the tropics and an ideal climate, the temperature at Nassau averaging 72 degrees for the entire season. To a Nassauvian, however, perfect weather and flowering plants are the commonplaces of the day. He has been accustomed to them ever since he could remember and accepts their presence with true British conservatism. Hog Island's glorious stretch of coral beach, where the winter visitor takes his morning swim and which is probably as fine a winter bathing-beach as any in the world, is accepted quite as calmly by the Bahamas Islanders.

Tennis has come to the front wonderfully in the Bahamas, the Colonial courts, in the opinion of visiting experts, being unsurpassed for surface and background by any in the world.

The many followers of Colonel Bogey in Nassau are well paid for their devotion. Not the longest course in the world, but a mighty "sporty" one, the Nassau course has endeared itself to the hearts of many veteran and fledgling golfers. The Florida East Coast Golf Championship, which is played on February 23 and following days, attracts a large field and is the occasion of many stirring matches.

You may reach Nassau by through Pullman from New York to Miami, Florida, and then by steamship *Miami*, of the P. & O. Line direct to Nassau, the trip occupying about two and one-half days. Or you can take the all-water route from New York direct by express steamers of the Ward Line, regular weekly service, the trip occupying about seventy-two hours.

From other North River docks vessels are constantly sailing with destinations that must appeal to the imagination of the winter traveler. Every important harbor port to the south of the American metropolis can be reached from it by frequent and direct steamer service. The various lines that go to form those cabalistic initials, the A. G. W. I. (Atlantic, Gulf, West Indies) give direct and excellent service to such points as Galveston, Mobile, Jacksonville, Savannah, and Charleston. There is an excellent service by Old Dominion Line to Norfolk and Old Point Comfort, whose really comfortable hotel is quite as well known as Fortress Monroe, which stands within a stone's throw. And, to let our minds drift back to Southern California once again, there are stout steamers of the Southern Pacific sailing twice a week to New Orleans, advertising "a hundred golden hours at sea" and forming a direct connection between New York and the great Southern Pacific rail system.

Jamaica, long a land of fascination for winter tourists, is thus described by the author of "The Sea and the Jungle":

"And we had close over our port bow the most beautiful island in the world. It is useless to deny it, and to declare that you know a better island. Can't I see Jamaica now? I see it most plainly. It descends abruptly from the meridian, pinnacles and escarpments trembling in the upper air with distance and delicate poise, and comes down in rolling forests and steep, verdant slopes . . . to more leisurely open glades and knolls. . . . It is a jewel that smells like a flower . . . For long I watched it, declaring continually that some day I must return (and that is the greatest compliment a traveler on his way home can pay to any spot on the earth)."

Jamaica is reached conveniently by

steamers of the United Fruit and Royal Mail Steam Packet lines.

In touring the West-Indian Islands you may visit the possessions of Great Britain, France, Denmark, and Holland, but Americans there is a peculiar interest in our own island, Porto Rico, over which float the Stars and Stripes. Here we find a curious commingling of ancient Spanish customs and institutions with the spirit of modern progress introduced by the United States. An attractive cruise to Porto Rico from New York is afforded by the New York & Porto Rico Steamship Company, occupying sixteen days, visiting several ports, and costing, on board and ashore combined, from \$110 to \$120.

The Windward Islands, including St. Lucia, St. Vincent, Granada, the Grenadines, and others, are comparatively new and highly interesting winter resorts. The climate of this region is genial and balmy and distant only four or five days' sail south of New York. The islands are visited by steamers, as the new S.S. *Guiana*, of the Quebec Steamship Line and Royal Mail Steam Packet Company's ships.

The winter traveler is a fortunate creature, indeed. Even if his journey is a short affair breaking in for a few days in the midst of a season's hard business grind, it is almost sure to be beneficial to him, to bring benefits that are far more to him than can be expressed in dollars and cents, even in the dollars and cents that are the expense account of his trip. And the fashion of short mid-winter trips is growing. If the New Yorker finds that he can not get the time for the South or the Canadian North, he may be sure that some time between January 1 and the first day of April he is going to pack his duffel and scurry down to Lakewood or Atlantic City. The novelty of these two places as winter resorts has long since passed. Lakewood knows no summer season, and as for Atlantic City, it gains its greatest social pretensions each year in the days between the Christmas holidays and those at Eastertide.

The mid-winter traveler has come to stay. Catering to his whims and taste has become one of the recognized transportation and hotel problems of America.

TOPICS - OF - THE - DAY

INVALUABLE WAR-MAPS will be included in our issue for January 9. The maps will cover the entire area of fighting in France, Belgium, Germany, Austria, and Russia in great detail, showing towns, railroads, rivers, canals, mountains, etc. The foremost firm of map-makers in the United States have been working on them for six weeks and we have spared no expense to make them complete. The Consul-General of one of the warring Powers says, after a careful examination of the one showing his country: "The map is absolutely correct, and far better than any other of its kind printed in New York that has been brought to my notice." The edition of this issue will be LIMITED, and orders for it should be placed now to avoid disappointment. Subscribers who wish their friends to have these maps should inform them early or send a list of their names to us, enclosing ten cents for each name, and we will supply them by mail.

THE MOVE TO KEEP OUR GUNS OUT OF EUROPE

HALF-A-DOZEN BILLS pending in Congress to stop the exportation of war materials to the warring nations show the force behind this movement, altho the press talk reveals a wide divergence of opinion on the ultimate effects of such a prohibition. Virtually all agree that such legislation as Senator Hitchcock and a number of his colleagues propose would be welcomed by Germany and would cause our arms-manufacturers a loss of millions of dollars in foreign contracts. But while some observers, looking beyond these immediate effects, are convinced that an embargo would advance the cause of peace, others argue no less earnestly that it would foster militarism by making it necessary for nations to keep their armaments up to war standard even in times of peace. Some argue that since only Germany's enemies are in a position to avail themselves of the present freedom to buy arms here, the proposed change would put all on the same level and be thoroughly consistent with the spirit of neutrality. Others contend that it would be an absolute violation of this spirit, since it would be restoring to Germany an advantage which she lost through no fault of ours.

Before following the editors into the mazes of this most interesting controversy it may be well to glance at the rules that already govern our business dealings with belligerents with whom we are at peace. They are thus summed up in untechnical language by the *San Francisco Chronicle*:

"It is agreed that we can not fit out and arm war-ships for either belligerent and turn them loose without becoming liable for the damage they may do to the other belligerent. The *Alabama* case settled that and estopped us from making the contrary contention. Nor can we fit out an organized army or any part of one to take the part of one belligerent without justifying reprisals on the part of the other.

"By our own laws we are forbidden to supply in our own ports a war-ship of a belligerent with more than sufficient to convey it to its nearest home port.

"We may, however, lawfully ship any kind of supplies, including all munitions of war, to either belligerent, and if the

other belligerent captures them the shippers have no kick coming. They will doubtless have been paid in advance."

Thus, as the *New York Journal of Commerce* remarks, nobody denies that the sale of arms to belligerents by a neutral country is "quite legitimate under what is known as international law, and in accordance with traditional practise," the only penalty attached being the risk of capture and confiscation at sea. A correspondent of the *New York Sun* reminds us that this point has been established by no less an authority than the Supreme Court of the United States, which declared, in a unanimous opinion delivered in 1822, that "no neutral State is bound by any canon of international law to prohibit the exportation of contraband articles," and that "the sending of contraband of war from a neutral country to the belligerent port for sale as articles of commerce is unlawful only as it subjects the property to confiscation on capture by the other belligerent."

But Senator Hitchcock and the other legislators who have fathered bills to put new restrictions on our commerce with the warring nations argue that our manufacturers, in selling munitions to the belligerents, are adding fuel to the European conflagration and postponing the advent of peace. To quote Senator Hitchcock's own words:

"Our nation stands for peace, and it seems to me outrageous that we should be running our powder-factories and our gun-works night and day to furnish means for carrying on the present war. Those who are making money out of this traffic will, of course, object to this bill, but no one else ought to. Two years ago we authorized the President to prohibit the exportation of arms and ammunition to Mexico because we did not feel that this country should help to continue the war there. As a matter of fact, our Government owns at the present time more than 300,000 Krag-Jorgenson rifles, better than some of the arms now possessed by European nations. We have discarded them because the Army has a better weapon. Several of the European nations would like to buy them, and undoubtedly Uncle Sam could get a handsome figure for them and the treasury of the United States would be very much benefited. But no one

would propose such an outrageous breach of the laws of neutrality for the benefit of the whole people of the United States. My bill proposes to carry this law of neutrality a little further and to forbid to individuals that which is already unlawful for the Government."

While our arms-manufacturers are ready to sell to all, Germany can not buy, because her enemies control the high seas, and the Allies, according to some authorities, have placed orders with our arms- and ammunition-factories that will keep them busy for the next two and one-half years. So great, in fact, is the dependence of the Allies upon American munitions of war, if we are to accept the statement of George Sylvester Viereck, editor of *The Fatherland*, that "were the war material from the United States withheld, the war would come to an end in sixty days or less." In a statement laid before our State Department by the German Ambassador, Count von Bernstorff, some of the orders for war materials placed in this country by the Allies are specified as follows:

Two hundred thousand rifles, caliber .303, from the Remington Arms Company.

Two hundred million cartridges from the Union Metallic Cartridge Company.

Two hundred thousand rifles, caliber .303, and 200,000,000 cartridges from the Winchester Arms Company.

Total output of artillery cartridges-cases of the Union Metallic Cartridge Company.

Four million pounds of powder from the Du Pont Powder Company.

Fifteen hundred machine guns from the Colt Works. (Larger orders pending.)

Fifty thousand revolvers from the Colt Works.

Two hundred armored motor-cars, with machine guns, from the Autocar Company.

Five hundred thousand rifles, caliber .22, and ammunition for drilling purposes from the Winchester Arms Company.

Nine hundred 6-inch howitzers, delivery within eighteen months, from the Bethlehem Steel Company.

Shell cases for the howitzers from the same company.

Seven million pounds of powder from the Du Pont Powder Company.

One hundred thousand Remington rifles, caliber 7 mm., and 13,000,000 cartridges.

About 3,000,000 cartridges per week are being shipped from the United States to France.

Forty to fifty large guns, 9.2 inch caliber, from the Bethlehem Steel Company.

Two thousand tons of powder for artillery and infantry cartridges from the Du Pont Powder Company.

One hundred thousand carbines, caliber 30-40, from the Winchester Repeating Arms Company.

One hundred million cartridges for the above carbines.

Aeroplanes from various firms.

Four million aerial arrows.

Artillery ammunition, estimated value \$12,000,000, from the Crucible Steel Company.

Commenting on these figures, Mr. Viereck discovers in the very size of the Allies' contracts with us proof that they are "without the facilities for carrying on a contest on such a large scale" as the present war. France, he admits, has enough arms and ammunition plants of her own to enable her to continue the war even if the American supplies were cut off, but "England finds herself in a difficult position and could not go

on enlarging her forces on the present scale without the hundred- of thousands of rifles and millions of rounds of ammunition being shipped to her from the United States." And "as for Russia, she would be immediately at the end of her resources were the American markets closed." This German-American editor goes on to say:

"Is the United States, through the furnishing of guns, ammunition, and powder, prolonging the war? And is the benefit derived by a few families from these war-material orders an equivalent to the losses caused to trade in general by the prolongation of the war? And at the end of the war will the United States be in a position to take the rôle of an arbiter? Will not the German people, as well as other neutrals, whose trade has suffered through the prolongation of the war, righteously object?"

Mr. Viereck's recipe for ending the war in sixty days, retorts Horace White in a letter to the *New York Evening Post*, evidently involves the triumph of Germany. We read:

"Germany, having made war, and preparations for war, the chief concern of human existence, is presumably well supplied with guns and ammunition and manufactories thereof. She has the great Krupp works with 90,000 men working night and day and she has taken the Belgian arms-factory at Liège and turned it to her own service against Belgium, with probably 10,000 men more. Now if she can prevent France from getting arms from this side of the water, she can conquer her enemies in sixty days or less. That is what Mr. Viereck means by bringing the war to an end. He means ending it successfully to the country which began it. The American people are to enable the Germans to march into Paris in sixty days, or less! . . .

"But what then? Germany would levy contributions in cash and territory to suit herself, and, having thus planted the seeds for future wars,

would begin to prepare for them, and would still call them defensive wars. It is needless to say that the people of the American hemisphere do not want this war to end merely as an armistice, to break out again as soon as the chief belligerent can get his second wind."

Mr. White maintains also that "any new legislation which introduces a change of practice in favor of one belligerent and against another is a breach of neutrality." Another contention, admitted by Senator Hitchcock to be "the strongest argument yet advanced" against his bill, is that if we prohibit the sale of war munitions to belligerents as a violation of neutrality we may find ourselves embarrassed if we ever get into a war and need to look abroad for war supplies.

Why strike a blow at our own industries because Europe seems fit to go to war? asks the *Chicago Herald*. Not only would these prohibitory measures strike at our prosperity, declares the *Brooklyn Eagle*; they would stultify our claim to neutrality. Such an embargo, says the *New York Sun*, "is designed to deprive Great Britain and her allies of the advantage their superior naval power has won for them," and is hence "as unneutral as a German army corps commander." This view is shared by such papers as the *New York Tribune*, *Times*, and *World*, and the *Philadelphia Press*, and more than one editor notes that at least three of the men who have introduced bills to stop the sale of arms to Europe are German-Americans.

"IT SEEMS TO ME OUTRAGEOUS THAT WE SHOULD FURNISH MEANS FOR CARRYING ON THE PRESENT WAR."

Declares Senator Gilbert M. Hitchcock, of Nebraska, leader of the movement in Congress to forbid the sale of arms to the warring nations.

TO BAR THE WAR FROM WESTERN WATERS

THO SOME DOUBT is expressed as to the practicability of the suggested plan to keep the war out of North- and South-American waters, the press agrees that the meeting of representatives of twenty American republics on December 8 was a unique, perhaps epoch-making, occasion. This, as the *New York World's* Washington correspondent points out, was "the first international conference of neutral nations which had assembled in any part of the globe since the European War began, and, irrespective of its possible accomplishments during the present conflict, was regarded as the birth of a new movement in international law for the definition of the right of the neutral as opposed to the right of the belligerent." It was unique, says the *New York Sun's* correspondent, "in that it was the first definite action ever taken by the American Governments looking toward their acting as a unit with relation to the rest of the world. Often they have sought unanimous action in regard to interests in relation to one another, but never before have any attempts been made to solidify the Governments on problems relating to Europe and Asia." The only action taken at the conference was the appointment of a committee to study the new problems growing out of the European War. This was the suggestion of the Argentine Ambassador to the United States, Dr. Romulo S. Naon. In the speech supporting his position Dr. Naon laid down a new and notable principle which the *Philadelphia North American*, *New York World*, *Washington Post*, and *Pittsburg Dispatch* think must ultimately become as important in international law as the Monroe Doctrine. *The North American* quotes him as saying:

"The interests of the countries not involved in conflict are as much entitled to respect, are as sacred, to say the least, as those which could be invoked by the countries which misfortune has led to belligerency. The mission of the neutral countries is to maintain the progress of the world, and to conserve its moral and material energies as a nucleus for the reestablishment of the disturbed equilibrium.

"That social mission, which is as supreme as the very defense of sovereignty, augments, if possible, the attention which deserves respect for the integrity of their rights as neutrals. If these rights and the rights of belligerents conflict, a spirit of justice, a sentiment of humanity, and a reason of high practical policy determine that the rights of the neutrals must prevail, inasmuch as their mission is a mission of progress and preservation of life.

"If war can justify the setting aside of the rights of neutrals, there would disappear our commercial activities and our economic resources, in the preservation of which are concerned both our own existence and the exigencies of civilization.

"The right of the belligerent ends where the right of the neutral begins."

As a basis for the special commission's study of the problem thus presented by Ambassador Naon, the Peruvian Government offered an interesting suggestion. After describing the embarrassment caused in this hemisphere by Europe's war, and noting America's isolation from European policies and interests, the Peruvian note said that a declaration

"that America can not admit that its commerce within the

maritime area belonging to the Continent—supposedly bounded by a line equidistant from it and the other countries, both on the Pacific and the Atlantic side—be subject to the contingencies of the present war, would give ample guaranty to lessen, even in part, the serious effects of the crisis which we have begun to feel, and would likewise impose respect for the affected interests, a respect that up to the present time does not seem to have entered into the minds of the belligerent Powers."

This, as the *New York World* and *Times* both recall, is the idea formulated by Thomas Jefferson in a letter written in 1820, in which he said:

"The day is not far distant when we may formally require a meridian of partition through the ocean which separates the two hemispheres, on the hither side of which no European gun shall ever be heard, nor an American on the other; and when, during the rage of the eternal wars of Europe, the lion and the lamb, within our regions, shall be drawn together in peace. . . . The principles of society there and here, then, are radically different, and I hope no American patriot will ever lose sight of the essential policy of interdicting in seas and territories of both Americas the ferocious and the sanguinary contests of Europe. I wish to see this coalition begin."

Here, says *The World*, "is an idea of vast importance"—

"If all the republics of the Western world in majestic council shall set up new ideas of neutral rights, claiming for them the authority of international law, embodying them, perhaps, in the phrase, No more European wars on this hemisphere, we shall have a very impressive addition to the vital democratic doctrine which already says, No more colonization and no more Kings on this hemisphere."

To stretch the three-mile zone, "established when three miles was the range of a cannon-shot," until it covered a hundred miles of public waters, would be, in the *New York Times's* opinion, "not merely a step, but many strides, toward the accomplishment of the cherished ideal of forcing nations at war to confine their

molestation to each other." Tho it looks visionary, "dreams sometimes come true," *The Times* remembers, and it goes on to show that neither Germany nor Great Britain would lose by acceding to such a request. The *Philadelphia Record* does not see how this extension could hamper naval operations except in the case of commerce-destroyers, "but the nations of the New World are under no obligation to help the licensed pirates of the Old World to destroy each other's shipping." Moreover, "the destruction of British or German ships carrying goods between Chile, Argentina, Brazil, and the United States would not be the destruction of British or German, but of American commerce." Nor does this paper consider European consent necessary, for

"If two American States should unfortunately become involved in war, the European Powers would not hesitate to warn them against making the Mediterranean the scene of their naval battles and of piratical enterprises against neutral trading vessels, on the pretext of searching for contraband."

A declaration by all America declaring that such waters as the Gulf of Mexico and the Caribbean Sea should not be made the scene of naval operations in a European war would not, in *The Record's* opinion, be disregarded by non-American Powers. Here the *San Francisco Chronicle* and *Pittsburg Dispatch* heartily

HE SUGGESTS A NEW DOCTRINE.

Dr. Romulo S. Naon holds that where the rights of neutrals and belligerents conflict, "the rights of the neutrals must prevail."

WATCHFUL WAITING WITH A TIN DIPPER
— Halladay in the Providence Journal

NEWS YORK: Mr. Daniels believes that the President will keep the country out of trouble" —Wood in the New York Tribune

WHAT WE NEED AND DON'T NEED IN THE WAY

agree, and they see no need of consulting the European belligerents in defining the new policy. Let the United States, Argentina, Brazil, and Chile agree to back up the doctrine with their combined naval force. Would any of the belligerents care to take on these three countries as enemies for such a cause? *The Dispatch* does not think so.

On the other hand, the *New York Journal of Commerce* and *Wall Street Journal*, *Springfield Republican*, *Philadelphia Press*, and *San Diego Union*, tho heartily favoring the principle involved, think that nothing could be done without the consent of the European combatants, and doubt if such consent can be obtained. The *Charleston News and Courier* adds that it would be impossible for neutral nations to maintain the neutrality of a 100-mile zone and that "other practical difficulties would arise from the fact that large areas of the western hemisphere are dependencies of belligerent Powers and are, therefore, parties to the struggle which has its center in Europe, but which is affecting every continent of the globe."

GOOD TIMES SEEN FROM WALL STREET

SOME DIFFERENCE of opinion may exist regarding the value of the New York Stock Exchange and the righteousness of its transactions, but everybody seems to take the successful resumption of its business as a sign of coming prosperity. In New York this feeling is voiced by such papers as *The Times*, *Herald*, *Sun*, *Tribune*, *World*, *Journal of Commerce*, and *Commercial*. Farther away from Wall Street, the *Boston News Bureau*, *Transcript*, and *Christian Science Monitor*, *Springfield Republican*, *Washington Post*, and *St. Louis Republic* are no less certain that the renewed activity in the securities market is the forerunner of improvement in the business of the country and perhaps an industrial boom. "The wave of fear has passed," declares the *Philadelphia Inquirer*, "and it seems certain that the country will enter upon a more prosperous career." At this time, says the *Boston Transcript*, business needs "just such an impetus as can be supplied by this restoration of the stock market; taken in connection with the protest suspension of restrictive legislation, the assurance of an advance in freight-rates, and the plenitude of funds in the money market, it should

result in a revival of commercial activity and industrial expansion." Minor exchanges, the *Springfield Republican* is aware, in San Francisco, New Orleans, Chicago, Philadelphia, and Boston had previously resumed transactions without any trouble, "but their operations could not be regarded as important for the reason that only the New York Exchange is an international market for securities." *The Republican*, conservative in its optimism, believes that "America is slowly climbing back."

"With the securities markets so generally reopened, even under some restrictions, with money-rates ruling very low and currency so abundant that the emergency issues are virtually retired, because no longer needed, with the foreign exchange market tending to a point where gold may be imported and with the foreign trade gradually expanding, the United States perhaps should be content, for the time being. This people have shared with Europe the tremendous calamity of the war, but this people already are pulling out of the catastrophe while the peoples at war are sinking deeper into economic ruin. American manufacturing industries remain depressed, except in the favored lines furnishing material of war; yet of all places on earth the United States to-day is economically by far the most blest. Our unemployment difficulty is serious, but America has not in arms millions of men engaged in the scientific destruction of accumulated wealth."

The New York Stock Exchange was closed from July 30 to November 28 for all transactions, and for two weeks longer for stock transfers. It was the longest closed period in the history of the Exchange, the *Albany Journal* notes, and it continues:

"Its effect was in the main good. It averted disaster, and it gave time for adjustment of financial conditions that had become dangerous. Brokerage houses naturally suffered heavy losses through interruption of business, while a large part of their expenses had to be continued. Many employees were deprived of their means of livelihood. But there was the greatest good to the greatest number—the public. Its securities were protected from further market depreciation. The market values recorded on the last day of business on the Exchange remained the basis of loans. If sales were made, privately, at lower prices, they were not recorded.

"At the same time, suspension of the securities market had a depressing effect on finance and business. The closed Exchange stood as evidence of unusual departure from normal conditions. Speculators became investors against their will. Their capital was tied up in securities which they could not liquidate. This condition soon created impatience, and many weeks ago the reopening of the Exchange was urged."

"DO YOU WANT ME TO WEAR THESE ALL THE TIME?"

INADEQUATE DEFENSE, ADEQUATE DEFENSE, OR MILITARISM?

—McCutcheon in the *Chicago Tribune*.

OF DEFENSE AS SEEN BY GENERALS OF THE PENCIL.

Bond-selling was finally resumed on November 28; on December 12 the market was opened to a limited line of stocks, and, as the *New York Sun* observes, a long experimental period was expected. But the market took care of itself: "the selling movement was normal, the buying impulse heavy; prices were higher than when the Exchange closed and showed no tendency to flag." Hence it was decided to throw the market wide open on December 15. That means, the *New York World* explains, that "the New York Stock Exchange is now wide open for business as before the war, but with a minimum-price line throughout the trading-list," which "closely follows the low prices established by the panic which closed the Exchange on July 30." This restriction, say several editors, will probably be but temporary, and a mere formality, since prices have shown no tendency to sink to the danger-limit. Neither *The World* nor *The Commercial* expects to see any noteworthy liquidation by European holders of American securities. *The World* does not believe that

"England, as an example, will be compelled to liquidate its first foreign investments as well as to exhaust current income therefrom to finance the war. At all events, foreign investments in America will be the last to go by the board. It is the one great country on earth where safety and improvement are most assured. It is the only great country which can show evidences of entering upon a new era of industrial expansion and prosperity."

The World makes the interesting suggestion that the opening of the Stock Exchange presents a new problem in neutrality—

"More than many people imagine, perhaps, the attitude of Americans toward the great European quarrel is determined by business considerations.

"The Stock Exchange will soon record infallibly the sympathies of an important section of public opinion in the United States. If speculators buy on this or that victory or sell on this or that defeat with energy enough to control the market, we shall soon have an expression which may easily be looked upon abroad as unneutral."

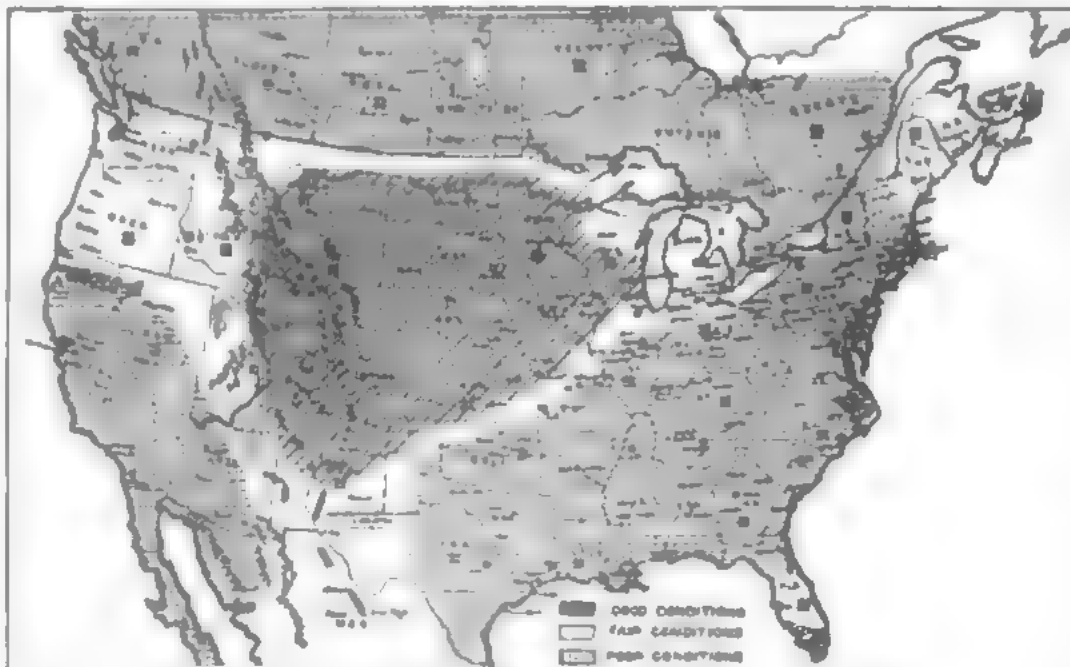

Several New York editors can not let the occasion pass without calling attention to "the prudence and foresight, as well as the skill and integrity of purpose," with which the Stock Exchange officials and Wall Street bankers have handled the perplexing financial situation created by the European War. As *The Journal of Commerce* puts it, "the 'money power' of New York has been exercised in an honorable, considerate, and public-spirited manner, which is really in keeping with its character, but was needed

to dispel some of the clouds which occasional lapses from a high standard had cast upon its reputation." Rather different is the thought which has occurred to many Americans, especially in the West, and which we find thus expressed in a letter to the *New York Times* *Analyst*:

"In the days of its fatness, Wall Street reckoned itself as the special barometer of the state of commercial life. . . .

"Yet it has been out of business for four months, and, save for those immediately concerned, there has been entire indifference, and apparently not much regret. It is incon-

ceivable that a branch of business of such vital import could ever temporarily drop out of existence and create so little stir. The sober truth is that the West in general long ago lost both faith and interest in Wall Street and its operations as conducted. . . . So it has come to pass that the general thought in the West was entirely indifferent as to when Wall Street renewed operations."

WHERE WE ARE PROSPEROUS.

By this map Mr. Roger W. Hainson shows where good or bad times prevail. The wheat belt is prosperous while the cotton belt and the industrial northeast have suffered.

A MILLION MEN OUT OF WORK

IT IS A SERIOUS MATTER if there are, as stated, "a million men out of work in the United States to-day, and a hundred thousand men starving," and private and public agencies all over the country are again at work on this ever-recurring and baffling problem. Every section tells the same story. A man writes to the unemployment committee of the Washington State Federation of Labor: "In over thirty years of working experience, I have never seen the like, when a man who is willing and anxious and capable of doing work satisfactorily, can not even get a chance tho one may look his eyes out of his head

Copyrighted, 1914, by John T. McCutcheon

THE MOBILIZATION OF OUR STANDING ARMY HAS BEGUN

—McCutcheon in the Chicago Tribune

for such a happy opportunity. *Because the work is not there.*" In Chicago, Richmond, Cincinnati, Boston, and other cities, similar stories may be heard. Judge Gary, whom the Mayor of New York put at the head of his Committee of Unemployment and Relief, ventures "the assertion that we have a greater need to give relief here in our own city than we have to give relief in Europe, as great as the problem over there is." City Chamberlain Bruere estimates New York's unemployed at 25,000, with a possible growth to 100,000. "The idea," he says, "that in the most prosperous commercial city of America strong, able-bodied men should be unable to find work is a reflection on our civilization." And the Richmond *Times-Dispatch*, moved by the distress in its own city, declares that "whenever a man who is able to work and wants to work is denied that opportunity, civilization to that extent has proved itself inefficient, and civilization's governmental agencies should do what they can to make the deficiency good."

Mayor Mitchel's efforts in this direction please the Chicago *Tribune* in a city where New York's municipal activities are often treated to criticism. He has succeeded in enlisting the active services on his committee of such men as E. H. Gary, F. A. Vanderlip, Julius Kruttschnitt, Oscar S. Straus, George W. Perkins, and Otto T. Bannard, and the Chicago editor believes such large employers of labor peculiarly fitted to handle the problem. In Massachusetts, the Boston *Transcript* expects the State Committee on Unemployment to do great good this winter, and Governor Walsh states that he will "urge upon the incoming legislature the enactment of an emergency labor law which would make it possible to suspend temporarily sections of the labor laws of the State, so that work on orders resulting from

European War might be expedited in the factories." This

the New York *Times* quite heartily approves, explaining that "the labor laws passed by the influence of the unions, enacting conditions of employment unacceptable to wage-payers, are one chief cause of idleness, destitution, and unrest."

In a report which wins the praise of the Springfield *Republican*, Secretary Wilson of the Department of Labor recommends a nation-wide plan to handle the problem in a large way and bring the "jobless man" to the "manless job," wherever found. Then,

"With seasonal variations of employment nationally adjusted with accidental disturbances to employment nationally provided for, with individual delinquencies in respect of employment better understood by national public opinion, and with such ameliorations of industrial distress as this department is now preparing to offer, a right beginning will have been made."

By another plan the Government, says Dr. Charles P. Steinmetz, chief consulting engineer of the General Electric Company, could and should stabilize the labor-supply. For instance, public projects like highways, waterways, conservation schemes, protection from floods, and irrigation-works "could easily be worked upon intermittently without economic loss." "When it became clear that from any cause the general supply of labor throughout the country was greatly in excess of the private demand, the Government should begin to absorb the workmen for employment on the national undertakings already sanctioned." And Dr. Steinmetz has a still more interesting suggestion, calling for a new sort of "citizen soldiers":

"What objection could there be to the Government allowing men to enlist for three or four months' training at any time when the demand for labor had fallen to a point threatening serious unemployment?"

"The men so enlisted would be getting valuable instruction, their health would be improved by the experience, they would be drawing wages, they would not be a drag upon production through being unemployed."

"In the course of time this method would provide the country with a splendid military reserve which could easily be brought up to a point of war efficiency."

THE GERMAN RAID ON ENGLAND

LAST WEEK the progress of the European War was marked by two important military developments, one to the credit of each side, and by two dramatic naval exploits in which the honors were similarly divided. In France and Belgium the Allies reported a marked strengthening of their offensive and a slow but steady pushing back of the strongly entrenched German lines, while in Poland Germany claimed "the greatest victory of the war," in "the complete shattering of the Russian offensive." At sea the fortunes of war were reversed, the eastern theater witnessing the torpedoing of the Turkish battle-ship *Messudieh* in the Dardanelles by the British submarine *B-11*, which reached its quarry by diving under five rows of mines; while in the North Sea a German cruiser flotilla eluded the British patrol fleet, bombarded three English towns, and made good its escape. Altho the developments in France and Poland are regarded as major events and the feat of the *B-11* is hailed as the most daring exploit of the war, the interest of our press seems to focus chiefly on the bombardment of Scarborough, Hartlepool, and Whitby by the raiding German cruisers on the morning of December 16. "For the first time in centuries English blood has been shed in England by a foreign foe," remarks the New York *World*, and as a consequence "Englishmen now know from bitter experience that England is not immune from attack; that the British Navy is not an impregnable fortress around the British Isles, and that Great Britain requires all her military resources of whatsoever kind and character." This result, *The World* goes on to say, "ought to be worth a million recruits to Kitchener's army," and the prediction

Copyrighted by Underwood & Underwood, New York

SCARBOROUGH, ONE OF THE THREE ENGLISH COAST TOWNS BOMBARDED BY THE GERMANS

is justified by English dispatches stating that an immediate sequel to the bombardment of these east-coast towns and the killing of more than a hundred persons, "two-thirds of them women and children," was "a general rush to the recruiting-offices." In view of this development, one editor remarks, "England stands to gain infinitely more from this daring raid than the Germans themselves can hope to gain." On the other hand, a dispatch from Rome quotes Prince von Bulow, German Ambassador to Italy, as saying: "This is simply the prelude to what the German fleet is soon to undertake, which may astonish the world."

Meanwhile, according to a London correspondent of the *New York World*, this exploit of the German cruisers "has produced a more profound impression on the English people than any other event of the war." He goes on to say:

"Stories of English people, with familiar English names, in an every-day English town very much like hundreds of other English towns, torn to pieces by shrapnel, their homes burning, their women folk struck down in the streets and their babies buried in burning wreckage, have taken hold of the imagination of the people as no tales of atrocity and fire and sword in Belgium, or no ship-loads of wounded soldiers and starving refugees, have been able to approach in effect.

"English people all over the country have read this morning how Alfred Beale, an ordinary British postman of Scarborough, was chatting with an ordinary British housemaid to whom he had just handed a letter on her master's porch, when a German shell came out of the sky and, exploding in the street, sent both postman and maid into eternity; how a young housewife of Hartlepool was in her kitchen preparing her husband's breakfast, and looked up suddenly to see blue sky where her roof had been, and to find herself a widow; and they are asking themselves to-day: 'If this happened to Hartlepool and Scarborough, why couldn't it happen to Tynemouth, or Falmouth, or Deal, or Dover, or Sandwich, or, if the Germans land, to any town in England?'"

Many English dispatches speak of this raid as an attack on unfortified towns, a fact which moves the military attaché of the

German Embassy at Washington to make the following statement:

"The fact is established that Hartlepool is fortified, while Scarborough and Whitby are defended, like all other British coast places, either by regular troops, coast guns, or volunteers.

"The bombardment of all Belgian coast places by the British-French navy did not take place because these places were fortified, which they are not, but because they are defended by the German troops."

Our editors, while paying tribute to the skill and daring which enabled the German flotilla to find its way through the mine-fields, elude the British fleet, deliver its attack, and run the gauntlet of the same perils back to its base, generally agree that the attack on the Yorkshire towns has in itself very little military significance. Some observers regard it as a raid pure and simple, others suggest that it was a feint to draw the British fleet into a position convenient for submarine attack, or by diverting attention to enable some of the fast German cruisers to escape into the Atlantic to harry the commerce of the Allies.

It is suggested in some quarters that this last may have been accomplished. Remarking that "the real significance of the enterprise may possibly be made apparent later," the editor of the *New York Evening Sun* goes on to discuss the incident:

"Berlin merely announces that a part of the High Seas Fleet

WHERE THE WAR WAS BROUGHT HOME TO ENGLAND

bombarded certain 'fortified towns' on the east coast of England, but it is added that 'regarding the further course of its action no information can be given.' This may imply some ulterior object which it is not at present expedient to reveal; until that object is known the raid can only be regarded as a more or less wanton experiment in destructiveness. It is impossible to avoid associating it with the advice of one of Germany's most celebrated and popular naval writers, advice that was published the very day before the raid occurred. 'We must see clearly,' he wrote in the *Deutsche Tageszeitung*, 'that in order to fight with success we are obliged to fight ruthlessly—ruthlessly in the proper meaning of the word, that is to say, without any regard whatever for any conceivable thing which lies outside the line leading to our final military goal. . . . Our sole thought is devoted to increasing vengeance by any and every means which can lead to victory.' A victory of any substantial kind could not very well follow upon such excursions as yesterday's in the North Sea, but as an act of vengeance the enterprise is quite understandable.

"In all probability popular opinion in Germany has forced the Navy to give some account of itself. Enormous sums have been spent on the German Navy, which hitherto has been of singularly little service. The policy of attrition has been a most obvious failure, for the odds in favor of the British Navy are considerably greater to-day than they were four months ago. If the German fleet was hardly fit to encounter the enemy in the opening days of the war, it is even less fit to do so to-day, and at the present rate will be still less fit a year hence. The destruction of Admiral von Spee's squadron must incidentally have had a depressing effect, and it is safe to conjecture that yesterday's daring performance was undertaken as an act of reprisal and as a means of reassuring the public and allaying popular impatience at the apparent inactivity of the Navy."

English dispatches state that the British Admiralty had warning of the contemplated raid, and that the escape of the

raiders was due to "luck" and an intervening fog. The *Boston News Bureau* reminds us that German captains in the North Sea "have now a cloak for their operations two-thirds of the time for the round trip, with a good chance of fog to aid in the eight-hour interval of daylight." London is reported disturbed over the possibility that some of the German cruisers, instead of returning to their base, may have slipped out into the Atlantic. Says the *New York Sun*:

"While Germany may not be willing to risk a general engagement in the North Sea, the descent on the Yorkshire coast suggests the possibility of a raid by a swift and powerful squadron in the waters of the Atlantic along the routes of England's merchant fleet carrying immense cargoes of food and war-supplies. It may be said that the Atlantic has its own patrol of British war-ships, but obviously if the British Navy can not make a closed sea of the North Sea or German Ocean there must be plenty of room in the Atlantic for the operations of a German flying squadron. The game would be worth the risk, for a tremendous amount of damage could be done to the British merchant marine. The traffic so valuable to England herself and so necessary to the cause of the Allies might be deranged and tied up, if not temporarily ruined."

English papers are full of condemnation for this attack on unwarned towns and the killing of non-combatants, and their indignation is echoed in many editorial columns on this side of the Atlantic. Turning to the German-American press we find the *New York Deutsches Journal* declaring that "the guns of the German cruisers have told the world in the plainest speech that the days of England's arrogant supremacy on the sea are over." And the *Staats-Zeitung* of the same city says that "the German fleet has once again accomplished a master-stroke of courage and poise."

FOREIGN - COMMENT

THE FLAGS AND BANNERS OF NIPPON WAVING AT THE CELEBRATION OF THE FALL OF TSING-TAU.

OUR DEFENSES VIEWED FROM ABROAD

THE "CHEERFUL, INCURABLE OPTIMISM" of the President, as the Canadian papers term it, irritates some of our neighbors a little. Thus the *Montreal Daily Star* takes the President to task and reminds him that "great self-confidence, based upon past successes under far different conditions, is a frequent forerunner to disastrous failure." Canada, to judge from the tone of the Dominion press, wants us to be well armed because it may become necessary for the United States to enter actively into the war in defense of those principles to which the Allies and America, we are assured, are alike committed; and it is claimed that many Americans indorse this view. For example, the *London (Ont.) Advertiser* says:

"Quite a few people in the United States have expressed the belief that their Government and Congress should come out frankly in favor of the Allies, and enter the war against Germany. Their belief is based not only on the ground that the Allies are fighting in the cause of freedom and democracy, of which the United States is professing a champion, but that it is necessary as a matter of self-defense against the possible results on this continent should Germany win."

This view finds an echo in England, where the *London Daily Express* is a little annoyed at our "state of unpreparedness" and thinks we shall ultimately be forced into a conflict with Germany:

"We agree that it may be wise for the Government at Washington to maintain its position of impartiality, but it is not possible for any nation or for any individual to be impartial in this great war. Great Britain and her allies are fighting for exactly the same cause as Washington fought for in the war against George III. and Lord North. If Great Britain and France are beaten, it will not be many years before the United States will have to fight jackbootery."

Less subtle is the comment of the *Montreal Daily Star*, which bluntly warns the President that safety depends "not upon platitudes and perorations, but upon weight of armament and the dread machinery of war," and says that unarmed pacifism, while a delightful doctrine, is a little dangerous as a deliberate national policy. It is convinced that we are definitely committed to such a policy, and continues:

"Well, the United States is a sovereign nation, and it is privileged to take that view of the future if it is willing to take the risks attending it as well. But any nation is on highly perilous ground which depends upon the excellence of its 'political principles and institutions,' or any other domestic virtues, to protect it from the hazards of outside attack. Unfortunately, domestic

virtues, which do not get themselves translated into powers of self-defense, are of little protection against the brutal covetousness of less virtuous but more virile military nations. . . . If the Americans propose to continue to live in this wicked world, and to preserve their rich domain intact, they must resolutely shoulder the burden of previous preparation to defend it."

Japan, however, is thoroughly pleased with the Wilson policy, and the *Tokyo Asahi* gravely advises us to drop any imperialistic ideas, remain at home, and attend to business:

"The President and the Secretary of State have avowed that they have taken to heart the instruction of Washington in his farewell address, 'Why forgo the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground?' It follows, therefore, that further increase of armament for America would add nothing to the enviable international position she now holds, but would rather be a source of misunderstanding by other nations."

Similar advice, rather more delicately expressed, is offered by another Tokyo paper, the *Nichi-nichi*, which thinks:

"If America, steadfastly pursuing its anti-imperialistic policy, bends her energies to the improvement and development of the enormous resources she has at command, both at home and abroad, she will surely become so great and prosperous that no country will dare attack her."

Any increase of armament at this moment would weaken our influence for peace, thinks the *London Daily News*, which sees in America the mediator in the present war:

"It is quite certain that the States of Europe, for all their present concentration upon war, will one day desire an end of the slaughter and return to sanity. On that day they will need the advice and assistance of some impartial mediator, whose zeal for peace and whose equity are equally above suspicion."

To the short view it might seem something gained by a partizan to create the impression that the American people or Government was identified at all points, short of positive action, with this or that protagonist. It is Wilson's view that it would be a heavy loss to the world were America to lose her reputation as a friend of all nations, precisely at the time when that reputation is most necessary. His view will be shared by every far-thinking man in this country."

The *London Spectator*, however, while approving the President's general attitude, feels bound to urge:

"our flesh and blood across the Atlantic to make quite sure that the President's 'utmost' is the utmost not of courage, chivalry, and moral determination, but of material, for in these days a man whose courage is not supported with good arms goes like a sheep to the slaughter."

"The President says: 'It is not necessary for America to have

a huge standing army; she can trust to her citizenry trained and accustomed to arms."

"We must remind the President, however, that at present the American people not only are not trained or accustomed to arms, but what is worse, they do not possess the arms and ammunition to put into the hands of the citizenry, trained or untrained."

TURKISH AND RUSSIAN JOY IN COMBAT

NO SUCH REGRET as is professed by the other European nations at the necessity of war seems to be felt in Turkey or Russia as they face each other in conflict. Turkey sees victory just ahead in company with all-conquering Germany, while Russia has actually selected a Slav name for the ancient city of Constantine and expects to hear the arches of Saint Sophia ring with the echoes of the Russian national anthem. Complete satisfaction pervades the editorials of the Turkish press, which sing the praises both of Turks and their allies. Thus the Constantinople *Tuxfiri Efkyar* lays stress upon the friendliness of Germany to the Moslem world and contrasts it with the attitude of the Triple Entente, which it accuses of hatred and oppression. Equally emphatic and enthusiastic is the Constantinople *Ikdam*, which cries:

"To arms for the mighty conflict! We shall march gloriously onward, sure of our purpose and confident of its achievement. While we know that all Moslems, far and near, are with us, yet we Moslems are not alone. We have other friends, friends who are already champions and victorious in war. With them we fight side by side. Ever since the Russians, French, and English began this war our friends have battled with amazing strength and success, not on their own, but on the enemy's soil. The statement that we entered the war under pressure from Germany is a calumny."

Other Constantinople papers express almost identical views. Thus the *Sabah*, in an editorial headed "No Change in Our

assure to Italy the fidelity of her Moslem subjects in Tripoli, while the Mohammedans of Tunis and Algeria will revolt against France." The *Tanin*, in company with all the other Constantinople organs, has been roused to fury by the British

THE TRIPLE ENTENTE—"What a scare that gave us!"

TURKEY TAKES THE PLUNGE INTO THE VOLCANO.

TURKEY: "The whole world seems to be doing it—why should I be left out?"
—De Nieuwkraker (Amsterdam).

Policy," maintains that the war was forced upon Turkey, not by German pressure, but by the aggressions of England and Russia; while the *Tanin* makes a fervent appeal to Italy to enter war upon the side of Turkey, promising that Turkey "will

annexation of Cyprus, despite the fact that since 1878 it has been to all intents and purposes a British colony. In an article entitled "Hypocritical England," the *Tanin* says:

"Ever since the Balkan War, in dealing with the Moslem world, England has covered her face with a veil of hypocrisy. To-day the mask has fallen from the face of our enemy; we know where we stand. . . . England pretends that we are taking up arms under pressure from Germany, instead of recognizing the fact that we are fighting to avenge all Moslems of the oppression that England has imposed upon them. . . . Away with hypocrisy. God is with the good. We shall, we must, win."

While Turkey is satisfied with herself and her position, all Russians are filled with joy at the opportunity she is affording them. The Czar himself, in a manifesto published in the Moscow *Russkoye Slovo*, says:

"Together with the whole Russian people we firmly believe that Turkey's insensate intervention in the war will hasten the—to her—fatal course of events and will open out to Russia a way to the solution of those historical problems on the shores of the Black Sea bequeathed by our ancestors."

While the Czar is thus politely saying that he means to secure Constantinople, with its outlet on to the Mediterranean, the Petrograd *Noroye Vremya*, a semi-official organ, makes no bones about Russia's intentions, and is frankly delighted with the turn things have taken. It says:

"The war with Turkey must be considered desirable, however inconvenient it may be to divert a part of our forces from the main front, because it gives us the possibility of settling, with one supreme effort, the 'Eastern question.' . . . There has never been in the past, and, maybe, never in the future will there be such a happy combination of circumstances for the liquidation of Turkey, at least as a European Power. This occasion must be utilized, no matter how difficult and what its cost. If we win, there will spread before us the grand prospect of realizing the greatest and perhaps the ultimate ideals of the Slav races. We never dreamed and never will dream about world-conquests, about the destruction of great empires, but we need a free outlet

to the warm waters and to the wide expanses of the terrestrial globe."

That the moment to seize Constantinople has at last come, all Russia has agreed, says the Petrograd *Ryetch*, which goes on to state:

"This time the question so important to Russia will really be solved, solved in its entirety, in accordance with its significance to a Great Power which seeks a free outlet to world water-ways and wishes to guard the door of its own house.

"In this favorable conjuncture lies the explanation of that general satisfaction with which Russia has met the news that at last, after having labored so much for the liberation of other nations, she finds the desired opportunity to work out her own emancipation."—*Translations made for THE LITERARY DIGEST.*

"WHY DOES EVERYBODY HATE GERMANY?"

THIS QUESTION is not ours, but is one seriously asked in the Empire of William II., and in the pages of *Der Farmer*, the well-known Stuttgart monthly, one of the most brilliant of German writers, Anton Oskar Klausmann, squarely faces it in an article under the above title, and discovers the answer. This distinguished author, known throughout the length and breadth of the Fatherland either under his own name or under one or other of his ten pseudonyms, finds after an exhaustive analysis that "the wells have been poisoned," and that the German nation is the victim of a deep plot to destroy its fair name engineered by British, Russian, and French statesmen, and accomplished by a corrupt and venal press which for twenty years has been systematically slandering the German people.

Herr Klausmann thus dramatically opens his inquiry:

"Enemies round about us! Friends nowhere! Even the States that have declared their neutrality are unsafe and uncertain in their attitude toward us, and we can not count on their good-will.

"What then have we done? This pertinent question millions of Germans have asked themselves during these last months and have answered: 'We have done nothing; we have injured no one; we have blocked no country's path except England's, who regarded us as a far too powerful rival in the world's markets. We have attended quietly and peaceably to our own business; we have been modest and reserved; we have mixed in no intrigues—in short, we have done nothing with which any one can reproach us.'"

He then pictures the German as he appears to foreign eyes, "the rapacious, arrogant busybody, a constant menace to the peace of the world," and asks how it can possibly be that such a completely erroneous conception should have been acquired, and finds that it is the result of a slow poison persistently distilled in the foreign press:

"This misuse of the foreign press against us is part of the policy of the Iron Ring—England, France, and Russia. They have

systematically depreciated us in the eyes of the world. They have 'influenced' the foreign press. The almighty ruble, the world-conquering pound sterling, and the French franc have created accomplices, and for decades everything unpleasant that has happened anywhere in the world has been laid at our door by the press. This German-baiting has been conducted at the expense of reason and logic. They have charged us with things so senseless and foolish that one would have thought that even a half-witted person would be able to see the fallacies."

In spite of all the absurdities of the campaign against Germany's virtues, the writer acknowledges that it has been a success, and proceeds to take the Government to task for not having initiated a counter-campaign of press bribery:

"To be sure it would have cost millions to influence the foreign papers, for we should have had to bid higher than our enemies. But these millions would not have been wasted; they would have proved an excellent investment when that dark plot against us was hatched, and we found out, with despair, that we had not a friend left in the world. We should not have had to bear those hours of anxiety when we saw our so-called friends in America, in Sweden, in Denmark, in Spain, in Roumania, and in Italy overwhelming us with accusations and crying out to heaven

A MYTH EXPLODED.

The famous "concrete-bed" myth has exploded, according to a report from the British War Office quoted in the London press. Ever since the war began various *Sherlock Holmeses* were constantly discovering that ostensible factory-sites and innocent-looking tennis-courts were in reality concealing emplacements for German howitzers prepared in advance by desperate but determined German spies. So persistent were the rumors that the British War Office determined to investigate. Major-General O'Callaghan was appointed to visit all suspected spots and report. The General really did find concrete beds, but they were actually giving way under the weight of mere every-day machinery, and could no more have supported 42-centimeter guns than they could have upheld the Statue of Liberty. Furthermore, the General reports that there is not a single fort in England which would need a 42-centimeter gun to demolish it. Our picture shows a tennis-court torn up during a period of spy-fever to see if it contained one of these imaginary gun-beds. The search seems to have been thoroughly done.

that we had broken the peace, that our rapacity alone had caused the war."

Now that the war has started, he thinks it is a waste of time to attempt to influence the hostile papers, but he notes with some satisfaction that the powers in Berlin are no longer blind to the advantages accruing from a friendly press and have taken steps to insure support in certain quarters:

"What a hostile attitude was assumed by certain Italian papers during the early days of the war! In Berlin the names of these papers that suddenly dropt their hatred of Germany and wrote in our favor are well-known, and it is quite understood here that an ass with a load of gold has climbed over the wall of hatred for Germany."—*Translation made for THE LITERARY DIGEST.*

WAR ENDS DYNASTIC FEUD IN SPAIN

WAR HAS BROUGHT PEACE between the long-estranged heads of the Spanish house of Bourbon, says the *London Times*, owing to the fact that Don Alfonso de Bourbon, who occupies the throne of Spain, and Don Jaime de Bourbon, who claims it as head of the Carlist party, both happen to be in personal sympathy with the cause of the Allies. The *Times* correspondent in Madrid says:

"Don Jaime of Bourbon, hitherto recognized as the chief of the Carlist and pro-German party, and pretender to the throne of Spain, has abdicated his position with dramatic effectiveness. For a fortnight past it had been rumored that he was displeased with the violent campaign against the Allies carried on by his supporters here, and now one of the leaders of the party has announced in the press that they no longer recognize Don Jaime as their chief and are looking for another Bourbon to take the place from which they have deposed him. This is their reply to the statement, obviously inspired by the Prince himself, that his sympathies were with the Allies and that he had been for over two months working with the French Red Cross."

"Now the *Correspondencia de España*, under its Court intelligence, announces that Don Jaime has addressed a telegram of warm sympathy to King Alfonso on the death of Prince Maurice of Battenberg, and that the King has returned his thanks for the attention in terms quite as cordial. Thus there is no room for doubt that the long feud between the two branches of the Spanish royal house has come to a close over the grave of the young Queen's brother."

Meanwhile, Don Jaime has been having a few unpleasant experiences during a hurried visit to his home in Austria, the *Paris Éclair* states:

"Some time ago Don Jaime de Bourbon, the Spanish pretender, addressed an appeal to his partisans to side with France in this war. This came to the knowledge of the Austrian authorities and he was placed under close arrest while on a short visit to his castle at Frohsdorf. The immediate excuse for this action was the fact that Don Jaime has been a colonel in the Russian Army."

"Don Jaime persisted in his efforts to gain his freedom and was finally told that he could either remain a prisoner in Austria till the end of the war or permanently leave the country. He chose the latter course and was conducted to the Swiss frontier."

Meanwhile, Germany is making strenuous efforts, says the *Manchester Guardian*, to influence Spanish opinion and to

obtain a reversal of the policy of neutrality that has been endorsed by the leaders of every party in Spain. The *Guardian* goes on to state:

"Germany is adopting desperate measures here to seduce public opinion. The *Correo Español*, the organ of the Carlist party and now the official German organ, publishes a two-column article stating, in substance, that Germany has officially offered to present Spain with Gibraltar, should the German arms triumph."

BERNHARDT'S MISSION IN AMERICA—Warned in advance of what was coming by no less a person than the famous General von Bernhardt, the German residents in America were prepared for eventualities, so says the *Toronto Globe* upon the authority of Dr. David Starr Jordan, Chancellor of Leland Stanford University, who was present at one of the General's private meetings. The *Globe* says:

"In the early summer of last year General Friedrich von Bernhardt, the famous German cavalry officer and military authority, crossed the United States. He came by way of the Pacific. His coming was unheralded. His speeches were unreported. His going was unchronicled. No American newspaper 'played up' the visit of one of the most-talked-of Germans in the world to-day. His new book, 'Germany and the Next War,' was published early in 1912, while he was on this world-tour. A copy of it reached him by mail at Singapore. In the United States he was the guest of the German Consul. His addresses were in German, to Germans invited individually by the Consul. His mission was to advise Germans in the various German centers of the purpose, the plans, and the rightness of the then impending war that now 'staggers the world.' He told its story, the essentials of its program, the year before it began."

Dr. Jordan's story, as quoted by *The Globe*, runs:

"I met von Bernhardt in San Francisco and heard him give an address on May 26, 1913, just as I was leaving for Europe, Germany, the Balkans, and Australia. The invitation was from the German Consul in San Francisco. It was on the official paper of the Consul's office. The gathering was composed of about three hundred persons, all Germans except one other American and myself. The Consul presided, and the meeting was semi-official but private. So far as I know, there was no reporter present and no report was published. I would not have known that the German cavalry General was in America except for that meeting."

DISCORDANT GERMAN AND BRITISH IDEAS OF THE BELGIAN SITUATION.

SCIENCE - AND - INVENTION

DEEP-SEA DIVING REVOLUTIONIZED

AN IMMENSE FIELD for salvage work and exploration of the ocean bottom and marine life has been opened up by the perfection of a new diving-apparatus which is described in the current *Technical World Magazine* (Chicago). The new record for deep-sea diving, recently made in the United States and by the use of the new diving-suit, beats by just two feet the old record of 210 feet which was achieved in the course of experiments under the auspices of the British Admiralty. But the American record, 212 feet, which was made in Long Island Sound a few weeks ago, might just as well have been 310, had water of this depth been available. The two divers who performed the feat went to the bottom, and could naturally go no further; so the "beat" is a small one—until the American champions try deeper water. The average diver, using the old apparatus, we are told by Robert G. Skerrett in this article, seldom exceeds a hundred feet, and 150 is his maximum. Even at this depth, he can remain but half an hour or so, and the greatest care must be taken in leaving work to proceed slowly to regions of normal pressure. Too rapid a transfer may give

the diver "the bends," and may even be fatal. In the new form of diving-suit, in which the record noted above was made, the diver is clad in a rigid case, so that the pressure of the water is not transmitted to the air that he breathes. He thus works at ordinary atmospheric pressure, and the dangers of deep-sea diving are reduced practically to zero. Says Mr. Skerrett:

"Except for the bronze helmet, the ordinary diving-dress is collapsible and made of rubber and canvas. The new suit being entirely of metal, is rigid, and is of itself strong enough to resist the crushing force of the enveloping sea. It is made of an alloy of aluminum, and the armor complete weighs a little short of five hundred pounds. In truth, it is virtually a diving-machine, for the man inside is well-nigh helpless in its grip until lowered below the surface, when the water counterbalances the dead weight and the articulated sections permit the operator to move with a freedom something akin to that of the steel-clad knight of old.

"In order to give this measure of mobility, the suit has over fifty turning joints. These are made substantially water-tight by leather packing which swells and becomes more effective the greater the pressure of the sea. To prevent this external force

By the courtesy of "The Technical World Magazine," Chicago.

A NEW INVADER OF THE UNDERSEA WORLD

The new diving-apparatus is too heavy to allow the wearer to move upon the surface, but is so buoyant undersea that it will permit him to explore with ease depths as yet unknown.

GOING DOWN.

The first man to use this apparatus made a new world's deep-sea diving-record and might have gone much further if the water had been deeper. The strange-looking suit will also safeguard the diver's life.

THE LATEST FASHION IN DIVING-SUITS.

from jamming the joints, facility of action is insured by clever arrangements of roller-bearings. Indeed, the armor is not entirely water-tight, and the divers say they do not wish it to be so, for the moderate leakage serves to lubricate the joints and thus to aid necessary movements. This would be a dangerous, indeed a very perilous, defect but for a strikingly novel feature of the invention.

"Of course the diver needs air to breathe as would the submarine worker in the ordinary dress, but in this suit of armor his air is supplied him at atmospheric pressure. So far as the physical effects upon him are concerned, his lungs and body are no more taxed than they would be at the surface. At one stroke this does away with a number of the serious limitations peculiar to the usual elastic underwater dress in which air at intense pressure is inhaled. In the back of the armor is a recess, and therein is installed a very compact and powerful little pump. This pump sucks from the feet of the suit all leakage and forces it immediately outward. This pump is worked by compressed air, and the air, after doing its mechanical work, is exhausted into the suit for the diver to breathe, and then passes up to the surface through the free space in an armored rubber tube within which are led the compressed-air pipe and the electrical connections for a telephone and a lamp. In this manner the armor is thoroughly ventilated, and, even should the pump not work for a number of minutes, there would still be enough free air in the roomy dress and the tube space to meet the diver's needs for at least ten minutes while he is being hauled to the surface.

"Indeed, during the demonstrations in Long Island Sound, the pump was halted for that length of time when the diver was a hundred feet down. He suffered no inconvenience, and when the compressor started again he was lowered to the bottom one hundred twelve feet deeper. Such a situation in the usual elastic dress in all probability would have meant sure death. The brief breakdown showed as nothing else could what can be expected of the suit in actual service. Because the operator is not exposed to air-pressure, no matter how deep he goes or how long he works there, no delay is necessary in hoisting him to the surface. According to the British Admiralty regulations, should a diver go down two hundred four feet—its table covers no greater submergence—and remain there for twenty minutes to half an hour, the total time of his ascent must not be less than one hour and seven minutes! In bringing up the divers from the bottom of Long Island Sound, two hundred twelve feet down, the maximum time was eighty seconds. The men were absolutely unaffected by this abrupt change in pressure, altho the deepest one of them had ever before been in the ordinary dress was ninety feet, and on that occasion he had suffered from bleeding from both nose and ears.

"The remarkable advance in the art of submarine diving, and the fact that men can now be sent so safely to greater depths, promises to open up an immense field for salvage work and subaqueous exploration."

UNDERGROUND BEACONS FOR AIRCRAFT—Some interesting experiments have been made recently with sunken lights for indicating landing-places for aircraft. We learn from a recent number of the *Deutsche Luftfahrer Zeitschrift* (Berlin) that the lights are placed beneath the surface of the ground in such manner that they can be clearly seen from above, but so arranged that aircraft can descend upon them or roll over them without danger. The object, of course, is to indicate the most favorable landing-places. They can also be constructed to serve the added purpose of showing the main direction of the prevailing wind. Such a one will shortly be installed at Johannisthal. It consists of a square plot having a white light in the center and a red light at each corner. The center light is about one square yard in size, and the red lights are about eighty yards distant from this, at the four quarters of the compass.

These outer lights have an underground connection with a weather-vane. When the device is operating, the white light in the center and one or two of the outer red lights are lit in accordance with the quarter the wind comes from. With a north wind, for example, the north point would be lighted; with a northeast wind the north and east points would be lit. When there is a dead calm the center alone is illuminated, while a shift in the wind is automatically recorded by the lights through their connection with the vane.—*Translation made for THE LITERARY DIGEST.*

OUR CHEMICAL SENSES

TWO of our senses are intimately connected with chemical action—those of smell and taste. Their relationships are so close that the boundary-line between them is more imaginary than real. In many cases we commonly ascribe to one of them sensations that really belong to the other, as when we speak of the "taste" of certain foods that are almost tasteless, but possess an appetizing odor. Since chemical action can take place only between substances in actual contact, says Alfred J. Lotka, writing in *The Scientific American Supplement* (New York), we can become aware of the smell or taste of an object only by actual contact with it or its vapors. This places a restriction upon the scope of these senses, and in man, at any rate, they are not developed to the same degree as sight and hearing. Nevertheless they fulfil important functions. Says Mr. Lotka:

"Their primary purpose [is], no doubt, to enable the individual to exercise the proper judgment in the selection of his food. This is indicated by the location of the organs of smell and taste in and near the mouth. In the case of animals the senses of taste and smell do very efficiently fulfil this function; in fact, the presumption is that animals have no other means of distinguishing healthy from injurious or poisonous materials for food. In the case of man, the same reliance can not be placed upon the sense of taste, as some poisons have a pleasant taste, and some substances which are more or less harmless have a disagreeable taste. Aside from the perfectly normal discrepancies between our likes and dislikes in the matter of taste, and the things that are good for us or otherwise, individual persons may be subject to various peculiar abnormal vagaries of the sense of taste. The simplest of these is a more or less complete 'taste blindness,' which accompanies various diseased conditions ranging in seriousness from a common cold to incurable affections of the central nervous system. In the case of general paralysis it is especially the sense for saltiness that is lost. People subject to epileptic fits almost invariably lose the sense for sweetness, often also for saltiness, but usually not that for bitterness, at the time of one of their attacks. Sometimes it is only one-half—usually the left—of the mouth and tongue that loses its sensitiveness. Persecution maniacs who are in fear of being poisoned often have an exaggerated sense of taste.

"Occasionally a peculiar case is found in which different tastes are confused; the patient, for example, asserts that a bitter substance tastes salty to him. In the case of neuropathic persons, that is to say, persons of somewhat unstable mental balance, certain tastes are sometimes associated with color sensations. A temporary loss of the sense of taste can be produced at will by painting the tongue with certain drugs. Cocain, if applied somewhat liberally, causes local anesthesia; in mild applications it merely deadens the sense for bitterness. Some insane persons are subject to 'taste hallucinations.' Perversions of the taste, more or less morbid in character, are observed in hysterical and other persons."

A peculiar and interesting phenomenon noted by Mr. Lotka is that of contrast, whereby, after one has partaken of something salty or bitter, pure water tastes sweet. Again, a dilute solution of potassium chlorate, which has itself little taste, causes water to taste intensely sweet. If the mouth is rinsed with copper sulfate or potassium-permanganate solution, cigar-smoke acquires a repulsively sweet taste. It is also said that if the air contains mere traces of prussic acid, cigar-smoke acquires a peculiar taste, which thus furnishes an efficient alarm-signal. To quote further:

"Substances possessing a marked flavor are of great importance in daily life, perhaps none more so than salt, sugar, and vinegar. As regards the first of these, it is absolutely indispensable and there is no substitute for it. The place of vinegar can in a measure be taken by other acids, such as, for instance, lemon juice. Sugar is not one single substance, but is the name given to an entire class of more or less closely related compounds containing carbon, hydrogen, and oxygen. Sugar fulfils a double function, being both a food in itself, and, on account of its pleasant taste, an appetizer."

In the diseased condition known as diabetes, sugar becomes

highly injurious to the patient, who is thus condemned to a rather monotonous diet. Fortunately chemistry knows several substitutes for sugar, notably saccharin, which not only equals but vastly surpasses sugar for sweetening power. It is pronounced by Mr. Lotka "quite non-poisonous," altho the Government food-experts have arrived at a contrary conclusion. We read on:

"It is sometimes stated that animals will not eat foods sweetened with saccharin. This does not seem to be true, except perhaps for ants and bees, who require sugar, not on account of its sweetness, but on account of its food qualities. Saccharin has no value as a food, and, moreover, it is so intensely sweet that the quantities ordinarily taken with the food would be negligible even if it had a food value.

"The chemistry of flavoring material, and the study of chemical constitution in relation to the taste of various substances, have grown to large dimensions, yet until recently no one collected work of reference on the subject was available. This gap has just been filled by a book from the pen of Dr. G. Cohn, on organic flavoring materials, published in Berlin by F. Siemsen, from the introduction of which many of the data given above are taken. The bulk of the book is highly technical and gives a mass of data regarding the taste of a large number of organic substances. For those working in this field, whether from purely scientific interest or for the sake of applications to practical ends, this collection should prove very valuable.

"We have here culled out points of interest to the general reader, and will close with one more observation of this character taken from the chapter of Psychology of Taste. It is rather surprising to read that girls have a more sensitive taste for bitter and boys for sweet. Their taste for saltiness is equally sensitive. Adult woman has a more highly developed sense of taste than man for sweet, bitter, and sour. For salty materials there is not much difference; if anything, man is a little more sensitive than woman. A facetious person might be tempted to say that this must be taken with a grain of salt."

THE WEIGHT OF A SUNBEAM

DOES THE ATTRACTION of gravitation, which holds worlds in their orbits and draws all objects in the earth's vicinity toward its center, exert any influence on a thing apparently so immaterial as a light-ray? No influence of any form of attraction on light had ever been noticed until about twenty years ago when Zeemann showed that a powerful magnet visibly altered the position of certain lines in the spectrum. Now it appears likely that gravitation has a similar, tho not the same, effect. Magnetism splits up the spectral lines, exerting a broadening effect, while gravitation shifts them all alike in one direction. For instance, in the solar spectrum, whose rays at their origin have passed through the powerful field of gravity in the sun's vicinity, all the lines appear shifted toward the red, as compared with similar lines from terrestrial light. Says a writer in *Prometheus* (Leipzig, October 10):

"According to the theories of Einstein and Nordstrom, there should be a real influence of gravitation on light. It is asserted that the spectrum-lines of two light-rays originating in gravitation-fields of different strengths are shifted relatively to each other. It has recently been proved by Evershed, and supported by measurements, that the lines of the solar spectrum are shifted toward the red end of the spectrum with respect to the corresponding terrestrial lines. He gives a detailed explanation for this shifting. But as Fremidkech has now shown, the shifting is very well explained, so far as its amount is concerned, by Einstein's theory. An influence of an impulse proceeding from the sun, on the shifting, can not be the cause; for in this case single lines would be shifted in different degrees. But the measurements show that the shifting of the lines, both in amount and direction, is the same for all, as Einstein's theory of the influence of gravitation requires. The shifting of the lines calculated with Einstein's formula agrees remarkably well with the average observed values. Further, the shifting toward the red on the sun's rim is greater than elsewhere, which would seem to point to a gravitational influence; for it is assumed that the lines on the rim are due to absorption exerted by thicker layers of gas and therefore to layers with different values of the gravita-

tional field. Further measurements in a wider region of the spectrum may of course show differences, in which case the previous observations can not serve as an explanation. The influence of gravitation on light, however, may now be regarded as partially proved."—Translation made for THE LITERARY DIGEST

CIRCUMSTANTIAL ACCIDENTS

THIS NAME is given by a writer in *The Electric Railway Journal* (Chicago) to accidents of a class in which a part is played by a chain of circumstances. On such occasions relationships between conditions and objects may be brought out which would otherwise remain undetected for long periods. An illustration follows:

"In a recent car-house fire which, fortunately, was extinguished by the employees of the local company before it gained headway, the sequence of events was most illuminating. The trolley-wheel of a car that was being run into the house with the trolley-pole in the reversed position left the wire and swung around sufficiently to clear the wooden guard on the overhead timbers, struck the beams, and came in contact with an iron conduit carrying a lighting circuit. At the same time the trolley-pole buckled, making simultaneous contact with the wire, and thereby grounding the latter. Current passed over the conduit to the ground at the rear of the building. In contact with the grounded pipe was a metal ash-barrel. As a result the conduit was melted where it entered a junction-box on the ceiling and a fire was started at that point; the ground wire at the rear of the building was melted off and the ash-barrel was melted at points of contact with the pipe; and current also passed to the second floor, where connections of soil-pipes at metal sinks were burned off and a fire started among some towels on an adjacent side wall. Only quick work saved the company from a heavy loss.

"Obviously it is difficult to forestall the interrelation of circumstances in connection with the prevention of fires and accidents, but in all such work the efficiency of prevention is largely a matter of putting factors together which may cause trouble and mentally sizing up their possibilities for harm. . . . Carelessness in some small particular so often sets in motion a whole train of evils that in a broad campaign for safe operation no better work can be done by employees and officials directly responsible for handling rolling stock and plant than to forestall the results of all sorts of slips and errors and to take steps in time to restrict their effects to the harmless field. By paying heed to the man with the alarmist type of mind in such work a great many troubles can be prevented."

BAD TEETH AND CRIME—May defective teeth be one of the causes of criminality? Youthful delinquents are frequently observed to have bad teeth, and some authorities have suspected a causal connection. *American Medicine* (New York) opines rather that the decayed teeth and the immorality of these offenders proceed from a common source, namely, insufficient nutrition. Says this paper:

"Defective physical development has been almost certainly proved to be the primary cause of much antisocial conduct, particularly of boys, and perhaps girls also. Back of that, apparently, is deficient and poor food. Misdemeanors and crimes are being traced back to a material basis. The delinquents are not able to act normally. Psychologists have found that arrested or delayed mental development is almost the rule among youthful criminals. Of course some may have been taught to be bad, but the large number of splendid citizens who were raised in the slums shows that we have vastly overestimated the environment's moral effect upon the healthy. It seems that the baneful teachings of bad companions are effective in proportion to the badness of the pupil's physique. Such a boy or girl could be taught to be good but might easily fall under temptation in adult life. The prevention and cure of moral delinquency have therefore been drifting from the hands of moralists to those of physicians. The earlier the treatment begins the better the results. One of the main effects of bad development, bad nutrition, and infection in childhood is the defective nature of the materials in the teeth. They are practically never good in such unfortunates, and of course they increase the damage by interfering with mastication and by

constant poisoning from the numerous pus foci they harbor. One of the most satisfactory parts of school hygiene is the attention given to the teeth, and now we learn that such good results have obtained in young delinquents as to have created the opinion that defective dentition is in reality the main cause of their immorality. This is going a bit too far, but no harm can result if any reformer does think so, for it will direct attention to the ultimate cause and perhaps lead to prevention of some of it, tho we do not know where we are to get the money or food to nourish the great mass of babies of the submerged tenth. Sad as it seems, some must go hungry, become physical defectives, and drift to the reformatories to be patched up as far as our means permit."

THE TALES THAT DEAD MEN TELL

THE murderous old adage, "Dead men tell no tales," is no longer true, if it ever was so. Belief in it has doubtless been responsible for a long and bloody catalog

of deaths, and many a modern assassin has acted on it, only to find, in many cases, that he has been leaning on a broken reed. Dead men, to be sure, are not as voluble as live ones, but the tales that they do tell are not to be gained. To-day, writes Davina Waterson in *The Alienist and Neurologist*, an assassin has to reckon with the physicist, the chemist, and the Roentgenologist, who force him to face damning, dispassionate scientific facts, and with equal zeal these facts are used to clear the innocent man condemned by circumstantial evidence. Says Miss Waterson, as quoted in *The Scientific American Supplement* (New York):

"If a man is found walking quickly away from the place where a body has been found, and if the man has blood-stains on him and on his pocket-knife, naturally he is the murderer, so why spend a fee on an expert to prove the contrary?"

"Just such a case occurred in France. It was no use the man saying he had poached a rabbit, made a stew, and burned the skin and bones to avoid possible detection. He was condemned because the blood-stains and a known hatred for the victim shouted guilty! Then came along a physicist and showed the blood to be that of a rabbit, for, by the unique methods of two professors, E. T. Reichert and A. P. Brown, it can be determined to what species of animal, bird, or reptile the blood belongs, since every species has distinct crystallization. Experts claim to distinguish differences of nationality, and it is no illogical optimism to state that their claim to prove consanguinity may prove to be correct. If Jacob had been able to set a scientist to work on Joseph's coat the brethren would have been confounded, and Reuben, the conniver at deliverance, extra triumphant. Ever since those days the malignant have tried to fix guilt on innocence by spattering the blood of animals on clothes or weapons, but it never can happen again in civilized countries.

"A little while ago a mother murdered her little girl in a lonely spot and 'murder by person or persons unknown' was the verdict. A suspicious neighbor, who disliked the woman, took to the search privately and one day found a blood-stained knife near

the house. 'Why, that's the knife I used to kill a rabbit last week. I put it there in the wall, meaning to clean it,' cried the mother.

"Submitted to an expert, the knife told of human blood—blood shed a year ago, and the terrified mother confessed her guilt! It is now over seven years since an Italian physicist, A. Lazzarano, perfected the method of determining the age of a blood-spot. Would Rizzio's blood, said to be renewed every year on the floor of Holyrood Palace, stand an investigation? I think the tourist, enjoying the induced thrill of horror, would rather the scientist kept out of the way!

"Mutilation of a body is not always effectual, and has occasionally, by its very dexterity, convicted the real offender. A murderous butcher will, naturally, cut up his victim with precision, and a medical student or surgeon would do it in a skilful fashion. The mutilations by Jack the Ripper showed him to have considerable anatomical knowledge.

"A physical defect, engendered by disease or habit, often guides an expert in detection, but when a man cuts his old father into 130 pieces and buries these separately in garden and

field, he naturally expects to lull suspicion, especially when he daily expresses surprise that the aged parent does not return from Paris.

"Six months after the deed a farm-hand dug up a hand, no clue apparently, except that a friend, a medicolegal expert, took note of certain callosities in the palm, rather peculiar ones, and soon after begged of the son his father's stick as a memento. The curiously carved knob exactly fitted the skeleton hand and the son was convicted of the murder. In the same way the body of a mutilated nun was identified by the callosities on the knees produced by constant kneeling; and Sir William Fergusson proved the identity of Livingstone (tho it was hardly doubted) by showing an old ununited fracture in the left humerus. The structural deformations induced by occupation often lead to the identification of a murdered man when he has been,

say, a tailor, a barber, or a shoemaker, while the condition of the teeth may show the victim to have been a printer or a potter, owing to the plumbism engendered.

"Now, if a man is found shot through the head and with a pistol in his hand, what more rational than a verdict of suicide? But in real suicide the weapon is held so firmly that force is required to dislodge it. It seems as if the muscular spasm persists until *rigor mortis* occurs and sets it. Several experts have tried to make the hand of a corpse grip a weapon, but have never succeeded, and their knowledge of this fact has often opened the avenue to detection of murder. Again, if you found your grandfather on the floor with a rope round his neck and the other end dangling from a nail in the wall, certainly you would say that he had hanged himself and his weight had broken the rope.

"But the medicolegalist is as well up in knots as a sailor and knows a suicide will tie them one way, a murderer another. There was a case in Paris of a grandfather who had, apparently, hanged himself in the manner described. But he had not tied the rope, declared the expert, and, in case of such uncanny knowledge, two neighbors confessed they had from their window seen the son-in-law strangle his father and arrange the other piece of rope. . . .

"The different physiologic action of fire on a dead body

and a living one was not known by the man who rushed frantically to his neighbors, saying he had found his wife lying across a chair by the fire badly burned from waist to knees and also on the neck. Unfortunately for him the doctor pointed out that burns made before death contained serum, and there was no vesication (thin serous fluid under the skin); moreover, the fire could not have passed from waist to throat. The man then confessed to strangling his wife and afterward setting fire to her.

"The student who murdered his aged uncle by drowning had clearly not taken chemistry in his studies or he would not have been so confounded when brought to justice. He had wound nine yards of thick lead tubing round the body to sink it. Surely enough? But a little knowledge of chemistry would have made him make a few incisions for the escape of natural gases, as these brought up the corpse in spite of the heavy weight.

"Lynx-eyed Science is rendering it ever more difficult to dispose of a body or hide the crime of murder. Human blood and hair and bones have characteristics distinctly their own. The 'gory knife' of melodrama is no longer sufficient to fix a crime, and even if, as seems possible, the penny novelist should kill his hero with radium, why, the physicist would come along with the electroscope and with it absolutely refute or confirm the accusation."

TELEPHONES IN THE WAR

THE TELEPHONE has not done away with the old methods of military signaling by flags and the heliograph, but it is certainly supplementing them most effectively. Nor is all the telephonic work confined to military operators. The telephone-girl is beginning to find a prominent place in late dispatches from the war-zone. At Dahlen, in an instance cited by a contributor to *The Transmitter* (Baltimore, November), a Belgian woman operator telephoned officers of her country at nearby forts that they were not properly placing their shells. By following her instructions these officers were able to regulate their firing effectively. But the telephone-girl was killed by a shot which destroyed the office from which she was directing operations. The writer goes on to say:

"The picture of a demolished switchboard and central office interior gives a vivid glimpse of the danger undergone by two other operators, young women of Louvain.

"The switchboard was located in the booking-office at the Tervueren station in that city. The Germans were approaching, shells were bursting near them as they worked, flames had broken out in adjacent buildings, but these two young women,

wires they were handling. They knew this and stuck to the switchboard until the last wire snapt. Just before the enemy entered and wrecked the office they crept from the building and

The galloping dispatch-rider, braving a hail of bullets, is replaced by a thread of wire, unromantic, but more likely to deliver the message.

by good fortune joined the fleeing refugees without suffering injury.

"The bravery of the young operator of Etain, in northern France, of whom we told in our last issue, has now been celebrated in most of the journals of the world. Several poems have already been inscribed to her memory. . . .

"Submarine telephone-cables are mentioned as in use by the entrenched Germans in northern France. Subterranean telephone-lines appear to be a special favorite of the German signalmen. Their use is recorded at several important points of conflict. . . .

"Of the numerous reports of telephonic fire control, perhaps the most graphic is that from Carl H. von Wiegand, the Berlin correspondent of the United Press. Mr. von Wiegand was the first foreign correspondent permitted on the actual Russo-German firing-line during a battle. His was also the first eye-witness story by any American correspondent at the Russian front. Candidly admitting his fear while exposed to the terrific shell-fire, this writer, in describing the work of the German artillery, goes on to say:

"For half an hour the German battery paid no attention to the shells passing overhead. Finally a soldier with a telephone installed on an empty ammunition-wagon began talking and copying notes which the commander of the battery scanned hastily. A word of command, and a lieutenant galloped along the line giving varying ranges to the battery commanders. The crews leapt to their positions and the battery went into action."

"Shortly after this Mr. von Wiegand with his official guide was permitted to move up to the crest of the hill on the side of which they had been standing. He followed the field telephone-line and at last came upon half a dozen officers who were watching the effect and directing the German fire. The battery itself, whence he had just come, could see absolutely nothing of its own work."

LETTERS - AND - ART

MAETERLINCK'S APPEAL TO AMERICA AND ITALY

IT IS THE POWER and privilege of America and Italy—two great neutral nations—to save four famous and beautiful Belgian cities to posterity, says Maurice Maeterlinck in the Paris *Pigeon*, because Germany could not resist a plea from such a source that these monuments be spared. By her

and finally Ypres. These delightful and hospitable towns, he says, formed a Pleiad to the great Flemish cities, Brussels, Antwerp, Ghent, and Bruges, "vast and incomparable living museums held sacred by a people more closely attached to its traditions than any other." It is for their preservation that the

world-famous Belgian author makes his appeal to America and Italy; and that our sympathies may be touched, he tells us a little of what loss his people have suffered in the destruction of these smaller towns. It is to be regretted, he thinks, that they were so slightly known to tourists, because "each of them had its proper visage of peace, of amenity, of innocent gaiety, or of meditativeness. Each had its own jealously guarded treasures, its belfries, its churches, its canals, its old bridges, its tranquil convents, its ancient houses that gave to each an individual physiognomy one could never forget." To Ypres, however, a picture of whose public square and Drapers' Hall we reproduced on November 28, Maeterlinck awards the palm, and of this place, that to many is merely an odd name and a point in the battle-line, he draws the following picture:

"The incontestable queen of these ravaged beauties was Ypres, with its enormous Grand Square, bordered by quaint gabled houses and the huge market that occupied all one side of the quadrilateral. This place haunted one's memory ever after, even if one had only seen it between trains, because it was so unexpected, fairylike, almost illusory, in its disproportion to the rest of the city. While the old town from century to century shrank more and more, the Grand Square remained unchangeable, a gigantic and magnificent witness of the power and opulence of other days when Ypres with Ghent and Bruges was one of the three sovereigns of the western world, one of the warmest hearths of human activity and industry, and the cradle of historic liberties."

In Maeterlinck's view the Grand Square of Ypres deserved to be as sacred to man as the Place of St. Mark's in Venice, the Place of the Grand Duke in Florence, or the Place of the Duomo in Pisa, because it was "a unique and irreproachable object of art that roused a cry of admiration in the most indifferent observers, . . . a thing of beauty, which, as the English poet says, is 'a joy forever.'" The Belgian author is unwilling to believe that the Grand Square has been destroyed, altho he confesses that "in this horrible war one must be-

lieve everything, even the worst." So he argues that destruction is the inevitable fate of Bruges, Ghent, Antwerp, and Brussels unless "the immediate and imperious intervention" of neutral nations can be secured, and he adds:

"Toward them we turn our anguished eyes, and especially to those two great nations, Italy and the United States. In their hands lies the lot of these our last treasures, the loss of which would be accounted the heaviest and most irreparable caused by civilized humanity in the course of centuries. These nations can do that which they wish done. It is time that they do that which it is no longer permissible not to do."

Maeterlinck then calls attention to the diligence with which

WHAT REMAINS OF THE DRAPERS' HALL AT YPRES
A masterpiece of lace-work wrought in stone, now lost forever

efforts to secure our good-will since the beginning of the war, he argues, Germany has shown how much weight she attaches to the opinion of the non-combatant world. Belgium's cause in this matter is Italy's as well, we read, because Italy is pre-eminently "the land of noble cities." As for America, "she represents, above all other nations, the future," wherefore, looking forward, she should see to it that, when the great peace comes, it shall not find the land waste and despoiled of its charms.

Maeterlinck, who does not in this article criticize Germany with the acerbity he has previously shown, names among the ruined cities Louvain, Malines, Termonde, Lierre, Dixmude,

Germany has spread abroad in the world statements in her defense as a sure sign of how highly she values outside opinion. The countries which she chiefly addresses, Italy and America, are also peculiarly fitted to respond to the appeal of the Belgian poet, so he thinks. Italy, because the past has so richly endowed her with monuments whose ruin she would keenly feel, and America because she finds her imagination most often and keenly stirred by the memorials of an antiquity which she does not possess. As we read:

"It is not necessary to instruct Italy on what it means to us that these cities are in danger. Italy is preeminently the land of noble cities. Our cause is her cause and she owes us her support. In the destruction of a work of beauty her own genius and her eternal gods are outraged. As for America, she represents the future better than any other people. She should ponder on the days that are to follow this war. When the great peace shall descend upon the earth let it not be to find it a desert shorn of all adornment. The places in this world which are the product of the labor of centuries and the happy success of the determination, the patience, and the genius of a race are not many in number. This corner called Flanders, above which death hovers, is one of its sacred spots. Should it perish, the generations yet to be shall lack memorials and masterpieces they may possibly delight in and which no power on earth can replace."—*Translation made for THE LITERARY DIGEST.*

WAR'S EFFECT ON LITERATURE

THE LEADERS OF LITERATURE who have spoken their minds on the subject of war and its relation to their art seem far from hopeful. Mr. Howells declares that war stops literature. Mr. Gosse, whom we quoted a few weeks ago, told us vividly how it had not only stopt, but effaced, Belgian literature. He went on to show us how the Franco-Prussian War put a paralyzing hand on French literature, and Mr. Howells asserts that our own Civil War left behind it nothing rememberable save Lowell's "Commemoration Ode." His own literary theory, besides the observable facts in the case of war, excludes the idea that great events can produce literature. "They seldom call forth the great creative powers of man," he asserts in the *New York Times*. "In poetry it is not the poems of occasion that endure, but the poems that have come into being independently, not as the result of momentous happenings."

"This war does not furnish the poet, the novelist, and the dramatist with the material of literature. For instance, the Germans, as every one will admit, have shown extraordinary valor. But we do not think of celebrating that valor in poetry; it does not thrill the modern writers as such valor thrilled the writers of bygone centuries. When we think of the valor of the Germans, our emotion is not admiration, but pity.

"And the reason for this is that fighting is no longer our ideal. Fighting was not a great ideal, and therefore it is no longer our ideal. All that old material of literature—the clashing of swords, the thunder of shot and shell, the great clouds of smoke, the blood and fury—all this has gone out from literature. It is an anachronism. . . .

"As I look back over my life and recall to mind the great number of books that the Civil War inspired I find that I am thinking of things that the American people have forgotten.

They did not become literature, these poems and stories that came in such quantities and seemed so important in the sixties.

"There were the novels of J. W. De Forest, for instance. They were well written, they were interesting, they described some phases of the Civil War truthfully and vividly. We read them when they were written—but you probably have never heard

RUINS OF THE CATHEDRAL OF YPRES.

The altar-piece seen here reduced to tatters is one of the priceless works of art sacrificed to war.

of them. No one reads them now. They were literature, but that about which they were written has ceased to be of literary interest.

"Of course, the Civil War, because of its peculiar nature, was followed by an expansion, intellectual as well as social and economic. And this expansion undoubtedly had its beneficial effect on literature. But the Civil War itself did not have, could not have, literary expression.

"Of all the writings which the Civil War directly inspired, I can think of only one that has endured to be called literature. That is Lowell's 'Commemoration Ode.'

"War stops literature. It is an upheaval of civilization, a return to barbarism; it means death to all the arts. Even the preparation for war stops literature. It stopt it in Germany years ago. A little anecdote is significant.

"I was in Florence about 1883, long after the Franco-Prussian War, and there I met the editor of a great German literary weekly—I will not tell you its name or his. He was a man of refinement and education, and I have not forgotten his great kindness to my own fiction. One day I asked him about the German novelists of the day.

"He said: 'There are no longer any German novelists worthy of the name. Our new ideal has stopt all that. Militarism is our new ideal—the ideal of Duty—and it has killed our imagination. So the German novel is dead.'

Mr. Howells was asked by the interviewer why Russia, "a nation of militaristic ideals, had produced so many great novels during the past century." The man who introduced Turgenev to the American reading public was not backward in reply:

"Russia is not Germany. The people of Russia are not militaristic as the people of Germany are militaristic. In Germany war has for a generation been the chief idea of every one. The nation has had a militaristic obsession. And this, naturally, has stifled the imagination.

"But in Russia nothing of the sort has happened. Whatever the designs of the ruling classes may be, the people of Russia keep their simplicity, their large intellectuality and spirituality. And, therefore, their imagination and other great intellectual and spiritual gifts find expression in their great novels and plays.

"I well remember how the Russian novelists impress me when

was a young man. They opened to me what seemed to be a new world—and it was only the real world. There is Tchekoff—have you read his 'Orchard'? What life, what color, what beauty of truth are in that book!

"Then there is Turgenev—how grateful I am for his books! It must be thirty years since I first read him. Thomas Sargent Perry, of Boston, a man of the greatest culture, was almost the first American to read Turgenev. Stedman read Turgenev in those days, too. Soon all of the younger writers were reading him.

"I remember very well a dinner at Whitelaw Reid's house in Lexington Avenue, when some of us young men were enthusi-

AS THE BIRD-MAN SEES REIMS.

More than ever does Pompeii seem to typify the cities of the war-zone.

astic over the Russian novel, and the author we mentioned most frequently was Turgenev.

"Dr. J. G. Holland, the poet who edited *The Century*, lived across the street from Mr. Reid, and during the evening he came over and joined us. He listened to us for a long time in silence, hardly speaking a word. When he rose to go, he said: 'I have been listening to the conversation of these young men for over an hour. They have been talking about books. And I have never before heard the names of any of the authors they have mentioned.'"

One hint Mr. Howells gives of the reason why war can do nothing for literature. It touches the old literary battle of realism and romanticism:

"Romanticism is no longer a literary force among English-speaking authors. Romanticism belongs to the days in which war was an aim, an ideal, instead of a tragic accident. It is something foreign to us. And literature must be native to the soil, affected, of course, by the culture of other lands and ages, but essentially of the people of the land and time in which it is produced. Realism is the material of democracy. And no great literature or art can arise outside of the democracy."

GERMAN PITY FOR FRANCE

NO EUROPEAN endowed with the slightest instinct for history can contemplate the position of France on the Continent to-day without an impulse of sympathy. So says Dr. Bernhard Dernburg, repaying in part the kindness of the French and British writers who have been extending their pity to Germany. But we have failed to see any gratitude expressed by either side thus far for the efforts of the other along this line. Dr. Dernburg, in the *New York Sun*, looks back to a time when France was playing the rôle of attempted overlordship:

"What a fall she has had since those splendid days under Richelieu and Louis XIV.! It seems but yesterday when she dictated policies to every chancellery. No merely earthly splendor seems at all comparable with hers from the age of Mazarin to that of the French Revolution.

"Then comes the Napoleonic glory, and we have Talleyrand triumphant at the Congress of Vienna. The third Napoleon continues the magnificent procession. Paris is always the queen city of the world, reigning in undisputed sway over men and manners, over arts and sciences, the home of beauty and delight. How shocking the collapse when a united Germany, frugal, domesticated, pious, comes between exquisite France and the glories she has lost! It is the old, old story of Cinderella stepping out of the kitchen to eclipse her proud sister.

"I do not overlook Alsace and Lorraine. It is customary to refer to France as aching for revenge, as sighing for those lost provinces. But Alsace and Lorraine symbolize rather than comprise the reality which is the decline of French force, the decay of French power in its widest and its moral sense.

"France has surrendered herself to the pomps and delights of this world, the pride of life. She would not, like Germany, rear large families, make a cult of the home, dwell simply in content. The population of 38,000,000 Germans that went to war with France forty-four years ago has grown to nearly 70,000,000 since, but the 38,000,000 of the French in 1870 are represented by some 40,000,000 only at this hour."

In such a plight France is seen by Dr. Dernburg as casting about for an ally:

"That hostility had lived upon the memory of Bismarck and his victory at the Congress of Berlin. Russia was rendered impotent in the face of the Turk! That is how it impresses the Muscovite mind.

"France could sympathize, but she could offer something more substantial than her sympathy. She had her wealth. It is perhaps true that no

other area of equal extent on the globe is so rich in natural resources as France, and, if France loves pleasure, she loves accumulations also. She was only too eager to finance Russian railways, Russian loans, Russian armaments, Russian industrial undertakings, and Russian engineering enterprises. It was a generation in which the might of Russia inspired awe and to which Japan was remote. In a space of time that seems incredibly brief, Russia, the allied and friendly nation, had absorbed the cash equivalent of at least two billion dollars in French money.

"Thus is explained a mystery which for some little time has perplexed students of what is called world politics. How can a nation professing liberty, equality, fraternity, ally itself so closely with the autocracy of the Cossack and the knout? One motive is the recovery of that lost glory, of that supreme position in Europe. The other consideration has to do with the vast sums transmitted from Paris banking-houses to Petrograd, Moscow, and Odessa.

"When Russia leads the way to Armageddon, France must follow. Hesitation, holding back, would entail the cancellation of the enormous indebtedness, a flat repudiation. A stroke of the autocratic pen in Petrograd can bring the French to bankruptcy, and well they know on which side their bread is buttered."

SOME OF SHAW'S ERRORS

TWO POINTS that Mr. Shaw made in his "Common Sense" article about the war are taken up and answered by Mr. Ford Madox Hueffer. Shaw said England was as militarist a nation as Germany, and also that Sir Edward Grey and most of the present Liberal Government in England were "Junkers." Mr. Hueffer contends in the *London Outlook* that England is not militarist, but opportunist; and as for Sir Edward Grey being a Junker, that is declared impossible on the face of it, because "a Junker is a member of a small Prussian political party, agrarian in tendency, desirous of maintaining high prices for foodstuffs and of seeing the re-establishment of Prussia as a *Ständischen Staatswesen*." Mr. Shaw's "common sense" turns out to be not even good sense, in Mr. Hueffer's view, and stupid in the particular occasion of its presentation, as "it is always at its most stupid when large bodies of men are engaged in tasks of self-sacrifice." For "whatever Mr. Shaw may find to say against the English, or I might find to say against the Prussians, no one will deny that large bodies of men of both nations are offering themselves up to the final self-sacrifice that is open to men and that large bodies of women are suffering the final pangs that it is possible to feel." Mr. Hueffer adds: "There are many death-beds in the world now, and the person who coins an epigram beside a death-bed is a stupid person." To explain Mr. Shaw's first misconception of the two countries taken as forming a militaristic parity:

"Prussia has an enormous body of doctrine which began to be compiled by Hegel in the early decades of the last century, was continued by Treitschke, and is still preached by Delbrück—to name only three names. This body of doctrine is known as *Staats- or Rechtswissenschaft*, and the upshot of this doctrine is always that the duty of the State is the waging of war. And this doctrine is taught to every German and has been taught to every German since the year 1870. It is taught to every student by every professor of State philosophy throughout Germany, and almost every professor of every other learned subject throughout Germany interpolates into his lectures now and then a passage to the effect that the first duty of the student is to the State and that the first duty of the State is to wage war. It is, in fact, impossible for any German to be unfamiliar with this doctrine, while it is almost impossible for any Englishman ever to have heard it. Every German child is, by Ministerial decree, again, taught to shout at the top of his voice during singing-lessons, because it is more manly and warriorlike to shout, and, by a decree of Falk, the Minister of Education in 1876, every German child has to be taught out of a reading-book containing accounts of bygone Prussian victories and feats of arms. In face of these facts and the impossibility of paralleling any one of them in these islands, it is the merest partiality, for a given purpose, in Mr. Shaw to say that England is as militarist as Germany. England is not militarist at all; she is simply opportunist."

After Mr. Hueffer's definition of the word, it is, he says, as absurd to call Sir Edward Grey a "Junker" as to call the German Foreign Minister a Liberal Unionist. Mr. Shaw quoted the meaning of his term from a German-English dictionary, but he mistook the phrase "doings of the country party" for "episodes in high life," whereas it signifies "political actions of the party in Germany which wishes to see the interests of agriculturists rather than those of industrialists prevail in the councils of State." Mr. Hueffer, taking a hand in sizing up the situation as between England and Germany, says:

"The fact is that the present struggle is the death-grip between two practices of life: the one being founded on the idea that humanity can remedy most of the evils of society by attending to those evils as they arise; the other having for its basis the definite doctrine that the State must carve out terri-

ties for its populations with the sword. This is not merely partizan writing. No State-trained German would disavow the doctrine, and it will be found in Clausewitz, Hegel, Paulsen, Ziegler, Treitschke, Delbrück, Blum—to name only seven well-known German writers on various subjects. And, having won territory with the sword, the State doctrine continues, the State will extend to that territory and to those populations its splendid and shining culture. That is, no doubt, not a criminal doctrine, but it is apt to be a nuisance in a world where feudalism, not a caste system, has gradually developed into constitutionalism, not military State regulation. The fact is that Prussia is a late arrival in the Occidental world. She was not Christianized until five hundred years after the rest of Christendom; she did not

build her capital until some thousand years after the other capitals; she did not become an independent Monarchy until five hundred years after the other monarchies of Europe, and she remained a caste State, with serfdom and gild systems, until 1806. It is, let us say, not ignoble or wicked of Prussia to seek to impose her ideals or the yoke of her necessities upon the surrounding populations, just as it is not ignoble or wicked of lions to feed upon giraffes; but it is a nuisance. Mr. Shaw, being a State doctrinaire, has more affinities with Prussia than most Occidentals. His is a point of view like another; but his ideas of liberty are those of the *Bankgenossen* of an early Prussian tribal chief. So that no doubt his pro-Prussian sympathies may be pardoned to him—he owes so much to Wagner and Marx, too. For my part I would intern him at Olympia, not because he is pro-Prussian, but because he has tried to drag in the United States that the United States may drag the Fabian chestnuts out of the European conflagration."

Mr. James Douglas, in the *London Daily News*, declares that Emperor William ought to hang the iron cross on Mr. Shaw, who "has done more for Germany than all her apologists." Reading the "Common Sense," he says:

"My heart sank lower and lower and my faith grew colder and colder, until I found myself sitting paralyzed in a state of frozen cynicism, bereft of belief in everything and everybody, and convinced that my country and my countrymen were irretrievably and irremediably in the wrong. The process by which I was reduced to this condition of insanity can not be analyzed in a brief article, but it can be defined in two words—cynical sophistry. The cynic who is not a sophist does not possess the power to make the worse appear the better reason, for we instinctively recoil from cynicism naked and unashamed; but the cynic who is endowed with the intellectual duplicity necessary for the purpose of falsifying some facts, glossing others, and suppressing the rest, can bewilder and bamboozle the unwary mind so completely that it becomes incapable of maintaining its grasp of reality."

RELIGION-AND-SOCIAL-SERVICE

THE MOTHERS AND BABES OF BELGIUM

THERE HAVE BEEN 40,000 births in Belgium since the German came there; and there will likely be 40,000 more in this winter of hardship and privation. "How many of the newly arrived 40,000 have already died unnecessarily—undecorated, unsung victims of this war—no one will ever know," says Mr. Will Irwin, who is one of the American journalists who have seen Belgium since it became a conquered country. "How many of the coming 40,000 will die this winter," he continues in the *Springfield Republican*, "depends

loaded to capacity with the white-faced wounded. The car would go on, and the refugees would close their gaps and resume their weary, nerveless pace.

"At the concentration-yards they sat in family groups, the children huddled about their mothers and grandmothers like chickens around hens. No child among them laughed or played; they were too weary for that; but no child cried. I was trying to have speech with these refugees, and finding them too nerveless to give any account of their adventures, when an ambulance arrived.

"A nurse and a physician descended. A woman rose from

a distant group and joined them. She carried in her arms a bundle wrapt in rags. The slant of her back showed that the bundle contained a child—there is an attitude of motherhood which none can mistake. The women in the nearest group followed the pantomime with their tearless, hopeless eyes.

"What is it?" I asked.

"For a time none of the women answered. Then one spoke in a dead tone.

"Her baby is dead," she said. "She had no milk in her."

"All that happened on the fringe of Belgium, to the refugees who had made their way out and were nearing safety and enough comfort to keep soul and body together. I could multiply instances from the observa-

tion of others. There was, for example, the group of 200 refugees who arrived in Holland early in November. They carried with them four dead, new-born babies. It was the same story which one hears everywhere. The mothers were so reduced by privation that they had no milk of their own. As for cows' milk, it was not to be had for any money.

"Add another picture, brought out by an American from Belgium. He stood one morning by the back door of a German cook camp, watching a group of Belgian women grubbing through the trash-heap piled up behind the camp. All these women carried babies.

"What are they doing?" he asked a German sergeant with whom he had struck up acquaintance.

"Scraping out condensed-milk cans," said the sergeant. "It's the only way to get milk for their babies. I've seen them run their fingers round a can which looked as bright as a new coin, and hold them into the babies' mouths to suck. My company," he added, "has been getting along without milk in its coffee and giving it to these women. We've received no orders to the contrary—and we're mostly family men. But we're an exception; and it doesn't go very far."

"Here is another recent picture from stricken Brussels, that gay, dainty, lively city in old times—the city whose smiling people called it *petit Paris*. The scene is the once busy, pleasant boulevard Bishofsheim. A woman collapses on a bench set along the sidewalk after the fashion of the greater Paris. In her arms is a baby. A child staggers along clinging to her apron. The woman's face is blue and yellow; she is on the verge of collapse. The baby, surely not over five months old,

BELGIAN BABIES BORN IN ENGLAND.

These are among the fortunate ones for whom there will be milk in plenty.

upon us in America—upon how much food we send to the nursing mothers, how much milk to the babes." Mr. Irwin goes on to recall a scene he witnessed at the tail of the procession of Belgian refugees who poured into France. A group had halted at a crossroads beside which some one had erected a tent of blankets strung on sticks:

"As I approached, wondering what this might be, an automobile came whizzing down the road at seventy miles an hour—there are no speed laws for military automobiles in time of war. It stopped beside the tent; there was a parley, and a man in Belgian uniform wearing a Red Cross brassard on his arm alighted.

"What is it—what is happening?" I asked the first of the refugees beside the tent—an old man who crouched in the gutter.

"Un enfant—a baby is being born," he said briefly. The man in uniform was a Belgian surgeon taking time from his work of repairing death to assist in giving life.

"Again: It was the next day in Calais—Calais, once so busy and so venerable, and in spots so pretty, but now faded and dirty with the passage of armies. Ten thousand of these refugees came into Calais that day. That day, also, the Red Cross was bringing in Belgian wounded by the thousand—there had been serious fighting along the Yser.

"The refugees, herded or escorted by the police, streamed down the streets to the concentration-yards prepared for them on the docks of the French Government, which was going to transport them to the Midi as soon as it could get the steamers. You would hear now and then the toot of an automobile horn, and the refugees would make way for the passage of a motor-car

has a pale, lead-colored skin. Its mouth is open as tho set that way. Its eyes are closed.

"Two women of Brussels pass this unhappy group. They hurriedly exchange some words, turn back to the woman on the bench. Then one stands guard while the other hastens for some milk and bread—such as is to be found in the Brussels of to-day. They force a little milk between the teeth of the mother. They let the baby drink. Unwashed tho it is, it drinks as tho it had never drunk otherwise.

"To the face of the mother come a few patches of color. She slowly recovers until she is able to eat a bit of bread. The baby opens its mouth, drinks more greedily. 'It has not fed since two days,' the mother whispers. The mother tries to rise from the bench, but she can not. The elder child drinks the milk that is left. It looks curiously at the piece of bread as if it did not know what it was. The mother forces it to eat. A crowd has gathered, murmuring. This sight is not new, yet each time it draws a little crowd. Every one would like to give—but no one can. Who is not poor at this moment? Many of them have children at home who to-day weigh less than the day they were born."

The lists of the dead issued by France and England and Germany are mounting day by day to a ghastly total. "But these take account only of the strong young men who have died in the fighting." There might be made lists of the uncounted dead:

"They do not list the women who, foolishly or ignorantly, sticking to their homes, have died under the shell-fire of enemies or friends. They do not list the weak and helpless who have dropt out from the pathetic caravans of refugees to perish along the edges of the roads. They do not take list of those who are beginning to die by hunger in stricken Belgium. And finally, they do not list these babes of Belgium, dropping off before their lives have fairly begun, because there is no milk.

"Let us view the situation in cold blood. Belgium is shut off from the world ringed with steel. Her own food-supply was used up long ago, either by the people or by their conquerors. The cattle were first of all to go; even in August I saw the Germans killing milk cows for rations. A cow or a small dairy herd is left here or there; but they are the exceptions.

"The supply of condensed milk ran short long ago. Now, milk is a necessity to most civilized children between the ages of one and two years. Some children, it is true, pull through, under exceptional circumstances of privation, without it; but these are the unusually sturdy; they stand apart from the rule. The average young child must have milk or he will die. And there is no milk. Again, the suckling baby must have mother's milk or a substitute. There is, of course, no substitute to be had in Belgium, and equally there is little mother's milk. Every woman knows that a civilized nursing mother must 'keep up her strength.' She must have nourishing food in many cases special food. Every woman knows that a certain proportion of civilized mothers can not feed their own babies even at that.

"Nourishing food—special food! The news which filters out of that locked, stricken country to the American commission for relief in Belgium makes a sarcasm and a mockery of those phrases. In many, if not in most Belgian cities, the populace is down to one large baker's bun a day, issued by the municipal authorities. In some places, the authorities have been able to supplement that ration by one bowl of cabbage-soup a day. One bun and one bowl of cabbage-soup a day—for a nursing mother!

"Yet that is all they have and all they will have this winter at the best America can do. The American Commission hopes to transmit ten ounces of food a day to each inhabitant of Belgium—and to do that the people of the United States must strain every resource of charity. How little that is for a civilized human being, and especially for a nursing mother, becomes plain when one learns that the average inhabitant of Greater New York consumes forty-two ounces of food a day. The best the mothers of Belgium can hope for is a quarter ration this winter."

TWO CALLS TO ARMS

AS ARMY OFFICERS, statesmen, and newspaper editors take up the call for an increase in our means of national defense, religious editorial opinion responds in two opposite ways. Some are naught for the cries of the "alarmist," and seek peace only through the medium of peace, not by being

ANTWERP CATHEDRAL OPENS ITS DOORS TO A NEW AUDIENCE.

prepared for war. Others fear the peace-lovers are too sentimental, reminding them that in a world of war and war-makers guns must be carried even by the righteous, and that excessive peacefulness may actually invite war. There is, of course, no division along denominational lines, and there is no significance in the fact that it is the Protestant *Christian Work* (New York) which believes Mr. Bryan's peace treaties "worth a big army in every State," while it is the Catholic *Monitor* (Newark, N. J.) which says: "As an antidote against an enemy's war fever, we have more faith in pointing cannon, loaded to the muzzle, than in cooing doves and arbitration treaties." Not that *The Monitor* takes a belligerent attitude. "It is to the credit of our people that they are sincerely desirous of peace," that "they have little patience with the war spirit which, after all, is, for the most part, translated savagery." But this New Jersey Catholic weekly adds that "peace, as an obsession, is the sure vestibule of war," and "the advocacy of peace may be so intent as to bring on war." Our Government is declared to be "in the hands of sentimentalists," while the common sense of the people "demands a state of absolute preparation for war." Ex-President Roosevelt and General Wotherspoon are commended for speaking out about our unpreparedness, while "Mr. Bryan, lulled by the cooing of the dove of peace, goes on feverishly signing arbitration treaties and smiling blandly from a heart overflowing with

human sympathies." "War comes suddenly," we are reminded: "the mighty war now in progress burst overnight." Moreover, "when the war fever comes, the year clause of delay in an arbitration treaty is invisible to eyes looking only for the instruments of war"; and "it is a military axiom that the nation which strikes quickly is the nation which strikes best." Continuing:

"It is impossible to tell what will be the consequences of the war now going on in Europe. . . . Will ambitious Japan, having tasted war, be satisfied with a sip of blood? Will a proud race, its military prowess acknowledged by the invitation to enter a European war, brook the exclusion of its yellow sons and daughters from a land which welcomes the children of the white race? And how long will it endure this policy of exclusion? May it not be that Japan, under cover of its present paltry military necessities, is getting ready for a conflict more serious for itself? Japan is a tiptoe nation.

"We do not belong to the progeny of the alarmists and we dislike to invite specters. But we need neither alarm nor specters to recognize that the easy-going policy of our country, the indifference in high places, must give way to a thorough preparedness. Adequate preparation is the best guaranty of peace."

With these last words, Dr. Lynch, of *The Christian Work*, would heartily agree. He urges the most complete preparation for defense. "We urge it with all our might," he says; "and we shout as loud as does Mr. Roosevelt: Let us arm! Let us arm!" But, he continues, "the world is just now learning that there are two ways of arming," "two methods of securing peace." Dr. Lynch believes in armament, but an armament "which is infinitely more powerful than guns or battle-ships." "Yes," he explains, "let us arm mightily, and character is the greatest defense of a nation as it is of a man." He goes on:

"Let us arm. Therefore let us proclaim to all the world (more by deed perhaps than by word, altho there is no harm in words when they are kept), that the United States will, under no considerations, steal territory or anything else from weaker nations, that it will never commit an injustice toward another nation because it is weak nor bully it; yes, let us go further, and say, to all the nations of East and West, North and South, 'we desire only to be your friends. We want to help you develop your institutions. Let us send you advisers, teachers, and lend you money at low rates of interest. Let us help you solve your internal problems. Let us befriend you in every way.' Which nation thus befriended would attack the United States, and would any other, seeing this wonderful thing?

"Let us provide means of national defense. Great armies? No. They have failed. Great arbitration treaties such as the President and Secretary Bryan are now signing with the nations are worth a big army in every State. Multiply these treaties to include every nation. As soon as possible tighten them in their scope. Get out all conditional and qualifying terms and make them absolute offers to arbitrate every difficulty with any nation. Go on offering such treaties—offering them with a Senate unanimously behind them—and each one becomes an impregnable fortress."

The editor of *The Monitor* seems to fear, as do some of his fellows in religious journalism, that we may some time have to fight Japan. Yet, says Dr. Lynch, let us begin at once to arm against Japan. But while "Messrs. Meyer, Hobson, Mann, and the others" would spend about \$100,000,000 on a greater Navy, which "would probably lead us into war with Japan," this editor knows "an armor that would be invincible, and at just one-tenth the expenditure of the appropriation named above—ten million dollars." He says:

"Let Congress appropriate \$10,000,000 for defense against Japan this year. Then take it and build a fine library in ten Japanese cities, ten great hospitals in ten Japanese cities, ten universities in ten Japanese cities, and then say: 'We present these to you as testimonials of our good-will. Furthermore, we intend to keep all treaties we have made with you, and also we intend as a nation to treat the question of Japanese immigration with absolute justice and in strict regard of your self-respect.' There would not be necessity for one gun-boat on the Pacific coast for the next quarter century, so far as Japan is concerned, should the United States say this. How wasteful nations are in defending themselves!"

THE WAR-TIME TIDE OF KINDNESS

GOOD EFFECTS of the European War are "dismally scant" anywhere, *The Continent* (Pres., Chicago) finds, but "the opportunity of helping war's homeless, widowed, and orphaned victims comes as near to being a spiritual blessing as can possibly attend so great a curse." And it has brought, we are told, a real spiritual uplift especially in those wheat-growing States where the Belgian benefactions have become a "unanimous, sweeping, civic movement—involving churches, women's clubs, schools, commercial organizations, and every other social force." This "wave of compassion," declares *The Christian Herald*, is flaming across the continent: "it has kindled the hearts of men and women everywhere and melted them to deeds of kindness." Christians, we are told, "are reveling in a widening and delightful vision of Christian service." Further—

"While the older nations are torn by a war so vast and dreadful that no human power can stop it, God's people are carrying on a war against suffering and sickness, hunger and death, a war so far-reaching and inclusive that for the first time in history the world's benevolence would seem to measure up almost to the extent of the need. If the present colossal relief plans now under way are carried forward as energetically as they have been begun, millions of human beings will be benefited. Like heaven-sent argosies of blessing, our relief-ships are crossing the seas, prayer-wafted and food-laden. They are making the Stars and Stripes the symbol of world-wide mercy and helpfulness. All neutral nations, to a greater or less extent, are supplementing the work which is now being carried forward so successfully by the United States.

"There are various indications that this flood-tide of generosity may ultimately come to be regarded as a part of the great divine plan in relation to the present war. It could only be by inspiration that a movement so gigantic could have suddenly sprung into existence, demonstrating that the sin may abound in the world, the spirit of the Master lives within the hearts of multitudes of his followers, urging them to those deeds of kindness and benevolence. We see relief organizations springing up on all sides, and all with the same purpose in view. Organized charity has eclipsed itself. The Rockefeller Foundation gives its millions. Hundreds of thousands of dollars pour into the various funds from a variety of sources. So generous are these combined offerings that there would seem to be no limit to the possibilities of this amazing flood of benevolence. Truly, God's people have lifted the sluices and opened the dikes and inundated the blood-red zone of war with the stream of their gifts."

At the same time, we are reminded, generosity toward the distressed millions of Europe "should not absolve us from the duty of responding to calls nearer home." Readers of daily newspapers, particularly in New York and Chicago, are constantly having their attention called to home charities and home needs, which seem to be forgotten in the wave of sympathy for Belgium, and to a lesser degree for Poland, Servia, and other war-swept regions. So that *The Christian Herald* is moved to remark:

"The war has greatly increased unemployment and multiplied want and suffering here, and appeals in behalf of our own unfortunate ones should not be set aside. In the enthusiasm of rescuing Belgium, let us not overlook the destitute at our own doors, but rather strive, with a discriminating hand and a good conscience, to do our duty to both until the present crisis is safely past."

But the *Kansas City Star* believes "that one who refuses to contribute to Belgian relief on the ground that charity should begin and end at home is less likely to give for home consumption than one who helps the Belgians." And it concludes:

"If it takes a dramatic appeal to enlarge some hearts; if it takes 'dynamite' to dig into some pockets, let the dramatic appeal, or the dynamite, do the work.

"Don't forget the American child while remembering the European child." Hurrah for that sentiment! But there is far less danger of forgetting the American child while remembering the European child than there is of forgetting the American child while also forgetting the European child."

MOTOR - TRUCKS

EUROPE'S DEMAND FOR TRUCKS

IT seems to be generally agreed in American motor circles that the supply of motor-trucks in Europe is far less than the needs of the countries now at war call for. This condition has arisen in spite of the fact that factories in Germany, France, and England have been producing trucks as fast as their equipments and force of men would permit; in spite, also, of heavy importations from this country. England has been working her factories at full pressure, delivering her trucks in France, where factories have been somewhat handicapped because of German possession of the industrial districts of the north and north-

"Two types of four-wheel-drivers, known respectively as light and heavy, are provided for under the French regulations. Both types are being ordered in big quantities, and American firms capable of supplying these vehicles to the French specifications will find a ready demand for them in Russia as well as in France.

"Light four-wheel-driven tractors must be capable of towing a load of not less than eight tons; the dead weight of the tractor must not exceed three and a half tons; the pay load carried on the tractor platform must be at least two tons. This pay load will include actual material transported and the spares considered necessary by the manufacturer. It must be possible to carry twelve men on the tractor platform, also three on the driver's seat, in place of goods.

EXCURSION MOTOR-BUS IN USE IN BROOKLYN.

west. Russia, on the other hand, has been dependent wholly on other countries than France and England, and mainly on us. Of present conditions a writer in *The Commercial Vehicle* says:

"When the war broke out the French Army was holding its annual competition of army motor-trucks. That competition never came to a close: the officers and men were suddenly called up for active service and the trucks were commandeered. Men and vehicles are now at the front.

"There are two distinct classes of army vehicles in France: ordinary trucks and four-wheel-driven tractors hauling trailers. Considering the trucks first, these must be four-cylinder models carrying a load of not less than two tons, equally distributed over the whole of the floor space. No maximum load is indicated, but this is regulated by the refusal to grant premiums on more than three tons pay load. Thus a manufacturer who carried three and a half tons would only receive credit for three tons. The maximum dead weight is three and a half tons for complete vehicle with one driver aboard, full water-, oil-, and fuel-tanks, but without tools and spares. All French army trucks must have solid rubber tires. Pneumatics, rubber blocks, and steel tires are forbidden. Even in the case of front-driven machines the rear wheels must be rubber-shod.

"Four-wheel-driven tractors, or, as they are officially known in France, total-adherence vehicles, are a much smaller group than the ordinary trucks. Their usefulness has only just been proved, and there has been no time to get great numbers of them into service. It is well known, however, that they are capable of valuable work, getting into positions which are altogether beyond the reach of ordinary trucks. For carrying ammunition to the batteries, generally placed away from main roads, they are really invaluable. They are also being made use of in certain sections of the French artillery for hauling big guns.

Total weight of a light tractor must not exceed five and a half tons. Heavy tractors must be capable of towing twelve tons on two trailers."

RUSSIA AS A MARKET AFTER THE WAR

Before the European War began, a large trade for motor-vehicles had been developed in Russia by foreign nations, many of the makers being Germans. Should the Allies win this war, it is believed by dealers in Russia that a considerable boom in sales of motor-vehicles will set in. Some of the dealers are already getting in touch with makers in this country and England. Orders at present can not be filled because of lack of facilities for transportation, but when peace returns it

of the active foreign competition which exists under Russia's low import duties. The centers where the motor trade will be most active are Petrograd, Moscow, Riga, and Odessa, all of which require both pleasure vehicles and trucks. Of trade in the past with Russia the following facts are presented in *Automobile Topics*:

"Last year Russia bought 5,350 automobiles of the value of \$8,821,000, as compared with the previous year's 3,428 cars, which sold for \$5,218,000. Of the cars imported last year, \$7,511,000 worth had four seats or more, and \$593,000 worth had less than four seats. Trucks and chassis represented an expenditure of \$717,000. Importation figures for 1912 show that cars with four or more seats were valued at \$4,863,000, those with less than four seats at \$324,000, and trucks and chassis at \$331,000. The increased imports of trucks and chassis in 1913 were due to orders from the Russian War Department, while credit for the great increase in the total imports is given to the International Automobile Exhibition at Petrograd last year.

"The first five months of the present year Russia imported 2,252 cars, valued at \$3,947,000. Of these, 1,816 were automobiles with four seats or more, and 121 had less than four seats. The trucks and chassis numbered 315.

"The bulk of the automobiles in Russia are high-powered German and Italian cars, and their owners are the wealthy aristocrats, who are willing to pay for the best. People of the middle classes find it difficult to regard the automobile, even tho it may be a low-priced car, as anything but a luxury. But efforts have been made by various automobile organizations formed during the last two years to educate people capable of buying motor-vehicles to the point where they will overcome their frugal instincts and put money and automobiles into circulation.

"A Russian agent representing several foreign companies said, before the war, that he found it more difficult to dispose of a car selling for \$1,000 or \$1,200 than of a \$3,000 one. A dealer in Riga believes the tendency is toward more and more expensive cars. Several American cars retailing at \$800 to \$1,100 have agencies in Russia. Their agents and various American consuls are convinced that there will be a tremendous market for such cars in Russia after the war.

From *Automobile Topics*

A TRAIN OF MOTOR-TRUCKS USED IN CLEANING THE STREETS OF NEW YORK.

is predicted that "a tremendous increase in the use of automobiles will take place in Russia." Very little manufacturing of motor-vehicles has ever been done in Russia because, in the first instance, of the high cost of construction and the lack of expert workmen, and in the second because

dous market for such cars in Russia after the war.

Nearly all the high-priced cars in Russia have the torpedo body, and so fond is the Russian motorist of this design that an attempt to sell him a car with any other sort of a body is like trying to sell a three-year-old model for the latest on the market.

One-sided wheels would be no more inconsistent than the one-sided springs now on your car.

The missing half of your spring equipment

See if you can reconcile these two facts about your present springs: First—engineers know that every vibration, from the smallest jar, which merely jolts you, to the biggest bump, which breaks springs, is felt not while the spring is straightening out, but on the recoil—the back-snap. Second—all the reinforcing plates of your present springs are on one side—the under side—put there to cushion pressure only on the downward swing. Clearly, this is effective as far as it goes—exactly half-way.

Here are your present leaf springs—all the reinforcing plates on one side—only half springs.

This is the Ames—meets another series of plates spread over your present main leaf. It is the other half, now missing.

Here are your present springs—supplemented by the Ames—now complete. They resist pressure both ways.

Ames Equalizing Spring

is guaranteed for the life of your car, costs from \$8 to \$15 a pair

Trial offer to car owners and dealers

Send us a line on your letter-head specifying the make and model of one of your cars and we will ship a set of Ames Equalizing Springs to you on trial. If you are good for it, we are.

The Ames offers the highest known efficiency in shock absorption and the greatest known safety from spring breakage.

For Pleasure Cars

Recoil alone is responsible for discomfort. It is the cause of broken springs. The Ames is easily put on to prevent these two troubles. Insist that your new car is Ames equalized.

For Commercial Cars

Examine your expense sheets for repairing and replacing broken springs. Then remember that an Ames installation costs less than one complete repair job. Let us estimate on your fleet.

"The use of motor-trucks in the larger cities has increased considerably in the last year. The Moscow and Petrograd central post-offices have a number. One large firm in Moscow, dealing in dairy products, has 34 trucks. Before the war this car was in demand for military purposes. The cheap delivery-car field remains to be developed. Several American consuls think that it will prove profitable for firms establishing agencies where cars and parts will always be on hand for immediate delivery. The duty on commercial cars amounts to \$36.05 on each car if there is but one seat for the driver. If there is more than one seat the duty is \$72.10."

BELGIUM'S ARMORED MOTOR-VEHICLES

It is declared that the Belgian Army has made in the present war "a greater proportionate use of motors than any other nation." Not only has she used them for transportation purposes, but as armored vehicles from which to fight. Following are interesting data on the subject as printed in *The Commercial Vehicle*:

"Belgium's army motor service differs from that of France, England, and Germany in that she does not possess any great number of trucks, and her army, calculated for defensive and not offensive purposes, has not the scientific adaptation of motor-vehicles to various classes of army operations which form such a feature of the German organization. But Belgium has plenty of touring-cars and touring-car chassis, and when her territory was invaded she forthwith proceeded to make the best of her resources.

"Belgium relied on horses for moving and feeding her troops, and horses have proved to be the most fragile article of war it is possible to imagine. The result is that after three months' resistance, with her forces reduced to about a tenth of their original figure, the Belgian Army in the field is making a greater proportionate use of motors than any other nation. Any bullet or shrapnel wound will put a horse out of commission, but the probabilities are that a score of bullets will not do more than add a few more delves to the already battered panels of a motor-truck.

"When the war-storm broke it was too late even for Belgium to think of obtaining fleets of motor-trucks, and she did not possess any important service of motor-buses. In the large towns light delivery cars existed, and these were first called up for army service, followed immediately afterward by the requisition of hundreds of touring-cars. Manufacturers' stocks of chassis were called for and fitted with light canvas-topped bodies. These machines were capable of carrying loads from one-half to one ton, and by reason of the nature of the body could accommodate practically any kind of material.

"In addition to her touring-car service Belgium has made a very extensive use of armored cars. Practically all these have been prepared since the war broke out. The heavier and more powerful types of chassis are employed and are fitted with a chrome-nickel-steel body generally not less than .2 inch thick, this casing extending along the sides of and over the bonnet. The radiator is uncovered, but can be protected by hinged steel doors. Within the steel housing there is a seat for the driver, who is placed as low and as far to the rear as possible, and in the center a quick-firing gun either revolving within a steel turret or having a big steel guard to revolve with it. The driver has a clear view of the road ahead and a restricted view of the road on one side. His position is such that it is practically impossible for him to be hit. As the gun can be trained in any direction, such a machine is a most formidable weapon of attack, and has

proved particularly effective in driving off cavalry attacks. The chassis are supplied largely by Sava, Minerva, Pipe, and Excelsior."

SECOND-HAND CARS REMODELED AS TRUCKS

The business of putting a truck body on an out-of-date pleasure-car chassis, thus securing a commercial vehicle at low cost, is growing. This kind of truck is especially good for speedy deliveries and lighter work. The problem, however, has shown itself to be not a simple one. Conspicuous failures have not been infrequent, although many attempts have succeeded excellently. Of the difficulties attendant on conversions *The Horseless Age* says:

"In each instance the question may be approached from two different sides. We may take a certain car and try to find a commercial use to which it can be profitably adapted, or we may take a certain service and look for a car which will be suitable. The first of these methods is best if it can be worked out, but the latter may need to be followed in many cases.

"There are certain kinds of commercial work to which some pleasure cars can be adapted with little change in the chassis. There are many tradesmen who have small, light deliveries to make over a comparatively large area, and require not so much carrying capacity as fairly high speed, or at least ground-covering ability. So far there have been few purely commercial cars built which are particularly suited to this service. Examples are the dyeing business, florists, furriers, and others who deal in goods of considerable value and serve areas too large to be quickly covered by one horse.

"They usually require a small chassis of a car which has proved economical upkeep, except in some instances when a really high-grade car may be preferred for the sake of its greater impressiveness, even though the expense may be greater than that of a lighter car. It is a great mistake to put a large, high-powered car into this sort of work unless the owner is willing to pay for relatively high upkeep. Pneumatic tires should always be used for service of this sort.

"Another good use for chassis as they stand is the delivery of heavier and perhaps bulkier matter which requires considerable speed of delivery. The best example of this class is the distribution of newspapers to newsdealers in large cities. Rather heavy and high-powered cars are suitable for this service, and they must be of good quality, with reasonable upkeep expense. Oversize pneumatic tires are essential for economy in this work, and in some cases the rear wheels should be rebuilt for dual pneumatic tires. It is an advantage to use six tires of the same size, preferably on demountable rims. Such deliveries are not expected to be made so economically as would be possible if time were not an important factor.

"Greater difficulties are encountered when the heavier and more bulky classes of goods must be handled on a more strictly competitive basis as to cost. A converted pleasure car may be low in first cost, but there are several things about the design that may tend to make operating expenses higher than with strictly commercial cars. One of the most important is that the power and speed capacity of the vehicle are such as to encourage driving at speeds far higher than are economical.

"For the accommodation of bulky loads, many chassis, especially the older ones, do not have sufficient wheel-base. More room can be obtained by placing the seat over the engine, but this has usually involved the purchase of a new steering-gear.

"It is usually simple enough to connect the brakes to levers in the new position, but not all cars have gear-shifting and clutch throw-out connections which could readily be connected with the levers elsewhere than in their original positions. A change of this sort may throw much greater strains on the front axle and frame than where the load is placed over the rear axle. The front axle is usually amply strong to care for the load at the reduced speed, and the frame can be reinforced with truss-roads to good advantage.

"Referring further to the matter of tires, it is a mistake to think that much greater economy will be obtained from solid tires, except at very slow speeds. Pneumatic tires are being used by preference on most delivery cars of 1,500 pounds or smaller capacity, and on many trucks of twice that capacity. But in the case of dead axles or other construction where they can be safely used, solid tires can be obtained to fit most sizes of pneumatic-tire rims.

"In conclusion, it is possible to find commercial uses for many pleasure cars of old models which are still mechanically good. They are most appropriate for very light work and conditions where speed is of greater importance than economy, but with judicious changes some of them can be adapted to heavier work with success, especially in cases where they must stand idle enough so interest on the investment would be relatively a more important item of cost. Common sense would dictate that care should be used to provide as light a body as possible, so as to reduce danger of overloading."

THE PRICE OF GASOLINE

Garage men make bitter complaint of the growth of roadside gasoline-stations where the price is cut several cents per gallon. Garage men for several years had been accustomed to look to gasoline sales for an important part of their profits. Their income from storing cars was inadequate. From that source alone their business would not "break even," but from sales of gasoline at from six to ten cents above curb-station prices they were able to meet their expenses and make a fair living. At first, owners of cars preferred to purchase gasoline at garages—at least when their cars were driven by chauffeurs, in order to avoid the waiting necessary when making purchases at roadside stations, but even this class of owner has more and more drifted away from the garage as his source of supply for gasoline. Hence it is believed that the time when a garage can make up its loss in storage business by charging a high price for gasoline is passing. *The Horseless Age* says on this subject:

"Competition in the sale of gasoline is springing up on all sides. Roadside gasoline-stations are multiplying. Any man with a capital of \$200 or \$300 can start such a stand, and he only needs to make a 'profit' of two or three cents per gallon in order to earn his day's wages. In many small towns there are hardware-stores, and even grocery-stores, which sell gasoline to motorists; and the latest competitor is the drug-store, which puts in a curb gasoline-pump to stimulate sales of soda and ice-cream while the tanks are being filled. Besides this, the Standard Oil Company's local stations will sell gasoline to car-owners who install storage-tanks, and many frugal car-owners do this for economy and convenience.

"The fact that gasoline can be purchased more cheaply elsewhere than at garages is bad for the garage business. Gasoline is the one most essential staple required by a motor-car, and no car-owner can escape making the comparison of gasoline prices. If he finds them higher at the garage

(Here's The Answer)

"What soup shall I have?"

That is the puzzling question!

Are you planning an elaborate function? Or is it one of those semi-formal "little" dinners or luncheons which help to make the social world go round?

In any case "*Campbell's Tomato Soup*" may well be the wise and easy answer.

Prepare it either as a light tomato-bouillon or as a rich cream-of-tomato; or serve it in bouillon-cups topped with whipped cream—for a specially attractive feature.

It is readily adapted to any meal, moderate or hearty. And its rich distinctive quality commends it to the most epicurean taste.

MORE ABOUT THE BELGIUM SITUATION

BELGIUM WAS the most thickly populated country in Europe, and its people, being of the manufacturing class, raised less than 40 per cent. of their own food. When war began on their soil, all production there practically ceased. Every business activity was paralyzed. The chimneys of great plants grew cold. Lanes of transportation were given over to war. Starvation became the only prospect, unless defended against by outside philanthropy.

Mr. Irvin N. Cobb, the daring newspaper correspondent, was given a welcome-home dinner in this city the other night, at which, says one report, after some lighter allusions, as he despatched one horror after another seen by him while with the German Army in Belgium, "gasps and even sobs took the place of the laughter." And "I tell you," Mr. Cobb declared, "every penny sent to help in that stricken territory is broad cast upon the waters. To give is the greatest honor and privilege you who are spared can have."

Queen Elizabeth, of Belgium in a cable, has said: "The food which your country is daily providing to our women and children comes like a ray of sunlight in the darkest hour of Belgium's history. The Belgian women have fought a brave fight." And American women who read *The Literary Digest* are generously helping them.

“In the name of the suffering women and children of Belgium I ask the women of America to help us,” is one sentence of an appeal by the Duchess of Vendôme, sister of the Belgian King.

"Largest Quality"

New York

than elsewhere, is it strange that he is easily persuaded that he can buy his tires, oil, and other supplies to better advantage through a mail-order or "cut-price" establishment? It is better for the garage not to drive away the gasoline trade, even tho it carries no profit. The oftener a man comes, the more he will buy, and few concerns can afford to acquire the reputation of being high-priced.

"So it seems like the best policy for the garage to meet the lowest local retail price for gasoline and rely on other lines to support the business and provide profits. It means that the garage man must study to stimulate his more profitable sales and to develop profitable lines. It is the same in the grocery-store—staples must be handled with little or no profit in order to retain the trade in the more profitable fancy lines of goods."

THE INCREASE IN MOTOR-BUSES

Not only in New York, where they have been in operation for two years or more, have motor-buses been growing in popularity leading to extensions of lines, but in the interior, and even the Far West. Recent statements as to earnings and surpluses in New York indicated a remarkable increase in travel in these comfortable conveyances. New York lines early in December added three new lines to those already in operation, one of them going as far north as the Viaduct on 155th Street. A writer in *Automobile Topics* says that in the Far West "motor-buses are being successfully operated in direct competition with street-cars." Some of these Western lines began with a single car which some enterprising person had bought at second-hand. The writer says:

"In one locality numbers of individuals have started relatively short 'nickel-a-trip' routes, gradually establishing what is practically scheduled service from small beginnings. So popular has this sort of service become that several operators now have a project for joining hands in a mutual free-transfer system.

"As has so often been pointed out, the automobile, in distinction from the street-railway car, possesses pliability that enables it to be adapted to the public need of the moment. Motor-buses always move with street traffic at its average or maximum speed, where street-cars are necessarily limited to speeds that usually are below average traffic speeds in congested districts. Motor-bus traffic, moreover, may follow, both in direction and carrying capacity, traffic volume more closely than can railway traffic.

"These facts are pretty generally realized, it would appear, by all persons except those whose capital is needed to finance new enterprises of the sort, or whose sanction is necessary to their establishment under proper franchise. The very great need of just that adaptability in passenger haulage that only the motor-bus enjoys, however, seems destined to force it to the front in due season, even without special organized inducement. Incidentally, where the touring-car type of bus already has gained possession of the streets, the taxicab problem is in a fair way to be solved."

TRUCKS THAT SAVE A BREWER THIRTEEN CENTS A BARREL

One of the largest brewers in New York is declared by *The Commercial Vehicle* to have effected through the use of motor-trucks a saving of thirteen cents per barrel in deliveries of beer. Trucks at this brewery have ousted horses, and a heavy increase in business during four years is attributed to some extent to the facility with which deliveries are made and ad-

ditional outlying territory reached. The writer says further:

"Previous to December, 1903, the company used horses exclusively in the delivery of beer, but in that month purchased two gasoline motor-trucks for service in delivering kegs to the outlying points. These two trucks were tried out until 1910, when six more were purchased. In 1911 the company opened its bottled-beer department, and for the service of this department purchased six electric and six gasoline trucks. These were tried out until July, 1912, when it was decided that the trucks were so much more efficient than horses that the twenty horses then in service were disposed of. Between that time and the end of 1913, fifty-nine other trucks were bought. The fleet now numbers seventy-three vehicles.

"Gasoline trucks are used for suburban delivery. The radius of delivery by these trucks extends as far north as Mt. Kisco and Peekskill, as far west as Bloomfield and Bernardsville, N. J., as far southwest as Keansburg, N. J., as far southeast as Babylon, Islip, Smithtown, and Patchogue on the south shore of Long Island and Huntington on the north shore, and as far northeast as Stamford, Conn. Peekskill and Islip are at a radius of approximately forty-two miles from the plant; Stamford, thirty-two miles; Bernardsville, thirty-one miles, and Keansburg, twenty miles.

"This area extends between these outlying points and a radius of fifteen miles from the plant. Deliveries are made in this territory every day, once or twice a week or once in two weeks, depending upon the amount of business done in the different cities and towns included in it.

"Previous to the adoption of trucks for the delivery of beer to the outlying suburban territory, all beer for these points was shipped by freight to the station nearest the place of business of the retail dealer. This method was very slow and costly and necessitated hauls to the freight-station at one end and from it at the other.

"The use of gasoline trucks for this work has proved cheaper and quicker than shipping by freight. Another important feature is the personal contact between the driver of the truck, the representative of the brewery, and the dealer which this method permits. Before the use of trucks such beer as was shipped to the outlying points was ordered by letter or by a verbal order to the brewery collector, who called once a week or once in two weeks, depending upon the accessibility of the place and the amount of beer purchased.

"In case the dealer happened to run short of beer, he would purchase additional stock from the nearest brewer and not wait for goods to be shipped from the city by freight. This has been entirely eliminated by the use of the trucks. Now, if a dealer sees that he will run short, he simply tells the driver that to-morrow he wants so many kegs or so many cases, as the case may be, and he gets them.

"This feeling of certainty on the part of the suburban dealer, that he can get the required amount of stock at the right time and delivered at his place of business without the necessity of having to haul it from the railroad freight-station in his town, has had a great deal to do with the securing of trade in the suburban districts.

"This trade consists both of keg beer and that in bottles. It is only in recent years that the bottled-beer trade has reached a large and paying proportion, and this has been due almost entirely to the use of motor-trucks. This is substantiated by statements by officials of the company, that since May, 1911, when the bottling department of the company was opened and the delivery equipment motorized, the total business of the company has increased by approximately 85,000 barrels per year, or 40 per cent. of the entire output of the concern."

CURRENT POETRY

ALL who write easily are tempted to write carelessly. Mr. Clinton Scollard has resisted this temptation; he has produced a large amount of verse, but he is, and always has been, a scrupulous artist. Therefore his "Poems," recently published by Houghton Mifflin Company, form a volume which those who have the interest of American letters at heart may regard with considerable satisfaction. The charming little books of verse which this poet has published from year to year have been gratefully received, but from none of them could his real worth be definitely determined. This collected edition contains what he considers the best of his works, and it can not fail to establish yet more firmly his already prominent position among the foremost writers of our time.

He has imagination, sympathy, and the power to combine words to make things rich in music and color. Here are four stanzas that hold the very soul of the Orient.

AS I CAME DOWN FROM LEBANON

BY CLINTON SCOLLARD

As I came down from Lebanon,
Came winding, wandering slowly down
Through mountain passes black and brown,
The cloudless day was well-nigh done.
The city, like an opal, set
In emerald, showed each minaret
Afire with radiant beams of sun,
And glistened orange, fig, and lime
Where song-birds made melodious chime.
As I came down from Lebanon.

As I came down from Lebanon,
Like lava in the dying glow,
Through olive-orchards far below
I saw the murmuring river run.
And 'neath the wall upon the sand
Swart sheiks from distant Samarkand,
With precious spices they had won,
Lay long and languidly in wait
Till they might pass the guarded gate.
As I came down from Lebanon.

As I came down from Lebanon,
I saw strange men from lands afar
In mosque and square and gay bazaar—
The Magi that the Moslem shun,
The grave Effendi from Stamboul
Who sherbet sipped in corners cool;
And, from the balconies o'errun
With roses, gleamed the eyes of those
Who dwell in still seraglios.
As I came down from Lebanon.

As I came down from Lebanon,
The flaming flower of daytime died,
And Night, arrayed as is a bride
Of some great king in garments spun
Of purple and the finest gold,
Outbloomed in glories manifold!
Until the moon above the dun
And darkening desert, void of shade,
Shone like a keen Damascus blade.
As I came down from Lebanon!

Here is a poem that will have a home in many an anthology and (what is more important) in many a scrap-book.

PROLOG

BY CLINTON SCOLLARD

I spoke a traveler on the road
Who smiled beneath his laden load.
"How play you such a blithesome part?"
"Comrade, I bear a singing heart!"

I questioned one whose path with pain
In the grim shadows long had lain,
'How face you thus life's thorny smart?"
"Comrade, I bear a singing heart!"

I hailed one whom adversity
Could not make bend the hardy knee,

Most punctures are unnecessary

Every experienced motorist knows that most punctures, so-called, are caused by faulty tubes rather than actual, accidental incision through the tire. Leakage around valves, porous rubber and worn spots are only a few of the unnecessary troubles common to cheap machine-made tubes.

The way to avoid needless punctures is to equip your car with tubes properly *made by hand out of real rubber*. *Kelly-Springfield Tubes* are made that way—and we make them slowly enough and in small enough quantity to *make them right*. If you are tired of needless tube trouble, try them.

Kelly-Springfield Tires are made the same way. You get the result in increased mileage.

Send for "Documents in Evidence" which tells the experience of others

Kelly-Springfield Tire Company
Cor. Broadway and Fifty-seventh Street, New York

STEER WARMS

Insure Warm Hands and Comfort on the Coldest of Winter Days

STEER WARMS consist of two electrically heated, leather covered grips that lace on the steering wheel. They keep your fingers and hands from becoming chilled on the rawest day—and that means you are warm all over.

They take only a minute to attach. Lace on; wire up. That's all. No marring the wheel. No holes to bore. A switch conveniently located regulates the heat. The current is taken from the battery, electric lighting system or magneto. Very little current required. *Steer Warsms guaranteed to give satisfaction and not to burn out within five years.*

PRICE: \$7.50 per pair complete, ready to attach to any car. Special STEER WARMS for Ford cars, \$5.00.

The IECO Electric Manifold Plug combines three separate devices into one. *First*, it is a primer and from the dash you can prime your car without raising the hood. *Second*, it is an electric vaporizer, which enables you to start your car almost instantly on the coldest winter day. *Third*, it is a gasoline saver when used as an auxiliary air valve, saving at least 20% to 30% of your gasoline expense.

Material and Workmanship are fully guaranteed. *Booklet upon request.*

DEALERS: Car owners everywhere want STEER WARMS and MANIFOLD PLUGS. Get your share of this business. We back you up with our positive guarantee. Write for our discounts.

Wm Traflog Co. 6541 Carnegie Ave. Cleveland, Ohio

"How such brave seeming? Tell the art!"
"Comrade, I bear a singing heart!"

Friend, best be thou if thou canst say
Upon the inevitable way
Whereto we fare, sans guide or chart—
"Comrade, I bear a singing heart!"

Many of our poets are so full of messages and interpretations that they never make love-songs. Yet such simple lyrics as those of Robert Burns are the sort of poetry that sings through the centuries. Not for many rimed studies of city streets would we exchange a bit of sheer beauty like this.

SERENADE

BY CLINTON SCOLLARD

Slumber has stilled the note
In the thrush's tender throat,
But the cheery cricket sings,
And the moth's dark wings
Flutter along the night
Through the pale moonlight:
Soft may thine eyelids meet!
Sleep on, oh, sweet!

Never a stir 'mid the stars
Of the jasmine at the bars
Of her casement, looking away
Toward the unborn day.
Mount, and an entrance win,
Steal in, my song, steal in!
Soft may thine eyelids meet!
Sleep on, oh, sweet!

Steal in, but breathe not above
The lowest whisper of love;
Hover around her there
In that holy air;
Gildle into her dreams, and be
A memory of me!
Soft may thine eyelids meet!
Sleep on, oh, sweet!

"Fra Angelico, and Other Poems" (Longmans, Green & Company) introduces to the American public Mr. Gregory Smith, a poet whose strong faith, like his fondness for Latinisms, suggests Francis Thompson. The first two stanzas of this poem are sonorous and stately. The third and fourth are somewhat obscure, but the concluding stanza is admirable.

A WESTERN WINDOW

BY GREGORY SMITH

I can not see his earliest ray
That darts from out the eastern haze;
I can not hear the loud acclaim
Of jubilation and of praise
That hails the monarch to his throne
Restored, to reign alone.

His pursuivants in purple clad,
Purple and gold, before his face
Step forward proudly, two and two,
To scatter odors and to chase
Foul shapes of darkness—this demery
I can not, where I lie.

And yet I know, the night is gone—
I see it in yon dappled sky.
I hear it whispered 'neath my eaves
By birds, as they twitter by;
New hopes within me surge and say,
'Tis come, another day.

In this dim day of doubt and fear
Say, art thou weary? For thou hast
Been feeding after tokens sure,
That Right is Victor at the last.
Oh, trust! The hidden from thine eye,
The sun is in the sky.

No need to thrust thy hand within
The Pile of Sides. Those visions blest,
They came, they go, but bidness
Abides forever. Here may rest
All hopes securely. See, the rock
Quails not at ocean's shock.

Was it not written, "God will not
Forsake the sinless soul in hell?"
Sin kills. But whoso sin is not,
In death's dark chambers all is well.
Be sure at last prevails the right—
Christ triumphs in the fight.

The simplicity of Mr. Sturge Moore is sometimes too deliberate to be convincing, and most of his poetry is "precious" rather than real. But he has taste, skill, and imagination. Without these gifts he could not write such pleasant lines as these, which we take from his new book, "The Sea Is Kind" (Houghton Mifflin Company).

WINGS

BY T. STURGE MOORE

That man who wishes not for wings
Must be the slave of care;
For birds that have them move so well
And softly through the air:
They venture far into the sky,
If not so far as thoughts or angels fly.

Feather from under feather springs,
All open like a fan,
Our eyes upon their beauty dwell
And marvel at the plan
By which things made for use so rare
Are powerful and delicate and fair.

When callow brood doth rest
Against a feathered mother's breast,
Beneath the shadow of her wings
None seem so close at home as they,
Nor is love felt a cooler way:
Their mother is their home! Lark sings
And lark may sing; but not so take
The heart by storm as hen can take
When, hawk in the sky,
She is brave for her fledgling's sake!
Swallow soars, and swallow may soar on high
To the top of the sky:
The eagle is strong, the ostrich fleet;
Let them glory in prowess. Ere
They learned to conquer air and space
With ease, velocity, and grace,
Lark, swallow, eagle, ostrich were
Dependent on devoted care:
Each once was snugly stowed away,
Yea, like a smooth stone there each lay
Egg speckled, bluish, white, or gray!

Mr. John Masefield is at his best when he leaves by-streets for the open sea and sings of ships and sailors. But sometimes, as in this poem from "Philip the King" (The Macmillan Company), he records a mood with a psychological accuracy almost uncanny.

WATCHING BY A SICK-BED

BY JOHN MASEFIELD

I heard the wind all day,
And what it was trying to say.
I heard the wind all night
Rave as it ran to fight.
After the wind the rain,
And then the wind again
Running across the hill
As it runs still.

And all day long the sea
Would not let the land be,
But all night heaped her sand
On to the land;
I saw her glimmer white
All through the night,
Tossing the horrid hair
Still tossing there.

And all day long the stone
Felt how the wind was blown,
And all night long the rock
Stood the sea's shock.
While, from the window, I
Looked out, and wondered why,
Why at such length
Such force should fight such strength.

What Springs Are on This Car?

Comfort is a big factor in the choice of a car.

The prospective buyer decides upon about the amount he wants to pay and examines the cars at that price.

He finds they all have mechanical efficiency and convenience of control, starting, lighting, etc.

The car that can offer the greatest comfort is the car that wins with the unprejudiced buyer.

When you are looking at cars, ask, "What springs are on this car?" The dealer will answer with pride and confidence if he can say—

DETROIT SPRINGS

He knows that you know about them and he knows that you want the springs that are

Guaranteed for TWO Years

Not to settle or break. Detroit Springs are self-lubricating and never squeak. Look for the lubricating cups at the end of each leaf.

Always ask, "What Springs Are on This Car?"

PERSONAL GLIMPSES

MAKING GANGSTERS INTO CITIZENS

A NUMBER of good people have given themselves emotional dyspepsia over the badness of the world. Some of these have developed into pessimists of the deepest dye, simply because they came to realize that the instincts of other people could not be wholly repressed. Busily stamping out one vice, they were confronted by others, which sprang up in the places of those just crushed. When they had lived to see this process repeated apparently *ad infinitum*, they took to despair and cultivated a grudge against a world so worldly that it would not be reformed by force, and against life so living that it would not change its nature at the dictates of good sense. Such people Walter Lippman mentions in his "A Preface to Politics." They are the ones who do not seem to have realized that there is another way of reforming, a method which does not disregard the fundamental cause of the evil in men, but which capitalizes it for good. They are the ones who do not realize that "instead of taboos, we must redirect them. Instead of trying to crush badness, we must turn the power behind it to good account," the assumption being "that every lust is capable of some civilized expression." Fortunately for us at the present time, not all of us have turned pessimists through observation of the perversity of mankind. Some have caught this new idea, that men are not, in the main, bad because they want to be bad, or were born bad, but because some two-edged impulse has been used to cut the wrong way. They have seen that the only reason man has used steel for swords was that he had not been taught sufficiently well its better use for building houses and making plowshares. An example of this new vision of old problems is given by the New York Press, in describing the work that has been done in one East Side Settlement House. Here the workers were confronted by the problem of the boy gangs, growing up to be gangs of rowdies, gunmen, and criminals. It might have been possible, with the aid of some two score policemen and accommodation in the Reformatory, to stamp out in a comparatively short time every single one of these crowds of boys, handed together in a common fealty and drawing their gang-spirit from that same loyalty that makes men patriots and heroes when it inspires more worthy deeds. But the Settlement, with a rather rare knowledge of human nature, saw that to crush the gangs was, also, to crush the gang spirit,—in other words, to punish boys for their loyalty. They chose rather to seize

upon the spirit that animated and inspired these little neighborhood desperadoes and turn it to their own uses. One of the foremost workers in this gang development, Miss Mary de Grey Trenholm, relates to the interviewer something of the work that has so far been done. "We have learned from the gangs themselves," she says, "the best way to interest these boys in our clubs." For many years repressive tactics had been tried, but the result was not equal to the measure of success that seemed possible. And so at last—

We made a study of the gangs and found that if the qualities the members showed in their gang life were turned in the right direction it would help in the solution of the problem.

What is a gang, and why? It is most assuredly a body of persons brought together to pursue some certain course, good or evil, tho it is generally evil. Every neighborhood has such a group. These boys meet to decide the questions of the rule of their district, just as men of state meet to decide upon the manner in which certain issues should be handled.

The boys, as they grow older, if unrestrained, turn to the vicious. Difficulties spring up among the factions of different neighborhoods; this leads to an enmity that is decidedly bad, and in many cases if the leader is of a vicious nature it ends in criminal deeds.

It is an impressive thing to see a fight between rival gangs. The two factions advance on each other. They have their outposts, their generals, and captains. It is a real battle and the boys of the rank and file are as loyal to their leaders, as quick to obey, as are the men of the Army. In that you have one of the finest qualities of human nature—loyalty. This is followed by honesty. Honesty to his gang, it may spell dishonesty to society in general, but it is sublime truth to the leader. Catch these boys at an early age when their minds may be turned to better things, and you have a splendid basis on which to build loyalty and truth.

In working with the boys of the gangs we have discovered, in the majority of cases, it is not physical prowess that makes for the selection of the leader. The mental ability, the power to dominate the minds of the other boys, generally cause the selection of the head, and those who think the gang leader is always a bully and the biggest tough of the lot are decidedly mistaken. In many instances we have found him to have the superior mind and inferior physical attributes.

In taking a gang of boys who have been used to street play and escapades of various sorts, it is certainly fatal to try to break their spirit. Reformation is not the word to be applied. It is rather development than that. To develop the best points in these young boys is to swamp gradually their less desirable qualities. To reform them, in the general acceptance of the word, is to preach the futility of lawbreaking, dwelling all the time on their evil qualities. As long as the baser metal is recognized, just so long do you keep that mind in a state of recognition of its existence.

It is impossible with a body of boys who have never known anything but street life to expect them to follow a virtuous mode of conduct at once. The boy must have oc-

In the Beginning

"IN the beginning" is where quality starts. Knowledge of fundamentals is essential to produce the best. The perfection of Stanweld Products—Rims, Tubing, Parts—is due to our thorough knowledge of the electric welding process. The first to use this method of welding in a practical and economical way, we have developed it to the highest point of perfection.

STANWELD RIMS

Stanweld Rims are made of the finest steel possible for the purpose. Each lot of steel is given both chemical and physical tests. The finished rims are carefully inspected and tested. When you buy a motor vehicle of any kind, insist on Stanweld Rims. It is a feature guaranteed free of charge to anyone.

STANWELD SEAMLESS STEEL TUBING

Stanweld Seamless Steel Tubing is used extensively in the manufacture of go-carts, bicycles, motorcycles, automobiles, and other articles of light steel construction. Furnished in straight lengths, or finished parts. It is the highest, strongest, steel tubing made, and takes an elegant finish.

Go There in a Detroit Electric

THE comfort and coziness of the Detroit Electric are doubly emphasized these cold and sleety mornings. Snug and safe from wind and weather, Mrs. Ware takes Mr. Ware to the office—and then goes about her shopping or other morning errands, independent of weather, street cars or chauffeurs.

The Wares "go there in a Detroit Electric" wherever "there" may be. Day or night, rain or shine the car is always ready, always available for pleasure or business uses. 98 per cent of all motoring trips are easily within range of a Detroit Electric—60 to 70 miles at a speed of 20 to 25 miles per hour. The

Detroit Electric

is the car for the whole family. The wife or the young people may drive it as well as the husband. That's why Detroit Electrics are more and more taking the place of touring cars which seldom tour and which only the husband can drive.

Detroit Electrics give more real service and they cost much less to operate. Records of charging costs for 1423 Detroit Electric cars kept in private garages show an average monthly cost of only \$6.22 per car.

The reasons why every third electric sold is a Detroit Electric are to be found in the excellence of the car itself—its larger battery and motor, giving 15 to 20 per cent more power; its silent, frictionless worm gear; its beautiful and durable aluminum body; its fine, comfort-giving upholstery and a score of other points of superiority.

Won't you look at the new models at our dealer's? "Go there in a Detroit Electric." He will send for you, if you'll just phone.

cupation, pleasure. Substitute the wholesome work and exercise for the harmful sort and you may make some headway, but hold up to these boys the fact that their gangs are infamous, deride their leader, and you undermine their loyalty in the first place and produce suspicion in their minds.

The first move that the settlement must make is, naturally enough, to catch the attention of the gang boys and their leaders, and this they find the most difficult of all. These young citizens of the streets are fancy-free, and used to finding in the El Dorado of the street all the excitement and vivid interest that their hungry young natures demand. To compete with these attractions puts the settlement on its mettle. No dull tracts or sermons will suffice here. Somehow, the boy must be led to enter the settlement house, and, once there, his interest must be held. Good intentions and a feverish desire to benefit mankind are not sufficient qualifications for those who must do this work. The street urchin is not the only human being who will shy off from the person who intends (usually grimly and with compressed lips) to "do him good." The good must be done him a good deal more subtly, and—

Men expert in the work of boys are needed for this. They become acquainted with members of the gangs in the neighborhood. They are not permitted to hold out a special service to the boy in exchange for his acceptance of our hospitality, but as it becomes known there are certain things in progress in the settlement house in which every live boy is interested, the little fellows come in. There is no doubt that the average boy would rather engage in athletic sports than sit swinging his feet on a pier planning some escapade.

We have had much difficulty in solving the problem of the gang boy in the settlement house, and the result has been the forming of clubs with a president or leader. There are two or three of our best workers among the men of the present time who were once gang boys.

Not so very long ago we formed a new club. The boy placed at the head of it gave up in despair. He declared the members were bad and that he could do nothing with them. It was about to be disbanded, when a boy in it came to the front. He called on me and told me he had been their leader when they were a gang. He declared they were not bad, but were not understood. He asked me if he might try his hand at the matter by being elected president of the club. I said he could, and he was elected president. This same club, under his leadership, is one of the most orderly and best bodies we now have. It seems the club members were dissatisfied because their old leader was no longer at their head. They respected him and deferred to his opinion, and if that is not loyalty I would like to know what it is.

Once this loyalty is turned in the right direction, many subsidiary problems solve themselves. Often it is the boys themselves, taught a new self-respect and sense of responsibility, who can best solve them, as in the following example:

At one time, during the rage for "tur-

key-trotting," we had a very serious time in the East Side house. A deputation of the boys and girls asked for the closing of the dancing-room; others asked that it be kept open. I frankly told them that it was not my hall but theirs. Also that I had always hoped that the boys and girls of the East Side house would dance properly and conduct themselves as ladies and gentlemen should, but that the matter was entirely in their hands, and they could settle it by voting on it. When the vote was taken, a majority asked for the closing of the hall, until the members of the house should decide to dance properly. Many of those who wished to keep it open voted for the closing. As a result, for several months there was no dancing. When it did begin again it was as well conducted as it should be.

One of the great principles we try to instill in the minds of these young men is respect for the girls. When a boy is a member of a street gang, he is thrown little in the society of nice girls, and seems to lose respect for them. The public dance-halls, places where girls and boys drink, are decidedly dangerous for them, and when the boys meet only such girls they do not respect them.

In this house, and in this work, the girls are a great factor, and the association of boys and girls is a thing that we promote. It is the most natural thing in the world that they should associate. Marriage is the right result. Respect for the girl is a thing that the boy must be taught. Our dances and entertainments bring them together in a healthy way, and as a result we have had many of our girls and boys marry. They now have their happy homes and families.

A LEGAL LIGHT ECLIPSED BY A BASEBALL STAR

NOWHERE in New York City at the present time can be found any office-door bearing the legend, "E. Trowbridge Collins, Attorney-at-Law." And yet events—the same events that have brought forth the peerless Eddie Collins, \$50,000 ball-player—once tended that way. John N. Wheeler, who writes a few reminiscences of Collins for the *New York Sun*, says that Eddie was once headed straight for the bar—the same Eddie who seems to have been predestined for the diamond, if any one ever was. But Fate, with more intelligent sympathy than most do give her credit for, stepped in and saved the country from a so-so lawyer, giving it a bang-up second baseman. Fate's right-hand man was an old and derelict but bright-eyed catcher, who knew a player when he saw one, and was not slow in getting him placed with his old manager, Connie Mack. Then was the legal light forever eclipsed. E. Trowbridge became Eddie for good and all. And yet to himself, perhaps, this opportunity did not come with really startling suddenness. It was for him only the outcome of a long devotion to baseball, beginning with the first real games of boy-

hood days. Of this devotion the writer carries the history back as far as high-school days, of which he says:

The first time that Eddie Collins was projected on my baseball screen was several years ago when he was a member of the Washington Irving preparatory school team of Tarrytown, and he came to play a game against a nine in Yonkers. Pitching for the Collins outfit was a player with a Latin strain and poor control, so poor that he worked E. Trowbridge all up until the latter picked up a brick and chased him from the park in anger and took up the pitching himself. The Washington Irving team lost that game.

"We would have won if it hadn't been for that crazy dago," said Eddie afterward.

My next flash at Collins was in Columbia University, where he made the varsity team in his freshman year without any trouble, and he played through the two following seasons. At the end of the third he was elected captain of the team for his senior year, and it was at this point that his career really began.

Coaching the Columbia team at that time was Billy Lauder, the former Giant third baseman, and Lauder introduced Collins to a friend of his, Billy Lush, who conducted a club in an outlaw league in northern New York. Collins was eager to make a little spending-money during the summer months and, preferring baseball to a trip to Europe on a cattle-ship, acting as nurse-maid to a cow or any of those other summer pursuits often taken up by college men, he agreed to play in Plattsburg, N. Y. Later he went to Rockville, Conn., where Connie Mack first heard of him through the good offices of an old catcher who was under some obligation to Connie, as are most of the sharp-eyed old ball-players throughout the country.

It might be well to pause here long enough to correct a statement which has floated around through baseball circles for some time and which is utterly unfounded as far as facts go. The story is that Collins applied to both McGraw and Griffith for a job when he was at Columbia and was turned down by the two New York managers, Griffith being the leader of the Yankees in those days. McGraw himself has said:

"I never heard of Collins until he was with Philadelphia. It's a wonder Lauder didn't tip me off."

After Mack had received the wireless flash from the catcher he arranged for a conference with Collins at the old Fifth Avenue Hotel in New York, where the two met for the first time one Sunday morning, Connie making the trip from Philadelphia for the purpose. Mack has said since that he was not much impressed by the slightly built and boyish-looking youth who confronted him and said his name was Collins. This first interview, as reported to me by Collins, was along these lines:

"How would you like to sign a contract with the Athletics?" asked Connie.

"I don't know," answered Collins. "I expect to go to law-school after I finish my college course, and I was only playing summer ball because I needed the money."

"Well," suggested Mack in his fatherly way, "my team is pretty well down in the race now, and we start on the final Western trip of the season within a few days. We haven't much chance to pull up this

year. You might join us and see how you like it. Perhaps I won't like you and maybe you won't care for the game. But try it; I'll give you a chance to play. Nobody but you and I need know it."

Eddie was elated over this lucky chance, and did not delay in joining the team in Philadelphia. For fear of recognition, he remained on the bench in that city, but once on the road he blossomed forth as Eddie Sullivan, and took his place with the others. It was indeed a lucky chance, that Western trip of the Athletics at the end of the 1906 season. Scarcely one veteran appeared on the field; the youngsters had it all their way. It was the big try-out for them. We are told that "Sullivan," strangely enough, and altho he was tried in various positions infield and out, did not reveal at that time a great deal of talent. Still, there must have been some traces evident—enough, anyway, to induce Connie Mack to exact a promise from the boy that he would come back to the Athletics when his college course was ended the following spring. Through a chance photograph that fell into the hands of the authorities, Eddie's lapse into professional ball was discovered, and he was forced to give up his connection with the college team. But with his prospects after graduation to console him, he did not greatly grieve. Of Collins as one sees him now, after seven years of it, the writer remarks:

Off the field he is quiet and unassuming, losing all the aggressiveness that he shows in a game. After he had been with the Athletics for a few years he married Miss Mabel Doane, of Philadelphia, and now there is a young big-leaguer named Paul running around Collins's home in Lansdowne, Pa., which is a suburb of Philadelphia.

His one winter sport is hunting, and he spends several months during the off season each year in the woods with his cronies of the big leagues. Before John Coombs was laid up he would hunt with him on his farm in Maine. Bunny Plank, the venerable side-winder of the Athletics, who recently joined the Federals, is a constant companion of Collins on his winter expeditions. The ball-player has always had a literary turn and he devotes much time in the winter to writing articles for the newspapers, at which game he is no amateur, for he sells them.

"How do you like the idea of going to Chicago?" I asked Collins last week.

"I hate to leave Mack," he answered, "for I realize what Connie has done for me. But I know that Mr. Comiskey is a great boss. He is one of the best liked men in baseball."

"Do you expect to manage the club, as it is reported you will?"

"I just want to be a player in the line now. Perhaps some day I would like to have charge of a team, but not yet. Of course I have ambitions."

Collins is a model ball-player, for he gives a manager no trouble. He takes wonderful care of himself all the time. He does not smoke at all and has the same tastes as Billy Sunday when it comes to beverages.

CADILLAC ENCLOSED CARS

The eight-cylinder motor gives to the Cadillac Enclosed Cars a smoothness of motion that is entirely new.

It accentuates and emphasizes the luxury and ease of riding which is so desirable in cars of this type.

Nor is this mechanical perfection the sole incentive to ownership.

For these cars are matchless specimens of the coach-builder's art.

Exteriorly they are handsomely proportioned and flawlessly finished.

The interiors are equally faultless, both in depth and softness of upholstery, and in the quiet richness of trimmings and appointments.

EXISTING, AS AN ART

AS to what most truly constitutes the "Art of Living" there has been, and doubtless will continue to be, endless discussion among those who have fared well enough in the world to be able to turn their thoughts to higher than mere material things. Here, for example, is one man's answer, drawn from the pages of *The New Republic*:

To collect a good deal of information, and to arrange it in my own way, and to judge it, and to be tranquil, and to have things simple rather than elaborate, and to sympathize with people and to discriminate between people, and to be kind to them when the opportunity comes, without hunting round for people to be kind to—that's about what I want.

Few will find fault with so sane and reasonable a theory as this. It might almost be taken as the typical and average notion of the true Art of Living among the enlightened. For that reason it is of interest to contrast it with the solution among the unenlightened of a problem slightly similar—*The Art of Existing*. Of the cultivation of this art one hears less than in the case of the other, but it is not any the less important for that reason. To fail to solve the problem of living means only ennui and discontent for the one who has failed; but to fail at the art of existing may entail a variety of things far more unpleasant. Some of these the New York State Factory Investigating Commission has unearthed in the course of a recent examination into the lives and histories of those who live on less than can strictly be said to support life. Part of a report submitted to the Commission reads as follows:

"How do they manage to do it? In what mysterious ways do girls stretch a less-than-a-living wage into a living one?" is the question which the public most often asks when it hears of girls living on \$5, \$6, and \$7 per week. Miss C. W., a department-store clerk, answers quickly: "When I have to pay for a pair of shoes or something like that, I don't buy meat for weeks at a time." "You see yourself the only thing that is left me to economize on is food," says another department-store clerk. "I never eat any breakfast at all. By experience I found that was the easiest meal to do without."

These and similar answers are given by the budgets gathered from working girls all over New York State. While the number of girls interviewed is not large enough for statistical conclusions, it is large enough to illumine the wage data already collected. About three hundred girls and women, living in the large cities all over the State, were interviewed and the account of their expenditures carefully tabulated. The fact most strikingly brought out by this study is that on less than a living wage, one or another item—essential to every normal person's budget—is reduced to a minimum or dropped entirely.

A little girl of twenty, who is getting \$1.50 a week in the millinery workroom of a large department store, laughingly

What Clarkson Is Doing for the Book Buyer

IN several hundred thousand Libraries in the homes of people in every walk of life—almost every book was bought of me. Why? Because I have no agents and sell you just the books you want—all new—many at a saving of from 50 to 60 per cent—you examine the books in your own home for 30 days before paying for them. If not satisfied return them at my expense—and owe me nothing. Write for my new catalog—It's free.

Sample Prices:

Wild Animals of North America, 9 vols., cloth, 1000 illustrations, publisher's price \$40—my price \$25.
Shakespeare, 40 vols., full leather, the Marston, largest type and best notes of any Shakespeare published, publisher's price \$100—my price \$55.
Library of Oratory, 15 vols., publisher's price \$15—my price \$4.75.
Memories and Papers of the Southern Confederacy, 2-4 Mowbray, publisher's price \$15—my price \$8.
Popular Garden Flowers, publisher's price \$3—my price \$2.
Girdling the Globe of J. Verne, publisher's price \$1—my price \$0.50.
Around the World, over 400 pages of ever-changing scenes of interest, publisher's price \$1.50—my price \$0.75.
Ensayes, Addresses and Speeches, publisher's price \$1—my price \$0.50.

Here are 500 Editions, new, bound, elegant paper, many of them at less than 25 cents on the dollar—Hugo's Complete Works, \$4.50—Kipling, \$1.50—Poe, \$0.50—and all other standard authors at similarly low prices.

Get My Big, New Catalog

My new catalog, sent free for the asking, tells you how to save 50 to 60 per cent on thousands of books. Every book new and fresh, and guaranteed to please 3000—yes to be the judge. I do not quibble, and would rather have a book or set of books returned at my expense than to have a dissatisfied customer.

Hernando DeSoto

An Epic Poem

By Walter Malone

It is confidently believed by many that this is one of the most noteworthy additions to American Literature. Its theme is sufficiently remote to give it the romantic glamor of the Renaissance, and yet, at the same time, it breathes the vigorous spirit of twentieth-century America.

650 Pages. Price \$3.00

PANAMA

AND WHAT IT MEANS

By John Foster Fraser

The only story covering every phase of every thing connected with the great Canal, from an Englishman's point of view. Beautifully and profusely illustrated.

"The men, the machinery, the accomplished work, will be sharply defined and real to him who reads the story."—*The Scientific American*, New York.

Large 12mo, cloth, \$1.75 net; by mail, \$1.85.

FUNK & WAGNALLS COMPANY, New York, N.Y.

said: "I buy my suits with my lunches. Usually, I have rolls and coffee for breakfast—that's ten cents; then a sandwich and a glass of milk—that's fifteen cents—for lunch; and then a real good twenty-five-cent treat for dinner. But, of course, when I have to pay for a suit or a hat or a pair of shoes it's different. Then I have one meal and perhaps two a day until the bill's paid."

Dependence on friends for occasional meals is regularly counted upon by a few girls who were frank enough to admit it. Quite often the "gentleman friend" is regularly counted on for help.

"Gee! but I feel sorry for the girls who haven't got a steady," said Miss H. A. "Why! if I had to buy all my meals I'd never get along." Her breakfasts and suppers she cooks in her small furnished room, her lunches she usually buys. When she knows that her friend is coming in the evening she eats only a sandwich and a cup of tea for supper and then lets his treat of an ice-cream soda or candy make up for the rest of her dinner. "Sunday dinner I always count on him for," she ingenuously admitted. "As it is now my food bill rarely runs above \$2."

Such instances at least throw light upon the acceptance of the doubtful invitation and make it easier to understand the free-and-easy attitude toward men of many working girls.

"A young girl couldn't live where I do," said Mrs. N., a young widow living in the questionable section of Buffalo, "but I'm married, so I feel safe." She has been clerking since her husband's death, two and a half years ago, at \$6 a week—renting a cheap little room in the lodging-house district of the city. It is not yet known as the real "red-light" district, but as Mrs. N. herself put it, "the lights are getting pinker every year."

Among the rest is the story of one "Miss T.," who failed finally to solve the problems of the art of existing and has had to pay the penalty of failure. For the best part of her life, however, through the period from twenty to thirty, in which to many women life seems most bounteous in its gifts, she staved off the decision fairly well, supplying a makeshift solution. This is her brief history:

Miss T. is a woman of about thirty-one who has spent most of her life as a clerk in a department store. For eight or nine years she worked in the children's department. She has a reputation as an exceptionally clever saleswoman. Often she would write the advertisements for her department, but after nine years of such services her wage was only \$8. She had a widowed mother living in the country to whom she had to send one or two dollars every week. This left her only \$6 or \$7 for her own expenses. She lived in the lodging-house section of Buffalo in a small attic room with only a skylight window for light and air. For this she paid \$2.50 a week. Her breakfasts and dinners she cooked herself. At night she would buy some cold ham and a can of tomatoes for her supper. These provisions she would make last for two or three days.

At noon she would buy a dish of beans for three cents and some bread for two cents. Hardly ever did she pay more than six cents or seven cents for her lunch.

Make Your Haulage a "Credit"

Federalized Transportation is showing on the "credit" side of the ledger with many of the largest concerns in business today.

In every instance, Federals have reduced haulage costs, saved time and increased the transportation facilities.

Federalized Transportation is more than just buying Federal Trucks—it means the intelligent application of Federal delivery, with all its advantages, to your own haulage problem by experts. This work is done by the Federal Transportation Engineering Department; a careful study is made of your own particular case and the most efficient and economical plan of handling your goods is put into effect.

This is in turn backed by the Federal Service in your own town, which insures you a use-service that is unequalled.

The fact that so many well-known houses in your own business have found Federalized Transportation the most efficient means of haulage is all the more reason for you to investigate it.

Write for the booklet—"Henry Ford and the Federal."

It Pays to Investigate

Westinghouse Electric Systems—Starting, Lighting and Ignition

WHY DO YOU suppose the Westinghouse Electric Systems—Starting, Lighting and Ignition—are so much more interesting to a man when he buys his second car than when he bought his first equipped with some other system?

It is because he has acquired his experience in the most expensive way possible, and for that reason the details of his machine are now of very vital interest to him.

There is nothing like former experience with dull lights and lagging power to make you appreciate the high efficiency of Westinghouse generators for lighting and ignition. The owner whose car was equipped with the Westinghouse systems has forgotten he had them, so perfect is the service. These machines are self-regulating and their windings are especially treated to prevent damage from water, oil, gasoline or heat.

Experience teaches a man to know and avoid the various devices used to cheapen the ordinary apparatus. It also teaches him to recognize every high-grade detail of the Westinghouse machine from fine ball bearings to its substantial self-spark-

regulating device, all good for years of satisfactory work without repairs.

Experience makes you appreciate the "economy of over-size" as proven by the Westinghouse Starting Motor.

This motor has all the power required and more strength than necessary. For those very reasons it takes less current from the batteries to perform its regular work and it can do extraordinary work without strain on either its own structure or its batteries.

You cannot find a more ruggedly built machine in its class and it cannot be damaged by oil, water or the heat of the engine.

Finally, experience induces you to insist on what you want when buying a car. You are the person to be satisfied with its service and must bear the expense of its upkeep. If you insist upon certain details from your own knowledge of what you should get from your car, you will find the better class of dealers in full sympathy with you and ready to meet you half way. Especially since both manufacturers and dealers recognize that such standards as those to which Westinghouse Electric adheres, make for the satisfaction of their customers and the stability of their business.

WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY
EAST PITTSBURGH, PENNA.

Quite often she went without any breakfast, because she had no money in her pocket-book.

The only vacation Miss T. allowed herself was the one week given by the store with pay to each employee. She could not afford to go to the country and have a real rest, so would sit in her little attic room trying to rest there. Every day she would visit the store, "just to see if any one had taken her job away." The strain of worry, combined with work and the lack of rest, has finally told upon her health, for she has broken down, and is now almost a complete nervous wreck.

A BATTLE IN A DREAM

A FEW days ago a correspondent of the *London Daily Mail* sent in the story of a young Belgian volunteer who had been through twenty days of the hardest kind of drill, ending in several hours of desperate fighting in muddy trenches on the Nieuport-Dixmude line of defense. When the engagement was quite over, they carried the young man to the field-hospital, without a single wound, but exhausted to the point of coma. His experiences, related when consciousness returned, and printed in American newspapers, have the strange quality of vivid unreality. Brief scenes are as clear as if etched by the simple language of the narrator, but scene follows scene shiftily, without sequence and frequently without reason. The story shows, on closer inspection, much of the familiar structure of a dream or nightmare. This aspect, remarks the *New York Times*, is assuredly the result of the physical condition of the young volunteer and the psychological effect of his fatigue upon his mental functions. According to the *Daily Mail* account, also published in *The Times*, the regiment to which the young man belonged had, like the "Light Brigade" suffered terribly from some one's blunder. Owing to some mistake at headquarters, possibly a clerical one, they had been asked to perform very nearly the impossible. The regiment, says the correspondent—

Was fifteen days and nights in the Antwerp trenches in countless engagements. It withdrew at dawn, hoping then to rest. It marched forty-five kilometers with shouldered rifles. In the next five days it marched nearly 200 kilometers until it reached the Nieuport and Dixmude line. By an error of judgment it got two days of drill and inspection in place of resting, then took its place in the front line on the Yser to face the most desperate of the German efforts.

Small wonder if one's perceptive faculties became benumbed, after three weeks of this sort of thing! Already in the thoughts of many of the soldiers the real and unreal must have become confused in the twilight of their unutterable weariness. This the volunteer's story evinces:

— was evacuated by the Germans, and we were sent in at nightfall. As soon as they saw our lights they began shelling

us. We lost terribly. A number of the men ran up the streets, but we got them together. I had about twenty and retired in order. We were 600 who went in, and must have left a third there.

In the morning we moved down to reinforce a network of trenches on our bank of the Yser. There was a farm on our right, and some of our men were firing at it, but the door opened and three officers in Belgian uniform came out shouting to us to cease fire, so we sent a detachment to the farm, and they were swept away by machine-gun fire from the windows. No, I don't know what happened afterward about the farm. I lost sight of it.

We got into the trenches. They lay longways behind a raised artificial bank on our side of the river. At the northern end of them were mazes of cross-trenches protecting them in case the Germans got across the bridge there and started to enfilade us. They were full of water. I was firing for six hours myself thigh-deep in muddy water.

The Germans got across the bridge. We could not show head or hand over our bank. German machine guns shot us from crevices in their raised bank across the river only a few yards away. I was hours and hours dragging our wounded out of the cross trenches at the northern end of the bank southward and behind a mound till there was no more room for them there, and bringing up new men singly and two or three at a time from further down the trenches to take their places. We lost our officers, but I got the men to listen to me.

Some Germans shelled us with a cross-fire. They got into the cross-trenches. They fired down our lines from the side. We had to run back. I was too tired and sleepy to drag my feet. I think I must have fallen asleep.

We had an order to advance again. The French were behind us on either wing in support. I was too tired to get up. Some one kicked me. I looked up. They were three of my friends, volunteers like myself. We had all joined together. They apologized and ran forward. They are all wounded now, but we are all still alive, and I never have been hit once in thirty-four fights.

I got up. So did a man lying on the field in front of me. He was shot through the head and fell back on me. I got up again. A shell burst beside me and I saw three men, who were running past, just disappear. I was lying on my face again, and could not lift my head, either through fear or sleep, I don't know which.

I found myself running forward again. I called to men lying and running near and held my revolver at them. We were all charging with bayonets, back at the Germans shooting us from our own trenches under the raised bank. They did not wait for us. They looked like frightened gray beetles as they scrambled up away over our bank and down into the river. It was dusk, but we shot at them over the bank. The water seemed full of them. We crouched in a big trench in muddy water behind the bank. No, we did not sleep, but my head and eyes seemed to go to sleep from time to time.

There were perhaps 200 left of our 600. I think there was one officer further along, but it was quite dark. Some of the men talked very low. Then I heard voices whispering and talking near us on the river-side of our bank. It was of earth, perhaps

ALL THE LIGHT ON THE ROAD

The first and only device that entirely eliminates the objectionable "glare" from electric headlights without decreasing the volume of the light.

Passed by the police departments in all large cities—recommended and used by motorists who want lots of light on country roads.

The Hick-Myer Deflector for automobile headlights (patented) overcomes the "glare" by throwing the light rays far and low ahead of the car and not over 4 ft. above the level of the road.

NO BUTTONS TO PUSH—NO KNOBS TO TURN—NO ADJUSTMENTS

The Deflector springs into place around the light bulb and requires no further attention. Takes the place of a dimmer—lasts as long as the car.

Price \$2 per set, delivered. See them at the New York and Chicago Automobile Shows.

Made only by

THE HICK-MYER DEFLECTOR CO.

Used on Overland, Regal, Reis, King, Westcott, Jeffery, Dodge, Hudson, Little Six, Hupmobile, Studebaker, Chalmers, Mitchell and all other cars using Kelsey and Stanweld No. 20, No. 21 and No. 22 Rims.

Use a Hick-Myer Rim Tool and your troubles are over.

Saves sight. Will save 25% on tire cost. Endorsed by the leading tire manufacturers. Buy of your dealer, or sent prepaid upon receipt of \$2.50.

THE TOLEDO AUTO TOOL CO. 41 Summit Street Toledo, Ohio

five feet high and six feet thick. On the other side the slope fell steeply to the river.

I sent a hush along the line. We listened quite silent. I thought I heard German words, an order passed along on the other side. I crawled up on to the bank, not showing my head, you know. It was really about 300 Germans who had stayed there on our side under the bank, fearing to cross the river under our fire. So we stayed all through the night. We did not sleep nor did they.

There was just six feet of piled wet earth between us. We only whispered and could hear them muttering and the sound of their belts creaking and of water-bottles being opened.

There was a thick gray mist hanging low in the morning. I crawled on to the bank again, holding my revolver outstretched. A gray figure stood up in the mist below, close to me. He looked like a British soldier in khaki. He said: "It's all right, we are English," and I said, "But your accent isn't," and I shot him through with my revolver. Some of our men crept to the bank, but they shot them, and some of theirs climbed over, but we fired at their heads or arms as they showed only a few feet away, and they fell backward or on to us or lay hanging on the bank. Then we all waited.

As it grew lighter they did not dare move away, and none of us could get out alive over the bank to use the bayonet. A few men made holes in the looser earth, and so we fired at each other through the bank here and there. Our guns could not help us, and theirs could not shoot across, for we were all together, and yet we could not get at each other. Some of the men—theirs and ours—got over lower down, so there was firing now and then, and two men were killed near me, sliding down into the water in the trenches.

Somebody threw a cartridge-case across close to me. On a paper inside was scrawled one word, "Surrender!" We did not know if they wanted to surrender themselves or wanted us to surrender. They were more numerous, but we were better placed, so we went on scrapping and crawling round to get a shot at them.

Perhaps it was the French who got round at the ends. There was heavy firing. We heard quite close through the raised bank a few slipping down on the river edge and water splashing. Some of us pulled ourselves up on to the bank. I heard our men scrambling up on either side of me, but could not see them. I think I was too sleepy. I shouted to charge, and then must have fallen over on my head, rolling down the bank.

And so the waking nightmare ceased and deep sleep followed. Doubtless all that he tells is quite true—at least, as it appeared to him as he told it—and yet, as *The Times* points out, one might almost better say that he dreamed these things than that he lived them. It adds:

Nobody at all familiar with the newer works on psychology, especially those written by the followers, more or less thoroughgoing, of the great Freud, could have read the story of this young Belgian's experiences in the trenches along the Yser without noting the peculiarly dreamlike quality that characterized the narrative.

Now, dreams, in ancient times the object of attentive study and ingenious

interpretation as of prophetic significance, have for several hundred years and until the other day been almost excluded from scientific notice. This was because only the densely ignorant or wildly superstitious could longer credit them with telling anything about the future. The possibility that they might be full of meaning as to the dreamer's past and present had not been realized. Recent investigation has disclosed, not the possibility, but the certainty, that from dreams much can be learned in regard to experiences and conditions, and the modern psychologist is an oneiromantist, just as were those long-bearded sages who in days remote stood on the steps of thrones and talked solemn nonsense for the encouragement or warning of equally solemn kings.

But the new readers of dreams do not talk nonsense. Instead, they draw sound deductions from the unveiling of the subconscious which dreams effect, and are able practically to demonstrate that no human being ever forgets anything, and least of all the things that he wants to forget.

The young Belgian, when he told his story, had been reduced, by weariness and hardship, by the prolonged threat of death, instant and violent, by the necessity for continued exertion after all ordinary physical and mental resources had been exhausted, to a state in which his response to impressions and stimuli was strangely like that of dreaming, and what he said, or rather the manner of his saying it, was replete with evidences of his condition. There was in it all the incoherence of dreams, the queer instantaneous shifting of scenes that marks them, and the usual absence of the sense of relative values. He accepted whatever came without horror, protest, or even surprise, and he has not a word of pity to utter either for himself or for the companions who fell around him.

This sort of memory of events the *Columbia State* characterizes as the record of a human phonograph—a history impressed indelibly upon a mind unconscious of any effort of perception. Only through such accounts, it is claimed, may we learn to picture for ourselves something of the reality of war as it is being fought on the other side of the world. There are an accuracy and vividness about these phonographic accounts that the greatest correspondent can not duplicate. We read:

Where a stronger man speaks of the bloodiest battle almost in monosyllables, these whose minds have been crushed by war yield to suggestion to the making of a wonderful mosaic of narrative. Whipt with horror till they are faint with it, they sketch experiences as they were seared upon their brains. Almost like a phonograph, they give up the records of their impressions in words that put to shame the most ambitious efforts at description of trained writers. Without connection, in a disjointed series of separate mental pictures, they are able to put the reality of war into speech. Beaten into the dream state, they make the true record, the record that is untinged with pity, that is free from terror, that is unspoiled by effort at exaggeration or impulse to egotism. . . .

It is yet too early, of course, to begin to look for anything of real literary value from the dizzying vortex of the great conflict; but when the great story shall be

A TOTALLY NEW WINTON SIX

AT A NEW PRICE—\$2285

Excelling quality—never before produced except in the biggest and most costly cars—is now, *for the first time*, obtainable in a car “not quite so big”—and at a price hitherto impossible:—the New-Size Winton Six, at \$2285.

This car gives you everything that makes an automobile high-grade, good to look at, delightful to use, and creditable to own—even to that final note of quality, your own personally selected color scheme.

Here are Some of its Major Features:

Motor—Famous Winton Six-Cylinder I-head motor. Bore, 3 1/4 inches. Stroke, 5 1/2 inches. Unit power plant, completely housed.

Wheel Base—128 inches, eight inches shorter than the Model 21 Winton Six.

Electric Features—Bijur starting and lighting. Bosch ignition.

Clutch—Five-pair dry-plate.

Transmission—Selective sliding gears; four speeds ahead and one reverse. Direct on third.

Steering—Left drive, with center control.

Springs—Chrome vanadium. Semi-elliptical front. Three-quarter elliptical rear. Rear springs underslung. Dann oil-cushionized inserts in all springs.

Wheels—Wood or wire at purchaser's option.

Tires and Rims—36 x 4 1/2 inch tires on all wheels. Non-skid rear tires. Firestone demountable rims.

Equipment—One-man top, silk mohair. Jiffy curtains. Power-driven tire pump. Plate-glass wind shield; both sections adjustable; upper for rain vision, lower for ventilation. Warner speedometer. Clock. Klaxon horn.

Body—The American Beauty type, a creation that makes this a genuine *pleasure* car. Especially graceful in design, and the last word in comfort. Divided front seats without extra charge, if you desire them. Spacious doors on concealed hinges. Finest of coach leather. Information upon request about roadster, coupe, limousine, and other bodies.

Colors—To avoid the monotony of cars that lack distinction and individuality, we permit the widest range of color schemes on this car. Each buyer may have his car finished to suit his individual taste. Metal parts trimmed in nickel.

Service—Buyers of this car will be entitled to the same thorough gratuitous service that is extended to buyers of the Model 21 Winton Six. That means continuous satisfaction.

Price—This car, which we term the Model 21A, sells at \$2285, f.o.b. Cleveland.

Our catalog tells the facts fully and briefly

77 Berea Road, Cleveland, O.

The Motor-Truck at the Battle Front Has Met Its Supreme Test

When the European conflict has ended, when the methods of the contending armies are viewed in correct perspective, when history is written with just balance, one fact will remain certain: Army transport has been revolutionized by the motor-vehicle.

ALREADY so many new and remarkable feats have been accomplished by self-propelled vehicles in the movement of men, supplies, and guns that an entire reorganization of military transportation will date from the European Armageddon. The motor-vehicle has become a supreme necessity.

This war has put the motor-truck to its severest test. Under the most adverse conditions of operation it has made good in rushing entire corps to the front, assisting in successful retreats, bringing back the wounded, carrying all forms of transport, providing armored engines of attack, besides many other items of service.

Each of the contending armies is placing great reliance upon the motor-truck.

In the German Army the motor-truck has accomplished wonderful results. A field representative of *Motor Age* thus sums up some of the achievements of the German trucks:

"The German advance through Belgium on to the northeast provinces of France was one of the quickest movements ever executed in military history, being of tremendous extent in line and face to face all the while with an active and sheltered enemy. What was the principal agent in the German advance? What enabled that huge arm pivoted in Luxemburg to sweep with massive vigor against northeast France and crash toward Paris? What kept the regiment of that arm united? The motor-vehicle."

Photographs of German Army operations show many caterpillar tractors handling big guns, ammunition, supplies, and the like. It is estimated that the German Army is equipped with 75,000 motor-vehicles.

How a fleet of American cars, converted into light trucks by the installation of military bodies, saved the Belgian Army from destruction in its evacuation of Antwerp is described by a field correspondent of *The Automobile*:

"These cars practically made possible the successful withdrawal of the Belgian troops from beleaguered Antwerp when it was believed that the entire army would be taken upon the fall of the city. They were used continuously during the retreat from the city, making trip after trip with loads of men, provisions, and ammunition between the city and first line of the allied troops."

King Albert's army has lost most of its horses, and its mainstay now is the motor-vehicle.

The British forces have found the automobile and the motor-truck indispensable. All of the London buses are doing yeoman work at the battle-front. A visitor reports seeing more than a mile of motor-lorries near the headquarters of Sir John French. The British planned to use trucks for transport from railhead to points two miles behind the lines, then to reload upon horse-drawn equipment. They have abandoned these plans. The trucks move right up to

the firing-lines. The results are described by military authorities as amazing. Two hundred motor-buses and "observations" with 1,000 touring-cars made it possible at one time to move 8,000 men at twenty-five miles per hour. England's shortage of horses has caused the motor-trucks to be of vital importance.

General Joffre quickly saw the value of the truck. Food for 750,000 men is carried daily by 250 Paris busses. Each bus carries daily 4,000 pounds of fresh meat. Paris postal-vans carry mails and parcel-post packages to and from the long lines. In France motor-trucks have done better transportation work than the railways. G. B. Warner, purchasing agent for the French and British Governments, in an interview in the *New York Times* the other day said:

"The first time an extraordinary use was made of the service was when General Gallieni made his famous sorties from Paris with the garrison and fell upon Von Kluck all unexpectedly to that commander and at the same time to General Joffre himself."

"Gallieni had 4,000 taxicabs and small automobiles at his disposal. It was just before the battle of the Marne. Von Kluck had got as far as Chantilly. Gallieni had 70,000 men in Paris that he thought could do effective work at the front. Acting upon his own responsibility entirely—you know he was responsible for the defense of Paris—he loaded his men into the taxicabs and automobiles, and within six hours he had transported the whole of the 70,000 to Meaux, a distance of about thirty-five miles. It was this unexpected reinforcement of the French Army that drove Von Kluck still farther to the northeast."

"On several occasions since then the automobile transport service has been used in the moving of large bodies of troops all along the line. One of the biggest feats was the transfer of the entire British Army stationed at Brasseur, between Soissons and Reims—more than 200,000 of them—to Saint-Omer, a distance of about 170 miles, which was accomplished within three days."

Statistics relative to the use of motor-trucks in the Russian Army are inaccurate, but it is known that the forces of the Czar are well equipped with self-propelled vehicles and that the present number is being rapidly augmented.

In the western field of operations the armored truck, "a moving fortress of impregnable steel traveling at a speed that man or horse cannot equal," is an important factor.

It is estimated that in the five leading armies there are to-day 250,000 motor-vehicles, of which about 100,000 are trucks. But the differentiation between trucks and cars is difficult to make because thousands of passenger-cars are fitted with military bodies, and those with ordinary touring tonneaus are doing the work of trucks.

The great battle-fields have been strewn with dead horses. As this great wastage

goes on the truck will become more and more indispensable. The scarcity of horses is rapidly increasing prices.

"In the commercial field," says an expert writer, "where horses were formerly used, they will be followed by trucks. The close of the war will be the truck-maker's opportunity."

Day and night the motor-truck is meeting the transportation needs of five great armies. A writer who visited the western battle-lines says:

"I have seen trucks speckled all over by shrapnel without having their running qualities in the least affected. Compared with a horse, the modern motor is a very small target, and unless a bullet strikes the cylinders or goes through the radiator the vehicle is not likely to be incapacitated."

"The advantages of mechanical over animal traction in the commissariat department are amplified in the artillery service. The future points to guns without horses, for a four-wheel drive tractor can do all, if not more, than a team of horses; it is not so vulnerable and it can be more rapidly replaced. It has been conclusively proved that horses are not necessary, indeed that they are prejudicial to the best work of an army service corps in the field."

In times of peace, in commercial transportation, the truck has proved its efficiency. In the supreme test of endurance in the world's greatest war the truck has received its supreme test and emerged with unqualified success.

It should be a source of pride that American trucks have made such splendid records in the various armies. In a recent competitive trial conducted by the British Government, twenty-eight trucks of three tons capacity and over participated.

"Of these," says the *New York Times*, "eight were of American build. The run was a very difficult one, including steep grades, wet and dry roads, and broken roads, and each contestant was handed a carefully weighed out quantity of gasoline and oil before starting."

"Every one of the American trucks finished in good condition, having fulfilled all requirements of the conditions laid down by the War Department officials. Many of the foreign-built trucks were never heard of after they started out."

It did not require a great war to prove the motor-truck's efficiency. The war has shown this efficiency, however, in spectacular fashion.

If in your business you could use a motor-truck and desire information, send us a detailed statement of your transportation, and we shall be glad to put you in touch with traffic experts qualified to give you reliable data.

Motor-Truck Department,

The Literary Digest

How Many Hides Has a Cow?

Sole leather is not adapted to soft, tufted upholstery of automobiles and furniture.

Hides must be split into thin sheets to produce upholstery leather.

What happens to the lower, fleshy, grainless portion? It is split in two and each sheet is coated, embossed, and sold as "genuine leather." What you have believed was leather is, on practically all low and medium priced autos, furniture and buggies, nothing but "coated splits." That is why so much "leather" upholstery cracks, rots and peels so quickly.

REG. U. S. PAT. OFF.

Is Guaranteed Superior to Coated Splits

It is intended for upholstery receiving hard usage. It averages twice the tensile strength of coated splits, is water-proof, and perfectly parallels the appearance and "feel" of the best quality of grain leather.

MOTOR QUALITY
For Automobiles
CRAFTSMAN QUALITY
For Furniture

For two years several leading makers of automobiles have been upholstering their cars with it, and are entirely satisfied. Many other makers await public knowledge and consent to discard coated splits for superior Fabrikoid.

written by the genius with the power of selection, he will look no doubt by his basic facts to the tales told by these broken men from the trenches, speaking from the daze and haze of suffering, yet bringing out on the waxwork of their brains the fine tracery of the crushing blows, the inhuman bellowings of modern battle.

THE FIRST TOMMY ATKINS

A CORRESPONDENT of the London *Times*, we are told, recently wrote to that paper in great indignation over the prevalence of the title "Tommy Atkins." To him it held the value of an undignified sobriquet, and he objected to its use as the characterization of men who were dying for their country. The respect of this patriot for the British private was laudable, but he was sadly mistaken as to the quality of the private's *nom de guerre*. There are several stories accounting for the origin of the name, but all of them agree on the one point, that the original Tommy was all that England could expect of any of her subjects. A Richmond *News Leader* editor thumbs the pages of Brewer's "Handbook of Literary Curiosities" and other authorities and informs us that

According to these, the term arose from the little pocket ledgers at one time served out to all British soldiers, in which were to be entered the name, the age, the date of enlistment, the length of service, the wounds and the medals, and so on, of each

individual. The War-Office sent with each of these little books a form for filling it in, and the hypothetical name selected, instead of John Doe and Richard Roe, as with lawyers, was "Tommy Atkins." The books immediately came to be so called, and it did not require long to transfer the name from the book to the soldier.

But why was "Tommy Atkins" selected?

Another correspondent of *The Times*, in taking issue with the uniformed protestant, explains that behind the little book and selection is a story of fine heroism and devotion to soldierly duty. He says:

"Many will remember why our soldiers received this name in the first instance. How, in 1857, when the rebellion broke out in Lucknow, all the Europeans fled to the residency. On their way they came upon a private of the Thirty-second Regiment (Duke of Cornwall's light infantry) on sentry at an outpost. They urged him to make his escape with them, but he would not do so and was killed. His name happened to be Thomas Atkins, and so, throughout the mutiny campaign, when a daring deed was done the doer was said to be 'a regular Tommy Atkins.'"

This background to the usage relieves it of any flippancy, offensiveness, or reason for inspiring resentment, and makes "Tommy Atkins" a designation to be proud of.

A Slander.—Satan was furious.

"I'm going to sue General Sherman for libel," he thundered. "Hell may be hell, but it isn't modern war by any means."

Thus we see that there is a limit even to epigrams.—*Philadelphia Ledger*.

\$1,500,000 First Mortgage 6% Serial Gold Bonds of the NORTHWESTERN IRON COMPANY Mayville, Wisconsin

Dated October 1, 1914. Coupon bonds of \$1,000, \$500 and \$100. Maturing in Series from October 1, 1915, to October 1, 1934. Wisconsin Trust Company, Milwaukee, Trustee.

These bonds are secured by a closed first mortgage on all the property of the Company, including its iron ore mine, two modern blast furnaces, by-product coke plant, etc., at Mayville, Wisconsin, together with 1,243 acres of valuable land containing over 10,000,000 tons of iron ore. We strongly recommend these bonds on account of these facts:

First: The Company has had sixty years successful operation.

Second: The value of the security is over four times the entire loan.

Third: The iron ore deposits alone would bring an amount in excess of the bonded debt.

Fourth: The mortgage provides for a sinking fund of 25c per ton on all iron ore mined.

Fifth: The strategic location of the property, coupled with cheap ore, enables the Company to practically defy competition.

Sixth: The stockholders have \$3,000,000 in cash invested behind the bonds.

Seventh: The ownership is in unusually strong and experienced hands.

We offer these bonds subject to prior sale at par and accrued interest to net 6%.

Circular No. S68 R contains full information and photograph of this valuable property.

AMERICAN STOCKS HELD IN EUROPE

WITH the opening on December 15 of the New York Stock Exchange for sales of all kinds of listed securities (stocks as well as bonds), much interest was felt in the degree to which European holders of our securities would send them here for sale. Fear that a considerable volume of securities might be sent over was a potent influence in delaying the opening of the Exchange. During the first few days after the opening, there was undoubtedly a considerable selling from Europe. Some observers thought this accounted for the slump in prices that occurred on the third day, but others maintained that the slump was a natural reaction from the strong upward swing that occurred at the start. What the future might develop, no one attempted to foretell, altho a feeling of confidence existed that European sales would not in any case be sufficient to demoralize the market. The stocks from which most was feared are Union Pacific, Southern Pacific, and United States Steel. The holdings in Europe of other well-known railway stocks are given as follows by *The Wall Street Journal*:

	Stock Outlets	Stock Held in Europe	P. C.
Pennsylvania	\$44,265,700	\$74,490,442	14.90
Southern Railway	180,000,000	62,852,400	34.90
Great Northern	20,000,000	38,127,500	19.07
Kansas City Southern	51,000,000	22,205,500	43.50
New York Central	225,581,000	21,212,900	9.40
St. Paul	233,130,000	17,185,400	7.30
Rock Island Co.	140,835,000	59,947,700	42.50
Atchafalpa	309,985,000	58,910,000	19.00

BANK TRANSACTIONS VERSUS BANK CLEARINGS

A new measure of trade volume—something better than bank clearings—is presented by the *New York Times Annalist* in an article which sets forth the superior value of total bank transactions. Only about 40 per cent. of the actual business of a bank is represented in clearings. *The Annalist* has compiled a chart in which on one line are shown fluctuations

in clearings, and on another those in the total transactions of banks. Elsewhere on this page will be found a reproduction of this chart. By the term "total bank transactions" is meant all debits against deposits in each institution represented in the clearing-house. Much more comprehensive than clearings are these total transactions, and hence more valuable as a gauge of business. They are more sensitive to business changes, since they include returns that are lacking in clearings but which are highly important, such as the money drawn by employers in cash in order to meet pay-rolls. As an example of the failure of clearing-house returns to reflect actual conditions, the writer says that at the time of the great Cincinnati flood clearings showed comparatively few changes, while total transactions "sharply reflected the pay-roll money drawn from banks and the general business depression that ensued."

FARM MORTGAGES AND REAL-ESTATE BONDS

James J. Hill's familiar remark after the war began, that "the largest single industry in the United States is tilling the soil, and this will suffer least of all," has led James Merriam in *Maudsley's Magazine* to point out in some detail the reasons why investors should be attracted to farm mortgages, since they represent "the most prosperous business done in the United States." He asserts that there has never been a time when the truth of Mr. Hill's statement stood out more than at present when the farm mortgage is "the very heart and center of the market for the less active securities." Conservative investors in increasing numbers are turning to farm mortgages, since they give "the highest interest consistent with safety in periods of financial uncertainty." Following are interesting points in Mr. Merriam's paper:

"Preliminary estimates of production of the principal crops in 1914 made by the Bureau of Statistics at Washington com-

BANK TRANSACTIONS AND BANK CLEARINGS COMPARED

pare thus with the figures for the two previous years:

	1911	1912	1913
Corn.....	2,705,600,000	2,446,988,000	3,124,474,000
Wheat.....	891,950,000	763,180,000	1,000,000,000
Oats.....	1,139,741,000	1,121,768,000	1,318,117,000
Barley.....	196,563,000	178,189,000	225,881,000
Rye.....	42,664,000	41,381,000	51,684,000
Buckwheat.....	17,025,000	15,887,000	19,241,000
Potatoes.....	406,288,000	331,525,000	421,847,000
Hay (tons).....	63,604,000	64,116,000	71,991,000
Tobacco.....	902,715,000	963,734,000	962,885,000
Flaxseed.....	15,973,000	17,551,000	28,073,000

"Consider along with these figures the following statistics of farm prices as of November 1, and you get a pretty accurate indication of the extent to which the farmer has actually been helped by the war, or, as Mr. Hill says, 'not hurt': Wheat, 96.2 cents per bushel, compared with 77 cents last year. Oats, 42.5 cents, compared with 37.9 cents last year. Barley, 51.3 cents, compared with 54.7 cents last year. Rye, 80.6 cents, compared with 63.3 cents last year. Buckwheat, 78.1 cents, compared with 75.5 cents last year.

"Or you may have the personal testimony of the farmer himself, as in the following quoted recently by a correspondent whose business it is to keep tabs on conditions in the Middle West:

"The stock on my farm," said one in reply to a question as to how he could afford to have a motor-car and send his children to college, "has increased in value over a thousand dollars in the past four months. My wheat has increased in value two thousand dollars—and I have done nothing except to wait. It is the kind of 'watchful waiting' I like, and if the war keeps on, as it seems that it will, I will be in better condition next spring than I have been in ten years."

"Prosperity does not lessen the farmer's legitimate borrowing-demand. He is continually in need of additional land, and he is continually under the expense of adopting new and businesslike methods of agriculture. For the satisfaction of this demand he has heretofore been dependent largely upon the insurance companies as buyers of his mortgages—to what extent one may gather roughly from figures published not long since, showing loans of such institutions in Missouri, nearly \$51,000,000; Kansas, nearly \$54,000,000; in Iowa, about \$100,000,000; in Nebraska, \$70,000,000, and in Oklahoma, \$32,000,000.

"But he is finding the supply of new capital from these sources materially curtailed at the present time, due to the fact that the various companies are looking forward to possible large policy payments to result from their European business, as well as the fact that the depression in business generally has confronted them with largely increased demands for policy loans. From several sections of the country come reports that most of the companies loaning there have notified their agents not to renew maturing loans on farms, provided they are able to place them elsewhere. The significance of this situation is that it spells opportunity for the private investor to obtain with more than the customary facility the particular grade of farm loans, with which the most scientific investors in the world have had such extraordinary experience for more than a generation."

That the business of selling real-estate bonds is "more highly developed in Chicago than in almost any other city" was recently asserted by *The Tribune* of that city. While individual mortgages are sold to investors in all parts of the world, the plan of issuing a large number of bonds in denominations of from \$100 to \$1,000, the same being secured by mortgages on real estate, is carried out only in large business centers, "and in this field Chicago excels." The writer says in detail:

"Several large houses have specialized in this branch for years, have developed

"I Have Money to Invest"

"My problem is: What is the most convenient investment, which will

- return me my money in the year when I will require it,
- be absolutely safe, and
- pay me 6% interest, regularly and punctually?"

This is the mental attitude of tens of thousands of persons at this time of year. The funds available may be \$100,000 or only \$100, but the problem is the same.

Safe 6% January Investments

If you yourself have any sum available for January investment, large or small, you owe it to your own good to investigate carefully the merits of the First Mortgage 6% serial bonds we own and offer. War conditions have only served to emphasize their complete stability and their safety, demonstrated by the fact that no investor has ever suffered loss of either principal or interest on any security purchased of this House, founded 33 years ago. These bonds are in convenient denominations, \$100, \$500 and \$1,000.

Our service to investors is complete, thorough and satisfactory. If you wish valuable literature that will help you solve your own particular investment problem, write for the Straus Investors' Magazine and for

Scientific Farming in the South

There are no more substantial improvements on any farm than those on the Mississippi farm shown above. Agricultural Colleges and High Schools in Mississippi and Louisiana are busy encouraging the farmers to diversify crops, build silos and breed cattle and hogs. These are legitimate purposes for which progressive farmers are entitled to secure capital by mortgages on their farms. Leading Life Insurance Companies buy these mortgages from us and you can also invest in them safely and profitably.

Write for our Illustrated Booklet describing and illustrating the South of today. It shows how we guarantee prompt payment of your interest and principal. These mortgages can be obtained in any amount from \$100 up to net you 6% on your investment. **YOUR SAFETY FIRST** is our business—let us tell you about it.

A Beautiful NEW Book of Intense Interest

Opening up a startling line of Valuable Facts concerning THE GREAT SOUTH AMERICAN TRADE OPPORTUNITY

THE AMAZING ARGENTINE

By JOHN FOSTER FRASER

The New York Independent says about this book:

"Almost the only good thing we can see about the war is the opportunity it brings for the expansion of American commerce into the inviting fields to the south. But the chief obstacle is that we do not know these countries; we have not even learned the A B C's. Let us begin, then, with *The Amazing Argentine*, for John Foster Fraser is a geographic journalist by profession and is able to play up statistics as they stand out like an electric signboard. We get a vivid impression of a land where millonaires are made by magic, and there are chances for many more."

FUNK & WAGNALLS COMPANY, New York

strong selling organizations, and have gradually attracted a clientele of investors who put all their surplus earnings into these securities. Three months ago, when the selling of corporation bonds and stocks practically ceased for a time, the business of selling Chicago real-estate bonds went on, somewhat diminished in volume, but still active.

"Within the last few weeks numerous new issues of real-estate bonds have been put on sale and have been steadily absorbed by a class of investors who are indifferent whether the stock exchanges are open or closed. These new issues are chiefly apartment-house building bonds, maturing serially and drawing 6 per cent. interest.

The houses selling these bonds perform all the detail work that the investor in ordinary mortgages must perform for himself. They have the title to the ground insured, they examine the architect's plans and estimates, and, finally, they inspect the contract, to see that the contractor's bond for faithful performance of his work is good. As the work of building progresses they advance sums of money to the contractor, first being assured both by inspection of the building and by affidavits of the contractor that the money has been earned. When the building is done and the apartments are rented, they collect the interest from the owner, pay the bond coupons, and see that insurance is kept up and that taxes are paid.

"In buying such bonds, the investor relies absolutely on the bond house for detail work. The questions on which he shall pass judgment are whether the property is worth approximately the valuation given it, whether the apartments will rent for approximately the estimated rentals, and whether there is anything unfavorable in the location that may tend to drive away tenants after a time. The bond house probably is better qualified to pass on these questions than the investor, but its view-point is that of a seller and the investor's view-point is that of a buyer, and opinions vary with the view-point.

"The first question is, will the apartments rent readily and stay rented till the last bond is paid? Many investors have lived in a dozen different apartment buildings and should be fairly expert judges of rental values. Others should view the properties in which they are investing and become expert judges.

"The question of the fair value of the property is equally important. Generally, bonds are issued to the amount of one-half the cost of the land plus one-half the contract price of the building. Sometimes the loan is 60 per cent. of the valuation. Naturally, the smaller the loan the more certain it is to be paid. Another important point is the duration of the loan. Enough bonds should mature each year so that in six years 30 or 40 per cent. of them will be retired. The balance should become due in seven or, at the longest, eight years."

NO NEW STOCK THIS YEAR FOR STEEL EMPLOYEES

It was announced on December 15 that the United States Steel Corporation next year would suspend its profit-sharing plan. The reason given was "the unsettled financial and industrial conditions." This plan was instituted by the steel corporation in 1903, and since it became operative it has never until now been suspended. More than 50,000 employees have acquired an interest in the corporation's business. They make up about 40 per cent. of the total number of stockholders. Last year subscriptions were received from 46,418 employees, their takings making an aggregate of 42,926 shares of preferred and 47,680 shares of common. The subscription price for employees was \$105 a share.

Railway Equipment Obligations

We have recently completed for distribution the third annual edition of our booklet on "Railway Equipment Obligations."

This booklet describes the equipment issues of the principal railroads, with information revised to November 30, 1914.

We will be pleased to send you a copy upon request.

The Fifteen Decisive Battles of the World

Bound in cloth. For only 25 cents.
By Sir Edward Creasy

In this classic book is told the stirring drama of the world's greatest battles from Marathon to Waterloo. The imposing array of armies, the wisdom and inspiring leadership of great commanders, and the valorous advance of battalions and squadrons are presented in vivid and stirring style.

12mo. Cloth, 35 cents; by mail, 40 cents.

FUNK & WAGNALLS COMPANY, New York, N. Y.

for preferred and \$57 for common. An annual allowance, as special compensation or bonus to subscribers who retained their holdings, was made of five dollars for preferred and \$3.50 for common. Probably no large corporation in the country has suffered more from the war than United States Steel. The common stock dividend was reduced recently from 4 per cent. to 2.

NORTHERN WINTER RESORTS

Among winter tourists are some who are said to hold in scorn the idea of white flannels in February, of *dolce far niente* in a porch-chair with a round moon coming up through the branches of the palms. For them, flannels in July. They want their winter to be winter—the smoke of hearth-fire ascending straight into the lifeless air, while the thermometer flirts with the zero-point and the clean, dry snow blankets fences and other inanimate things from sight. For them the summer months are for tennis. In the winter they want open-air skating upon the ice, tobogganing, ice-boating, red apples, red cheeks, all the health and warmth that come from exercise and plenty of it. This is a growing taste in America. The number of winter travelers who seek this sort of thing is increasing. There are comfortable hotels in northern New Hampshire and in Maine that seek this sort of patronage and guarantee the "real old-fashioned winters." There is an excellent modern house on Lake George that does the same sort of thing.

But, lest he should too much dread the "January thaw" and the "February warm spell," he can make assurance doubly sure by going North until he has crossed the international line and is well within Canada. The Dominion in January and February is a perpetual joy to those who clamor for old-fashioned winters. Montreal mid-winter life is a delight, with street-traffic almost entirely on runners and the sleighs different from anything ever seen "in the States," and evidently closely patterned upon the Russian droshky. Yet those who seek winter travel in the North purely for the creature joy of it are more apt to press on to Quebec, where the Château Frontenac, one of the most wonderfully located hotels in all the world, repeats its mid-summer gaiety and popularity, with the thermometer well toward zero and the snow banking in huge drifts against the winter.

There is another Château in Canada these days—and it is quite as effective and beautiful as the earlier comer. It is known as the Château Laurier, and it crowns a wooded bluff of great beauty in the very heart of the modern city of Ottawa. The capital of the Dominion prides itself upon the gaiety and brilliancy of its social existence. And that gaiety and brilliancy find fullest expression in the corridors and restaurants of the Château during the winter months when Parliament is in session, and seemingly all Canada coming to its halls.

You can not scoff at winter in the Dominion. There is more than one American, however, who refuses to tarry at such highly civilized points as Montreal, or Ottawa, or Quebec, but insists upon boarding the Imperial Limited and seeking the Canadian Rockies in the full glory of their mid-winter grandeur. That train, like all of the well-known limiteds on the transcontinental routes south of the international boundary, runs throughout the entire year.

Increase Your Knowledge of Investments

Through their lack of knowledge of the qualities that constitute a good investment and their misfortune in selecting an unreliable dealer, many investors do not get the most satisfactory results from their investments.

The Pamphlets mentioned below contain investment information which the investor will find of considerable value.

How to Select a Good Bond:

For the inexperienced investor who wishes a knowledge of a good bond's essential features.

The Most Satisfactory Bonds:

For the investor wishing to compare the investment market's relative values over a period of years.

Buying Bonds Systematically:

For the investor who wishes to formulate a plan of systematic accumulation and distribution of funds.

Savings Bank Bonds, New York State:

For the institutional or trust fund investor.

One or more of the above Pamphlets will be sent, postage prepaid, on request. Address Dept. D. 21.

WILLIAM H. WALLING, 703 Ferry Building, PHILA., PA.

SPICE OF LIFE

Not Needed.—CLERK—"This is the
most correct writing-paper for polite
correspondence."

CUSTOMER.—"But I wish to write to my
husband."—*Judge.*

Not Hard.—"How long did it take you
to learn to run a motor-car?"

"Oh, three or four."

"Weeks?"

"No, motor-cars."—*Boston Transcript.*

A Felicitous Deficit.—CALLER—"How
much for a marriage license?"

TOWN CLERK—"One dollar."

CALLER—"I've only got fifty cents."

TOWN CLERK—"You're lucky."—*Phila-
delphia Bulletin.*

Begin What?—The Scotch minister rose
and cleared his throat, but remained silent,
while the congregation awaited the sermon
in puzzled expectancy. At last he spoke:

"There's a laddie awa' there in the
gallery a-kissin' a lassie," he said. "When
he's done ah'll begin."—*Ladies' Home
Journal.*

Inconsistent.—"Then you don't think I
practise what I preach, eh?" queried the
minister, in talking with one of the deacons
at a meeting.

"No, sir, I don't," replied the deacon.
"You've been preachin' on the subject of
resignation for two years, an' ye haven't
resigned yet."—*Tid-Bits.*

Baby's Bank; or, Saving Up for Christmas.

EPISODE I.—"See, baby," said mama,
"see the pretty bank I've got you. We'll
put it right here on the table, and every
day papa and I will put some money in it
so that when Christmas-time comes baby
will be able to buy some nice presents for
Santa Claus to give to people. Won't
that be nice?"

EPISODE II.—"Gee-whiz!" said papa.
"I haven't got anything smaller than a
ten-dollar bill, and I can't change that on
the cars. Got any money?"

"I don't think I've got a speck of
change, William!" said mama. "Here!
Take this quarter out of baby's bank."

EPISODE III.—"Give me some change,
quick, William!" cried mama. "The
vegetable man is here, and I want to buy
a few things for dinner."

"I'm busted," replied papa. "Take it
out of baby's bank."

EPISODE IV.—"Say, mama," said ten-
year-old Tommy, "can I have five cents
to go to the moving-picture show this
afternoon? You promised I could, you
know."

"So I did, Tommy," said mama, with a
smile. "Here's a nickel from baby's
bank. I don't know what I've done with
my pocketbook."

**EPISODES V, VI, VII, VIII, IX, AND SO
ON.**—The same as the foregoing, with
slight immaterial variations.

FINAL EPISODE.—"Well, baby," said
Uncle Charley, "are you going to write a
nice long letter to Santa Claus this
Christmas?"

"No, I am not," replied baby, with a
stern, significant glance at all the members
of the family. "I shall write instead, I
think, to the State Board of Bank Ex-
aminers."—*Puck.*

Pointed.—TRIXIE (a bit late in arriving
—"Well, girls, who are you knocking
now?"

BELLE—"We were all here but you,
dear!"—*Puck.*

Simple.—PROFESSOR (in history)—
"How was Alexander III. of Russia
killed?"

FRESHMAN—"By a bomb."

PROFESSOR—"How do you account for
that?"

FRESHMAN—"It exploded."—*Punch
Bowl.*

Truthful Description.—A missionary was
returning to Basel from Patagonia, bring-
ing with him for the purposes of science a
collection of Patagonian skulls. The cus-
tom-house officers opened the chest and
informed the owner that the consignment
must be classed as animal bones and taxed
at so much the pound.

The missionary was indignant. So the
officials agreed to reconsider. When the
way-bill had been revised, it appeared in
the following form:

"Chest of native skulls. Personal ef-
fects, already worn."—*New York Evening
Post.*

Changing Fashions in Hostility.—A
zealous hobbly captured a workman
and haled him into court on the charge of
being an unregistered German. The man
swore he had a Russian birth-certificate,
and produced it. Then said the magistrate
severely:

"But why, then, have you for ten years
been masquerading as a German?"

"Because," answered the man apolo-
getically, "when I came to England ten
years ago the feeling against Russia was so
strong that I was obliged to pass myself off
for a German."—*Mollie Best in Harper's
Weekly.*

Polite.—"Hum, ho!" sighed the New-
Hampshire farmer as he came in from
down-town. "Deacon Jones wants me to be
pall-bearer again to his wife's funeral."

"Wal, you're goin' to be, ain't ye?"
asked the farmer's better half.

"I dunno. Y' know, when Deacon
Jones's first wife died, he asked me to be a
pall-bearer, an' I did; and then his second
wife died, an' I was the same again. An'
then he married that Perkins gal, and she
died, and I was pall-bearer to that funeral.
An' now—wal, I don't like to be all the
time acceptin' favors without bein' able to
return 'em."—*New York Evening Post.*

Breaking It Gently.—There is a new
formula for landlords and landladies ap-
prizing tenants of a rise in the rent. It
was received by a German woman, who
appreciated its unconscious humor, and
sent it to a Berlin magazine to be pub-
lished. It runs as follows:

"STETTIN, September 1.

"MR. AND MRS. N. N.: The forceful turn
of events, which through the grace of
Almighty God, our troops, armed with His
power and strength, have brought about,
allows us to perceive a greatly blest
future. May our people never forget such
grace of the God of all times who has pro-
tected us from all misfortune. Your
apartments will cost 30 marks beginning
with October 1. Respectfully,

"FRAU REDKENNING."

—*Springfield Republican.*

"Most valuable treatise of its kind in existence."—Commercial, New York. Two books, 12mo, cloth. \$1.50 net, each. A. Wagnall Company, New York and London.

CURRENT EVENTS

EUROPEAN WAR

IN THE EAST

December 10.—Petrograd reports that General Mackensen's German forces are within fifteen miles of Warsaw.

December 12.—In northern Poland the Russians are reported as again on the offensive and driving the Germans back. German forces descending into Poland from Soldau are met near Przasnysz and Tsekhanow and repulsed.

Vienna reports the capture of Novo Sandec, and the occupation of neighboring towns, in Galicia. Her troops are claimed to be holding the important woodland areas in the eastern Carpathians, and also the mountain passes in Bukowina.

December 14.—The German column advancing from Soldau falls back on Mlawa. Petrograd reports a German concentration on the left (west) bank of the Vistula near the mouth of the Baura. Hereabouts, as far south as Lowiez, heavy fighting continues.

Austrians are pouring down the northern slopes of the Carpathians in force, near Mount Dukla. Austria reports that the Russians are being driven northeast from Jaslo, and that the whole line from here north to Noworadomsk and Piotrkow is withdrawing. Added to this, the Russians in the Carpathians are said to be faring desperately.

IN THE WEST

December 11.—Fighting begins between Ypres and La Bassée, developing from Menin to Warneton and from Armentières to La Bassée, leaving the center quiet.

December 12.—The fighting from La Bassée to Ypres continues, gradually involving the center. The northern wing reaches into the fatal forest of Sonthem, where German thousands fell in November.

December 13.—The third day of fierce fighting on the Belgian border finds the Allies generally successful east of the Lys, but the Germans making perceptible advances to the north. The latter are assuming a dogged offensive, their advances being made persistently in the face of decimating fire.

December 14.—A sharp attack is made by the Allies at a point on the Lys, between Harlebeke and Wyteschaete, supposed to be another tentative thrust to test the German defense. In the Vosges the Germans are bombarding the railroad station of Saint-Léonard, south of Saint-Dié. The French line in Alsace is given as extending from Steinbach to Pont d'Aspach, to Pont de Brinighoefen, near Eglingen.

December 15.—Berlin reports heavy losses of the Allies in a vain attack southeast of Ypres, and also north of Verdun. Four French attempts to take the German position south of St. Mihiel meet with no better success. The recapture of Steinbach, in the Vosges, is also claimed.

It is reported that Generals Joffre and French, discarding the previous plan of a spring campaign, are engineering a general advance along the whole Belgian front. This movement, if successful, is planned to throw the German right back upon its second line of defense, from Bruges to Courtrai.

GENERAL WARNEWS

December 10.—Sweden starts an investigation into the recent offenses of mines laid in Swedish waters, seeking to

discover the offending nation and the purpose sought.

An Amsterdam newspaper's Berlin correspondent reports the Prussian losses up to November 30 as: killed, 95,000; wounded, 381,000; missing, 117,000. The *Russky Invalid* declares Russia to have lost 60,000 commissioned officers, killed, wounded, or missing.

December 11.—Word comes from Buenos Aires that the German cruiser *Dresden*, sole survivor of Admiral von Spee's squadron, has arrived safely in the port of Punta Arenas.

December 12.—Serb reports show the Austrians retreating out of Serbian territory, being pushed back upon the border at Shabats and Loznica. They claim to have 28,000 Austrian prisoners, with many guns.

December 13.—It is reported from London that a British submarine has accomplished the sinking of the Turkish battle-ship *Messudieh*, in the Dardanelles, diving under five rows of mines and evading by many hours' submersion the gun-fire of hostile forts and torpedo-boats.

The *Dresden* leaves Punta Arenas, Chile, refused coal by the Chilean Government because three months had not elapsed since her last visit there.

December 14.—The Servians, it is reported, after a fierce battle, regain Belgrade. Austria admits retirement before superior forces.

December 16.—Scarborough, Hartlepool, and Whitby, three towns on the eastern coast of England, opposite Helgoland, are bombarded by a German squadron in a raid lasting an hour: killed, 48; wounded, 85.

MEXICO

December 15.—Carranza officials report that two battles are being fought with the followers of Villa, one at Guamave, near Tampico, and the other at San Pedro de las Colonias, between Torreon and Saltillo. The latter assumes the more importance. Ten thousand troops are engaged, with reinforcements speeding to support both sides. It is said that Villa is personally in command of the Conventionalist forces.

DOMESTIC

December 10.—Washington is advised that Provisional President Gutierrez has ordered General Maytoreno to withdraw from the border at Naco, where several Americans have suffered from stray bullets.

December 12.—The New York Stock Exchange opens to all members, with some restrictions on operations in stocks which are held largely by European investors.

December 13.—Washington receives a call from Colonel Goethals, Governor of the Canal Zone, for two torpedo-boat destroyers, but withholds the ships requested, demanding further particulars.

Two more men in Naco, Arizona, are hit by spent shrapnel bullets. Governor Maytoreno reports he has received no order from Provisional President Gutierrez to withdraw from the border.

December 14.—Colonel Goethals issues a second call for war-ships, stating that violations of neutrality in the misuse of wireless and the establishing of bases of supplies within the Canal Zone demand several light, fast vessels as police-boats.

December 15.—A force of 3,000 infantry and artillery are ordered to reinforce

Gen. Tasker H. Bliss's command at Naco, Arizona, in view of possible conflicts on the Mexican border. Governor Maytorena, of Sonora, announces that his troops will be removed from the border and ordered not to fire into Naco, Arizona, for fear of complications with this country.

Postmaster-General Burleson submits his report to Congress. He recommends again the national ownership of telephone and telegraph services in this country. Alaska, Porto Rico, and Hawaii; he urges that payment to the railroads for transporting mails be made by space instead of weight; he requests an increased rate of postage on all second-class matter, except newspapers.

December 16.—In reply to Colonel Goethals's call for police-boats for the Canal Zone, Secretary Daniels orders the cruiser *Tacoma*, at Santo Domingo, to proceed to Colon.

Gen. Hugh Scott leaves Washington for Naco, Arizona. General Bliss, in command at Naco, on the advice of Washington, issues an ultimatum to General Maytorena, declaring that the next shot to take effect upon an innocent party on the northern side of the border will earn prompt reprisal.

The New York Stock Exchange permits the sale and purchase of all stocks, regardless of European holdings. The minimum price at closing, on July 30, is to be observed in all cases.

Good Progress.—CHEERFUL OLD LADY.—"Well, dominie, the new churchyard's fillin' up real nicely, ain't it?"—*Puck*.

ATWOOD GRAPEFRUIT

NO OTHER GRAPEFRUIT EQUALS IT IN FLAVOR

THE superiority of Atwood Grapefruit is not an accident. From the first planting the Atwood Grapefruit Co. has sacrificed everything for **QUALITY**. An initial expense of hundreds of thousands of dollars was incurred, while everything that scientific culture and experience could suggest was done to produce **QUALITY**. Even then some trees at maturity bore simply *good* grapefruit, but *not good enough for the Atwood Brand*. These trees were cut down and replaced by superior varieties.

So through the various processes of selection, cultivation and elimination has evolved the **ATWOOD FLAVOR**, as hard to describe as it is difficult to produce.

People who have eaten Atwood Grapefruit say:

"It is absolutely the best grapefruit I ever tasted."

"Fruit is fine and full flavored, 'The Best Ever'."

"They are the nicest fruit we have ever tried."

"The best that we have been able to secure."

"As usual, your grapefruit is way ahead."

"Fully ripe and delicious."

A well-known physician writes: "I prescribe grapefruit for all my patients, and tell them to be sure and get Atwood Grapefruit."

Atwood Grapefruit is always sold in the trade-mark wrapper of the Atwood Grapefruit Co.

Have You Seen The New Sampson Repair Plug

For Automobile Inner Tubes—

The Quickest Permanent Repair Ever Devised

See It At The Big Automobile Shows

THE feature of the day in the automobile world—an instant roadside repair as good as a shop could make it—as permanent as vulcanizing—will last as long as the life of the tube.

The *interior* has been anything like it. The SAMPSON PLUG is the application of the same principle used in making tight the valve-stem in the tube.

The edge of the soft rubber plug feathers out under the pressure—reinforces and becomes a part of the tube itself.

No Cement. No Gasoline. No Sand Paper. No Chalk. No Waiting. Just Your Bare Hands. That's All.

After three years of work, study and testing, we have PRODUCED THE PERFECT AUTOMOBILE PLUG. You must see it to appreciate what it is—the greatest comfort to automobile owners and drivers—the greatest tire invention presented since the invention of the inner tube tire.

Your simple portable kit, which the structure has been built with the punch included with the kit, then insert the soft rubber plug, screw it up tight with the thumb, break off the wire, and you are ready to travel, with a clean, permanent job. Price of kit, \$3.00.

Ask your dealer for it or write for literature.

The Right of the Child to be Well Born

By
GEORGE E.
DAWSON, Ph.D.

Professor of Psychology, Hart-
ford School of Religious Pedagogy

This new book on the new Science of Eugenics has a distinct mission in the world of men and women. It looks to improvement and preservation of the race in the natural, normal way. It recognizes moral economy on a biological basis. It urges parenthood as the supreme object of being, fit selection and wise preparation as a necessity thereto. 12mo, cloth. 75c net; postpaid, 82c. Funk & Wagnalls Co., 354-360 Fourth Ave., N. Y.

Half A Century Of NAVAL SERVICE AND SPORT In Many Parts Of The World

"From Naval Cadet to Admiral"

By Admiral Sir ROBERT H. HARRIS of the British Navy

An intimate narrative by one of the old sea dogs who have helped to make the British Navy what it is today. It is full of the spice of a lifetime. As the Admiral's personal life unfolds, the reader is placed in the heart of the action. The story is told in a simple, direct, and unassuming manner, but it is full of interest and excitement. The Admiral's life is a story of adventure, of the sea, of the world, and of the British Navy. It is a story that will interest all who are interested in the history of the British Navy.

It is a story of the sea, of the world, and of the British Navy. It is a story that will interest all who are interested in the history of the British Navy. It is a story of the sea, of the world, and of the British Navy. It is a story that will interest all who are interested in the history of the British Navy.

A large octavo volume. Faced, illustrated, bound in cloth. 75c net; postpaid, 82c.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"W. R. P." Rochester, N. Y.—"Please tell me what authority there is, if any, for the use of the word 'recipe' to indicate a cooking-receipt. Is not the word 'receipt' the proper word to use when it is intended to mean the combining of materials in cooking?"

The original sense of *recipe* is the medical sense, which you will find abbreviated upon all medical prescriptions by the letter R., but in modern speech this word in this sense has been entirely displaced by the word *prescription*. The word *recipe* is now commonly used for a statement of the ingredients and procedure necessary for the making of some preparation, especially a dish in cookery. This sense dates from 1743. The word *receipt* was used to designate a formula or a prescription in medicine as long ago as 1380, and in this sense it was steadily used from that date until the sixteenth century, when, for instance, Shakespeare used it in "All's Well That Ends Well," act I, sc. 3, line 227, "You know my father left me some prescriptions, of rare and proud effects." The first use of *receipt* in cookery dates from 1703.

"J. R. P. R." Pawling, N. Y.—"Who is (or was) the person writing Indian love-lyrics ('Stars of the Desert') under the name 'Lawrence Hope'?"

Laurence (not Lawrence) Hope, otherwise Violet Nicholson, was the wife of a British army officer and wrote a number of passionate poems. Her "Last Poems" were published by John Lane, of New York, who may be able to give you further information. So far as our remembrance goes, Laurence Hope's husband was many years her senior, and when he died she committed suicide on his grave.

"D. E. H." Dubois, Pa.—"Will you kindly tell me if 'a grammatical error' is a correct expression?"

"A grammatical error" is a common locution, but "an error in grammar" is to be preferred as avoiding what is sometimes considered as a violation of grammatical precision.

"R. E. W." Springfield, Ohio.—"(1) If the English view-point on the matter is not held here, will you kindly tell me the significance of the line, 'Not bloody likely,' in Shaw's new play. (2) What is the meaning of 'Santa Cruz is now pretty well Fletcherized'?"

(1) The line to which you refer should have no punctuation. The expression is not used by refined Englishmen. It is a coarse way of saying "Not at all likely." (2) Food is said to be *Fletcherized* when it is thoroughly masticated—possibly the sentence you give is a playful allusion to the damage done to the city.

"W. R. D." Healdsburg, Cal.—"Kindly give me the pronunciation of *Louise*."

Louise is pronounced *lu'ee*—u as in rule.

"E. S. W." Cambridge, Mass.—"Please tell me whether the size of Shakespeare's vocabulary has ever been ascertained, and if it has, what is the number of words? What sort of words are included in determining a writer's vocabulary? Are only the roots taken, or, for instance, would 'repeat' and 'repeated' be counted as two words? How does Shakespeare's vocabulary compare in size with the vocabularies of other noted writers? Is not one writer of note distinguished for the smallness of his vocabulary, he having a vocabulary of less than 1,000 words?"

Shakespeare's vocabulary has been estimated at 15,000 words, and it includes the root-words and inflections. Milton's vocabulary has been estimated at 10,000. The Bible contains Hebrew and Chaldean words 8,674, Greek words, 5,674. John Bunyan's vocabulary is said to consist of only Anglo-Saxon words. He may be the author to whom you refer; but long before him there was a semi-Saxon writer a priest named Layamon, who translated Wace's "Brut," who may have had a vocabulary of only 1,000 words at his command.

"O. N. C." Kingston, Okla.—"The sentence is elliptical and means *I could not love thee, dear, so much (as much as I do love thee), loved (if I did*

not love) I not honor more. In other words, his love of honor is the foundation of his great love for her (assumed).

"J. H." Andover, N. H.—"Kindly answer the following: (1) Are there any conditions at all under which a coin may be mutilated without breaking the law? (2) Please tell me also whether or not there is any law about hoarding money and keeping it out of circulation. (3) Is a two-dollar-and-a-half gold piece change?"

(1) No. The mutilation or debasement of United States coin, as well as the fraudulent importation or use of spurious foreign coin is a crime under Federal statutes. (2) No. (3) A two-dollar-and-a-half gold piece is a current coin which may be given in change.

"N. de G." Baltimore, Md.—"Will you kindly give me the correct use of the broad *a* in speaking English, and any rules there may be? Is there any book that would aid one in acquiring this?"

The broad *a* is used only in the southern part of England. From the Midlands up to the Tweed the *a* as in *at* is used. There are no rules that we can cite to guide you. Usage and the word in which the *a* occurs are the only guides.

"J. F. D." Delaware, Ohio.—"Is the commonplace sign 'Post No Bills' correct?"

The phrase is an English idiom of which we have hundreds similar; as, "I don't think it will rain"; "Shut the door"; "We received no money," etc.

"S. V. B." St. Louis, Mo.—"Which is correct—'We have not received any payment,' or 'We have received no payment.' If both are correct, which is given the preference, and why?"

Both the sentences submitted are correct. We prefer "We have not received any payment," as the more direct and emphatic. The second is a form current in English sanctioned by usage. *We have received no payment* is equivalent to *nothing*, hence our preference.

"H. M. H." Manchester, Ala.—"In the game of ruck, dominoes, or any other game, is 'trump' ever plural? If so, how would you use it? In other words, would you say, 'what is trump?' or 'what are trumps?'"

Trump is a noun singular and is generally so used. The plural form is used in card-playing to designate the character of the suit; as, "What are trumps? Spades." Here the question and answer are always in the plural. If the question "What is trump?" were put, the answer "clubs" would clearly point to the erroneous use of the verb which should be in the plural. "A trump" is synonymous with "a trump card," and as such is a singular.

"B." Lavonia, Ga.—"Which is correct—'The annual convention of women's clubs,' or 'the annual convention of woman's clubs?'"

As the club-members are women and there are a number of clubs, the correct way to write the sentence is "The Annual Convention of Women's Clubs."

WARNING!

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even tho they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonus. The LITERARY DIGEST mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

FUNK & WAGNALLS COMPANY,

Jackson "48"-Six—\$1650**Jackson "48"-Six—\$1650**

Power Plant—Long stroke, six-cylinder, 43 h. p. motor. Delco electric cranking, lighting and ignition system. **Fuel Supply**—Gasoline tank under cowl, gravity feed to carburetor. Supply tank in rear. **Control**—Left-side drive, control levers in center. Either front door may be used. **Suspension**—Full elliptic springs front and rear. Frame dropped to bring car close to ground and still give full spring action. **Rear Axle**—Full floating, ball bearing throughout. Two universal joints with torsion rod. **Wheel Base**—125 inches. **Tires**—34x4 inches, non-skid in rear.

Jackson Olympic "46"—\$1375

Power Plant—Long stroke, four-cylinder, 43 h. p. motor. Auto-Lite electric cranking and lighting system. **Fuel Supply**—Gasoline Tank at the rear. Vacuum feed. **Control**—Left-side drive, control levers in center. Either front door may be used. **Suspension**—Full elliptic springs, front and rear. Frame dropped to bring car close to ground but still allow full spring action. **Rear Axle**—Floating type. **Wheel Base**—117 inches. **Tires**—34x4 inches, non-skid in rear.

Equipment—Both Models

Mohair top, top hood, ventilating windshield, speedometer, electric light on instrument board, sight feed oil gauge, demountable rims, extra rim, tire carrier at rear, foot rail, coat rail, pump, tools and jack, electric lights and electric horn.

Thousands of Jacksons six, seven and eight years old are still giving faithful service every day

THAT fact is well worth remembering when you come to buy a car. That fact—more than anything else we could say—tells you of the sound engineering principles and the thoroughness with which the Jackson is built. Those things which other manufacturers are talking about now—long service; low repair costs, economy of tires and economy of gasoline—have *always* been Jackson features. The record of performance of Jackson cars through a long period of years assures you these qualities in fullest measure.

The experience of thirteen years of automobile manufacture is summed up in the 1915 Jackson models—thirteen years of experience of the same corps of skillful engineers and mechanics. And in every detail of design, construction, equipment and finish, the new Jackson models reflect this experience. We believe they offer the greatest intrinsic values, at moderate prices.

Both the "48"-Six and the Olympic "46" are well worthy the name they bear. No more thoroughly dependable cars have ever gone from their old-established factory. And they are up-to-the-minute in the finest sense. Nothing flashy; nothing of doubtful taste; nothing experimental; but all in step with the best accepted standards of design.

True stream-line bodies, beautifully finished and deep-cushioned, are mounted on both Jackson chassis. Powerful, flexible, almost silent motors. Luxurious comfort. And all the old-time Jackson sturdiness.

Comfort—the Dominating Characteristic

No matter what the roads may be, almost invariably the first remarks of a man or woman riding in a Jackson car for the first time is, "My, how comfortable!" After a long day's ride you are impressed most of all with this dominating Jackson characteristic: COMFORT.

And what other quality could you *prefer* in a car you buy?

Jackson comfort comes *primarily* from Jackson full-elliptic spring suspension, a costly construction principle to which we have held faithfully. Width of seats, soft upholstery and ample leg room contribute to the exceptional comfort qualities of Jackson cars, but full elliptic springs, *front and rear* make boulevards of country roads, and are the *real* source of surpassing comfort in Jackson cars.

Jackson prices are as low as sound engineering principles, honest materials and careful workmanship permit.

Before you purchase a cheaper car, or pay more for any car, see these two new Jacksons at the Automobile Shows or at your Jackson dealer's. The 1915 Catalog is ready for mailing. Write today.

JACKSON AUTOMOBILE COMPANY, 1318 E. Main St., JACKSON, MICH.

First in the Specifications

123 Pleasure and Commercial Vehicle Manufacturers list the Certainty of Continental Motors as first in the specifications.

For out of the eight good qualities for which any Truck or Car is selected, six depend on the Motor alone.

✓Silence
✓Power
✓Speed
✓Endurance

✓Economy
✓Flexibility
Simplicity
Appearance

Continental Motors

And in these six particulars, Continental reputation is years long, world-wide, and unassailably supreme.

Thus does this Standard Motor establish the worth of the manufacturers' product in which it is installed.

For this reason Continental comes first in the specifications.

For this reason 123 Manufacturers make sure of sales and satisfaction by building into their product the Certainty of Continental Motors. It is irrefutable that this Standard Motor, representing one-fourth of the total manufacturing cost of a Car or Truck, guarantees three-fourths of that vehicle's potentiality for service.

See that Continental Certainty is in your next Car.

Velie *for* 1915

New Prices, New Stream-Line Design, New Equipment

An entirely new note in body luxury and beauty, mounted on a chassis that includes every feature of real usable value that can be built into an automobile. New comfort for the man who drives his own car. New economy and riding ease that gives you a new idea of the pleasures of touring.

Big, Roomy, Comfortable

The average owner wants to drive his own car. And he wants to be comfortable.

Step into the front seat of any "Velie" model for 1915. Notice the room. On no other car, regardless of size and price, have equal provisions for the comfort of the driver been made. On the majority comfort in the front seat has been sacrificed. In the "Velie" for 1915 the front seat is as luxurious as the rear.

Step through the wide doors to the rear seat. Sit down on the deep, soft cushions. Real, genuine comfort is your first sensation.

Drive over all roads.

Open up the throttle. It makes no difference where you are, you get the same comfort over smooth macadam or rough country roads.

A Car of Real Quality

The deftness of European designers in developing features that add to beauty, comfort and convenience, combined with the skill of Velie engineers in developing features that add to service and ability.

In excellence of materials; in highest grade of equipment; in permanency of style, none can be better.

The new motor-driven tire pump; the graceful top; the big 37x4 1/2-inch tires on the light "Six" with non-skid tires on the rear wheels, are combined as regular equipment only on the Velie.

Model 14 —Six-cylinder, 50 h. p. Five-passenger Touring, Four-passenger Torpedo, Two-passenger Roadster,	New Price \$2,015 \$2,715
Sedan	

Features of Design

- Motor-driven tire pump on Models 12 and 14.
- 37x4 1/2-inch tires on "Big Four" and "Light Six," with non-skid tires for rear.
- 34x4-inch tires on "Light Four."
- Smooth, unbroken body lines.
- Tires at rear, with clean running boards.
- Highsides; deep, roomy body space.
- Tapering upholstery, blending into body rails.
- Quick-detachable side curtains.
- Double-dimmer headlights.
- Crown fenders.
- Gray & Davis electric starting and lighting.
- Bosch dual ignition.
- Special rain-vision windshield.
- Left steer with center control.
- Warner speedometer.
- Pressure feed, with the gasoline tank at the rear on large cars.

Model 11 —Four-cylinder 35 h. p., Five-passenger Touring Car,	New Price \$1,500
---	------------------------------------

A Light, Economical Car

The successful car for 1915 is going to be light-weight. Velie engineers have secured notably light weight, with superior strength, by the proper use of high grade materials. The manufacturer who argues heavy weight as an indication of strength no longer commands attention.

In view of the exaggerated claims for light weight made by many manufacturers, it might be well for you to take the weight of the Velie under the same conditions as you take the weight of any other car with which you want to make comparison. Then look at the tire sizes on Models 12 and 14. The tires are 37x4 1/2 inches.

The result of big tires on the real light weight Velie is low tire cost.

There is greater mileage from the gasoline, because there is less load to carry. There is less cost for upkeep because weight and strength are in proper proportion.

"Fours" and "Sixes"

Each have their logical place. Among cars of high price and power the "Six" has its advantages.

The line between Velie "Fours" and "Sixes" is a definite, firmly-established basis for proper engineering design. When six-cylinder design has reached a point where a real "Six" at lower price is possible, Velie will build it.

Model 12 —Four-cylinder, 45 h. p. Five-passenger Touring, Four-passenger Torpedo, Two-passenger Roadster,	New Price \$1,750 \$2,485
Sedan

2173

This figure represents the number of individual buyers who had, up to August first, placed orders for the new Cadillac.

No announcement had been made by this Company concerning the characteristics of the new car.

Even Cadillac dealers had not been informed concerning it.

The dealers did not especially seek these orders in advance.

They came spontaneously—in widely separated cities—from more than 2,000 individual buyers.

Their attitude was—in effect—"No matter what it is, just so it's a Cadillac" and "We want to order now."

And the public is still without authoritative information from the Cadillac Company concerning the details of the new car—but more than \$4,000,000 worth of business awaits its coming.

Could anything that we might say compare with this substantial expression of implicit confidence?

Could it have occurred in connection with any car other than the Cadillac?

We have said before that we regard the peculiar confidence reposed in the Cadillac Company as a trust and a responsibility.

It is also an asset so immensely valuable that mere self-interest, if nothing more, would impel us never to imperil it.

And Cadillac users bear testimony that we never have imperiled it.

Rest assured that those who have placed their orders will be abundantly rewarded.
